THE LABOUR GAZETTE

JULY, 1915.

INDUSTRIAL AND LABOUR CONDITIONS DURING THE MONTH OF JUNE, 1915.

1.—GENERAL SUMMARY.

INDUSTRIAL and labour conditions during June showed an improvement over those of May. There was an increase in manufacturing activity, and a slight improvement in building and general construction work. A more pronounced demand for help on the farms was evident, hay cutting having commenced in some districts. The opening up of canning factories also assisted in providing employment.

Crop prospects on the whole were considered good. Heavy frosts about the middle of the month put back the grain in many districts, but subsequent favourable weather was expected to overcome this setback. A somewhat keener demand for farm help became apparent. Fishermen on the Atlantic coast had a very successful month, mackerel in particular being taken in large quantities. Pacific coast conditions were also favourable. Lumbering continued active in Eastern Canada, but was somewhat dull in British Columbia. Mining, with the exception of operations in the coal districts of British Columbia and Alberta, was active in both coal and metal production. In a great many lines manufacturing showed improvement, and in establishments filling war orders activity was pronounced. Railway construction maintained about the same level as that of the previous month, no special activity being apparent. General transport

showed continued activity in water transportation, but a falling-off to some extent in railway traffic was reported. Domestic trade showed improvement in dry goods, summer weather improving the demand for wash goods; hardware remained dull owing to quiet in building operations. General business was only fair and collections were slow.

The Department's index number of wholesale prices stood at 147.3 for June as compared with 147.6 for May and 135.3 for June, 1914. If abnormal rises in the prices of spelter and zinc were included in the calculation the index number would stand at 149.5. Steep advances were made in several other imported metals and prices were higher in hog products, imported fruits, turnips, lead pipe, iron pipe, copper wire and barb wire. Prices were lower, however, in grain, cattle, beef, sheep, mutton, butter, cheese, fresh fish, flour, wool, cotton, tin, spruce, linseed oil and turpentine.

Interruptions to Industry.

Industry was but little interrupted by trade disputes, there being but three new strikes reported during the month, two of which were settled shortly after their occurrence. At the end of the month there were but five disputes in existence, and these affected comparatively few numbers.

The LABOUR GAZETTE, in its accounts of proceedings, abstracts of reports, legal decisions, quotations, or other records of matters of concern to labour, is not to be regarded as necessarily endorsing any of the views or opinions which may be expressed therein.—Ed.

A severe storm which occurred in parts of the Western Provinces towards the end of the month had a serious effect upon industry in a number of districts. At Grassy Lake and Redcliff considerable damage was done to property and some persons were injured through the collapse of buildings. At Calgary much damage resulted from the rising of the Bow River, large quantities of lumber being lost and the breaking of gas mains depriving the city for a time of its principal source of fuel supply. Along the main line of the Canadian Pacific Railway between Calgary and Field a number of landslides occurred and several hundred feet of track were washed away. It was necessary for a time to route main line trains via the Crow's Nest Pass branch. At Edmonton the rising of the Saskatchewan River caused floods which did damage estimated at close to \$1,000,000 and rendered many people homeless. A number of industrial establishments suffered heavy loss.

Among industrial establishments destroyed by fire or through other causes during the month of June, 1915, the following may be noted:

Nova Scotia.—June 17, at Kentville, Chalmers Reddens sawmill and woodworking factory, loss \$8,000; June 16, Dominion Atlantic Railway warehouse, loss \$25,000; at New Glasgow, June 13, premises of James Cummings, machine works, loss \$5,000; at Sydney, June 2, Morley Bros.' business block, loss \$15,000.

New Brunswick.—At Moncton, engine-room of Lea's sawmill, loss \$2,000; at St. John, June 8, Jardine business block, occupied by H. W. Cole, grocery establishment; H. Flewellen, printer and engraver; Arnold's department store, total loss \$100,000; at Richards, June 15, two sawmills, the property of H. Bouley, destroyed by bush fires.

Quebec.—At Asbestos, June 17, bakery establishment of Mr. Paquin, in Charlevoix County, Baie Ste. Paul Lumber Company's sawmills and lumber destroyed by forest fires, loss \$75,000; at Chicoutimi, June 24, Goudreault & Gagnon's departmental store; at Montmagny, June 7, 15,000 cords of pulpwood. At Montreal: June 9, hop department of the Union Brewery, loss \$30,000; June 9, the premises of the Valleyfield Iron Works, \$10,000; June 1, premises of Strachan's bakery, loss \$75,000; at St. Laurent, June 8, Albert Hodge hay and grain store, loss \$12,000; premises of the Canada Furnace and Stove Company, loss \$10,000; carriage factory of Stanislaus Robitaille, loss \$10,000; A. Rolland's boot and shoe factory, loss \$15,000, and thirteen dwellings, total loss \$100,000.

Ontario.—At Beamsville, June 29, Robt. E. Book's sawmill, loss \$5,000; at Chatham, June 3, McClary Block, occupied by McDonald House Furnishing Company and premises of the *Classic Theatre*, loss \$30,000; at Huntsville, June 1, J. E. Fisher's store; at Lampton Mills, June 7, *Lampton Mills inn*, post-office and general store, loss \$75,000; at London, factory of the Thomson Knitting Company, loss \$50,000; at North Bay, June 4, planing mill and lumber yard of D. Barker, loss \$12,000; at Ottawa, Doucet & Charbonneau dry good store, loss \$10,000; S. Karam's boot and shoe store, loss \$2,000; at Owen Sound, June 14, Canadian Pacific Railway round-house; at Peterborough, Curtis Bros.' brick-making premises; at Renfrew, storehouse of Town Corporation, loss \$2,000; at Russell, June 6, business portion of village; at Stoney Creek, June 23, Grand Trunk Railway station and freight shed; at Toronto, June 14, Grand Trunk freight car and premises of the Gurney Foundry Company, damaged by an explosion of acetylene gas, loss \$5,000; at Walkerville, June 21, overall plant of Peabody & Company, damaged by an explosion of dynamite, loss \$3,000.

Manitoba.—At Boissevain, June 19, business district, loss \$10,000; at Transcona, June 6, *Transcona Hotel*, Big Four clothing store and Raven's lodging house, loss \$100,000; at Winnipeg, June 8, Stobart business block, \$29,000.

Alberta.—At Edmonton, the Edmonton Lumber Company's sawmill, sawmills of Walters Ltd., destroyed and lumber swept away by floods in Saskatchewan River.

British Columbia.—Business section of Hope, loss \$40,000; at Vancouver, June 3, Percival business block, loss \$125,000.

Changes in Wages and Hours of Labour.

There were not many changes in wages or hours during June. There was little in the way of actual cutting of wage rates, but reduced time continued in many establishments, except in cases where activity was marked owing to war orders. In a few cases increases went into effect. Workers at the Granby smelter, Grand Forks, B.C., received a voluntary increase of 25 cents per day owing to the increased price of copper, which brought the minimum being received by any class of labour up to \$3.25 per day. Increases, also, went into effect at some of the Rossland mines of 25 cents a day above the regular scale. At Vancouver some 2,000 labourers employed by the city had the standard rate of \$3 per day of eight hours reduced to \$2.25 per day. Reductions were also made in the salaries of policemen and other civic officials.

Conditions in the Industries and Trades.

Conditions of employment during June in the several industries and groups of trades throughout Canada, as indicated by reports of correspondents of the *Labour Gazette*, and by information received at the Department of Labour from other sources, may be briefly summarized as follows:

Agriculture.

Crop prospects throughout the Dominion were on the whole favourable, and while from a number of points in the West it was reported that heavy frosts about the middle of the month set the grain back and that in some districts only an average crop was looked for, owing to the increased acreage sown and generally favourable conditions, production was expected to be larger than in previous years. In the districts in Southern Alberta and Saskatchewan which last year suffered from drought, an adequate amount of moisture was reported, and with a continuation of favourable weather, prospects were considered excellent. While some settlers were coming in from the United States, the movement was not as pronounced as in other years, reasons for this being found in the opposition of some of the States to the emigration of their farmers; also owing to the fact that crops last year were good in the United States and there were few dissatisfied farmers. Very little land, too, was being sold in the United States, which prevented land owners from getting money through sales to buy land in Canada.

In the Maritime Provinces, cold, wet weather in many parts was reported, and it was expected the crop would be late. Pasture, however, was excellent, and the hay crop was expected to be a good one. Good weather prevailed for the most part in Quebec and Ontario, though in parts of Ontario too much moisture was reported. Generally crop prospects were good, though hay was a light crop

in many districts. Some cutting commenced in a few localities towards the end of the month. In the fruit growing districts of Hamilton and Niagara Falls heavy frosts did some damage to fruits, though reports as to the extent of the damage were conflicting. Some parts suffered more severely than others. A very heavy crop of strawberries was reduced to an average crop. Thousands of tomato plants were killed, but a large crop was unhurt. Pears and cherries suffered to some extent, but peaches showed little injury, and were expected to be a big crop. Damage to other fruits and vegetables was not serious. A much larger area of land was reported under cultivation in the Cobalt district, and efforts were being made to have a grain elevator established at New Liskeard. In this district farmers took advantage of the ample supply of labour available last fall and cleared large areas of land before the snow fell.

The situation in regard to farm labour varied with different localities. In the Maritime Provinces the tendency was towards a scarcity of help. In Ontario, also, farmers were advised by the Department of Agriculture to send in applications at once and secure their help immediately, as it was considered that owing to the cessation of immigration due to the war, farm help would be scarce. The supply of farm labour in the Hamilton district was reported not equal to the demand, and better prices were offered to men for the summer months. At Berlin, farmers were not complaining about help and good men could be had at reasonable wages. In the Niagara district the opening of the canning factories, which were operated to full capacity, supplied a considerable amount of employment. In the West, also, reports varied. From Winnipeg it was estimated that 18,000 or 20,000 men would be required for the harvest in Manitoba, and it was considered there would be no difficulty in obtaining the required number as many men were expected to come from Eastern

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. present issue and is intended to present, in brief and accessible form, a generalized statement as to the state the amount of employment prevailing, no account being taken as to wage changes, trade disputes and kindred terms employed are divided into two groups, the order indicating in each the degree to which general condition.

Canada and the United States. At Moosejaw, while there was practically no demand for farm labour during the month, it was expected a considerable number would be required in July as farmers, it was thought, would commence to secure their help earlier than usual. In the Lethbridge district there was a demand for men in the hay fields, though rainy weather retarded the work somewhat. Wages offered were low and few men cared to engage in the work. At Prince Albert there was no demand, and it was thought the local supply would be ample for harvesting operations. At Calgary no great demand was reported. The Labour Bureau sent out 100 men at wages ranging from \$25 to \$30 per month. Prevailing conditions indicated there would be no difficulty in securing harvest hands and that an abundance of labour would be available.

In British Columbia strawberry pickers, mostly Chinese, were paid \$1 a day as against \$1.50 paid last year. The crop was a good one and better prices than last year were obtained.

The June excursions to the Ontario Agricultural College at Guelph, Ont., were not as well patronized as during the same period in former years.

A recent bulletin issued by the Census and Statistics Office estimates the total wheat area in Canada in 1915 at 12,596,000 acres, more by 1,662,500 acres, or 14.8 per cent, than the area sown in 1914, and the largest area of wheat ever sown in Canada. Every province shows an increase in wheat area and the bulletin considered crop prospects on the whole favourable.

Fishing.

Atlantic coast fishermen had a very successful month. Exceptionally large catches of mackerel were taken and heavy shipments made from Yarmouth. Lobster fishermen, also, did a profitable business. From many points along the Prince Edward Island coast very large catches were reported, and in some sec-

tions factories were unable to handle the fish on account of lack of cans. The local factories expecting that the falling-off in the demand and drop in prices would oblige a number of factories to close down, did not make the usual preparation. A scarcity of help was also reported. At Digby, N.S., very large catches of cusk were reported and producers were rushed to their capacity salting and drying the fish. Lunenburg also reported successful operations.

Fishing on the Lakes was fair. At Port Arthur the industry was being pursued by many and along the coast of Thunder Bay fishermen built huts and boats.

On the Pacific coast the fishing industry continued active. There was a falling-off to some extent in the arrival of American boats owing to the discovery of some new banks off the mouth of the Columbia river, but it was expected there would be a renewal of activity in American boats trading with the port at an early date. Sockeye salmon were commencing to run at Rivers Inlet and good catches were made. Canneries were becoming active.

Part of the whaling fleet, which, as was mentioned in the *Labour Gazette* for May, was expected to be tied up for the season, was overhauled and put in readiness at the end of the month and crews signed on. The resumption of the industry was expected to provide employment for a large number of men. Although starting about two months later than usual, it was considered a good business would be done, as whales were reported plentiful.

Lumbering.

Operations in the saw-mills continued busy throughout the lumbering districts in the Maritime Provinces and in Quebec and Ontario. In British Columbia, however, activity was not pronounced and few mills were running to capacity. Trade conditions remained quiet and markets for the most part were inactive. The demand for spruce deal for export

was not so encouraging in the Maritime Provinces as it was the previous month.

At Newcastle, N.B., lumber mills were very active, working full time and with capacity crews. Very few logs were hung up by low water, rains in the early part of the month enabling nearly all logs to be brought to the booms. St. John mills were all sawing steadily, but tonnage was scarce and there was some talk of mills having to shut down later in the season if stocks could not be shipped more readily.

All saw-mills in the city and district of Three Rivers commenced sawing during June and were working full time. All of the big mills in the district adjacent to Quebec were sawing. The floating of logs to the mills in this district was reported very successful.

The new pulp and paper mill at Iroquois Falls in the Cobalt district was expected to be in operation early in July, when the mill would employ in the neighbourhood of 500 men. The Pigeon River mill in the Port Arthur district was operating during June, and while not exceptionally busy was giving employment to those usually engaged during the summer.

At Fernie, B.C., the industry on the whole was reported as showing slight improvement, but was still in a very inactive state. New Westminster reported conditions about the same as in May, none of the mills running to capacity, and many camps being closed down. Considerable difficulty was experienced in getting rid of the cut, and there was no disposition to stock up to any extent. Mills in the Nanaimo district were working, but on a decreased scale, and logging camps were doing very little.

During the month a public meeting was held at Victoria in support of an application to the British Columbia Government in favour of requiring the employment of white labour in the production of timber purchased by the Government. Representatives of the lumbering interests explained the employment of Orientals for certain work and

regret was expressed at the action of the Victoria Trades and Labour Council in sending resolutions to the Prime Ministers of Australia and New Zealand asking them to purchase only lumber produced by white labour. The labour side of the case was presented by the president of the British Columbia Federation of Labour and delegates from the Trades and Labour Council, who dwelt upon the patriotic side of the matter and contended that suitable white labour could be found for the work.

The Department of the Interior, Forestry Branch, has issued a bulletin on treated wood block paving, which gives the results obtained in European, United States and Canadian municipalities using wood for paving, and the methods by which the best results have been obtained. Copies of the bulletin may be obtained free on application to the Director of the Forestry Branch of the Interior Department, Ottawa.

The Department of Trade and Commerce, Ottawa, was continuing its efforts to secure markets for and to improve the lumbering industry of British Columbia, and in this connection sent an officer of the Department to British Columbia to investigate and report upon the question of trade with China and Japan.

Mining.

Coal mining continued fairly active in Nova Scotia, but little, if any, improvement was noticeable in western mines. Operations throughout the Sydney and Glace Bay districts continued brisk, the only drawback being the want of vessels for water transportation, which caused an occasional idle day. Inverness colliery was fairly busy during the month. At Westville the mines were operating full time and the prospects were bright for the summer. The Allan shafts, at which an explosion occurred last December, were reopened.

At Fernie, B.C., the coal mines were not working more than thirty per cent of capacity. The demand for coke, how-

ever, continued to be good. The mines at Michel and Bellevue were operating from four to five shifts per week. Fernie, Hillcrest and Coleman averaged from two to three shifts per week, while mines at Blairmore, Maple Leaf, Passburg, Lille, Beaver Creek and Burmis were practically dormant. At Nanaimo the mines lost little time during June, but there were not many men engaged, most of the mines working with small forces.

Metal mining continued active on account of the increased demand for various metals in the manufacture of war munitions and the good prices obtaining. Zinc and lead mines, which were dull, were commencing to show improvement.

In the Sherbrooke, Que., district, asbestos and copper mines were running as usual, there being a fair demand for asbestos and a good demand for copper ore. In the Cobalt district, conditions generally were better than at any time since the war began. There was no greater demand for labour, but a great many men left for other fields owing to increased activity in the mining of copper, and this left little in the way of unemployment. Many miners left for Montana, Michigan and other copper producing districts in the United States, as well as for the Gold Coast in Africa. A number of the large mines cut down their underground operations considerably, some 100 men being affected. These lay-offs, however, were about met by the number of smaller companies resuming operations.

In British Columbia conditions showed continued improvement. The British Columbia Copper Company at Greenwood started operations on June 14, after being idle for ten months. One 800-ton furnace was commenced, giving work to 50 men at the smelter. The Mother Lode and Lone Star mines also began operations, 50 men being employed at the former and 30 men at the latter mines. The Rossland mines and the smelter at Trail continued active, and generally all mines which were working showed improvement. Workers at the

Granby smelter at Grand Forks were given an advance of 25 cents a day. The Granby company also resumed the payment of dividends, the first disbursement of this kind since June, 1914.

It was reported that the antimony mines at Lake George, N.B., would be reopened and operated. The construction of the St. John Valley Railroad puts the mines within three miles of the railway. When the mines were operated some years ago the ore had to be hauled about 16 miles for rail shipment and the price of antimony was low. The improvement in shipping facilities and the high prices obtaining for the metal were expected to overcome the disadvantages which made the operation of the property unprofitable in former years.

Manufacturing.

Manufacturing conditions in Canada continued to show improvement, and while the bulk of the activity was in the filling of war orders, this activity had a beneficial effect on general manufacturing as well.

The Sydney mines and Sydney steel works were much more active than in June of last year. Large orders for locomotives secured by the Canadian Locomotive Works at Kingston, Ont., from the Russian Government and from the Dominion Government for the Transcontinental and Intercolonial Railways, were expected to keep the establishment running at full capacity for many months.

Dullness was apparent in some shoe and leather factories in Quebec, though activity was reported in these industries in some Ontario centres.

At Berlin, Ont., trunk and shoe factories were reported as very busy, also tanners and saddlers. Furniture factories, planing mills, cigar factories, breweries and button factories, however, were working short time. At Niagara Falls, with the exception of woodworking factories, all industries were actively engaged. At Woodstock, wagon manufacturers reported some orders from

the West, and looked for improvement once the people felt sure of the crop. Furniture manufacturers at Woodstock were dull. At Stratford, all manufacturing industries were active.

During the month the annual convention of the Canadian Manufacturers' Association was held at Toronto. A full account of this convention is given elsewhere in the present issue of the *Labour Gazette*.

The annual general meeting of the Dominion Steel Corporation was held at the offices of the company at Montreal June 24. The report of the directors showed the net earnings of the company and its constituent companies, after making provision for bad and doubtful debts and after adjustment of the materials on hand, to be \$3,571,058.98. From this amount there was reserved for depreciation, sinking fund and proportion of discounts on bonds, the sum of \$1,064,279.88. Undivided profits carried forward were increased by \$225,256.24. Owing to its business being seriously disturbed by the war the company was obliged to postpone the payment of the dividend on the preferred stock. The operations of the coal company, it was stated, were affected unfavourably by the closing down for some months of the steel plant, but its business was on the whole well maintained. The prospects for the coming year were considered good, but the requisition of colliers by the Admiralty was seriously affecting the question of transport. In the early part of the year a distinct revival in the demand for iron and steel in Canada was apparent, but business came to a standstill with the outbreak of war. There had at the time of the meeting been no revival of Canada demand, but there was a considerable tonnage of steel required for war purposes, and demands for export trade were large while prices had risen to a level more in keeping with the heavy cost of transportation. The company was receiving a full share of business in this line. The only material addition which had been made to the properties since the last

annual report was a plant for the recovery of benzol and other hydrocarbons, the erection of which was undertaken in February. The plant was producing a considerable quantity of these by-products, which were greatly in demand, and even under normal conditions it was expected the plant would yield a good return on its cost. "On the whole," stated the report, "your directors are pleased to be able to report marked improvement in the outlook for your constituent companies in the coming year, as the result mainly of special demands from abroad."

Railway Construction.

Railway construction continued about the same as in May, there being no particular activity outside of western construction. A severe storm in Alberta about the end of the month resulted in a number of washouts and landslides on the main line of the Canadian Pacific Railway between Calgary and Field, and this occasioned some activity in rushing through repairs. Outside, however, of the continuation of work upon the railways being constructed north of Edmonton and work on the Canadian Northern and other lines in British Columbia, there was little beyond the regular maintenance work.

At Sydney extensive repairs were being made on the Intercolonial Railway bridges and fences, and a large number of men were employed in ballasting the tracks. At Halifax, work on the railway coming from Rockingham to the site of the terminals was being pushed forward. Ballasting and improvement of grades of the Canada Eastern division of the Intercolonial Railway was also progressing rapidly. A contract for a spur line of railway at Bathurst, N.B., was awarded to Reid McManus at a contract price of \$61,000.

At Montreal, work was still proceeding at the Canadian Northern tunnel, though the staff of workmen was comparatively small. The Canadian Pacific was extending its tracks at Glen

yard. The Southern Counties Railway was expected to complete its line to Granby before the season was over.

In Alberta, railway construction was very active on what are known as the McArthur lines running north from Edmonton. On the route to Fort McMurray the line was being ballasted as far as Lac la Biche, and from that point grading operations were being carried on. Work was also proceeding on the line to Peace River Crossing. Grading also was progressing on branches of the Canadian Northern and some work was being done on the main line of that road. This company was also making active progress on its McLeod line.

General Transport.

There was a fair amount of activity in general transport, more particularly in water transportation, a slackness being reported in railway traffic in a number of districts. The inauguration of a passenger and freight service over the newly-acquired Transcontinental Railway by the Dominion Government also occasioned some activity. The Government also took over the Lake Superior branch of the Grand Trunk Pacific.

At Sydney, N.S., transportation both by water and rail continued fairly heavy. At Halifax activity continued at the deep sea terminals, and there was considerable employment for longshoremen in the loading of deal and other cargoes.

At Montreal there was greater activity along the waterfront than was first expected; the number of vessels coming into the harbour being not far behind that of the same period of last year, and although many of these vessels came in ballast or with light cargoes, they went out with capacity loads. There was considerable work provided, also, in the fitting-up of vessels for cargoes to which they were not accustomed. The placing of many of the larger lake vessels in ocean and coast service resulted in a falling-off in the amount of grain brought through the Lachine Canal.

At St. Thomas fairly quiet conditions were reported. The Pere Marquette shops laid off 25 men during the month and men who were retained had their time reduced to 32 hours a week—an eight-hour day, with Wednesdays and Saturdays off. During the month the shops were closed down for a week—all hands being affected. Some men were also laid off on the Michigan Central. Business, however, showed a tendency to increase towards the end of the month and a few men were re-hired. The new London and Port Stanley hydro-electric line was completed and a trial run made towards the end of the month to test equipment. A number of the crews formerly employed by the line when operated as a steam road were expected to go to St. Thomas to accept positions on the Pere Marquette, new crews to be installed by the electric line. The road was expected to be open for traffic on July 1.

From Winnipeg it was reported that freight movements throughout the month were fairly steady, but there were less freight handlers employed than for the same period last year. Some improvement in railway traffic was noted in Fernie, B.C. The Canadian Pacific Railway put on an extra passenger service between Calgary and Spokane, and two additional freight trains were also put on during the month. With the completion of oil tanks at Prince Rupert, trains of the Grand Trunk Pacific on that division commenced burning fuel oil. Grand Trunk Pacific boats trading from Prince Rupert also adopted oil fuel. There was an increase in the service of the Prince Rupert division, there being three trains per week, instead of two as before. Grand Trunk Pacific boats also commenced running three trips each way weekly between Seattle, Victoria and Vancouver and Prince Rupert to meet the increased passenger traffic.

The Grand Trunk Railway Company has arranged for running rights over the National Transcontinental Railway and will put on a service from Toronto to Winnipeg.

The operation of "jitney" busses has been made the subject of regulation by a number of municipalities. In Toronto, where the membership of the Jitney Association has grown to 100, members have arranged with an insurance company to bond all drivers for \$10,000 as insurance against accidents to passengers. The civic license for a jitney has been fixed at \$12 per annum. Toronto street railway receipts were reported to have fallen off to a great extent owing to the establishment of the jitney system. Regulations were also put into effect at Hamilton providing for an annual license fee of \$2 for each sitting, exclusive of the driver's seat, that cars must be kept clean, safe and dry, in good order and repair and be provided with safety appliances to be used when necessary. A number of other questions were also provided for. At Winnipeg 480 owners were reported to have secured licenses at a cost of \$20 each.

The Trades.

Building.—A slight improvement was noticeable in building operations in a number of places in Canada, and the building trades were somewhat better employed on the whole than during the previous month. Not much change was apparent in the West.

Metal.—Machinists continued to be actively engaged.

Printing.—Printing trades continued fairly active, with dullness noticeable in some localities.

Clothing.—In a few localities where war orders were being executed, clothing trades were busy, but in general these trades were quiet.

Woodworking.—Some improvement was reported in wagon factories, but generally conditions remained about the same as in the previous month.

Food and Tobacco.—No improvement was reported in the dull condition of tobacco trades. Trades engaged in the preparation of food continued busy. The

opening of canning factories added to activity in this connection.

Leather Trades.—Conditions varied with different localities. In Quebec, leather and shoe workers were reported dull; in some localities in Ontario, busy.

Transport.—Conditions were fairly active with 'longshoremen and other workmen connected with water transportation. Employment for railway workers was not so good.

Unskilled.—A slight improvement in building operations mitigated to some extent the amount of unemployment in unskilled trades in a few localities, and the opening of canning factories and a somewhat better demand for farm help assisted in this direction. Instances of this kind, however, were restricted to a few localities, and there could not be said to be any appreciable diminution in the number of unemployed at the end of the month.

Canadian Trade and Revenue.

Foreign and Imperial Trade.—During May, 1915, there was a decrease in the total value of the imports entered for consumption in the Dominion of Canada, as compared with the corresponding month of 1914, the amounts being \$35,046,944 and \$45,614,533 for 1915 and 1914 respectively. The decrease for the two months ended May 31, 1915, against the same period of 1914, amounted to \$18,875,220. The total value of domestic exports during May, 1915, amounted to \$42,080,486, an increase of \$12,074,851 as compared with the same month of 1914. The total value of domestic exports during the two months of the fiscal year ended May 31, 1915, was \$70,772,375, as compared with \$45,758,706 for the same period of 1914. During May, 1915, increases were shown in the products of the mine, the fisheries, the forest, animals and their produce, agriculture, manufactures and miscellaneous merchandise. The following table gives the latest official summary of Canadian foreign trade:

Canadian Trade, May, 1915.

TOTAL IMPORTS ENTERED FOR CONSUMPTION IN THE DOMINION OF CANADA.

	ENTERED FOR CONSUMPTION.

Total.....	\$580,134,729	\$715,108,632	— \$134,973,903

The May, 1915, bank statement shows an increase in paid-up capital of \$2,-617, the total at the end of May being \$113,982,653. There was an increase in deposits in Canada payable on demand, the totals being \$347,346,119 and \$347,-325,937 for May and April respectively. Notes in circulation amounted to \$99,-

125,136, as compared with \$96,288,398 for April, an increase of \$2,836,738. Loans to cities, towns, municipalities, etc., amounted to \$43,948,436, and other current loans to \$760,631,113. During April, 1915, the total amount of these was \$805,963,211. The figures, therefore, for May show a decrease of \$1,-383,662.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

Markets for Canadian Lumber. First Report of Special Commissioner on Investigations in the United Kingdom.

MR. H. R. McMillan, who was appointed as a special and temporary Trade Commissioner to look into requirements and possibilities of markets for Canadian lumber abroad, has submitted

his first report embodying the result of his investigations in the United Kingdom. The report, which is published in full in the weekly bulletin issued by the Department of Trade and Commerce on June 21, deals with the special requirements for timber in the United Kingdom due to the abnormal demand created by the war, and contains information of interest and value to Canadian producers of lumber.

Appointment of Commissioner to Enquire into Mining Accident at South Wellington, B.C.

The Honourable Mr. Justice Murphy has been appointed a commissioner to enquire into the cause and the responsibility for the accident which occurred on February 9, 1915, in the No. 1 slope of the South Wellington coal mine, and in regard to the plans and workings of the mine and the abandoned Southfield mine adjoining, and generally into the conditions existing in the mines on the date of the accident. The commissioner will hold his first sitting at the court house, Nanaimo, on July 5.

British Armament Supply. Commissioners Visit Western Provinces. Examination of Applicants.

The British Commissioners who visited Canada with respect to the matter of securing workers for British armament firms, spent the month of June at different points in the Western Provinces. Word received in the Department about the end of the month showed them to be at that time at the Pacific coast looking forward shortly to return east. Expert mechanics it is understood had been sent out by the British Board of Trade who would assist in the testing of the various applicants for work in British armament factories. These experts arrived in Toronto shortly before the close of the month and were planning to visit the larger industrial centres and deal in this way with the applications received.

Annual Convention of Canadian Society Domestic Sanitary and Heating Engineers.

The twentieth annual convention of the Canadian Society of Domestic Sanitary and Heating Engineers was held in St. John, N.B., June 22, 23 and 24, many members representing various parts of Canada being in attendance.

Reports were presented by the president, vice-president and chairmen of the various committees, and discussed by the convention. A number of resolutions affecting business and public health were adopted. The following officers were elected: President, E. H. Russell, London, Ont.; vice-president, D. J. Shea, Fredericton, N.B.; secretary-treasurer, B. Noble, London, Ont.

The convention of the New Brunswick section of the larger society was also held at St. John in the same month. Reports of various committees dealing with sanitation, heating, arbitration, legislation, apprenticeship and education were read and discussed. D. J. Shea and William Watson were re-elected president and vice-president respectively and R. E. Fitzgerald of St. John elected secretary-treasurer in place of W. C. Crawford, who retired.

Prorogation of Saskatchewan Legislature. — Resolution on Agricultural Production and Unemployment.

The fourth session of the third legislature of the Province of Saskatchewan, which commenced on May 10, was prorogued June 24. Amongst the various measures passed were a number affecting the agricultural industry and to some extent railway construction. The chief legislation, however, was in the direction of temperance reform.

The address of His Honour the Lieutenant Governor referred to the enactment of measures likely to prove of material benefit to farmers and to other legislation passed by the legislature. Reference was also made to the crop prospects in the province, which were regarded as bright, and to the necessity for the utmost effort and sacrifice in rendering all possible assistance to Great Britain and her allies in the prosecution of the war. In this connection the work of the legislature in "ending the serious economic drain upon individual and collective resources involved in the liquor traffic," was also referred to.

On the day prior to prorogation the following resolution was passed unanimously:

"Whereas, in the opinion of this Legislative Assembly the most urgent problem confronting the people of Canada, saving only the issue of the present war, is that of speedily and largely increasing the Dominion's annual volume of natural products, which involves a speedy and large increase in agricultural population;

"And, whereas, an immediate if lesser problem arises from the several thousands of unemployed workmen now in Western Canadian cities, many of whom are European born and whose lives before they came to Canada were spent upon farms;

"Therefore, be it resolved, that joint action should be taken by the Federal Government and the several Provincial Governments towards the end that these unemployed workmen who have had agricultural experience may become producers of Canadian agricultural produce, and further that the fields from which Canada may expect to obtain increases to the agricultural population should be again examined without loss of time and a definite, energetic and comprehensive policy set on foot to effect the solution of the gravely urgent problem."

*Change in Immigration Regulations.
Mine Workers From Newfoundland
Admitted to Nova Scotia.*

For a number of years past it has been the custom of the coal and steel companies of Nova Scotia, after engaging all local help available, to import from Newfoundland any extra help needed in their mines. The men from Newfound-

land have been found especially desirable because they have a knowledge of the conditions prevailing in the Nova Scotia mines and are able at small expense to return to their native homes any time a reduction in the operating staff becomes necessary. For these reasons restrictive immigration regulations have not as a rule been enforced against miners from Newfoundland. Last month it was represented that miners were being brought from Newfoundland when there was a sufficient number locally to supply the demand. Upon the strength of these representations the immigration authorities enforced restrictive regulations, which resulted in the rejection of a number not having \$25 in their possession at time of arrival. A thorough investigation into the labour situation being made, it was definitely ascertained that a sufficient supply of miners of a suitable class could not be secured in Canada, and consequently it was decided to admit those from Newfoundland as in past years, providing they had satisfactory evidence of work awaiting them at some specific point immediately upon arrival.

*Internment of Aliens at Several Western
Coal Mines.*

During the month some trouble arose among miners in the Crow's Nest Pass and Southern Alberta coal districts, owing to the objection on the part of miners of British origin and of nationalities allied with Great Britain in the war, to working underground with Austrian and German miners. There was some cessation of work at Coal Creek, but it lasted only a day or two, when the authorities intervened and interned all single miners and, as it is understood, all married miners of enemy nationality and not having families in Canada. The trouble which originated at Fernie was extended to Hillcrest and affected to some extent the Coleman camp. The general result of the trouble was that some 300 men from the Fernie

and Michel mines were taken from employment and placed in interment quarters at Fernie, while approximately 140 men were temporarily laid off at Hillcrest. The situation did not affect the Bellevue camp on account of enemy aliens having been excluded by the company some months ago.

The nationalities of the men employed by the Crow's Nest Pass Coal Company, which was the principal company affected by the trouble, are as follows:

British.....	858
Italian.....	492
Russian.....	142

II.—REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Halifax,

Amherst.

The labour market, while not up to that of June, 1914, was somewhat better than last month, this being due to orders for shells and boxes, and with the arrival of more machinery these will be increased. While there was no great rush in the other industries they were running along generally satisfactory.

The departure of the troops from Amherst has interfered with the wholesale and retail trade, making business in these lines somewhat quieter.

The cost of living remained about the same, with the exception of flour which has dropped 90 cents per barrel.

Although the weather during the month somewhat interfered with the planting of crops, there will be a larger acreage than last year, and with a continuance of the growing weather that has prevailed during the month, the farmer will have very little to complain of, as the prospects for good prices are exceptional.

Fishermen have had very satisfactory results from their labour, and prospects for good prices were much better than some time ago.

Labour conditions for June continued to be very fair, although in some branches of the building trades there was more unemployment than usual at this season of the year. As reported a month ago, there was very little to do for bricklayers and masons, and carpenters reported a surplus supply of help in their line. All other trades reported conditions fair.

The Dempster woodworking mills, after remaining idle during the winter months, have been taken over by a new company, the Piercy Supply Company. The old employees of the Dempster Company have secured employment with the new firm. Extensive alterations and additions are being made to the plant, and when completed additional help will be required.

The Nova Scotia Car Works had some rush orders to fill early in the month, and for a time the help worked night and day. This firm has not had sufficient work to keep the plant in operation during the past year, and most of the help have left the city or turned to other occupations.

In some branches of 'longshore work conditions have been very active. Men engaged in handling deal have had quite a busy time.

Work on No. 2 pier, deepwater terminals, was about completed. At the new south end terminals splendid progress has been made during the past month. The number of men employed in excavating, filling in, and in the manufacture of the huge concrete blocks was being increased daily, and as this work was only in its preparatory stages the outlook was for very active conditions in Halifax when things are in readiness for the construction of the docks and buildings. Work on the railway cutting from Rockingham to the site of the terminals was being pushed along rapidly.

Farmers have been hampered in their work somewhat by a long spell of wet weather, but reported the growth up to the average year, with the condition of the grass excellent.

Fishermen had a very successful month. Large fares of mackerel were taken all along the coast, but particularly on the south shore. The "Prince George," sailing from Yarmouth June 5, carried about 3,500 barrels, the largest shipment in years. Other steamers in the Yarmouth-Boston service carried heavy mackerel cargoes to Boston.

The lobster fishermen in this vicinity also fared well and did a profitable business. Lobsters sold from three for 25 cents for small up to 30 cents each in the Halifax fish stores.

Sydney.

The general condition of labour continued to improve and activity prevailed in all the larger industries. In addition to this much civic work was started up which gave employment to a large number of men. This tended to make business brisk, and with the exception of city carpenters and some other mechanics at Sydney, activity was general in the whole district. There was a tone of confidence permeating nearly all classes which gave much encouragement to business generally.

The steel and coal industries were active, and prospects were bright for

both. The smaller works such as the foundries and wood factories were not as active as could be wished, but many of the workmen continued to find employment elsewhere in the city.

The Sydney mines and Sydney steel works were much more active than in June of last year. Both of these companies are making material for shells for the British War Office. There is no holding back on the part of the workmen employed on shell making for they are very anxious to make all they can in the shortest time possible.

The coal trade continued brisk throughout the Glace Bay district, the only draw-back being the want of vessels for water transportation which caused an occasional idle day. Inverness colliery was fairly busy during the month, but as this company has no chartered steamer in the trade this year it is entirely dependent upon the local market, which so far has been fairly good.

The building and allied trades still remained quiet, although there was a little more work to do than during May.

Transportation by water and rail were fairly heavy.

Extensive repairs were being made on the Intercolonial Railway bridges and fences, and a large number of men were employed in ballasting the tracks.

Unskilled labour was in fair demand around the collieries.

The weather was cold and wet during most of the month and unfavourable to root crops and small seeds, but the hay crop promises to be very good. A larger acreage has been put under cultivation than ever before, and if warm weather sets in there is no doubt that a large amount of produce will be grown in Cape Breton Island.

Fishing was fairly good and large catches of haddock, salmon and mackerel were taken.

The extension of the Intercolonial Railway around Little Bras d'Or was being finished up. Bridges, culverts and fences were being put in and built. The track was also being put in condition to permit faster travel.

Truro.

Labour of all kinds was well employed. Stanfields Ltd., which was shut down for two weeks, resumed operations on June 14. All other industries were operated steadily.

A great many wooden buildings were being erected, and as a consequence carpenters were busy, and builders' labourers as well. A contract for a \$12,000 addition to the central fire station was let.

Seeding was completed, and the outlook for good crops was bright.

Summer lumber operations were being carried on extensively.

Railway operations showed signs of improvement.

Painters, tailors and retail clerks were well employed. Printers were fairly well employed.

Trade, both wholesale and retail, was reported satisfactory.

Bank clearings were up to the mark.

The lobster season was very satisfactory.

The cost of living ran evenly, with a drop in some lines, particularly farm produce.

The coal mine at Kemptown closed down for a week. The chair works at Bass River and ribbon wood works at Stewiacke were operated steadily.

Westville.

The demand for labour was decidedly greater than for many months past, and away over the corresponding period of last year, due to the active operations in the coal industry, together with the large orders being filled for war munitions.

The above, of course, tends to increase railway traffic, which was gradually assuming normal conditions.

Wholesale and retail trades showed a decided improvement over last year and were quite brisk.

Lumbering continued active.

The coal mines operated full time and the prospects were bright for the summer in this industry. The Allan shafts, at which an explosion occurred last December, have again been opened up. The mine is reported in good condition and mining operations were going on at the end of the month.

Woollen mills were busy.

Printing, clothing, leather and miscellaneous trades were quiet. Bakers, confectioners and butchers were busy.

Transport and building trades were fairly well employed.

Metal and engineering trades were active.

Woodworking and furnishing trades were quiet.

PRINCE EDWARD ISLAND.**Charlottetown.**

Labour in and around Charlottetown does not appear to have experienced any very great change owing to war conditions.

Building operations were brisk. Several buildings were under construction and carpenters had a full season's work in hand.

Commercial conditions were normal. Several large shipments of live stock, etc., have left this port.

The local canning factory was busy with a heavy contract.

The laying of storm sewers was being pushed in Charlottetown. The cost is estimated at \$30,000.

Lobsters and cod were reported in great abundance in the western part of the island. The capacity of the fish store rooms was being taxed to the utmost.

Mackerel were not so plentiful in the market owing to unfavourable weather which interfered with the fishing. They were selling at 20 and 25 cents each, and corned two for 25 cents. Cod sold at 4 cents per lb. and lobsters 12 cents lb.

Considerable activity prevailed in the baling and shipping of hay.

The wet weather which prevailed for the past two weeks of the month was a severe drawback to farmers. A large crop, however, is looked for this year.

NEW BRUNSWICK.

Fredericton.

Skilled and unskilled labour was generally well employed during June, while in some branches there was greatly increased activity. The machine shops were especially busy and looking for more help. The sawmills were working full time and giving employment to a large number of men. Any persons really looking for work could easily find it.

Trade, both wholesale and retail, was reported active in all its branches, while bank collections were said to be satisfactory.

Farmers were through seeding, and conditions appeared favourable for good crops. The fruit crop also promised much better than last year, and apple growers were expecting a heavy yield.

There is again some talk of the anti-mony mines at Prince William being re-opened and worked in the near future. While nothing definite has been decided, negotiations have been in progress which were expected to bring this important industry into activity again.

Moncton.

All the various branches of labour have been enjoying conditions of steady activity during the entire month, and both volume of employment and output very materially exceeded that of May and also of the corresponding period of last season. All the local supply of labour was employed and considerable outside help has been attracted by the active conditions prevailing. Both public and private building operations were much more extensive than those of last year, and the outlook promised activity until the close of the season.

The School Board have asked tenders for the erection of a new high school building of stone and brick, to be completed on or before March, 1916. Excavation and concrete work on the Main street subway were both well advanced and a considerable force of men employed.

Very active conditions also prevailed in all manufacturing plants. The installation of machinery in the Record foundry for the manufacture of shells has been completed and the work was in progress.

The contract for the construction of a concrete dam to create an artificial lake at Jordan Sanatorium has been let at \$22,000, and work will commence at once.

Considerable activity existed in real estate with prices firm.

A change in the hours of labour of the clerks in the Government railway offices began June 14, the hours after that date being from 8.30 a.m. to 12.00, and from 1 p.m. to 5 p.m. The former hours were 9 a.m. to 1 p.m., and 2.30 p.m. to 6 p.m. The hours of labour remain the same.

The unfavourable weather which existed throughout the month of May continued to a lesser extent during June, and as a consequence farmers were much handicapped in sowing and planting operations which were, however, about completed at the end of the month. The acreage has been considerably affected and crops will be late. Grass, however, looked remarkably well. Farm help continued very scarce.

Newcastle.

The labour market continued steady during June, with practically all available men being employed. Building trades were very active as was also unskilled labour, which is largely employed in the lumber mills and loading of lumber. Activity still continued in shipping circles, and not for some years have so many vessels been loading at this port.

Work on the new opera house was under way. The contract for a new station at Derby Junction has been awarded and it was expected work would commence shortly. There was also some talk of rebuilding the pulp and paper mill of the New Brunswick Pulp and Paper Company at Millerton which was destroyed by fire January 1 last.

Agricultural conditions, although not ideal, were very good. The farmers had all their spring work done. The hay crop has been benefitted by the many showers and promised to be the best for years.

Fishing continued good, and a large number of salmon were being taken. Cod were reported very plentiful and large numbers were taken by the salmon fishermen, who were forced to throw them back into the water as they have no means of preserving them. A heavy storm on June 23 did considerable damage to fishing as well as causing the loss of five lives.

The lumber mills were very active, working full time with capacity crews. Very few logs were hung up by low water, as the rains in the early part of the month enabled the companies to get most of the logs into the booms.

The contract for the spur line of railway at Bathurst has been awarded to Ried McManus at a contract price of \$61,000.

All local industries were working steadily.

The improvement work on the road-bed of the Canada Eastern division of the Intercolonial was progressing rapidly. The ballasting between McLaggan's and Blackville was completed and the track raised about a foot, while between Upper Blackville and Forks Siding the track has been raised about a foot and a half. The Nelson Hollow bridge was also near completion.

St. John.

There was not much change in the labour market during June, very little new work being started in the city proper, but considerable activity was being carried on in the suburbs. Several development companies are erecting wooden dwellings in Lancaster, Glen Falls, Carleton, Fairville and East St. John.

The St. John Milling Company has erected a new flour mill in Carleton, being the first of its kind ever installed in St. John. The mill is of the variety known as the Tattersall Midget Marvel, and has a capacity of 50 barrels per day.

Reports published in the daily press in the early part of June that work was to be suspended on the Courtenay Bay works has turned out to be incorrect, as work was proceeding as usual, giving employment to a large number of men. A new company has taken the work over and dredging was being rapidly prosecuted.

Custom receipts for May show an increase of \$55,855.14 over May, 1914. The following is the statement: 1914, \$121,457.74; 1915, \$177,312.88.

The inland revenue receipts for the month of May were \$19,334.84, and for the corresponding period last year \$14,890.51, an increase of \$4,444.33.

Bank clearings for the four weeks ending June 24 were \$5,930,052, and for the corresponding period last year \$6,175,863, being \$245,811 greater in 1914 than in 1915, and \$1,446,104 less than for the five weeks ending May 27 of the current year.

Savings bank transactions for the month of May were: deposits, \$66,597.06; withdrawals, \$91,386.03.

Wholesale grocers will close their establishments at 5 p.m. during the months of June, July and August. Several of the leading dry goods, hardware and stationery stores close at 1 o'clock on Saturdays, but keep open until 10 o'clock on Friday evenings. This has

been the custom for several years past during the summer months.

The City Council has increased the policemen's pay as follows, to date from the first of June: first inspector and first detective, each \$3.25 per day; assistant detective, \$2.75; inspectors or sergeants, \$2.75; patrolmen (second year), \$2.50; patrolmen (first year), \$2; police matron, \$60 a month.

The first catch of sardine herring the present season was made on June 25 at Sand Cove, when nine hogsheads were taken.

Reports from the upper St. John river were encouraging, and it was expected the upper corporation drive, containing about 3,000,000 feet of logs, would be over Grand Falls early in July.

Alma.—J. W. Breen is at Alma, Albert County, superintending the building of three lighthouses. One is to be placed on the breakwater at Alma, one on Herring Cove breakwater, and one at the mouth of Point Wolf river.

Sussex.—Sussex and vicinity was visited by a freshet on June 9, doing considerable damage. At Walker Settlement a field of oats and potatoes was washed away.

QUEBEC.

Hull.

A marked improvement was shown in the labour conditions in this locality. The number of unemployed has certainly decreased, and farm work will give employment to many men. The lumber trade promises to be more active. Lumbering operations will be more extensive than last winter, and this will in a large measure improve labour conditions in this locality.

Most manufacturing establishments, specially pulp mills, were active. Business men in general reported trade as being good.

The cost of living has somewhat increased. Flour, however, has come down .80 cents per barrel.

The falling of rain during the month made probable a good wheat and oat crop. Hay, however, did not look so well.

Weather conditions have favoured building operations, and many labourers have been employed in cement sidewalk repairing and building.

Montreal.

During June there was a steady increase in hopefulness and confidence on the part of manufacturers and merchants. There was an appreciable betterment in the amount of business done in some lines, but not enough to make the month any different in character from May. Summery conditions made a brisk demand in wash goods and light fabrics, but the boot and shoe trade was on the slow side. The local demand for leather was not active, but there have been large sales of soles in the United States and France as well as inquiry from Great Britain. The hardware trade has been good from country points, but city trade has been limited on account of the falling off in building operations. There was a shortage in some lines of hardware because all the foundries which are in a position to do so are devoting all their attention to the manufacture of munitions of war. There was very little building going on. The prices on real estate were maintained with little selling taking place.

The active season for paints and oils was over, but a good trade was still reported. The mills were making active deliveries of domestic textiles. It is becoming difficult to get supplies of woolen dress goods, and it is thought that velveteens and corduroys will be largely utilized for fall wear. Supplies of Italian silks will now likely be affected by Italy's participation in the war. In the boot and shoe trade orders for men's wear were light, but the vogue in ladies' cloth-topped boots kept some factories moderately busy.

Cigar manufacturers reported poor business, the output of local factories

being greatly under the corresponding period last year. The termination of the contract between the wholesale grocers and the Cannery Association has caused some lines of canned goods to be offered below standard prices, particularly tomatoes. Export to the English market was expected to relieve the situation.

The hopefulness of people in business seems to be based on their expectation of an excellent crop this year, the continuance and increase of war orders and the fact that the situation has not grown worse in spite of gloomy prophecies in the first six or more months of war. The tendency was still to economize.

The Dominion Bridge Company is constructing an addition to its works which will cover about an acre of ground and other iron and steel construction companies and machine shops have installed a great deal of new machinery and increased the capacity of their plants.

The Canadian Car and Foundry Company has received an order for 600 standard forty-ton freight cars for the Intercolonial Railway from the Dominion Government, the order being valued at \$750,000. The 2,000 steel freight car order from the Russian Government was not closed at the end of the month though it was expected it would be soon.

Mr. J. H. Plummer at the annual meeting of the Dominion Steel Corporation stated that the company was getting as much foreign business as it desires. The output of ingots had risen to 29,000 tons, and another blast furnace would be started early in July. Canadian business had not improved very much.

During the last week of June natural gas was struck at St. Barnaby at a depth of 2,250 feet in the third well started on May 1. As soon as the full force is obtained in the third well a fourth will be started, a fifth and perhaps a sixth before the season is over. A pipe line to Montreal is promised after that.

The Canadian Locomotive Works has received a rush order from the Govern-

ment for fifteen heavy locomotives to be used on the Intercolonial Railway.

Ames, Holden & McCreedy, Limited, reported their shoe factories busy on orders for the soldiers.

Tourist travel has not developed to the extent hoped for, but hotels and railroads still hope that hot weather will cause a rush to the North.

Work was still proceeding at the Canadian Northern tunnel, but the staff of workmen was comparatively small. The excavating work was still going on, a by-product of crushed stone being taken in the rough from the tunnel, ground in special machines and sold at good prices. The Bath Hotel and other buildings in the neighbourhood were being pulled down.

The Canadian Pacific was still extending the tracks at Glen yard. The Southern Counties Railroad expects to complete its line to Granby before the summer is over, which will give the company sixteen additional miles through the best parts of the southern counties. A sub-station, depots at intervals and barns will be erected.

On the water-front there has been greater activity than was at first expected. The vessels coming into the harbor have not been far behind those of last year in number, and they have taken capacity loads out with them although coming in ballast or very lightly laden. There has been a good deal of work in adapting vessels for cargoes to which they are not accustomed. With many of the larger lake vessels gone into the ocean and coasting service the grain brought down the Lachine Canal this season into the harbor is six million bushels less than last year. There were only 1,134 trips made in June through the canal against 1,506 made in the previous June. There was not a large decrease in the amount of wheat coming down in June, but the number of passengers was little more than half of the total in June, 1914. Customs receipts for June in the port were \$105,310.04 ahead of the corresponding month last year, being \$1,925,564.13.

The Harbor Commissioners have asked for tenders for demolishing and removing the buildings on the south side of Notre Dame street east between Marlborough street and half a block past Prefontaine street. This will make room for additional tracks. The great tanks of the Asphalt and Supply Company near Tarte Pier have been filled, with road oil in one, and refined oil in the other for general street paving purposes.

The City Council has finally passed the by-law levying a one-cent tax on every person entering a theatre, moving picture hall, an amusement hall, a concert hall, a circus, a playground, a racecourse, skating rink, or any other place where an entrance fee is collected. The hospitals and charitable institutions which are to get the benefit of this tax must give a monthly report showing the number of beds gratuitously occupied by patients who have resided in the city for six months at least before admission.

The Canadian Autobus Company has proposed to the city that the latter should guarantee its bonds to the extent of \$3,000,000, the company in return to construct and operate within a year 300 motor buses, and to pay the city one-half of its net receipts. The city attorney is considering whether this would be legal or not.

Messrs. Hering and Fuller, New York consulting engineers, have reported in favour of the construction of an additional unit to the present filter and the strengthening of the retaining walls for supporting the banks of the aqueduct excavation, at a cost of \$675,000. Controller Cote submitted a plan of expenditure to improve the water supply which totalled \$4,500,000, and was itemized as follows: Expropriation of land and Bond street retaining wall, \$225,000; fencing, \$35,000; draining ditches, \$25,000; culverts, \$15,000; entrance to aqueduct, \$475,000; entrance gates, \$100,000; bridges, \$560,000; retaining walls, including \$110,000 for additional plain concrete, \$675,000 (\$2,110,000 in all); hydro-electric power house, \$1,-

500,000, and \$900,000 for the second filter.

A free ferry service to St. Helen's Island was inaugurated on June 6, but the one ferry-boat capable of holding 800 persons has proved insufficient on holidays.

Mr. Robert C. Dexter, secretary of the Charity Organization Society, reports the society's work very strenuous in spite of the fact that it is summer. Through the society a plan has been started by which city residents away for the summer allow their ice to be delivered to poor families with infants and unable to purchase for themselves.

Casualties at the front have been so frequent that the Montreal Branch of the Canadian Patriotic Fund finds 234 families requiring its care as a result. This total is made up as follows: Killed in action, 52; invalided home, 61; prisoners or reported missing, 23; and wounded, 98. Of the large number of soldiers invalided home the fund is trying to find employment for those who are able to work. A special bureau of the fund will be opened to bring labour of this kind and employers into touch. The regular applications for relief increase at the rate of thirty a day. Up to May 31 \$382,867.89 was disbursed, the expenses for administering and collecting this fund being more than paid for by the interest. The exodus of Italian reservists in the near future is expected to throw another burden upon the fund. A special section for this work will probably be formed.

In response to an urgent call for increased hospital supplies and comforts for the Canadian soldiers from Dr. Hodgetts in London the Red Cross has decided to double its regular shipments so that 100 cases will be sent forward weekly instead of fortnightly as hitherto.

Four hundred applicants for engagement in armament and shipyard work in England have registered their names at the City Hall. Of this number 80 per cent are natives of Great Britain and 10 per cent Frenchmen or French-

Canadians, the rest being half Belgians and half other European nationalities. By trade 200 are machinists, 100 boiler-makers, shipwrights or ship carpenters, and the remainder blacksmiths, copper-smiths or moulders. They will be examined on July 10.

On complaint of an Italian deputation that they have been discriminated against by the city in giving out work, Mayor Martin asked the assistant chief engineer to instruct all corporation foremen to employ Italians in the same proportion as Canadians. Other men out of work have demonstrated at the City Hall and additional work at sidewalk construction was promised them.

There has been a continual exodus to the Spirit Lake camp of alien enemies, chiefly Austrians and their families during the month. Recruiting has also taken a very large number out of the city. French, Belgian and Russian reservists have gone in great numbers. Five thousand French-born residents have left since the war began. Citizens of Montreal have been hearing continually in June of the arrival in England of Montrealers who are going to the front. These have been drawn from all classes, those who had had work and those who were without. From the Grand Trunk and Canadian Pacific Railway offices 1,200 and 1,500 men respectively have gone and the Canadian Northern has contributed its quota. Of the three thousand men now at Valcartier the greater part have come from Montreal and different parts of Quebec. Recruiting was still steadily proceeding. Italian soldiers have been called to the colors and part of 3,000 Montenegrins have already come here to be transported to Three Rivers to await transportation to the front. The Speakers' Patriotic League has received encouraging co-operation from employers in their efforts to stimulate recruiting.

Though profits of Ames, Holden, McCready, Limited, fell off sharply, Mr. D. Lorne McGibbon, president, reported the outlook not discouraging. Additional orders from the Canadian Government

were being filled and further orders were expected both from the home and foreign Governments. The company's three large factories were capable of double the present output. The Canadian Converters' Company, Limited, had a bad year with a decrease of 66 per cent in profits, an increase in bad debts and an increase in failures reacting on the business. The obligations of the company to the bank and other creditors had been constantly reduced. The Ontario National Brick Company deferred its bond interest, and so did the City Central Real Estate Company.

Goodwin's Limited reported a considerable shrinkage in sales for the year on account of the war, but on account of reduction in operating expenses it was expected that the current year would show much better. The Montreal Water and Power Company had a gain of about five per cent in ordinary business over the previous year. Tooke Bros., Limited, dry goods, reported a fair business. Public utility companies have in the main done very well.

Montreal bank clearings for June were \$196,046,272, or \$38,091,541 below the aggregate for June, 1914. The decrease, February excepted, is the largest reported this year, but the total returns are at about the same level as during the preceding months.

Quebec.

The month has been a fairly good one. A large number of building permits have been issued, the greater part of these being either for repairs or small dwelling houses.

Work has been started upon the new Union Station. This building will cost, it is estimated, \$300,000 and in Levis a new freight shed that is to cost \$22,000 was also started during the month. The Electric Railway has also been engaged in putting in new curves and improving its line, the cost of these works being in the vicinity of \$15,000 to \$20,000. These activities all helped to improve labour conditions and would have done so had

they not been offset by dullness in manufacturing lines, the shoe and leather trades being very dull.

Farmers have been busy sowing and weather conditions have been very good.

In the lumbering industry all of the big mills in the outlying districts have started on their season's cut. The floating of logs to the mills was very successful, in most cases there being enough water and in no case too much. The Transcontinental Railway has begun the running of regular trains between Quebec and La Tuque and beyond this point west.

Sherbrooke.

Work was plentiful in Sherbrooke for almost all trades; the factories making shells were advertising for men and could not get all they wanted. Bricklayers and masons and carpenters were also busy, while unskilled labour was in fair demand. In fact there was no reason for any person being idle who wanted to work. A number of young men have joined the different corps for overseas duty.

All factories were busy, particularly those making war material, most of these working night and day.

McKinnon & Holmes were progressing well with the addition to their factory and expected to be running about July 15, as they have most of their new machinery installed. The Connecticut Cotton Mills were running full time and could hardly keep up with their orders.

The Kayser Silk Company has started and are employing some local help. The company brought a number of operatives from the United States with them.

Farmers were busy and expected a large crop of hay. A good number of farmers planted more wheat than usual which looked good at the end of the month.

Lumbering was quiet.

The asbestos and copper mines were running as usual, there being a fair demand for asbestos and a good demand for copper ore.

Sorel.

The condition of labour has been very satisfactory in Sorel and the district of Richelieu during the month. Work has been relatively abundant and as many men as in the previous month have been employed. In some of the shops, especially in some shipyards, a certain number of men have been discharged, but most of them have found work elsewhere. In the other industrial concerns activity has been good. There has been plenty of work and the wages paid have been fair.

In the foundries more men have been employed. Men who had no work in the city found employment on farms where they were greatly needed.

Trade has been good, comparing favourably with that of the same month in previous years.

The cost of living continued high. Some of the commodities are, however, cheaper, especially butter, new cheese, ordinary family flour and evaporated apples. There has been also a decrease in the price of potatoes. As to other commodities they have been as high as in the previous month.

Building trades have had a better month and more men have been employed.

As a whole the month, all things considered, has been satisfactory.

Great activity has also been noticed on the farms where more land has been ploughed and sown. Great care has been taken to assure a good crop. Hay seems to have somewhat suffered by the cold weather and rain that prevailed part of May and June, but grain and vegetables had a good appearance and promise a very satisfactory crop.

St. Hyacinthe.

The general condition of the labour market was not quite as good as during the preceding month, but was better than during the corresponding month of last year. Two buildings only were started during the month, but consid-

erable repair work was carried on, which gave employment to the building trades. The sash and door, boot and shoe, leather and tobacco industries had a quiet month. The other local industries were active.

Anyone looking for employment was able to find outside work. Civic work, such as permanent sidewalks, sewers and the laying of water mains, gave employment to all those in need of it. The gas company also had considerable work under way.

There was little change in the cost of necessities of life. Coal (stove size) went up 25 cents per ton, as usual, and the price will go up 25 cents per ton every month until October. Rents continued high, and no decrease is expected next fall.

Wholesale business was fair and the retail trade had a good month. Banks reported a good month, with satisfactory collections.

The general condition of agriculture was very good. The crops look well. Garden produce was plentiful and sold well. The fruit crop promises to be a large one. Dairy and farm products sold at good prices.

St. John's and Iberville.

The labour market showed a slight improvement as compared with the preceding month. There were not so many unemployed in the locality. Unskilled labour was better employed than during last month. The city employed a number of them at sidewalk, sewer, etc., construction, and others found work on the farms. The building trades showed no improvement over last month, and there was a number of idle men in these trades.

Navigation was active during the month. More ships passed through the harbour this season than during the same period last year.

The Etna Explosives Company, an American concern, wishes to start in St. John's, as early as possible, an explosive factory as well as dye works and has

entered into negotiations for that purpose with the municipal authorities. The Singer Manufacturing Company, which had been working only 30 hours per week, has announced that, starting from July 5, the working hours will be 50 per week with a larger staff.

Wholesale and retail merchants reported trade as being rather quiet.

The cost of living has changed in some lines during the month. Milk, sugar, butter and flour were cheaper, but eggs and ham have increased in price.

Agricultural conditions were very good. The recent rains have done much good. The prospect for potatoes and fruits never was better than this year.

Fishing was fairly active. Lumber dealers reported a quiet month.

Three Rivers.

Labour conditions during June were more active in some branches of industry than during May, but there was still a number of workers out of employment.

The Three Rivers Traction Company began the laying of ties and rails early in the month and the concreting of the streets was expected to follow immediately. The City Council has given a contract for some concrete street paving which will employ a number of the city labouring class.

The city has also given a contract to the North Shore Power Company to install more street lights.

There has not been much increased commercial activity since last month.

The wholesale and retail trades do not show any improvement over the same month last year.

Farmers were busy, with fine weather and good prospects.

Fishing was rather quiet.

Every sawmill of the city and district started sawing during June and all were working full time.

All factories were running fairly well.

The Three Rivers Traction Company started the construction of their road during the first week of June and the work has progressed steadily.

The provincial highway contractors have commenced making the highway at the Cape. The work between this city and Berthier was being done by different crews and was progressing fairly well.

ONTARIO.

Belleville.

There was little change to note in labour conditions during June as compared with the previous month. Building operations were only fair as compared with the same period last year. Some additional employment was given to unskilled labourers owing to the fact that a sewerage system for the western portion of the city was commenced which will entail an expenditure of upwards of \$30,000. This work was started towards the end of the month and a number of unskilled labourers were employed.

The work of constructing the new Bank of Commerce building has commenced and will give employment to a number of workmen. A new children's shelter building has also been commenced.

In the various industries, such as the two lock factories and foundries the month was fairly busy, the employees working full time.

In agricultural pursuits there has been considerable activity. Crops generally are good with a prospect that the yield will be one of the best in years.

Some work in improving the roadbed of the Canadian Pacific Railway and Canadian Northern Railway through the city has been going on, giving employment to a number of unskilled labourers.

Berlin.

Labour conditions for June were about the same as for the previous month. Furniture factories, planing mills, sash and door factories, cigar factories, breweries, button factories, some shirt and collar factories were working short hours. The Dominion Tire Fac-

tory, the Buffalo Forge Company, McBrine Trunk Factory and one shoe factory were very busy, the first two working night shifts. Tanneries and saddlers were still busy. The Berlin Trunk and Bag Company received an order for 10,000 army halters which will keep them busy for two months at least.

The building trades were fairly well employed. Work on the addition to the library was going on as well as on the Dietrich bakery, the Schantz block, the Economical Fire Insurance building and the Bricker block. The new Merchants Bank building was nearly completed, only the interior to be finished. Work was also commenced on a fruit warehouse near the Grand Trunk Railway station and on a large addition to Zion Evangelical church.

During the month the Metcalfe Candy Company of Berlin secured a Dominion charter for the manufacture of candies of all descriptions. The capital stock is fixed at \$50,000. This will mean another large industry for Berlin. The firm intend to build at the corner of Cedar and Elgin streets.

Wholesale and retail trade although fair was not near up to the same month last year.

Customs returns for May were \$61,124.65 against \$36,141.10 for May, 1914, an increase of \$24,983.55.

There were no strikes nor lockouts during the month, but wages in general were not as high as last year, especially so with hod carriers, non-union bricklayers, non-union cigar makers and painters and unskilled labour.

The cost of living remained about the same. Flour dropped, but eggs and meats were higher than last month; so were beans and cheese, the increase in price in the last two being mainly due to large shipments to Europe.

Farmers were kept busy caring for their stock and marketing their vegetables and fruits. Strawberries were a good crop but early cherries and other small fruits were somewhat damaged by frosts. Fall wheat and other grain looked well and the outlook for a good

crop was fair. Farmers are not complaining about help this year, as good men can be had at very reasonable wages.

Brantford.

Labour conditions have not improved generally during the past month, and continue very much below the average for former years.

The building trades show slight improvement over last month, more permits being granted, and those being of greater value. A permit for a new store, valued at \$63,000, has been granted, and work immediately started. This will help much, as it is to be hurried to completion, and all men that can be possibly handled will be employed.

The Board of Education has commenced fixing new plumbing in the Central school at a cost of about \$6,000. It was found impossible at the present time to renew the heating and ventilating system.

The other building work commenced previous to this month is progressing favourably, there being a large surplus of men to draw upon.

The new bridge spanning the Grand river was progressing, and steel work was soon to be commenced. The concrete work was being done.

The civic authorities have a large number of men employed laying sewers and repairing streets.

The factories remained quiet and a large number of men were unemployed. Those factories engaged in the manufacture of war munitions were the only ones showing activity.

During the month the new post office buildings were opened, and the small amount of work which had to be completed was nearly finished. The city authorities contemplate buying Mohawk Park for recreation purposes, and some work will be done in fixing and cleaning things up to add to public enjoyment. One feature which should interest those engaged in industry was an exhibition, during the month, of the work done by boys in the Industrial Class at the Col-

legiate Institute. The working exhibits were of a high order and proved the value of such training in any community.

Agriculturists were busy. Haymaking was in progress at the end of the month with a fair crop. Conditions looked very favourable for the farmers this year. Market gardeners were also busy. New vegetables were being brought in and were securing fair prices.

Manufacturing generally was very quiet, war orders being the only ones to create activity.

Paris.—Conditions were fair. Steps have been taken to facilitate the manufacture of war munitions.

Burford.—The new Government building was making good progress, and conditions generally were good.

St. George.—Steps were being taken to prepare for the manufacture of war munitions.

Brockville.

There was no improvement in labour conditions generally over last month and opportunities for employment were not as good as in the previous month. Conditions were not nearly as active as for the same month in the previous year. There was a supply equal to the demand in all trades and many were employed on short time only.

The Bell Telephone Company were employing a number of men laying wires underground.

The civic light and power department has decided to supply electric current for light and cooking west of the town to supply summer campers.

Unusual activity was noticed in the brass and iron trade as far as the manufacture of shells for the war department was concerned.

Railway traffic was quiet while steamboat traffic was fairly brisk.

Notwithstanding the slack condition of most trades, the only loss to the men has been in time and not in rate of pay.

There was a change in the cost of living to some extent in the price of butter

which was considerably lower than in May.

Agricultural conditions were fair, high prices ruling for cheese. Market gardening was active.

Manufacturing was mostly quiet, though there was unusual activity in some lines, chiefly war orders. The National Manufacturing Company and the James Smart Manufacturing Company were running double shifts on this class of goods.

The Gilbert Motor Boat Company and the St. Lawrence Engine Company were fairly active while the hat and glove trade was quiet. Wood-working factories were only fair.

A contract has been let by the Department of Railways and Canals for 1,200 feet of cement wall on the north side of the Rideau river necessary to complete the power dam.

Chatham.

Labour conditions on the whole were not up to the corresponding month of 1914. While the building trades were ahead there was a falling off in a number of the manufacturing concerns. The International Harvester Company was closed down indefinitely, laying off between 80 and 90 men but retaining all the office staff and foremen and a few men in the yards. The Chaplin Wheel Works were working three and four days per week. The carriage and buggy factories showed a falling off in orders owing to the poor trade in the west.

All foundries and machine shops were fairly busy and the Dowsley Spring Works were very busy. The flour mills and woollen mill were still very quiet, the former being overstocked with flour. The American Pad and Textile Company reported trade if anything ahead of 1914.

The building of the Canadian Wolverine Brass Company, burned in April, has been completely rebuilt and was ready for operation, which, however, was not commenced at the end of the month.

The remodelling of the Merchants Bank was nearly completed.

Contractors commenced work on the erection of towers on St. Joseph's church which will furnish employment to a number of workmen for some time.

At the last meeting of the City Council steps were taken to secure orders for war supplies in order to furnish employment for the many who it was thought might be out of employment in a short time owing to the usual closing down for a month or two of a number of factories.

The city engineer was well up with civic work and was working with fewer men than usual. Hydro installation still employed a large number of men preparing for ornamental street lighting.

Farmers were very active, the crops needing the most attention being corn, tobacco and sugar beets. Prices for farm produce remained firm although wheat fell in price to \$1.05. Flour also dropped to \$7.50 per barrel. Hogs were quoted at \$8.50; cattle for export, \$7.50.

Cobalt.

Considered as a whole labour conditions in Cobalt and the district generally were better than at any time since the beginning of the war. This, however, cannot be taken to mean a greater demand for labour, but rather that a great number of men have left for other fields. The increased activity in the copper mining districts has been responsible for a large number of miners leaving for Montana, Michigan and other copper producing states as well as for the Gold Coast, and to Massey Station, where the old Massey copper mine is being reopened.

A number of the big mines including the O'Brien, Penn Canadian, Seneca Superior, Crown Reserve and others have cut down their underground operations considerably. The number of men affected by such a lay-off will aggregate about 100, but this again is about fully made up by a number of the smaller companies resuming mining operations.

A very much greater area of land in Temiskaming is under crop this year as compared with last, the greatest ratio of increase being in wheat. There was every indication of splendid yields, and in view of this the Board of Trade of New Liskeard is endeavouring to get sufficient interest worked up to insure the construction of the first grain elevator in the new district. During the slack times of the latter part of August the farmers took advantage of the ample supply of labour and cleared large areas of land before the snow fell.

The new large pulp and paper mill at Iroquois Falls is expected to be in operation early in July. The mill will employ in the neighbourhood of 500 men.

Galt.

In spite of the cry of hard times throughout the country, the labouring classes in Galt and South Waterloo district have very little to complain about. While some industries, such as iron moulding and printing, were not yet up to the standard, these trades, or at least some of them, have found employment at other work.

There seems to be exceptional activity in the shoe trade, so much so that one firm is going to put up a new factory, thus enlarging its capacity just about double.

There were one or two small failures in the retail trade, namely one dry goods store and one retail butcher business.

Carpenters and joiners expected a cut in wages, but it had not come at the end of the month, and the old scale of last season remained in force.

While there were no new large buildings going up, there were some private residences under construction.

The printing trade still seemed dormant, and the hands in one office were working 44 hours per week. Iron moulders were working only four days per week, and some not that. Machinists were all busy and in demand.

The new railroad, the Lake Erie and Northern, is likely to be electrified in

the near future, which will add still more work for a lot of men.

On the whole the industrial outlook was very satisfactory, and there were few men out of work. Quite a number have returned to the Old Country, and more were contemplating going.

The Canada Machinery Company is going to operate its branch shop in Hespeler again, after being shut down for some months.

The Perfect Machinery Company, which manufactures drills, hacksaws and grinders, was busy, the plant working at nights. Additions are being made to the equipment of the plant and also to the staff.

A number of meetings of Farmers' and Women's Institutes were held during the month and were well attended.

A by-law to loan the Hurlbut Shoe Company the sum of \$25,000 was carried. By the vote the town secures a factory with twice the capacity of the company's present plant, and in addition a new company to occupy the present premises when vacated by the Hurlbut Company.

Hespeler. — The British Government have been advertising for men for some time. Quite a number of local men intend going.

Guelph.

There was little change in the general labour situation during June. All the building trades had a fair month, but were not nearly so active as during the corresponding month of last year. The new telephone building, extension to the Gilson Manufacturing Company plant, and quite a number of good residences comprised the greatest amount of building in progress.

Manufacturing industries for the most part remained quiet.

The City Public Works Commission after calling for tenders for street paving decided to have the work done by day labour, as the tenders received were much higher than the city engineer's estimate.

The Waterworks Commission has called tenders for a new reinforced concrete reservoir and also for the laying of about 5,500 feet of conduit line.

At the regular monthly meeting of the Trades and Labour Council strong resolutions were passed protesting against the release of Austrians who had been sent from here to the detention camp at Toronto some time ago.

Customs returns for the month of May totalled \$22,505.65, an increase of \$6,515.10 over the corresponding month of last year.

Numerous houses were vacant throughout the city, but there was little change in rentals. Real estate operations were still very quiet.

Wholesale and retail merchants reported trade fair.

Farmers had rather a quiet month, being chiefly engaged with root crops, road work and the like. With the exception of hay, which is very light, crops were looking well.

The June excursions to the Ontario Agricultural College were not so well patronized as in former years.

Hamilton.

The condition of the labour market during June showed an improvement over the previous month, there being less idleness among both male and female workers. A census taken of 136 manufacturing establishments employing about 13,000 hands showed a decrease of about 100 employees as compared with the corresponding month of last year. One large jam factory, which last year was giving employment to 300 girls and women at the end of June, was at the same date this year employing 500 girls and women. Seventeen factories in Hamilton were working on the manufacture of shells, several of them with day and night shifts.

There has been little house building going on this summer and as a result the building trades were less active than usual at this season of the year.

Work on the Proctor-Gamble Soap Company's plant was nearing completion and it was expected that before the end of July, over 300 hands would be employed in the manufacture of the Proctor-Gamble products.

The new Sheet Steel Company's buildings were in course of construction and being rushed to completion. The main building will be about 100 feet by 400 feet. The Cartridge Company, which erected a factory on Oak avenue some time ago, has found it necessary to increase its plant and large factory buildings are in the course of construction. The Dominion Steel Castings Company has a large amount of orders on hand and is increasing the capacity of its plant.

Fewer men than usual were being employed on civic outside work this year and the city's programme of work for this season will be completed early in the fall. The civic works department's pay list this summer averages about \$12,000 per week. Industrial Commissioner Marsh has received applications from about 500 mechanics who are anxious to go to Britain to work on war munitions. About 300 applications were from Hamilton men and the balance from those in outside places.

Work has been begun in preparation for the big factory to be built by the Eaton Company, of Toronto, on the site purchased some time ago on John street north. Several houses were being pulled down and on this part of the land acquired will be erected the first unit of what will ultimately be one of the largest factories of its kind in this country. The new building will be four storeys in height, of reinforced concrete, with a frontage of 75 feet and about 75 feet in depth.

The Arcade Limited, one of Hamilton's largest departmental stores, has purchased the Griffin Theatre building adjoining it and will erect a mammoth addition to its already large establishment.

Work in the Toronto-Hamilton highway was progressing rapidly and it was

expected the road would be completed before the end of the present year.

A navigation and transportation company, to be known as the Turret Chief, Limited, has been incorporated with a capital of \$40,000. The head office of the new company will be in Hamilton.

Customs collections at the port of Hamilton for the month of May show a decided increase, much more than is accounted for by the war tax.

Inland revenue returns at Hamilton for the month of May amounted to \$113,700.14, an increase of \$33,893.03 as compared with the corresponding month of last year.

There was a scarcity of domestic servants at the end of the month.

The Board of Police Commissioners at a recent meeting passed a by-law in regard to "jitney" regulation. A license fee of \$2.00 per seat per year was put in force and cars are required to be clean, safe, dry and provided with safety appliances. Cars must carry a sign indicating the number of the vehicle and the number of passengers allowed. No jitneys are to be operated on Sundays and certain parts of main streets are not to be used for discharging or taking on passengers. Questions regarding the deposit of a guarantee bond and as to how much should be charged as fare were laid over until the next meeting of the Board.

Farmers were busy. The hay crop is a light one, due to cold weather. Wheat was looking well and indications were that the crop would be a bumper one. The acreage of wheat sown in this locality last fall is far in excess of recent years. Fruit growers reported that in all probability the peach crop will be an immense one. Plums will be a heavy crop but pears and apples are lighter than last year. Cherries and raspberries promise well. Strawberries were being marketed in fairly large quantities and were selling at from 8 to 10 cents per box by the crate.

The supply of farm help during the past month has not been equal to the

demand and better prices were being offered for men for the summer months.

Manufacturing in some branches showed considerable activity but on the whole was not being carried on as extensively as it was during the same period a year ago.

The local firm of Wagstaffe, Limited, has secured an order from the War Office for \$1,500,000 worth of jam and a large number of extra hands are being given employment. The War Department has stipulated that the order shall be made up in one-pound hermetically sealed tins and five varieties of jam, strawberry, gooseberry, black currant, apricot and marmalade are being sent.

The National Steel Car Company received some large orders during the month which will keep that concern busy for some time. Among the orders received is one from the Railway Department of the Dominion Government for 350 cars, to be used on the Government railways.

Work on the new infirmary building in connection with the Mountain Sanatorium, which will cost in the neighbourhood of \$100,000, was being rapidly proceeded with and it was expected that the building would be occupied early next winter.

A by-law has been adopted by the City Council for the issue of debentures for \$65,000 for extensions and improvements to the waterworks.

Bank clearings for June amounted to \$12,864,156 in comparison with \$13,176,677 for the same month a year ago.

The Canadian Pressed Brick Company, of Bartonville, has been awarded the contract for the outside brick for the new Mountain Hospital at \$10.50 per thousand at the kiln.

Kingston.

Labour conditions during June were much the same as in May. Building operations were very slow, with little new work coming on and slight chance of improvement.

The majority of the factories were fairly busy getting out war munitions of varied character. The Canadian Locomotive Company has received orders for locomotives for the Intercolonial Railway and for other railways, the orders amounting to an aggregation of \$2,000,000, which with their present orders for other material will mean work for twelve months to come and an increase in the working staff of 400 or 500 men.

The Kingston Shipbuilding Company have quite a lot of work on.

The Kingston Construction Company have begun installing an eight inch water main on Montreal street from Thomas to Rideau street.

The Thunder Bay Construction Company was active on the new causeway, and was commencing to get things in pretty fair shape.

There appeared to be a lull in the grain trade, but it was expected it would get brisk shortly again.

Let passes were issued at the St. Lawrence canal office during May for 1,135,725 bushels of grain en route to Montreal.

Residents of Kingston are to get their electricity at a much reduced rate.

The Hydro Electric System goes into effect in July, which will mean a saving of about 25 per cent. to domestic users and 20 per cent to commercial users.

Mr. Joseph Sauve, of the Tailors' Union, was appointed president of the Labour Educational Association at their last annual meeting.

London.

Local labour conditions and prospects were not very bright, and although there were few men out of work, yet there was not much work ahead. The city authorities were doing all they could to help conditions. The Board of Education has four schools under construction, having let contracts during the month for the Princess avenue school at \$53,200 and the Princess avenue school at \$69,285.

On all this work the Board has ordered that the standard scale of wages shall be paid. The Princess avenue school will have a swimming pool—the first in the city—and all scholars will be taught to swim.

A three-storey building is being erected on Richmond street, which will have two stores on the ground floor and apartments on the two upper floors.

The Advertiser Job Printing building was being rushed, and the cement work had reached the third storey.

Building permits for May totalled 197 at a value of \$184,350.

The Sherlock-Manning Piano and Organ Company was working full time with a full staff, the company's output going chiefly to the country and eastern provinces.

Yeate's shell factory was working two shifts—night and day.

The McClary Manufacturing Company were slack in their stove and furnace shops, working four days of eight hours. In their tin and enamel departments they were busy.

All clothiers, dry goods men, hatters and furnishers, barbers, grocers and butchers are closing Wednesday afternoon during the summer months.

On May 1 bricklayers' wages were increased from 50 cents to 55 cents per hour, in conformity with an agreement entered into for five years on May 1, 1914. This rate will prevail until May 1, 1918.

An event second in importance to the Ontario Hydro-Electric Power in the matter of Government and municipal ownership, is the opening of the London and Port Stanley Electric Railway, which is owned by the city of London, and will be opened officially on July 22, under the auspices of the Ontario Hydro-Radial Union. This is the first municipal-owned traction line to run with hydro power, and built under the Ontario Hydro Commission guidance. Representatives will be present from almost all Ontario municipalities and from some of the American cities. The

employees have already been engaged, and excursion traffic will commence July 1.

The heavy frosts in the early part of the month destroyed almost totally all tree fruits in this district, such as cherries, apples, plums and pears. Crop conditions generally were never better, and the farmers have sowed larger acreages of grain, the yield of which will be heavy. Indications are for an abundant crop of currants, raspberries, etc.

Niagara Falls.

Labour conditions in June were somewhat better than in May, but not nearly so good as in June of last year.

An event of the month was the commencement of work by the Canadian Niagara Power Company on the enlargement of the capacity of its generating plant. While the company has issued no statement, it is announced by newspapers that three additional units of 12,500 horsepower each will be installed. Seven units were already in operation. The new installation will not require enlargement of the power house or forebay, which can accommodate eleven units. A construction force of carpenters and labourers was at work at the end of the month.

The H. R. Rice Company established a factory for the manufacture of shoe parts and sandals. Machinery was installed in an existing building and ten hands commenced work.

A box factory being erected by Pinneo & Sons will be ready for business by August.

Contracts were let for a \$20,000 Baptist church.

The city will grant a fixed assessment on a new modern dairy plant.

Reports as to the extent of the damage done by late frosts to grapes, strawberries, tomatoes, corn, beans, pears and cherries are conflicting. In some districts the damage was much more serious than in others. A very heavy crop of strawberries was reduced to an average crop. Thousands of tomato plants were

killed, but a large acreage was unhurt. Pears and cherries suffered somewhat, but peaches show no injury. Damage to other fruits and vegetables was not serious. Fall wheat and oats promise well. Hay is a heavy crop and cutting was commenced.

The chief development in manufacturing was the opening of the canning factories. The Niagara Falls Canning Company opened with 80 hands packing pineapples, and other factories in the district were running full capacity. Strawberries will be packed next.

The Sanitary Can Company secured some good orders for tin cans, and will employ more hands.

The Dominion Chain Company increased its day shift, but stopped running nights.

Kinzinger, Bruce & Company took on a few more hands at their carriage mountings factory.

Cutlery, neckwear, suspender, shredded wheat and machinery concerns were busy.

Woodworking plants were very quiet for this season of the year.

Welland.—The Oranova Brick Company started manufacturing with ten hands and orders for 30,000 brick. The Beatty works received an order from the French Government for five carloads of contractors' plant.

Bridgeburg.—Large orders for artillery shells were received by two local plants.

Port Colborne.—The Government elevator was congested owing to shortage of vessels on the St. Lawrence route. Nine million bushels were received in May.

Orillia.

The labour situation showed noticeable improvement during June. With the advent of warm weather there has been considerable casual work available, and at the end of the month there was little chronic unemployment.

Work on two new cottages at the Hospital for the Feeble Minded has relieved the building situation somewhat, affording employment for about 50 men. This number will be doubled during July. The brick work on the water-works pumping station also will give employment to a number of bricklayers.

The Town Council is laying about a mile of main sewers and 5,000 or 6,000 feet of street connections by day labour, the engineer's estimate being lower than that of any of the tenderers.

Several factories were at work on war munitions, and others were putting in machinery for the purpose.

The cost of living has not been affected by any marked change in prices.

Good catches of herring have been made, running into hundreds daily.

Ottawa.

But little change in the local labour situation developed during June.

The inauguration of a number of civic works relieved the unskilled labour market considerably for a time, but the completion of these enterprises left many idle again. Several new civic works are planned, and when started will provide employment for quite a number out of work.

The various trades engaged in the manufacture of war materials continued busy, and with the exception of the printing trades which were, if anything, duller than during the past few months. The situation among the others was fair.

The dispute between local contractors and the bricklayers and stonemasons which, after considerable negotiation in an effort to renew an agreement, had been left in abeyance when no settlement as to the wage scale could be arrived at, took another turn during the month when the contractors offered to agree to the wage scale requested (that which prevailed in the old agreement) if the new agreement were made for five years. The expired agreement had been for three years, and the new offer of

the contractors was refused. Bricklayers and stonemasons were consequently working without an agreement.

As the result of the efforts of a Board of Conciliation, machinists employed by the Ottawa Car Company have secured a wage increase of 4 cents per hour. A minimum wage of 35 cents an hour was requested, but an agreement at 33 cents an hour was effected.

An illustration of slackness in the local industrial situation was furnished by the street workers employed by the local gas company who numbered about 12 as compared with about 200 in June last year.

An agreement has been reached between the employing blacksmiths and the horseshoers, whereby the latter will be granted the Saturday afternoon half-holiday until September. A request for the half-holiday the year round had been requested and refused.

A building trades federation to merge practically all the building trades of the city is being organized by leading members of the various unions.

An innovation in local trades unionism is the attendance of women delegates at the sessions of the Allied Trades and Labour Association. These delegates represent Ottawa Federal Union No. 20, a comparatively recent union formed of women workers employed by the American Bank Note Company.

An unusual industrial accident in the number injured occurred on the farm of J. J. Nesbitt, Hog's Back, when a scaffold upon which 30 men were working on a barn collapsed. About 20 were injured; three seriously; none fatally.

Local musicians have refused to play at the forthcoming Central Canada Exhibition if non-union bands are engaged.

Owen Sound.

In most departments the demand for labour was quiet. Most of the woodenware factories were still running on short time and building in the town was

decidedly quiet, but farm building is fairly good.

Heavy and continuous rains have improved farm prospects and firms doing business with the farming community reported conditions satisfactory, in most cases quite up to last year's mark.

Merchants reported that the tendency is generally to buy carefully. In boots and shoes, for example, the kind that wear well are generally preferred to a fancier shoe. In general the quantity purchased has been little reduced, but cheaper grades of goods are being preferred.

Outside of the reduction of work in certain factories and a consequent lack of building, things were quite normal and healthy. Business men in general seemed satisfied.

Peterborough.

Labour conditions during June showed a slight improvement in manufacturing lines, the manufacturing of war supplies being the leading feature. There was very little building going on in the city, but quite a number of men were finding work in the country as the farmers were taking advantage of the slackness of work in the city to get their work done before harvest time.

The De Laval Dairy Supply Company has been awarded the contract for the construction of the auxiliary pumping unit of 6,000,000 gallons capacity for this city at a contract price of \$15,850.

The city is going to construct about 30,000 square yards of street paving this year. This with the outfall sewer being built will give a lot of work to those who are not able to get work at their usual occupations.

The retail merchants have decided to close their stores every Thursday afternoon during July and August.

Farmers were very busy as is usual at this season. The hay crop will be light in most districts. Prospects for the grain crop were favourable.

Lindsay. — Horn Bros. will build a new woollen factory, the town having guaranteed payment of bond issue to the amount of \$65,000. This mill was burned down last December. The Boving Company has been reorganized and the plant will be put in operation right away. They have a contract for hydraulic machinery for the town of Orillia.

Port Arthur and Fort William.

The general condition of labour remained bad. There was practically no improvement shown since last month. There was plenty of labour, but very little demand. No public work was being done in Port Arthur. Fort William was still carrying through some public work on sewage and allotment gardens at a nominal wage of \$1.25 a day paid in city currency available in the stores of Fort William.

A few men were employed during the month in both cities in the manufacture of war material, but all the necessary machinery was not yet laid down.

A number of men used to armament work signed on to go to the Old Country in Port Arthur and Fort William. A protest was raised by the management of the Western Dry Dock owing to the fact that if these mechanics were shipped back to the Old Country there would be no supply for the local market when the plant was completed. Some 200 men were engaged on the work at the dry dock besides those still at work on the repair of the *Forest Chief*, which vessel was still in the dock undergoing extensive repairs.

There was no exceptional activity in any particular trade as no new industries, factories or public work was being started.

Railway and steamboat traffic was very light, consequently the number of men engaged in dock work was not nearly so great as it was a year or two ago.

The Canadian Northern coal and ore dock has only employed 70 men, each

working three days a week, during June, and the manager reported little prospects of improvements.

Gardening and farming have engaged the attention and spare time of almost every householder in this district, and the cities show a great improvement in appearance as the crops appear in nearly every garden lot.

This district is very favourable for hay and root crops particularly, and makes in consequence a good cattle country when settlers can get sufficiently ahead to pasture their cattle. Grain also does very well after the land has been thoroughly cultivated.

The fishing industry is being pursued by many this year, and along the coast of Thunder Bay many fishermen have established huts and some have built boats. The supply of fish they catch is brought in by the fishing tugs.

The Pigeon River sawmill has been operating during June, and while not crowded with work the mill has given employment to all those usually engaged during the summer by this firm, while their tug—the "Laura Grace"—was kept busy bringing up the log booms from the mouth of Pigeon River to the mill.

The Port Arthur Trades and Labour Council protested to the City Council on the condition of affairs in the Canadian Northern Railway repair shops claiming that car repairs that should be done in Port Arthur were being done in Winnipeg. The City Council forwarded the protest on to the Canadian Northern Railway officials asking for an explanation of the charge, and if true, that the work should be given in future to the local workmen. Up to the end of the month the City Council had received no answer.

The Port Arthur Trades and Labour Council also protested, on behalf of the plumbers and steamfitters, to one of the examiners appointed by the Master Plumbers for the inspection of work of journeymen plumbers to pass their examination. The Board of Inspection is made up as follows: one appointed

by the master plumbers, one appointed by the journeymen plumbers, and the city plumbing inspector. All the appointments are made and inspectors paid by the City Council. The City Council, on receipt of the protest, arranged a meeting at which all parties could be heard. The meeting was held and after explanations and reports the action of the inspector in question was upheld by the City Council and the protest dismissed.

Sault Ste. Marie.

Although labour conditions were anything but good there was a hopeful feeling among the commercial and industrial classes that matters were on the mend. With work well under way on the new jail and court house, it was hoped that general building operations would be started.

From present indications the present year is likely to be a record breaker for the farmers. A much larger area than usual is under crop, all crops looking promising, especially hay.

The cost of living was slightly on the decline.

Mechanics were more in demand than last month, but less than in June last year.

The trap rock industry at Richards' Landing has been bought by a new company and will be revived.

The Northern Foundry and the Lake Superior Steel Company have added plants for the manufacture of shells.

Stratford.

Labour conditions have greatly improved since last month as the building trades were active and the woollen factories and machine shops have large war orders to fill which will keep them busy for some time.

The new sewerage system costing \$65,000, which gave work to a number of men, is nearing completion. Gangs of men were engaged during June on the paving of streets and laying of

cement walks which will keep them busy this summer.

Wholesale and retail merchants reported trade fairly good.

Griffins' Opera House was closed for a time as workmen were engaged in making improvements. The theatre has been thoroughly renovated and named "Majestic Theatre."

Customs returns for the month of May amounted to \$24,038.88, an increase of \$685.10 over the corresponding month of 1914.

Farmers were very busy, and reported crops in the district in excellent condition and likely to be equal to last year's. Frosts have been numerous, and as a result the fruit crop and garden produce was damaged.

Grain prices were as follows: wheat, \$1.10 per bush.; peas, \$1.25 per bush.; oats, 57 cents per bush.; barley, 63 cents to 70 cents per bush. Live hogs \$8.35 to \$8.50 per cwt.

All manufacturing industries were active.

Listowel.—The Town Council has let contracts for the paving of a number of streets to be done this year.

Sebringville.—The Flax Mill Company has sown a large amount of flax and the prospects were bright for a good flax crop in this district.

St. Catharines.

Labour conditions during the month showed an improvement over those in May, but not as active as during the corresponding period of last year.

The Canadian Bridge Company, Walkerville, is constructing a siding on Permillia street to facilitate the erection of the high level bridge. They are assembling the steel at their yard at Walkerville preliminary to shipping it to the city. It was expected that the erection of the steel structure would commence soon. A gang of men were laying the foundation at the northeast end of the bridge.

Ground has been broken on James street for a new two-storey moving pic-

ture theatre. Newman Bros. have the contract.

The separate school is to be thoroughly overhauled and a new steam heating plant will be installed. This will be done instead of building a new school.

War supply contracts continue to keep some of the factories busy. Most of these factories were working double shifts, thus affording employment for a number of men.

Street railway employees were quite busy, especially on the Pt. Dalhousie division, since the season has opened. The half-hour service was in effect on the Pt. Dalhousie division.

The new sanitary dairy building was almost completed.

New wooden arches have been built on the Niagara, St. Catharines and Toronto Railway bridge over the old canal.

Merritton.—Labour conditions were fair during the month.

Thorold.—Operations on the canal were proceeding steadily.

Pt. Dalhousie.—There were three concrete cribs for Pt. Weller pier, all completed at Pt. Dalhousie, waiting to be floated down. The frame work for a fourth crib was being constructed and the work of making these gigantic foundations for Pt. Weller will be proceeded with all possible despatch.

St. Thomas.

Labour was not generally well employed during June. There was less activity in the labour market than during the previous month, and considerably less than the corresponding month of last year. Twenty-five Pere Marquette shopmen were laid off during the first part of the month and the men kept in service had their time reduced to 32 hours a week—an eight-hour day with Wednesdays and Saturdays off. Commencing June 28 the shops were closed down for a week, all hands being affected. In the traffic department of the Pere Marquette business was not brisk. The Michigan Central Railway

set back a number of crews, and as a result a number of regular men were reduced to the spare list, and in the neighbourhood of 25 men were laid off. Business showed a tendency to increase towards the end of the month and a few men were re-hired. Live stock commenced passing through on the Michigan Central towards the end of the month. Although it came in small batches it contributed some to the volume of traffic.

Local industries were quiet and, therefore, the supply of labour was in excess of the demand.

Fourteen skilled machinists went to England from this city to work in factories making munitions of war and a large number of applications have been sent in from men in other trades who are desirous of going abroad in answer to the call for mechanics.

Wholesale and retail trade was quiet.

Customs receipts showed a considerable increase over the corresponding month of last year.

The St. Thomas Biscuit Factory resumed work towards the end of the month with a small staff.

Steel casings will be manufactured in this city just as soon as the machinery can be installed. It is expected that, once started, this industry will give considerable relief to the unemployment situation.

The new London and Port Stanley electric lines will commence operation July 1. A number of crews, formerly employed by the steam road will come to St. Thomas to accept positions on the Pere Marquette and new crews will be installed by the electric line.

The crops in this district were looking fine and with a continuation of fine weather good crops will be general. Wheat and oats are particularly good; hay will be light; corn will be a poor crop. Potatoes are showing well and should be a good yield. The fruits are showing up fair. Cherries slightly under average; raspberries a good crop; plums average; apples below average.

Local industries reported a quiet month.

Toronto.

There was a slight improvement in labour conditions during June, skilled labour being better employed than during the earlier months of the year, though many were still out of work. The building trades were rather more active than in May. There were few new undertakings, but work on a number of old contracts which had been suspended was resumed. Many mechanics, more particularly machinists, left for Britain to engage in the manufacture of war munitions. Following the visit of G. R. Barnes, M.P., and W. Windham, who are commissioned by the British Government to secure skilled mechanics in Canada and were in Toronto early in the month, receiving a number of applications, four representatives of the British War Office arrived here on the twentieth to test the skill and competence of the applicants. They were examined in groups and those pronounced satisfactory forwarded at once to Britain.

The Board of Control has awarded a contract for the erection of the concrete substructure and floor of the Strachan avenue bridge to Roderick Campbell for \$23,045, and the contract for the steel superstructure to the Dominion Bridge Company for \$5,091.

The Steel and Radiation Company is erecting a brick addition to their factory on Fraser avenue for the manufacture of ammunition.

Work has been begun on the alterations of the Technical School, College street, which will be converted into the administration building of the Board of Education at a cost of \$100,000.

On the twenty-eighth the City Council adopted a by-law to authorize the extension, widening and grading of Queen street west of Sunnyside to the southern entrance of High Park.

The T. Eaton Company, Ltd., of Toronto, have begun the erection of a

knitting factory on North John street, Hamilton. It will be four storeys in height of re-inforced concrete, 75x175 ft., and will be the first unit of a large factory.

The Toronto Jitney Association has largely increased its membership, having now a total list of over 100. It has arranged with an insurance company to bond all drivers for \$10,000 as an insurance against accidents to passengers. The civic license fee for jitneys has been fixed at \$12 per annum.

Toronto railway receipts have fallen off, mainly owing to the establishment of the jitney system. Receipts during the first five months of the year were \$2,336,661, as compared with \$2,509,768 for the corresponding months of 1914, a decrease of about seven per cent.

The franchise for the Metropolitan Railway within the city limits expired at midnight on the twenty-fifth, when a force of workmen under direction of the city officials tore up a section of the railway tracks on Yonge street between the Canadian Pacific Railway tracks and Farnham avenue. The Toronto Railway Company has applied to the court for an injunction to prevent the city from removing what remains of the track in that locality, and a mandamus to compel them to replace the track torn up.

An early closing movement has been started among the storekeepers of the St. Clair avenue district. Several were already closing their business places on Wednesday afternoons, and petitions were being extensively signed requesting all others to do so.

Aviation training is being begun at the McCurdy school at Long Branch, where 34 pupils are taking lessons. A mammoth aeroplane is being built for the British Government at a factory on Strachan avenue, and orders from other quarters have been received.

The Bricklayers' and Masons' Union, No. 2, have 350 members out of employment. The union has expended over \$4,000 in the past few months for the relief of unemployed members, besides

paying death benefits and insurance claims of several members killed in the war. The marble setters have decided to amalgamate with the bricklayers' and stonemasons' union.

The metal working trades were generally quiet, with the exception of machinists, who were busy and much in demand. Electrical workers were fair. Furniture workers, carriage makers, cabinet makers and upholsterers were quiet. Workers in box factories were fairly well employed. Printers and bookbinders had a fair month. The Typographical Union has decided to submit their differences with the employees regarding a new agreement to arbitration, and appointed James Simpson and Hugh Stevenson as their representatives on a Board of Arbitration. Leather workers were active. Garment workers were generally quiet. Those engaged on Government contracts found work somewhat intermittent. Booth and shoe workers were fair. The provision trades were normal. Brewery workers and cigarmakers were quiet. Hotel and restaurant employees had a poor month, business being very slack and several hotels closing up or in financial difficulties. A large number of moving picture houses have also gone out of business. Railway and street railway men were quiet. At a meeting on June 16 the street railway employees voted in favour of continuing the agreement with the company as to wages which expired this month, for two years, the company favouring a three-year term. Navigation was less active than usual at this season.

Newmarket.—M. Sabrino has rented a factory building and will engage in the manufacture of toys. He expects to take on a large number of men at a later date.

Scarboro Township.—The Council is this year trying the plan of building their own concrete bridge abutments instead of letting out the work by contract, and anticipate that the system will be found more economical.

Windsor.

Labour conditions have improved since last month. The demand for men was somewhat brisk, although there was sufficient labour to fill all requirements. There has been enough work to keep all local workmen busy, but unemployed from eastern parts coming in made conditions look worse than they really were.

The building trades have been fairly good, employing all local mechanics and a few from other towns. A large number of bricklayers have been coming to Windsor, which eventually floods the demand in that line. Some have been sent out to the smaller towns where there was considerable small work and this has relieved conditions in Windsor and vicinity.

Buildings contemplated and under construction were: Clark Metal Last Company, a branch of an Indiana firm which has purchased a site and intends to erect buildings to cost \$15,000; De Vilbliss Manufacturing Company has given out plans for a \$35,000 building, and a paving contract at Ojibway to cost \$100,000. The Ford Motor Company has just completed a \$300,000 building, giving an additional \$130,000 square feet of floor space, making a total of about nine acres of floor space. This company has also started a new addition to cost \$60,000, dimensions 45 x 700 feet, which will be built on the shore of the river, which means considerable extra work such as pile driving, etc. Some stores and dwellings were also projected.

The civic works department has called for tenders on numerous paving and sewer projects, which when commenced will employ most of the unskilled labour.

Manufacturing has been fairly brisk, most of the factories being interested to some extent in the supplying of munitions.

The Peabody Overall Company, which was closed down for a week awaiting a shipment of dye-stuffs, has received a

sufficient quantity to keep them busy for about a month. This company's premises were damaged by an explosion to the extent of \$3,000.

The Toledo Scale Company received a large order for scales which will keep the factory in full operation for a while after being quiet this year.

Walker's Distillery has closed down for an indefinite time, having a large surplus stock on hand. The older employees were given other employment and only a few men were affected.

Customs receipts for May were \$294,025, an increase of \$6,489.30 over April and \$80,479.00 over May, 1914.

Crop prospects were good.

Railroads were just fair, not exceptionally busy.

Woodstock.

"Dull" is the word that expresses conditions both industrially and in a general business way. Some small orders for war supplies have been received, and some more of greater importance were expected. Much will depend during the next month or so on whether these expectations are realized or not.

Wagonmakers stated some orders were coming in from the West, and they look for better things when the people of the West feel sure about the crop. Manufacturers of pianos and organs were also living in hope and keeping their factories running. Furniture manufacturers reported business very dull, and while the factory was still running it may close temporarily unless something happens.

There was not much building, and but a fair amount of "jobbing." There was considerable outside work, however, of one kind and another, and there were very few idle men. Factory managers stated that the number of men looking for work was below the average.

With shopkeepers business was dull and collections slow. Although there were few unemployed in Woodstock, there were a good many on short time—

and short pay—and this has meant reduced purchasing power.

MANITOBA.

Brandon.

During June there was no marked improvement in the general condition of the labour market.

Unskilled labour has been able to obtain a fair amount of work on civic improvements, such as sewer and water mains, and extensions to the street railway system.

The departure of the 45th battalion C.E.F. to the Sewell Camp necessitated the formation of a Home Guard to guard the interned aliens. About 150 able-bodied unemployed were enabled to find work thereby.

The depression in the building trades continued, no new work commencing, and very little repair work being under way.

On June 19 the F. W. Woolworth Company opened one of their 5, 10 and 15 cent stores, about 50 hands, mostly girls, being employed.

During the month the prices of butter, eggs and flour were reduced.

The excellent weather conditions prevailing during the whole of June have had a very beneficial effect upon the grain crops. Never in the history of Manitoba has the crop outlook been more promising.

There has been an abundance of moisture, far above the average, and no excessive heat.

Should extreme heat come no damage could be done to the crop as the wheat has too firm a hold to be injured by the heat.

The acreage in crop is much greater than that of last year, and if the favourable conditions continue a record yield will be harvested, and much will be done towards solving the unemployed problem.

Winnipeg.

Labour conditions in June were little better than those of May. The building trades remained quiet, and there were but few buildings to be erected that would be of any consequence to the tradesmen concerned.

Much progress was being made with the civic building which, though to be but two storeys high, will occupy a large space. The extension to the Royal Alexandra Hotel and alterations at the Canadian Pacific Railway depot were fast nearing completion. About 300 men were working on the jobs. All other trades were moderately well employed.

The condition of unemployment amongst unskilled labour remained a serious one. The farmers have not asked for much help, and few men were sent to work in the country during the month. The Canadian Pacific Railway, the Canadian Northern Railway and the Grand Trunk Pacific Railway employed very little extra help.

It is anticipated that 18,000 or 20,000 men will be needed for the harvest in Manitoba, but there will be no difficulty in obtaining the required number, as many will come from Eastern Canada and the United States. Freight movements were fairly steady throughout the month, but there were less freight handlers than for the same period last year.

Manufacturers were fairly busy.

The Olympic Hotel, opened last fall, closed its doors on May 3 last, owing to heavy liabilities. About \$9,000 was owing to the 200 employees for wages. The claim for the amount was assigned to A. W. Smith, business agent of the local Union of Cooks and Waiters, and was being attended to by T. J. Murray, solicitor to the Trades and Labour Council.

The jitney service, inaugurated in Winnipeg some months ago, was still very popular; 480 jitney owners secured jitney licenses during the past few

weeks of the month, each license costing \$20.

The Civic Free Employment Bureau found work for 302 men in the city and 169 out of the city.

The inspector of grain reported that 2,875,500 bushels of wheat, 980,400 bushels of oats, 106,600 bushels of barley and 938,900 bushels of flax passed through Winnipeg during the month.

SASKATCHEWAN.

Moose Jaw.

There has been practically no demand for labour but the situation did not appear to be as acute as earlier in the spring. Within a month a considerable number will be required on the farms and it is expected that the farmers will start earlier this year to secure their help and the crop will take a considerable amount of labour to harvest as the straw will likely be heavy.

Very little work was going on by the railroads in ballasting operations and no new construction work was being carried on.

Sufficient moisture fell for the growing crops during June and while heavy frosts about the middle of the month put the grain back for a number of days good growing weather the latter part started a rapid growth and the prospects were good for a fair crop. It is not expected that it will go much beyond the average and the sample may not be the best but owing to the increase in the acreage a great amount of grain will be harvested.

The Saskatchewan Bridge and Iron Works has secured a contract and work will be commenced within a few days. This will give employment to about 150 men and will do much to relieve the local labour situation.

Prince Albert.

General conditions remained much the same as in the previous month and the outlook for the winter was causing much

uneasiness among those whose duty it is to assist the needy.

Industrial inactivity was very much evidenced in many directions. Some 100 skilled mechanics have registered their names for the trial test for employment in the manufacture of munitions in the Old Country and were anxiously awaiting the arrival of the examiners who will put the men through the test at the Canadian Northern Railway shops.

Market prices remained steady and those obtained by dairy products were lower than usual for the time of the year.

Heavy rains the latter part of the month repaired the damage done by cut worms and dry weather. Horticultural produce received a severe set back by the frosts in the middle of the month, which month ended with the North Saskatchewan River in heavy flood. If the district is favoured with a spell of warm weather, however, the crop will be well up to the average. There was practically no demand for farm labour and estimates of the amount likely to be required at harvest shows that the local supply will be ample.

Other industries were very quiet and had nothing to record.

Regina.

Labour conditions have shown a slight improvement during the past month. The city has started laying water mains on several streets, which has given work to about 100 men, and the city commissioners were also negotiating with the contractor for sewers, which was let last year to be done by a trenching machine, to have the work done by hand and so give more work to the unemployed. The price quoted was \$24,000 for the work to be done by trenching machine. At the same time the company quoted a price of \$4,000 higher to do the work by hand labour. The contractor is willing to do the work at the price quoted for hand labour or he will relinquish the contract and enable the city to do the work.

Work on the completion of the Isolation Hospital has been commenced, which has given work to about 15 men in the building trades, which will be increased considerably early in July.

A block of three one-storey stores was also in course of construction. Tenders were also closed for a pair of one-storey stores to cost about \$9,000. A contract was also let for a Nurses' Home for the Grey Nuns' Hospital, at an approximate cost of \$20,000.

About 20 bricklayers and carpenters left the city during the month to work on the addition to the Battleford Asylum for the Insane.

At a meeting of the Anti-Tuberculosis League it was decided to go ahead with the sanitarium at Fort Qu'Appelle. As a Regina firm has the contract it was expected most of the men would be taken from Regina. The building was closed down last fall, but the League intend spending \$20,000 on the building this summer.

Wholesale and retail trade was very dull. Machinery distribution houses were doing very little business.

The cost of living has remained about the same as last month. Flour decreased slightly in price about the middle of the month.

Frosts during the middle of the month were hard on the crops and gardens. Fortunately the weather was dull and cool for a few days after and the crops did not suffer as much as expected. They were looking splendid again, and prominent grain growers claim very little damage has been done. A large amount of gardens had to be replanted.

Saskatoon.

About 80 men were started on the bridge recently. The university residence has taken on about 30 men. These two jobs by the Provincial Government comprised the sum total of building operations.

The employment situation was far from satisfactory. However very many

have found work in the country but not always at current wages.

It is thought that about 100 men will be taken from here to work on munitions in England.

The Saskatoon Typographical Union signed up a new agreement which was practically the same as that of the past year.

Very severe June frosts lasting intermittently for about 10 days cut large areas of grain of all kinds in the low parts of the fields. The grain, however, has continued to grow apparently little the worse. There is no precedent here for the severe freezing but most authorities claim it will make little difference except perhaps to make the grain a little later. All tender garden stuff was killed; potatoes were cut down to the ground. The frost was quite general, few gardens entirely escaping. There has been sufficient rain in most localities but not an abundance. Good pasture has improved the condition of the stock in this vicinity. Low prices for products has been cutting in on the customary returns from dairy herds.

ALBERTA.

Calgary.

There was still a large number of unemployed in the city. Although recruiting has been active, yet the effect was hardly apparent. Some idea as to the number of unemployed may be gathered by the number of applicants to the British mission of enquiry into armament labour supply; 945 were registered on June 17, applications were still being received, and it was expected that close on 500 applicants would be accepted.

There has been no great demand for farm labour. The Labour Bureau has sent out 100 men, wages ranging from \$25 to \$30 per month. It is difficult to get authentic information regarding the supply of labour for the harvest, but from the prevailing conditions it seems there will be no difficulty and that there is abundance of labour available.

The city, anticipating a shortage, has decided to close down all the public works on July 15 and was employing but a few compared with previous years.

The Canadian Northern Railway was busy completing its line to Macleod.

Arrangements for the annual fair were complete and it was reported that exhibits both in number and quality would compare favourably with last year.

The Associated Charities has given relief to 301 destitute families in June up to the 25th of the month.

The local Industrial Co-operative Society has opened its first store in Calgary.

Owing to severe storms which occurred during the month the gas mains leading to the city were broken; about 200 feet of the Canadian Pacific Railway tracks were washed out at Okotoks and vicinity, and several of the merchants' stocks were destroyed. Five landslides were caused between Calgary and Field on the Canadian Pacific Railway. Calgary also suffered severely; one carpenter was drowned on the Mission bridge; the Centre street bridge was washed away, a man being drowned, of whom no particulars were obtained, and houses adjoining the rivers were flooded and considerable damage done to property and furniture. The Eau Claire Lumber Company's boom broke near the Louise bridge and over 2,000,000 feet of lumber went down the river. The river rose five feet during the storm.

There has been plenty of moisture and with favourable dry weather there was every prospect of splendid crops.

Edmonton.

Labour conditions during June continued unfavourable, with large numbers in nearly all lines of industry out of employment. The building trades were very quiet, with little indication of any improvement. As a large majority of the workers are building trades mechanics the present depression in the indus-

try has caused more hardship than in any other line.

In answer to the call for workers for the British Isles over 700 made application, many others being turned away who were not skilled in the various trades as required by the labour commission.

From the time the Civic Employment Bureau was established, June 6, 1914, to the end of the year approximately 5,000 applications for employment were registered. During the first six months of the present year about 5,000 have made application for work. Of this number 4,000 had not made application for work to the bureau at any time previous to January 1.

Work was commenced on approximately twenty-five miles of plank sidewalks, the contractors agreeing that the superintendent of the Civic Employment Bureau should choose the men. This was done in order that men with dependents would be given this work.

Wholesale and retail trade remained quiet and freight shipments were very light.

At a recent meeting of the City Council it was decided to notify the street railway employees that their agreement with the city would be cancelled at the end of August. As the agreement would continue in force after August 31 unless due notice were given by either party, it is thought the city officials do not intend to enter into an agreement for next year.

The Trades and Labour Council is asking the City Council to pass a by-law regulating the operation of "jitneys."

After one of the most hotly contested campaigns ever conducted in this city the ratepayers on June 7 declined to enter into an agreement with the Northern Alberta Natural Gas and Development Company, Limited, granting the company a twenty year exclusive franchise to furnish natural gas to consumers at prices ranging from fifteen to twenty-seven cents per thousand cubic feet according to the amount supplied. This is the only utility not owned and

operated by the city, and it is the third time the citizens have refused to enter into an agreement with a private company.

Farmers reported very favourably on the condition of the crops, especially hay, which was coming on very rapidly owing to an abundance of rain. Market gardeners reported slight frosts in several localities but no serious damage.

Lumbering, mining and manufacturing were quiet.

Railway construction was very active on what are known as the McArthur roads running north from this city. On the line to Fort McMurray the road was being ballasted as far as Lac la Biche, and from that point grading operations were carried on. Work was also proceeding on the line to Spirit River and also on the branch to Peace River Crossing. The contract was let for the grading of the branch line to Grand Prairie, a distance of 60 miles, work to commence July 1; about 600 men will be employed. Mr. McArthur is reported as saying that 5,000 men in all will be employed on the McArthur railways this summer. The hotel he is erecting at Lac la Biche will be completed the latter part of August.

Grading was proceeding on the Oliver branch of the Canadian Northern and some work was being done on the main line of the same road.

■ Lethbridge.

A heavy storm towards the end of the month caused the Saskatchewan river to rise to a great height and much damage was occasioned through floods.

During the first half of the month labour conditions continued the same as reported for May. At the end of the month the prospect was brighter. There was a demand for men on the hay field, although the rainy weather is keeping this class of work back. There was also a call for men to go to work in the bush. The wages offered were low and few men cared for the job.

Part of the street railroad was being ballasted, finding work for about 25

men, the work being confined to resident workmen.

The coal mines were still slack but expected to get busy for the fall trade.

There was no building going on.

Wholesale and retail trade was considered dull.

Bank clearings were still below what they were at this period last year.

Wages continue about what they were last year.

About 340 names were registered as partially unemployed but this number has been decreased.

There was great activity in farming operations and all were taking advantage of the exceptionally good season. There is likely to be a good crop in all lines and farmers will be very busy. More settlers are coming into this district and land is being taken up.

The mines have been very slack, working only two days a week. It is customary to increase the output in July for the winter's stock, and this year will be no exception. Last year the mines ran four days a week in July, but conditions are generally slacker this year.

Medicine Hat.

There was no improvement in the labour market over May. There was very little doing in the way of building construction and only a very few men engaged in the different building trades finding employment. There does not appear much chance for steady work or much demand for labour until the harvest season.

Crop conditions in Southern Alberta never looked more favourable, and it was expected the largest crop in the history of the district would be harvested this season.

The town of Redcliff, which is six miles west of Medicine Hat on the main line of the Canadian Pacific Railway, was visited on Friday evening, June 25, by a severe electrical storm, which developed into a cyclone, blowing buildings down, unroofing others and doing damage generally to the extent of about

\$100,000. Only three persons, however, were injured. Among the buildings completely destroyed were the knitting factory and the cigar factory, while the Ornamental Iron Works roof was blown off and walls damaged. The roof was also blown off the Laurel Hotel and many residences received a like fate. The same storm visited Grassy Lake, a small town on Crow's Nest Pass Railway about 40 miles southwest of Medicine Hat, and did damage to the extent of several thousand dollars.

The City Council have under consideration a proposition from a company for the erection of a smelter at Medicine Hat. If the necessary arrangements can be made the company will commence the erection of the plant as soon as a by-law granting them certain concessions can be submitted to the rate-payers. The plant will employ on the start at least 150 men.

Both wholesale and retail trade was reported quiet.

BRITISH COLUMBIA.

Fernie.

General labour conditions during June remained practically the same as during the previous month, which was a slight improvement over the conditions prevailing during the preceding quarter. During the month the surplus supply of labour, or the number of unemployed was materially reduced through the mediums of recruiting for overseas service, and also in view of the internment of enemy aliens here. Some 260 left this district as members of the 54th Battalion, of whom 25 per cent. at least vacated positions immediately prior to their departure, while the total number interned here is 327, and of these practically all had been employed in the coal mining industry, although they by no means were obtaining steady employment.

No exceptional industrial activity transpired during the present month.

Coal mining remained at a very low ebb, namely not more than 30 per cent. of the actual capacity. The demand for coke, however, continued to be very good. The mines at Bellevue and Michel were doing the best of any in the district, these collieries operating from four to five shifts per week, Fernie, Hillcrest and Coleman averaging from two to three shifts per week, while the camps at Blairmore, Maple Leaf, Passburg, Lille, Beaver Creek and Burmis were practically dormant.

It was anticipated that beginning next month there might be a slight improvement when the transportation companies commence placing orders for their winter's fuel supply. The demand for coke continued to be very good owing to smelters operating at full capacity. In connection with coke manufacture it is understood that the Crow's Nest Pass Coal Company, Ltd., has under consideration the construction of a number of by-product coke ovens which would mean the expenditure of a large sum of money during construction, and also by the introduction of this permanent industry would result in the employment of a greater number of men. This matter, however, was only under advisement.

A peculiar situation developed throughout the mining camps of the Crow's Nest Pass during June when the miners of British extraction assumed a hostile attitude towards their Austrian and German co-workers, and positively refused to continue working underground with these enemy aliens. Practically only one actual cessation occurred, this being at the Coal Creek mines, and it lasted only two days, the first of which was declared an idle day by the management in order to give the men an opportunity to arrive at some satisfactory solution of the problem themselves, and as this was not sufficient time, the men themselves took the second day, and then as the authorities immediately intervened and interned all single miners and all married miners of

enemy nationality, and not having families in Canada. This compromise was accepted and the men returned to work.

Another partial cessation occurred at the mines of the Hillcrest Collieries, Ltd., at Hillcrest, Alta., where the Austrians and Germans worked three shifts during the week ending June 19, after the Britishers had demanded their dismissal, but before the situation became extremely acute, upon the suggestion of the mine management, an arrangement whereby the objectionable aliens were temporarily excluded to the benefit of the British and their allied co-workers, was accepted and operations resumed.

This condition of affairs, which actually originated at Fernie, also found supporters at Coleman, Alta., but there no cessation occurred. A general mass meeting was held, at which a resolution was passed unanimously that there would be no discrimination against the alien enemies, of whom it is estimated there are considerably less than 100 at this particular camp. It has been alleged, however, that this action is not recognized as voicing the sentiment of the Coleman miners. However, the mines continued to operate as usual.

The result of the present complications as affecting the labour supply is that over 300 have been taken from employment in the Fernie and Michel mines and placed in the internment quarters at Fernie, while approximately 140 have been temporarily laid off at Hillcrest. This situation did not affect the Bellevue camp on account of the enemy aliens having been excluded by the company two or three months ago. The result of this, however, is that the fairly large enemy alien population at that camp, in view of this forced idleness, have become destitute, and are now pleading for voluntary internment.

The lumbering industry on the whole throughout the district was slightly improved, but is still in what might be classed as a very inactive state.

In view of the small number of mills

at present operating, and also on account of the others having allowed their stocks to diminish to almost a vanishing point, it is very doubtful if this locality could supply and increased demand should any develop later on in the season.

Building activity was confined to one \$4,000 structure, and an estimated \$12,000 addition to the Canadian Bank of Commerce. The former was completed during the month, while the latter was still under construction, approximately 15 men being employed, including skilled and unskilled labour. Both of these jobs were on the day wage basis, no contracts having been awarded.

A slight improvement in railway traffic was evidenced when the Canadian Pacific Railway put on extra passenger service along this line in the form of two daily trains operating between Calgary, Alta., and Spokane, Wash. There were also two additional freight trains put on during this month, which makes five daily freight trains operating along this line.

Civic improvements have been reduced to a minimum, and with the exception of the construction of two blocks of macadam streets in the business district of the city, for which the appropriation of \$4,000 was made some time ago, the work is confined to repairs and renewals.

In Fernie and locality the agricultural industry is confined almost wholly to "truck-gardening," and from the limited amount of ground under cultivation, which is of no greater extent than during previous years, the indications are favourable for a maximum yield.

A noticeable increase in the cost of living went into effect at the beginning of this month, when the retail price of fresh meat advanced from 10 per cent. to 12½ per cent. Otherwise the retail price of food remained the same as during the previous month, with the exception of butter, which declined approximately 10 per cent.

Nanaimo.

There has been no change in the labour situation. The number of men out of employment showed a slight decrease owing mostly to men leaving the district for other countries, the men leaving being mostly British citizens.

Business men reported trade very quiet, especially in the trades outside of those dealing in necessary food stuffs.

There has been no specified change in wages or hours of labour although men were accepting any wages they could get.

Farmers were busy with their hay which promised to be a very large crop.

Fishermen were quiet.

The sawmills of the district were working but on a decreased scale and the logging camps were not doing much.

The coal mines hardly lost any time during June but there was not a large number of men engaged, most of the mines working with a small force of men. There was hardly any railroad construction going on.

The city was doing some paving and also some road work for the benefit of the unemployed. The Provincial Government also was providing a lot of work through the district at reduced wages and hours to help the unemployed.

Nelson.

Conditions regarding employment of labour showed no improvement over last month. Recruiting has been the order of the day and a number of young men have enlisted and gone to Vernon for training.

About 20 men of Nelson have made application to be sent to England to be employed in making war munitions.

The building trades were practically at a standstill with the exception of a few small cottages along the lake and some few necessary repair jobs. Quite a number of carpenters have left Nelson and gone to Trail, as the smelter there is running full time with a full force of men.

The Sheep Creek property, which is owned by the Canadian Consolidated Company, has shipped its first shipment this year. The Silver Hoard mine at Ainsworth has also recently shipped some few cars of ore to the Trail smelter. The largest shippers to this smelter are at Rossland; the Centre Star seems to lead all other mines, with the Le Roy a close second. All mines now working are showing a tendency to advancement.

Several cars of ore have already been shipped over the new Kettle Valley railway. The Carmi properties were shipping over the new line and were first to take advantage of the new route. These properties were also shipping to the smelter at Trail.

The Granby workers at Grand Forks smelter have had a voluntary advance in their wages of 25 cents per day, the lowest wages now paid with this increase being \$3.25 per day.

For the first time in ten months the whistle at Greenwood blew on June 14. The British Columbia Copper Company has been repairing its mines for immediate operation. At first only one eight-hundred ton furnace will be employed and 50 men given work at the smelter.

The Mother Lode and the Lone Star mines have begun operations. There will be about 50 men employed at the Mother Lode and 30 at the Lone Star. The company at the Mother Lode have given up their store and the company boarding house has been leased. It is also stated by the company that Austrians and Germans will not be employed, that is if they can get men of other nationalities.

Lumbering was practically at a standstill.

New Westminster.

Labour conditions during June showed no improvement over May and very little activity in any line could be noticed. The number of unemployed remained about the same with very little prospect of any relief. The city was carrying on a limited amount of improvements and street grading.

Work on the Brackman-Ker flour mills and elevator was expected to begin soon as the pile driving has been completed for the job.

The new meat market mentioned last month had not been started and very little building of any sort was being done. The plant of the Heaps Engineering Company has been seized for arrears of taxes with a view to settling internal dissensions which prevented the company from beginning operations.

Altogether the outlook was not at all bright for the remainder of the season.

The farmers have been getting ideal weather and prospects for a good crop were excellent. Small fruits were proving a good crop and prices were almost as high as in previous years. New potatoes have been on the market for some time and were selling at 2 to 2½ cents per pound.

Fishing has shown some improvement during the month but the spring salmon season has been a very poor one. Four or five canneries were packing but the supply was limited.

Lumbering was about the same as last month, none of the mills running to capacity, with a good many of the camps still closed down. Considerable difficulty was being experienced in getting rid of the cut and there was no disposition to stock up to any extent. The sash factories were still running on part time and orders for their products were limited.

No railway construction was being done and no men employed except for the usual necessary maintenance work.

Prince Rupert.

Labour conditions were unchanged and unemployment was general throughout the district.

The Imperial Oil Company has put its oil tanks into operation. The first boat arrived on May 28 with 500,000 gallons of distillate. All trains are burning oil fuel on the Prince Rupert division, also the Grand Trunk Pacific boats trading from this port.

On June 9 a new schedule was put in operation on the Grand Trunk Pacific between Prince Rupert and eastern points. Three trains will arrive and depart each week instead of two as before, and will run right through to Winnipeg.

On June 8 the Grand Trunk Pacific boats commenced three trips each way weekly between Seattle, Victoria, Vancouver and Prince Rupert. This change is to meet the increased passenger traffic by rail and boat.

The fishing industry has increased greatly and has become the mainstay of the major part of the population. The depression caused by the war has been overcome to a large extent by the growth of this industry.

There was a falling off during the month in the arrivals of American boats owing to the discovery of some new banks off the Columbia river. Reports coming in, however, would indicate a renewal of the trading with this port at an early date. The total amount of fish landed for the month of May was as follows:

	Lbs.
Halibut..	1,497,100
Salmon..	103,400
Cod	9,000
Soles..	3,000
Flounders	2,000
Shell... fish	1,000
Total..	1,615,500

Vancouver.

The general condition of unemployment which has prevailed for some time past has shown no sign of improvement during the last month. Deputations still continue to interview the Provincial Government impressing the need for some measure of relief from that body and pointing out the very unpromising prospect presented for the coming winter. In the city, relief to single men, whether residents, ratepayers, or otherwise, was stopped June 24. The civic relief officer strongly advised against this course. It was reported at the meeting of the civic relief committee, where

this action was decided upon, that fruit growers in the Fraser Valley had undertaken to engage about 100 of the unemployed as fruit pickers, in place of Chinamen who had formerly done that work.

In the outlying districts of South Vancouver and Burnaby exceptional distress prevails among families. Investigation by an official of the Provincial Government resulted in that body deciding to undertake some road-building work as a measure of relief to married men. About 500 are involved. They will work in weekly shifts of 100 each week, at a wage of \$2.25 per day of eight hours.

In the city, the standard wage for civic labourers has been \$3 per eight-hour day. This has been lowered to \$2.25. The men, numbering 2,000, are also working half time, which has been the rule for some months. The decision to take this step was made at a meeting of the City Council held in camera. It has been made the subject of a protest by the Trades and Labour Council.

Reductions have also been made in the wages of policemen and salaries of civic officials.

Mr. G. N. Barnes, M.P., representing the British Government, was in Vancouver in quest of skilled mechanics to go to Britain. Three thousand men registered as desiring to go. Local representatives of firms interested in the plan to manufacture shells interviewed Mr. Barnes and expressed disapproval of the proposal to take mechanics out of the city.

The new Government elevator was in the initial stages of building and was expected to give employment to some of the numerous building tradesmen and labourers out of work by reason of the practical cessation of ordinary building. The local Trades and Labour Council has protested to Mr. H. H. Stevens, M.P., against the proposal of the contractors to bring workmen into the city to work on the elevator.

Building permits to the number of 57, valued at \$719,280, were issued during May, as compared with 162, valued at \$524,380, for May last year. Building

operations generally were almost at a standstill and the percentage of unemployed workmen in that industry was very high.

Local finished lumber exporters express disapproval at the action of the Trades and Labour Council in notifying Australian Governments of the prevalence of Orientals in the lumber mills of the province.

City rules for the regulation of jitney bus traffic, along with the cheapening of fares by the Street Railway Company, have resulted in a very marked reduction in the number of busses operating.

The British Columbia Electric Railway Company has an agreement with its street car employees which terminates June 30. The company has made the following offer to the men:

General reduction in wages of ten per cent.

Method of this reduction to be discussed with the employees.

Working conditions to remain the same, except for the necessary alterations in the wording of such clauses as cannot properly be made to apply to the extended period.

The agreement to be for a period of two years.

These proposals made without prejudice and to be unconditionally withdrawn unless accepted without the intervention of any outside party.

This proposal has been declined by the men. The company has applied to the Department of Labour for a board of investigation to be appointed under the provisions of the Industrial Disputes Investigation Act, to go into the matters in contention. The company has also notified the electrical workers in its employ that their working agreement with the company will expire June 30. The street railway employees, along with the electrical workers, have formed a joint light, power and transportation council.

It is understood that a readjustment of longshoremen's wages has been requested by the local shipping firms. Pending the arrival here of the Interna-

tional president of the Longshoremen's Union no action has been taken.

Steel for the manufacture of war material is expected here at the end of June and several firms with the necessary equipment are making preparations to carry out the work. With this one exception the industrial outlook is very unpromising and workmen will be well advised not to come to British Columbia.

Victoria.

Generally speaking, there has been no change in labour conditions during the month, the number of unemployed registered at the City Employment Bureau being about 2,300, of whom it is stated 85 per cent. have been unable to obtain employment. The engineering and metal trades were fairly active during June, some of the ship yards working overtime in repairing steamers that were required to be done on short notice.

The City Council had an interview with the Provincial Cabinet when the city's unemployment problem was discussed, but no definite action was promised beyond the Cabinet endorsing a proposition to assist in securing low fares for those who might wish to go to the Northwest to obtain work in the harvest fields. A few days later a deputation from the unemployed interviewed the Government on the same subject. The Government held out no hope of any further new Government work being started in this vicinity, but the Acting Premier, Hon. Mr. Bowser, told the deputation that the Government would loan the city money for the relief of the unemployed when the city asked for it.

About 800 applications have been filed with the City Clerk from mechanics who desire to go to the Old Country as armament workers. The applications will be revised and suitable selections made when the British Commissioners visit Victoria.

The Trades and Labour Council at its meeting on June 2 passed a resolu-

tion that the British, Dominion and Colonial Governments should be asked not to handle any timber sent from British Columbia unless a guarantee was given by the Governments that it was being handled by white labour, and not by Asiatics.

Letters have been sent to the Prime Ministers of Australia and New Zealand asking for their opinion on the matter, and seeking to secure a pledge that lumber imported into those countries should be handled exclusively by white labour.

The Dominion Government has let a contract for the construction of an observatory on Little Saanich mountain, at a cost of \$75,000.

The whaling fleet, which has been tied up in Victoria harbour since last fall, is making ready to commence operations about July 1. This date is about two months later than usual, the delay being caused by a change in ownership of the whaling company. Although late in starting, a successful season is expected, as whales are reported plentiful on the west coast of Vancouver Island.

Some months ago the Pacific Lock Joint Pipe Company deducted from the wages of its employees a charge for the war tax stamp, and on a complaint from the Trades and Labour Council, the city officials took the matter up with the company, who have refunded the amount, \$6.10, which was donated to the Patriotic Fund.

The plumbers' strike against a reduction in wages, now in its fifth month, continued without any change in the situation.

The strawberry crop in this locality was the largest on record. The prices obtained were better than last year, several carloads being shipped to the Northwest Provinces. Labourers for picking (mostly Chinese) were paid \$1 per day as against \$1.50 last year.

The hay crop which has been harvested was fully up to the average.

Work on the harbour breakwater was proceeding satisfactorily, a large staff of men being steadily employed.

The returns of the forest department of the province for the month of May show that there was scaled in all districts 41,335,237 feet of sawlogs, 167,381 lineal feet of poles and piles, and 15,482 cords of railway ties, shingle bolts, fence posts and cordwood. The total exports for the month were 7,608,046 feet of sawlogs.

On Vancouver island there were scaled 3,053,040 feet of sawlogs, 15,380 lineal feet of poles and 233 cords of ties, posts and bolts. There was exported 6,574 feet of sawlogs.

The total estimated value of the sales of timber completed during the month was \$1,895.39.

CONDITIONS DURING JUNE AFFECTING WOMEN WORKERS IN LEADING INDUSTRIAL CENTRES.—REPORTS OF WOMEN CORRESPONDENTS TO THE LABOUR GAZETTE.

Montreal.

During the month of June women have been employed fairly regularly, but most industrial establishments have continued work at a reduced time rate, except those filling orders for the army. Women's occupations affected by the change of season such as laundry work and those of waitresses have demanded a greater number of hands than during the past few months. Retail establishments have been fairly busy. Some departmental stores have given the Saturday afternoon half-holiday throughout the month. In July and August the custom will become general as in previous years.

Help Tendered Women Affected by War Conditions. — Mention has been made in these columns several times during the past few months of the effective aid given unemployed women by the Emergency Employment Bureau and "l'Assistance par le Travail."* Before closing its office for the summer months the directing committee of the Emergency Bureau gave an extensive report of its work, begun on October 26, 1914, and ended May 31, 1915, from which the following details will be of interest: Between the two dates mentioned above 1,324 unemployed women registered; offers of situations numbered 1,181, of

which 1,120 were for domestic servants, only 61 other positions being available. In all 429 women were placed. The remainder were given sewing to do; 759 were employed in the sewing circles formed under the direction of special committees, and women unable to leave home were provided with work by the Home Sewing Circle. Besides filling many private orders 4,500 garments were made through the Bureau for the Red Cross. A Government contract for 9,000 compressed bandages and 3,000 gauze dressings was also filled. The office will be closed during July and August, but will reopen in September.

The committee of l'Assistance par le Travail, founded by la Fédération Nationale St. Jean Baptiste, kept its workroom open until the end of June. Some details as to the work done by this committee were given in the April number of the *Labour Gazette* (page 1180).

Mutual Benefit Associations for Women.—The "Alliance Nationale" besides admitting women members in many of its branches or circles (cerceles), as was mentioned in the case of l'Union St. Pierre granting its women members special privileges last year,* gives its support to the formation of women's circles, one of quite recent establishment being the "Cercle Marguerite Bourgeoys."

*See *Labour Gazette* for December, 1914, and January, 1915.

*See *Labour Gazette*, September, 1914, page 369.

Fédération Nationale St. Jean Baptiste.—The annual public collection of "Denier National" made by "la Fédération" in aid of its associated charities and federated societies was held June 24.

Women Clerks' Association (Ass. des Employées de Bureau).—The Association has been reorganized of late and is now in a position to offer many new advantages to its members. For some time past the Association has held an office where orders were taken for typewriting at 62 St. James street. At the same stand a school for professional training in office work has been established where members can follow courses in both English and French. A tennis club has been formed, the members having their won courts at Lafontaine Park; a swimming club is also among the additional advantages of the Association.

Factory Workers' Association (Ass. des Employées de Manufacture).—The last meeting prior to the summer vacation was held on June 20. The presidents and secretaries of the various branches were present at this central meeting and read the reports of their respective divisions for the past six months. The St. Helen Branch (Section Ste-Hélène) has offered its members 15 lessons in dressmaking, the same number in fancy work; 15 members followed the former, 29 the latter, the total attendance being 119 and 252 respectively. The "Ecole Garneau" section gave 15 lessons in domestic economy and cooking; 34 names were given and the total attendance numbered 177; in dressmaking 33 names were entered and the total attendance was 103. At the Maison-neuve branch 27 and 20 registered for the two classes mentioned above and the total attendance was 200 and 131. In the Hochelaga section 15 lessons in domestic economy and cooking were followed by 50 members and the total attendance was 340. A course in millinery was taken up by 35 young girls, the total attendance being 266. The dressmaking class had 51 pupils and total attendance 284, that of fancy work 32 pupils and

total attendance 176; 30 lessons in English were given to 84 members; these had a total attendance of 974. A singing class was formed in this section and proved very popular; 53 young girls registered and the total attendance was 456.

These various classes are given at the expense of the Association; the cost for the year just closed was \$500. The members are entitled to follow all these classes without any additional charge being made other than their yearly contribution of 25 cents. The officers of the Association give their leisure to the management of the different sections and receive no remuneration. At the last meeting a cheque for \$36.40 was received from the Co-operative League and was divided among the members profiting of its advantages. During the summer "l'Association des Employées de Manufacture" invites its members to attend special religious exercises to be held at the beginning of July and again in September.

Toronto.

The monthly report of the Women's Employment Bureau shows the following statistics for May:

Registrations for the month of May.....	107
Of these, for day work only for May.....	57
Number of applications for domestics during May..	242
Number of applications for day workers during May	177
Number of applications filled during May.....	26
Number of applications for day workers filled during May.....	177
Number of days' work given through work room during May.....	137
Number of days' work given through emergency work room during May.....	294
Number of women given work through knitting department during May.....	3
Total number of registrations to date.....	2,757
Total number of registrations of charwomen to date.	891
Total number placed in positions through this office to date.....	420
Total number now in positions through this office to date.....	420
Total number placed out of town through this office to date.....	120
Total number of day's work and odd jobs given to date.....	1,316
Total number of day's work given through work room to date.....	3799½
Total number of days' work given through emergency work room to date.....	4,967½
Total number of women given work through knitting department to date.....	201

In the department of day workers there were still more workers than can possibly be supplied with work. The fact that housecleaning has almost stopped may account somewhat for this. Also, many women report that their employers have already left for their summer homes.

Dressmakers seemed to be still well employed. Only occasionally was there an appeal for work among the competent ones.

Among the seamstresses and among the piece-workers the strain still continued. Many applications for work in the league rooms have come in during the month.

No very appreciable difference was noted in the domestic situation. The demand continued. Several women who formerly held out for day work only have been persuaded to take housework by the day or by the month.

Among the girls registered for factory work, several have applied for work during the last two weeks of the month as nursemaid or mother's help. This applies to girls of from 14 to 17 years of age. The difficulty in placing them arises from the fact that their mothers usually insist that they sleep at home, thus narrowing the possible area of employment. Also, the total lack of experience in housework, added to the possibility of return to the factory, makes the housekeeper hesitate about employing them.

In summing up the month's work, it appears that the greatest need is still with the day workers. More work is required for these women, many of whom are the sole supporters of little families, who are utterly dependent on their earnings.

In his report for May to the Local Board of Health, the Medical Officer of Health, Dr. Hastings, reported that the nurses in the Child Welfare Branch of his department had distributed 11,834 quarts of milk to the various day nurseries and creches of the city since the Provincial Secretary started to give the supply from the Guelph Prison Farm.

To save babies' lives the department is now supplying small quantities of ice in order that the milk may be kept in good condition throughout the day.

Reference is made to the large number of Italians out of employment during the past winter, and as a result of an inquiry conducted into the conditions of 100 of these families it was found that 89 per cent. of the fathers had been farmers in Italy, and of these 80 were out of work at the time of the inquiry.

Women's Institutes of Ontario.—Nearly 25,000 women, in 843 branches, make up the membership of the Women's Institutes of Ontario, the annual report of which, for 1914, has just been issued. Articles in this report cover nearly every line of feminine endeavour. The efforts described or proposed relate to activities in Institutes, the church and community life, to Red Cross and other forms of patriotic helpfulness, and to agriculture, more especially to fruit growing, poultry raising, and bee-keeping for women.

The report gives very full consideration to the home, nearly every range of domestic economy receiving attention. The study of child life is given a large place, and two addresses deal with "Children's Rights" and "Education for the Backward." "Electricity as it Relates to Women on the Farm" is the title of a practical talk by Sir Adam Beck. Considerable space is given to health topics, both of a public and an individual nature.

Factories.—All factories connected directly or indirectly with the manufacture of militia supplies were very busy. All were employed, but factory owners were breaking in few if any apprentices.

Domestics.—The Women's Welcome Hostel reports as follows:

Number registered (all new arrivals).....	14
" of city applications for domestics.....	80
" country applications for domestics.....	26
" applications filled.....	25

It may be seen from this report that the number of new arrivals is still very small and that there is plenty of work for good trained domestics.

A similar report comes from the Employment Bureau of the Women's Patriotic League:

Number registered.....	179
Number registered for day work (not sewing).....	84
Applications for domestic help.....	235
" " " " filled.....	33

Day work was much more scarce than

in April, owing to the fact that spring cleaning was over and former employers were leaving town for the summer months.

Winnipeg.

Comparative figures of positions offered and filled by the Winnipeg Free Employment Bureau are available for March, April and May and are given below:

	MARCH.*		APRIL.		MAY.	
	Offered.	Filled.	Offered.	Filled.	Offered.	Filled.
Agents.....	18	6
Chambermaids.....	13	6	19	13	6	6
Book-keepers.....	1
Cooks.....	10	5	7	2	6	3
Dress-makers.....	3	2
Day Workers.....	309	305	432	411	355	349
Domestics.....	281	97	243	81	156	90
Flower makers.....	1	1	3	3
Factory helpers.....	12	10	10	7	8	8
Housekeepers.....	13	13	15	6	13	8
Housemaids.....	2	...	1	1	3	2
Kitchen women.....	16	19	26	23	12	9
Laundresses.....	2	2	1	...	1	1
Laundry workers.....	1	1	...
Nursery.....	1	0	1	...	2	1
Nurse Girls.....	20	6	19	12	13	8
Office Girls.....	1
Stenographers.....	1	1
Tailoresses.....	4	2	1
Waitresses.....	14	9	9	5	8	8
Nurse maids.....	1	1
Ward maids.....	2	0	2	1
	721	482	791	564	587	496

*The above figures for March will correct those given in error in the *Labour Gazette* for May, p. 1298.

The variation in the totals is caused by the increase and decrease in the demand and supply of day workers and domestics more than any other class. It will be noticed that in March 19 classes of work were offered; in April 17, and in May 14; while spring housecleaning in April gave 106 days' work increase over March, which brings up the total. For June, many families having moved to the lake, the figures will drop in both the domestic and day workers' classes. There has been some demand for waitresses, kitchen girls and domestics, but

otherwise positions offered are very few. A reduction of hotel licenses has reduced the staffs of the hotel help employed, the number, however, is offset by the opening of summer hotels and restaurants at the lakes. Hotel help is looking for work, also young nurse girls (many more now that school is closed) and foreign girls.

Bookbinders were working both short staff and short hours. Garment workers are well employed and were with the exception of one factory working full time. Store help was fairly well em-

ployed, with occasional openings offering.

Telephone girls were well employed. Despite the number of the phones taken out there have been no dismissals. Voluntary vacancies have not been filled which leaves the staff somewhat reduced as compared with a year ago. The total employed is 584 in the seven exchanges. Salaries remain the same as a year ago.

Nurses were not very busy. One to six calls daily have been received at the Registry. Fifty-four names were on the waiting list.

Stenographers have been somewhat more in demand than formerly. The list of positions filled for June totals 55, most of which have been temporary positions.

School closed Friday, June 18, when 557 teachers, 12 supervisors and three domestic science instructors laid down their duties.

The Playgrounds Association has commenced work, and gives promise of a good summer. The appropriation is \$18,000, with 20 grounds in operation. There are employed one commissioner, 24 men directors, two pianists, 27 lady directresses, besides the caretakers of the school grounds. The grounds are open from 2 p.m. till dark. Some of the lady directresses are school teachers or university students.

The total relief given by the Associated Charities for May was 454, of which new cases totalled 34. The causes for relief being required are as follows:

Widows.....	86
General sickness.....	84
Tuberculosis.....	23
Accidents.....	81
Rheumatism.....	8
Cripples.....	62
Unemployment.....	71
Desertion.....	36
Man away.....	36
Inadequate wage.....	27
Under employment.....	20
Old age.....	17
Imprisonment.....	10
Insanity.....	7
Separation.....	5
Immorality.....	3
Non support.....	2
Misfortune.....	1

The Day Nursery has four paid workers and averages 25 children daily.

The Red Cross Society has opened rooms on St. Mary's avenue, where voluntary work is being done every day in sewing of all kinds for Red Cross work by the women of Winnipeg.

Vancouver.

General conditions of female labour for June remained very much the same as during the previous month, a slight increase in the demand for domestic help and laundry workers being balanced by the falling off of trade in the seasonal occupations, such as dressmaking, tailoring, etc.

The Free Employment Bureau, inaugurated by the Women's Employment League October 1, 1914, was on June 1 taken over by the City Council to become a part of the Civic Relief Department, under the direction of Mr. G. Ireland, relief officer for the city, to be operated as a free civic employment bureau for women.

The latest report of the relief department shows that during the past month the number of heads of families out of employment and registered as needing relief, has increased to between 1,400 and 1,500.

Many of the married women thus situated sought employment, but few were successful in finding it, and with a view to assisting such women with children as are able to find day work, the following resolution has been passed by the City Council:

"The usual fee charged to mothers who leave their babies in charge of the civic creche while they go out to work will be foregone for the present on the part of those really unable to pay."

A report issued on the work of the creche shows an increase in the number of married women leaving their babies to be cared for while they do "day work" to keep things together until their husbands obtain work. During

the month of April, 1914, 637 babies were left at the creche, while the report shows that during April, 1915, 892 babies were cared for. The creche was opened in May, 1912, by a committee of ladies, being taken over by the city in February, 1913, and placed under the direction of the health department, with a staff of six, to carry on the work. A new building was opened in July, 1914, and is the only one of its kind west of Winnipeg. The charge to mothers heretofore who leave their babies to be cared for has been 10 cents per day, the child receiving two meals, dinner consisting of soup, crackers and milk pudding, the evening meal of porridge and milk with bread and butter.

An employment bureau is also run in connection, where mothers needing work can register and where applications for women to do day work are received.

At a meeting of the City Council the attention of the members was drawn to the fact that the Salvation Army was advertising in the English papers for domestic help to be brought to Canada, and a resolution passed "protesting against any further movement of that kind as it is impossible to find situations for those already here." A copy of the resolution was ordered to be sent to the Salvation Army headquarters.

The efforts of the various women's organizations of the city have been for the last few months in the direction of patriotic work. During the month of June 12 tons of linen was collected by the Daughters of the Empire and forwarded to the headquarters of the Red Cross Society in England, while socks to the number of 1,800 pairs were collected on Empire Day and sent to England to be distributed among the soldiers.

There was a small but fairly steady demand for domestic help at an average wage of \$12 per month during the month. The supply, however, was more than the demand, a considerable number

of women seeking domestic work being unable to find situations. The demand was for general help, very few calls being made for cooks or housemaids, with practically no demand for housekeepers or chambermaids.

In factory employment, workers in jam making and fruit canning were fairly well occupied, the new fruit being in. There was a slight increase in the demand for laundry workers, but a falling off in the seasonal trades of dressmaking, tailoring, millinery and garment making somewhat increased the number of women out of employment or working short time.

Boot and shoe workers were steadily employed during the month, but there was very little demand for store clerks or waitresses.

The demand for stenographers was very low, the salaries offered in some cases being as low as \$5 a week for a bookkeeper and stenographer. Many stenographers have left town, but the supply was considerably in excess of the demand.

A reduction of 10 per cent. in the salaries of school teachers has been ordered by the Board of School Trustees, thereby making a reduction in civic expenditure of \$28,000. In reply to a statement that the salaries of teachers were too high, the chairman of Board of School Trustees stated that "over 70 per cent. of the teachers were getting less than \$100 per month, many not receiving more than \$60 or \$65, while a number of those receiving such salaries were in many cases the sole revenue producers of their families owing to the prevailing unemployment and financial stringency."

It is thought that reduction of salaries will curtail the work of the Teachers' Relief Association, 10 per cent. of their salaries being the amount contributed hitherto by each teacher to the relief fund.

THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—PROCEEDINGS DURING JUNE, 1915.

AN application was received on June 27 for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the British Columbia Electric Railway Company, Limited, and its street and electric railway employees in Vancouver, Victoria and New Westminster, relative to certain proposed changes in the wage scale and in working conditions. In the application it was stated that the dispute affected 1,058 employees directly and 156 indirectly. A Board was established on June 28, Messrs. Jas. H. McVety and A. G. McCandless, both of Vancouver, being appointed members thereof, on the recommendations of the employees and the employing company respectively. In the absence of any joint nomination from the foregoing, the Board was completed by the Minister of Labour on July 8, by the appointment of the Hon. Mr. Justice W. A. Macdonald of Vancouver as chairman.

An application was received on June 28 for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Grand Trunk Pacific Railway Company and its maintenance-of-way employees, members of the International Brotherhood of Maintenance-of-Way Employees. The dispute in question grew out of the termination of a previous agreement between the company and its maintenance-of-way employees, and a proposed reduction of wage rates, effective from July 1, 1915. In the application it was stated that the dispute affected 1,800 employees directly and 1,400 others indirectly. Whilst communications were passing between the Department and the parties concerned relative to the establishment of a Board, the application was withdrawn on account of further

negotiations between the company's officials and the employees' committee.

Reference was made in the June number of the *Labour Gazette** to the receipt of an application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Toronto Hydro-Electric commissioners and their electrical workers, members of the International Brotherhood of Electrical Workers. A Board was established on June 7 to deal with this matter, Messrs. Fred. Bancroft and Frank E. Brown, both of Toronto, being appointed members thereof, on the nomination of the employees and of the employing company respectively. The Board was later completed by the appointment of His Honour Judge Emerson Coatsworth, of Toronto, as chairman.

Reference was made in the June number of the *Labour Gazette*† to the receipt of an application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Canadian Northern Railway lines and merged lines, and their locomotive engineers and locomotive firemen and enginemen. A Board was established to deal with this matter on June 2, Messrs. D. Campbell of Winnipeg and F. H. McGuigan of Toronto being appointed members thereof, on the recommendation of the employees and the employing company respectively. In the absence of any joint agreement from the foregoing, the Board was completed by the Minister of Labour, on June 21, by the appointment of His Honour Judge Emerson Coatsworth of Toronto, as chairman.

Report of Board in Dispute between the Ottawa Car Manufacturing Company, Limited, and certain employees, members of Lodge No. 412, International Association of Machinists.

The Minister of Labour received on June 17 the unanimous report of the Board of Conciliation and Investigation, which was established on May 28, to deal with a dispute between the Ottawa Car Manufacturing Company, Limited, of Ottawa, and its machinists, to the number of 100, members of Lodge No. 412, of the International Association of Machinists.

The dispute in question grew out of a proposal on the employees' part for certain alterations in wage rates and working conditions. The industry affected not being one of the public utilities class, to which the Act primarily applies, the Board was established by the joint consent of the parties concerned. Messrs. Jas. Simpson of Toronto and Geo. F. Henderson, K.C., of Ottawa, were appointed members thereof, on the recommendation of the employees and of the employing company respectively, and the Board was completed on May 29 by the appointment of Mr. H. P. Hill, of Ottawa, as chairman, on the recommendation of the other Board members.

The unanimous report of the Board was accompanied by a copy of an agreement which had been secured between the parties concerned, providing for certain amendments in the wage rates previously in force, the same to "continue in force and effect during the continuance of the present war, but for not more than one year from the first of June, 1915," the terms and condi-

tions of the former agreement in all other respects to remain in full force and effect.

Report of Board.

The text of the report of the Board in this matter is as follows:

To the Honourable

The Minister of Labour,
Ottawa, Ont.

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Ottawa Car Manufacturing Company, Limited, (employer) and certain employees, members of Lodge No. 412, International Association of Machinists (employees).

The Board of Conciliation and Investigation appointed herein under the provisions of the above mentioned Act, and composed of James Simpson of the city of Toronto, recommended by the employees; George Frederick Henderson of the city of Ottawa, recommended by the employer, and Hamnett Pinhey Hill of the same place, appointed on the joint recommendation of the other members of the Board by the Minister of Labour as chairman of the Board, have the honour to report as follows:

The Board met on the thirty-first day of May, A.D. 1915, and having subscribed and taken the oaths of office, it immediately procured a conference between representatives of the men and

of the company looking to a settlement of the matters in dispute.

The Board met further on the first day of June and continued negotiations commenced on the previous day without them reaching any definite result. Mr. Henderson being obliged to leave Ottawa on the evening of that day for an absence of several days, he requested Messrs. Hill and Simpson to continue the negotiations in the meantime, and they held further meetings and continued the negotiations during the course of the two following days.

With the consent of his fellow members of the Board, Mr. Hill entered into correspondence with a large number of concerns employing machinists, and in that way accumulated a substantial amount of information for the benefit of the Board.

Messrs. Hill and Simpson again met in Ottawa on the twelfth day of June and resumed the negotiations already referred to. On the fourteenth day of June the full Board again met and the negotiations were continued during the course of that day and the fifteenth and sixteenth day of June.

The Board regrets to have to report that it has not been able to continue the negotiations to a successful result, it having been found impossible to work out an agreement between the employing company and its employees. It is also a matter of regret that the members of the Board are not unanimous in their conclusion.

The application of the men was to have an amendment to their previous agreement, providing for a minimum

wage of 35 cents per hour. After hearing the evidence furnished by and on behalf of the parties, as well as considering the information collected by the chairman of the Board, Mr. Simpson was and is of the opinion that the men were justified in asking for this amendment. Messrs. Hill and Henderson were and are, however, of a contrary opinion, and in the result the Board can only report that in the opinion of the majority an amendment such as asked for by the men cannot be recommended.

It is perhaps proper to report that during the course of the negotiations the members of the Board, while adhering to the opinions set out in the last preceding paragraph hereof, expressed their desire that in view of the fact that the company is engaged in the manufacture of gun carriages and ammunition wagons which are urgently needed, the parties should agree upon a minimum wage of 33 cents, to remain in effect only during the continuance of the present war, but for not more than one year from this date. This expression of desire was submitted to the parties, and the company has expressed its willingness to enter into this agreement, but the men still have the suggestion under consideration. The Board ventures to express the hope that the company will leave the matter open for a few days further, and that the men may see their way clear to enter into the suggested agreement.

All of which is respectfully submitted.

(Sgd.) HAMNETT P. HILL.

JAMES SIMPSON.

GEO. F. HENDERSON.

Terms of Agreement.

The agreement between the Ottawa Car Manufacturing Company, Limited, and its machinists, is in the terms following:

THIS AGREEMENT made in triplicate this seventeenth day of June, A.D. 1915, between the Ottawa Car Manufacturing Company, Limited, hereinafter called "The Company," of the first part, and the machinists employed by the said company, hereinafter called "The Machinists," of the second part.

Witnesseth that the parties hereto have agreed in the manner following, that is to say:

That the agreement made between the parties hereto, bearing date the twenty-eighth day of May, A.D. 1914, shall continue in force and effect during the continuance of the present war, but for

not more than one year from the first day of June, A.D. 1915, with the following amendment, namely: that the company shall pay a minimum wage to machinists of 33 cents, during the continuance of this agreement. In all other respects the terms and conditions of the agreement dated the twenty-eighth day of May, A.D. 1914, are to remain in full force and effect.

As witness the signatures of the parties hereto by their properly appointed representatives.

EDW. R. PATTERSON,
JOHN R. NASON,

For the Machinists.

*Ottawa Car Manufacturing Company,
Ltd.,*

W. K. JEFFREY.

WHOLESALE PRICES IN CANADA DURING 1914.

THE annual report of the Department on the course of prices in Canada for the calendar year 1914 was completed during June and will be distributed during the present month. This is the fifth statement of the kind to be issued by the Department, the special report on the period 1890-1909, issued in 1910, having been followed annually by a review of the preceding year.

The report for 1914 is similar in scope and arrangement to the previous issues and includes prices from month to month for over 300 commodities representative of production and consumption in Canada, divided into the following groups:

Grains and Fodders, Animals and Meats, Dairy Products, Fish, Fruits and Vegetables, Miscellaneous Groceries, Textiles, Hides, Leathers, Boots and Shoes, Metals and Implements, Fuel and Lighting, Lumber, Miscellaneous Building Materials, Paints, Oils and Glass, House Furnishings, Drugs and Chemicals, Furs, Liquors and Tobaccos, and Sundries. The report includes also index numbers showing the price movement in each commodity and group back to 1890 and analyses of changes during the year with detailed information as to conditions affecting prices, production, demand, trade conditions, &c.

THE COURSE OF WHOLESALE PRICES IN CANADA DURING THE TWENTY-FIVE YEARS 1890-1914 (inclusive).

Number of Commodities: 272.

(Average Prices, 1890-1899=100.)

TABLE SHOWING INDEX NUMBERS BY GROUPS OF COMMODITIES FROM MONTH TO MONTH, 1914.

Average prices 1890-1899=100.

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Year.

(b) Miscellaneous.....	114.0	114.1	113.8	113.3	112.7	111.3	110.8	109.8	110.5	109.9	108.1	108.6	111.4
(c) Paints, Oils, etc.....	140.2	141.3	140.2	140.8	140.6	140.1	140.6	140.4	140.6	142.4	139.5	142.9	140.7
IX. House Furnishings.....	128.8	128.8	128.8	128.8	129.0	128.8	128.8	128.8	132.3	132.6	132.6	132.6	129.5
IX. Drugs and Chemicals.....	111.1	111.1	111.1	111.6	111.6	111.6	111.6	121.4	137.3	141.1	140.2	139.7	121.6
XIII. Miscellaneous:—													
(a) Furs, Raw.....	226.5	230.3	236.0	241.3	241.3	230.9	235.0	208.6	208.6	172.5	137.5	96.1	205.4
(b) Liquors & Tobaccos.....	138.8	138.8	138.8	138.4	138.4	138.4	128.3	128.3	138.3	138.6	138.7	138.3	136.9
(c) Sundries.....	109.3	109.9	108.2	108.4	108.9	106.8	106.2	106.5	109.1	107.8	110.0	111.5	108.5
All commodities.....	136.5	136.6	137.0	136.7	136.3	135.3	134.6	136.3	141.3	138.7	137.5	137.6	136.1

*The average of the index numbers for the twelve months is higher than that for the year, calculated from the average prices during the year of the several commodities, namely 137.0, as a number of fruits and vegetables quoted only a few months during the year have a comparatively low price level.

Findings of the Report.

The opening paragraphs of the report are as follows:

"The factor which chiefly affected Canadian prices during the year 1914 was the outbreak in August of the great European War. From January until April the general price-level was steady, with a slight tendency upward; thereafter there was a decline of two points in the index number, during July and August, the latter being the lowest month of the year. The war, however, at once caused advances of about seven points, and though there was a reaction almost immediately, and although the year ended on approximately the same

level as it began, the effect on the average for the twelve months was a rise. The Department's index number (which includes 272 commodities) stood at 136.1 for 1914, compared with 135.5 for 1913, and 134.4 for 1912, these numbers being percentages of the average prices prevailing during the decade 1890-99, the period adopted by the Department as the basis of comparison. The point reached in September, namely, 141.3, was the highest recorded by the number since 1890.

"The chief increases for the year as a whole appeared in the groups Grains and Fodder, which rose 14 per cent, Animals and Meats, 6 per cent, Woollens, 8 per cent, Hides, 10 per cent, Drugs and

THE COURSE OF WHOLESALE PRICES, CANADA, BY MONTHS, 1914.

Number of Commodities: 272.

(Average Prices, 1890-1899=100.)

Chemicals, 7 per cent. Raw Furs declined 33 per cent, Fuel and Lighting, 6 per cent, and Cottons 5 per cent. Food prices returned to the high levels that had prevailed in the latter part of 1911 and early in 1912. Meats were on a high level throughout the year, but showed much weakness in the last three months."

The detailed statistics for the year are presented in Part I of the report, while Part II consists of tables of annual prices back to 1890 reduced to index numbers. The review of the price movement of the year is printed in two main sections: (A) A summary review of the general movement, with analysis from various points of view; (B) A review of the price movement during the year in each of the commodities covered by the investigation, with statistics or other information as to conditions affecting prices.

General Summary.

The general movement of wholesale prices in Canada throughout 1914 may be noted conveniently from the accompanying diagrams and tables, which show the movement from month to month of some 272 commodities. The report states:

"As may be seen by the accompanying diagram the course of wholesale prices during the first half of the year was downward, but turned abruptly upward in August on the outbreak of war, and although prices receded until November, the level in December was one-half point higher than at the beginning of the year and prices in many lines were beginning to advance rapidly. Early in 1915 a level higher than in September, 1914, was indicated. In the first half of the year, Grains and Fodders, Animals and Meats, Fish, Fruits and Vegetables, Textiles, Hides and Leather were higher than in the previous year but consider-

COURSE OF PRICES IN CANADA DURING THE PAST FIVE YEARS, 1910, 1911, 1912, 1913 AND 1914.

(Prices 1890-1899=100.)

able decreases appeared in Dairy Products, Metals, Fuel, Furs, and Sundries, while other groups showed some declines. The demand for building materials was slow and the industrial demand for raw materials, especially in the metal trade, was lighter than in 1912 and 1913. In Canada the cessation of the boom of the past few years in building and construction, the difficulty in raising money for and the suspension of many constructive undertakings was seriously felt on the markets. In some materials, however, such as hides, leathers, wool, and lumber, prices were maintained owing to scarcity even though demand was light. Raw cotton and jute were in fairly good demand, but supplies were light and prices high. Grain was in good demand from Europe in the early part of the year and shipments of cattle, hogs and meats to

the United States were good during the same period. Stocks of fish were low and foreign demand was good. Apples and potatoes were scarce and high in price. Sugar was lower in price than since 1890 and flour was comparatively cheap. Tea was somewhat scarce and high in price.

"All markets were completely changed by the outbreak of war early in August. Wheat, with other grains, flour and oatmeal, took the lead in advancing as the countries at war were the great wheat consuming countries of the world and were also great grain producers, especially Russia and Hungary. Sugar also rose immediately as half the world's sugar is produced from beets grown in Europe and these supplies would not be available for the English market. Live-stock and meats were in demand for

army supplies and prices rose but soon receded as demand fell off in Canada. Metal markets fluctuated violently for some weeks because shipments and supplies as well as demand were uncertain. Coke declined as industrial demand fell off. Rubber changed similarly. Fine wool declined, but coarse wool rose. New Brunswick lumber was upward under strong demand from Great Britain, but in other parts of Canada lumber was downward. Drugs and chemicals advanced steeply as shipments were uncertain, freight rates were higher, and demand was greatly increased in lines used in war, such as carbolic acid, glycerine and potash. Gunpowder also advanced. Raw furs, however, slumped as prospective demand for finished goods was cut off. Butter, cheese and eggs rose under a good demand from Great Britain. Additional customs and excise duties in Canada raised the prices of some commodities, including sugar, coffee, liquors, tobacco and alcohol. Within a few weeks the dislocation of trade and the interruptions to shipping had been readjusted to the new conditions and many commodities fell in price. Also the dislocation of industry weakened the demand for materials so that the general level of prices fell each month in spite of considerable advances in many lines. The disturbance of financial conditions increased the industrial depression and destroyed the influences tending toward improvement up to the outbreak of war, although this was partly offset by the high prices received for farm products and by the demand in some manufacturing industries for military supplies. Cotton fell steeply as the demand in

Europe was greatly curtailed, and the United States crop was the largest on record. Silk and jute similarly declined. Iron and steel products, structural materials, coke, gasoline, raw rubber and finally pulp and paper weakened considerably. In December the markets for grain, flour, butter, eggs, cheese, wool, flax, fibre, leathers, antimony, copper, matches and glass were advancing and this firmness indicated a very high level for prices early in 1915."

The Rise in the Cost of Food.

"With a view to specific comparison of the price of foods in 1911, 1912, 1913 and 1914 (including in the term only fully manufactured products, in the form in which they enter the household, *e.g.*, flour but not wheat, beef but not cattle, etc.,—80 articles in all) the diagram below has been prepared. The placing of the four lines on the same background enables direct comparisons to be conveniently made of the level of food prices in the respective months of the four years, as well as of their general direction. It will be noted that while in 1913 the level of food prices was lower than in 1912 and the latter part of 1911 it had risen considerably in the latter part of the year and was nearly as high as in 1912 during the first half of 1914. The outbreak of war was followed by a steep rise in September and though a recession then occurred the level was still high during the last three months of the year and was still upward in December. High prices for flour, oatmeal, sugar, and tea accounted to a great extent for this last advance."

INDEX NUMBER OF FOODS 1911, 1912, 1913, 1914.

	Jan.	Feb.	Mar.	April.	May	June.	July	Aug.	Sept.	Oct.	Nov.	Dec.	Year
1914	144.1	143.2	144.2	143.0	141.4	140.0	139.3	139.7	148.1	144.3	144.4	145.8	139.6

RELATIVE PRICES OF FOODS, 1911, 1912, 1913 AND 1914.

Including Meats, Fish, Dairy Products, Fruits, Vegetables; Breadstuffs, Sugar, Tea, Coffee, Condiments, etc.

(Prices 1890-1899=100.)

Retail Prices.

"Since the beginning of 1910, the Department has secured on the fifteenth of each month from the correspondents of the Labour Gazette (resident in each locality of the Dominion having a population of 10,000 and over—some fifty in all) a return showing the current retail prices of twenty-eight articles which enter prominently into cost of living, together with a statement in each case as to the prevailing rental for a representative workingman's dwelling of the better class, with and without sanitary conveniences. It is thought that probably 80 per cent of the expenditure of the ordinary family are represented in these returns, while the localities selected are the most important industrially in the several provinces. The prices in each

month in the years 1910, 1911, 1912, 1913 and 1914 reported in this way to the Department, have been averaged and the results set forth in the table in Appendix A. It will be seen from these statistics, and especially from the averages for the whole Dominion, that retail prices were comparatively steady in 1914 except in meats, which were upward. The most satisfactory way of estimating the total effect of these changes is to work out a family weekly budget* in the terms of the average prices for the several years. A calculation of this kind appears on the following page.

"It will be seen that the total weekly expenditures, including rent, rose slight-

*The quantities indicated in the budget are slight modifications of those employed in similar calculations by various official bodies.

ly, there being a slight decrease in rent and a rise in the cost of food.

"The weekly budget of food would cost \$7.73 in 1914 as compared with \$7.33 in 1913; and \$6.95 in 1910, a rise of nearly 5.5 per cent in 1914 but 11.3 per cent higher than in 1910. Meats, flour, bread and sugar were higher.

"In fuel and lighting the price level was practically unchanged, anthracite coal showing a slight decrease and soft wood an increase. It will be noticed that the chief advances in fuel were in 1912 and 1913.

"In rent a decrease of two per cent appears, the greatest reductions having occurred in Western Canada, but the average was still nearly fifteen per cent higher than in 1910."

Number of Articles Showing Increases or Decreases in 1904.

"An interesting sidelight is thrown on the price movement of 1914 by noting the number of articles which showed increases or decreases in average price or remained unchanged compared with 1913. Altogether, 322 articles are available in the present report and its predecessor for such a comparison. Of this total, 164 showed increases, 125 showed declines, while 33 were unchanged. In other words, 50 per cent of the number advanced, 40 per cent declined, and 10 per cent remained the same. In a similar list last year, 53 per cent advanced, while 34 per cent declined and 13 per cent were stationary."

Prices in Other Countries.

The accompanying table shows by index numbers the movement of prices in

other countries back to 1890 and by months for 1914.

"Appendix B contains more detailed information and the various index numbers are given by groups of commodities. The annual statement of the British Board of Trade is also given.

"In Great Britain prices also showed a great advance from August to the end of the year, but considerable weakness had appeared in many commodities during the first six months. Cereals, meats, tea, sugar, etc., advanced considerably but textiles and minerals averaged lower, although some strength appeared toward the end of the year.

"In United States prices also showed downward tendencies until August when prices rose steeply, especially in grain, flour, dairy products, hides, leather, chemicals, but the movement was downward in textiles, minerals, building material and many other commodities.

"In France prices as shown by the index number of *La Réforme Economique* were lower than for some years until June. Since that month no results have been published. Quotations of hides, tin, zinc, lead, cocoa, rice and corn were higher, while silk, cotton and coffee were lower.

"In Australia prices were higher than in 1913 in the first half of the year, and advanced still more in the third quarter. A severe drought caused very high prices for grain and many other commodities. Metals advanced considerably in the third quarter."

(i) Base 1911=1000; 92 commodities included.

The Movement by Groups and Commodities.

"Grains and Fodder.—The high prices during the last five months brought the level of grain prices to the highest point in many years. The index number for the group Grains and Fodder averaged 156.5 for the year, as compared with 136.8 in 1913, and 167.3 in 1912. High

prices of fodder and barley early in the year accounted chiefly for the high level in 1912; during 1913 the lowest level since 1906 was reached as a result of the record crops in 1912 and 1913. War prices for grain and hay, together with a great shortage in the world's crop of cereals, which had appeared before the outbreak of war, brought the index num-

RELATIVE PRICES OF GRAIN AND FODDER, 1910, 1911, 1912, 1913 AND 1914.

Commodities included: Barley, No. 3 Western; Barley, No. 2 Ontario; Bran; Corn, No. 3 Yellow; Flax, No. 1 Northwestern; Hay, No. 1, Montreal and Toronto; Oats, No. 2 White, Western; Oats, No. 2 White, Ontario; Peas, No. 2 Ontario; Rye, No. 2 Ontario; Shorts; Straw; Wheat, No. 1 Northern; and Wheat, No. 2 White, Ontario.

(Prices 1890-1899=100.)

ber of the group from 150.4 in July, to 178.5 in December, though in January the index number had been as low as 140.9. The estimates of the world's crop of wheat at the end of 1914 showed a shortage of nearly 500,000,000 bushels from that of 1913, the total crop being less than in 1910. The total consumption of wheat is estimated to have increased in recent years by 5,000,000 bushels each year. In rye, the next most important cereal in Europe, decreases in Russia, Germany, and Hungary reduced the crop 70,000,000 bushels below that of 1913 and nearly 100,000,000 bushels below 1912. Barley production showed a considerable decrease in Russia, Germany, Hungary and Canada, only the United States showing a large increase. In oats a reduction of 500,000,000 bushels was shown. In corn, the United States crop was larger than the small yield in 1913, but little larger than the crop in 1911, and nearly 500,000,000 bushels short of the bumper crop of 1912.

"The decrease in total estimates of grain crops from those of 1913 was, therefore, about 1,400,000,000 bushels. The reports as to wheat production in some countries later indicated greater yields than previously estimated, especially in France, Algeria, Argentina and Chili. Anticipations of reduced acreage and cultivation in Europe in 1915, owing to the war, and short supplies on various markets, owing to interruptions to shipping and the free movement of supplies, accentuated scarcity and raised prices on different markets according to circumstances from time to time, inducing much speculation and holding of supplies."

"*Animals and Meats.*—Prices of animals and meats had risen to record levels in 1913, but still further advances occurred in 1914 in cattle and sheep and their products. Hogs, hog products and poultry, however, averaged lower, though high at the beginning of the year. The index number for the group rose from 194.2 in January to 200.1 in September, but fell to 174.2 by December, averaging 192.3 for the year, as compared with 180.8 in 1913.

"Receipts of livestock showed decreases on the principal markets, except in hogs, and in cattle at Winnipeg. The large supplies of hogs raised and marketed in Western Canada, many of which came east to Montreal and Toronto, increasing the receipts there, became a very important feature, marking the advance of the mixed farming movement in Western Canada. The reports of the Census and Statistics Office show an increase in the number of cattle on farms in the prairie provinces. The great decrease in the number in Ontario is probably due to the large shipments to the United States in the latter part of 1913, when the tariff on imports was removed. It has been stated that farmers took advantage of the situation to get rid of a great number of cattle it would not have been profitable to feed for market as feed was high in price that season. Numbers of valuable milch cows, however, were also reported to have been exported. An increase in the number of swine and sheep in the western provinces also appears in the Census returns though decreases in eastern provinces lower the total estimate.

RELATIVE PRICES OF ANIMALS AND MEATS, 1910, 1911, 1912, 1913 AND 1914.

Commodities included: Cattle, Western and Ontario; Beef, hindquarters, fore-quarters and plate; Hogs, live and dressed; Bacon; Hams; Pork, salt, mess; Lard; Sheep; Mutton; Lamb, dressed; Turkeys; Fowls.

(Prices 1890-1899=100.)

“*Dairy Products.*—The level of prices of dairy products as shown by the group index number had risen to a high point by the end of 1913. By the middle of 1914 the index number was down to 129.5 in May as compared with 135.1 in May, 1913, on account of lower prices for butter. In July the index numbers stood at 131.3 as compared with 138.4 in July, 1913, butter, cheese, eggs, and milk at Victoria, B.C., being lower than a year before. Prices of butter, cheese

and eggs, however, rose steeply after the outbreak of war and during the closing months of the year the group index number was almost as high as in 1913.”

“*Fish.*—In 1913 fish prices had fallen considerably as a result of the “big run” of sockeye salmon in British Columbia and good catches of cod, haddock and mackerel on the Atlantic Coast. Canned lobsters, however, had risen steeply. In 1914 conditions were reversed as the catches on the Atlantic Coast and the

salmon run on the Pacific Coast were much smaller. War conditions lowered prices for a short time. The group index number for the year was therefore 156.0 as compared with 158.0 in 1913.

"The fish trade of Canada during 1914 was thought to be on the whole good although the export trade in canned lobsters and dried fish felt the disastrous effects of the war on markets. Later the demand for prepared fish of various kinds from European countries was reported greater. The trade in Canada also showed expansion."

"*Fruits and Vegetables.*—Prices had receded to a comparatively low level by the end of 1913 as a result of good crops in 1912 and 1913. In canned goods the pack of 1912 was so large that considerable stocks in many lines were held over and, as the 1913 crop and pack were also large, supplies were plentiful and prices

were low. The crop in 1914 was somewhat reduced by dry weather, but on the whole was large and prices were therefore little higher than in the previous year in most lines. Prices paid to growers by canners showed a reduction in some cases. In Ontario the peach crop was a failure. None were canned but supplies were available from the stocks held over in previous years. The index number for the group in November was 111.3 as compared with 126.5 in 1913 and the index number for the year was 118.1 as compared with 119.6 for 1913."

"*Miscellaneous Groceries.*—The general level of prices had fallen to 112.9 in January, as shown by the index number for the group, but in September was up to 136.0, declining to 132.2 in December. Flour and sugar were the chief commodities to advance but nearly all articles were upward."

RELATIVE PRICES OF FLOUR, 1910—1914.

(Prices 1890-1899=100.)

RELATIVE PRICES OF SUGAR, GRANULATED AND YELLOW, 1910, 1911, 1912, 1913 AND 1914.

(Prices 1890-1899=100.)

"*Textiles.*—The general level of prices for the year as shown by the average index number for the group was little higher than in the previous year, standing at 133.5, as compared with 130.8 in 1913. The declines in cottons, silk and jutes were offset by advances in woollens and flax products. Prices of jutes were also at record high levels from January to September and cottons and silk were higher than in 1913, until August. Textile mills in Canada had to contend with a slow demand for goods on the one hand, owing to trade depression, and with high prices of raw material and high operating expenses on the other

hand. Demand from clothing manufacturers was very light. Retailers in many parts of the country were heavily stocked up with goods and the free extension of credit in the period of fast expanding trade had resulted in some financial difficulties. These conditions had been gradually remedied without severe loss as the general trade of the Dominion kept up comparatively well during 1913 and the first half of 1914. The outbreak of war was followed by large orders for army supplies and caused improvement in some lines to offset unfavourable results in others. Dye-stuffs, however, became scarce and difficult to obtain."

RELATIVE PRICES OF COTTON AND WOOLLENS, 1914.

Commodities included: Cotton, raw; Cottons, grey; Cottons, woven coloured fabrics; and Prints. Woollens: Wool, washed and unwashed; Yarn, worsted; Knitted Woollen Underwear; and Beaver Cloth.

(Prices 1890-1899=100.)

“Hides, Leather, Boots and Shoes.— The market was comparatively quiet during the early part of the year, although prices of leather were firm, owing to the high price of hides and scarcity of supplies in many lines. As demand for boots and for leather goods was light prices could not advance and many factories were running on short time. Leather continued scarce and high, particularly in some lines such as calf. Increases in prices were expected whenever demand would improve. The leather manufacturers were reported to have a good demand in foreign markets and so were able to keep up prices of leather to boot and shoe manufacturers. In July

the market was still very quiet and factories were running under capacity. The demand for leather being light prices were steady and stocks of leather were low. Retailers had been buying from hand to mouth for some months and boot manufacturers were cautious in laying in stocks. Supplies of hides being scarce, the price had advanced slightly in March and again in July, but eased off again later. The demand for boots, saddlery, harness and other leather goods for military supplies in August caused a firmer market in all lines and, as stocks were low, prices advanced, especially in leathers. Owing to shipping conditions, supplies of hides from South America

RELATIVE PRICES OF HIDES, LEATHERS AND BOOTS AND SHOES, 1910—1914.

Commodities included: Hides, No. 1 Inspected Cows and Steers; Calfskins, green, No. 1; Horsehides, No. 1 Spanish Sole; No. 1 Slaughter Sole; Harness, No. 1, U.O.; Heavy Upper; Boots: Men's Split Bluchers; Men's Box Calf; and Women's Dongola.

(Prices 1890-1899=100.)

were uncertain for a short time. The supplies of chemicals and dyes used in the tanning and the manufacture of leather were also difficult to obtain from Europe. The demand from retailers in Canada was also better, especially in rural districts. In November and December the market was still firm and prices were strongly upward."

"Metals and Implements. — The decline in prices in 1913 continued during 1914. Although prices in some lines advanced steeply in August and Septem-

ber as a result of war conditions, and, although some of these declined again, others remained on high levels, notably antimony, quicksilver and spelter, while tin, lead and copper advanced again in December. The index number for the group stood at 114.7 in January and was down to 109.2 in July but rose to 123.5 in September and stood at 113.4 in December. In January, 1913, the index number had been as high as 122.6. The industrial demand for metals had fallen off considerably during 1913 and was

RELATIVE PRICES OF METALS, 1910—1914.

Commodities included: Iron, pig, N.S., and Summerlee; Iron, bar; Black Sheets; Galvanized Sheets; Tinsplates, charcoal and coke; Boiler Plates; Wrought Iron, old material; Steel Billets, mild; Steel, bar; Steel, cast; Antimony; Brass; Copper; Lead; Nickel; Quicksilver; Silver; Spelter; Solder; Tin, and Zinc Sheets.

(Prices 1890-1899=100.)

still lighter in 1914. War conditions interfered with supplies of some metals in the latter part of 1914 and firmed prices in some markets. The demand for lead, copper and quicksilver was increased. There was also a demand for iron and steel for war supplies, especially in Great Britain, but not enough to offset the falling off in demand for industrial purposes in America."

"Fuel and Lighting.—The index number for the group averaged 110.9 for the year as compared with 118.2 in 1913. The chief declines were in Connellsville coke and in gasoline, which were affected to the greatest extent by decreased industrial demand. Anthracite coal and coal oil were also down somewhat, but matches were higher."

"Lumber.—At the beginning of the year the trade depression appeared to be passing away. Activity was anticipated in the lumber markets as stocks were

scarce and a demand was expected. The situation was still more encouraging in nearly all parts of the country at the end of July, when the war broke out, and prices were becoming firmer in some lines. In British Columbia, where the depression in the lumber trade was greatest, it seemed that improvement was about to set in. The promise of good crops in all parts of Canada was an encouraging feature. The drouth which greatly curtailed the crop in the Prairie Provinces had diminished these expectations very little when war broke out. The new conditions caused a great demand for lumber in the Maritime Provinces but the shortage of ships and difficulties in shipping prevented this demand from having its full effect. In British Columbia the improvement in general trade was no longer expected, but the high prices of grain on the Prairie Provinces improved the demand

in that district somewhat. Owing to the conditions during the year the production was kept down considerably and stocks were not allowed to accumulate. In the Eastern Provinces the production was estimated to be up to the average or even to have exceeded it owing to the

admirable demand from Britain in the latter part of the year. At the end of the year throughout the country stocks were low, especially supplies in consumers' hands, so that any improvement in trade would immediately cause renewed activity."

RELATIVE PRICES OF LUMBER, 1910—1914.

Commodities included: Pine, all grades, good sidings, shipping culls, box boards, No. 1 cuts; N. B. Spruce and Shingles; Lath, Hemlock, Oak, Birch, Maple (soft), B. C. Fir and Shingles.

(Prices 1890-1899=100.)

"Miscellaneous Building Materials.—A slightly lower level of prices appeared as a result of declines in bricks, cement, hinges, iron pipe, nails, plaster of Paris, sash cord, sash weights, soil pipe, copper wire, iron wire, and wire fencing, but lead pipe, lime, red lead and wire cloth were higher."

"Paints, Oils and Glass.—The general level of prices for the group, including fourteen commodities, was slightly lower than in 1913, but was upward in the last three months owing to steep rises in glass and white lead. Benzine, Paris green, putty and resin averaged lower than in 1913 while shellac and turpentine as well as glass and white lead averaged higher."

"House Furnishings.—The group index number averaged higher than in 1913 as the higher levels reached in that year continued in most lines while crockery advanced still higher, as well as celluloid handled knives of European manufacture, on the outbreak of war owing to higher freights and other costs. Pails, tubs and brooms also averaged higher for the year, but sad irons and iron beds were lower."

"Drugs and Chemicals.—The group index number averaged 121.6 as compared with 113.3 in 1913. The principal increases occurred in alcohol, carbolic acid, caustic soda, glycerine and quinine, but alum, borax, brimstone, copperas and soda ash also advanced. Opium

alone averaged lower for the year, but advanced steeply in August."

"*Miscellaneous*.—Raw furs were down steeply in the latter part of the year. Liquors and tobacco averaged higher, increased excise duties being a considerable factor. In Sundries, binder twine, rope, newsprint paper and rubber were lower but gunpowder and starch were higher."

Appendices.

Appendix A deals with retail prices, and shows the averages for the past five

years of some thirty staple foods and of fuel, lighting and rent for each locality in Canada having a population of 10,000 and upward. Appendix B on prices in other countries, quotes the annual reviews published by the British Board of Trade, the *Economist* and the *Statist*, London, the United States Department of Labour, *Bradstreet*, *Dun* and the *Analyst*, New York, and gives the index numbers of *La Réforme Economique*, Paris, and the Bureau of Census and Statistics, Australia, as fully as available. Appendix C gives the statistics of the world's gold production.

ANNUAL CONVENTION OF THE CANADIAN MANUFACTURERS' ASSOCIATION.

THE forty-fourth annual convention of the Canadian Manufacturers' Association was held at the King Edward Hotel, Toronto, June 8, 9 and 10. Reports of different committees were presented and discussed, and addresses delivered by officers of the association dealing with questions affecting the manufacturing interests of the Dominion. Much of the business of the convention was devoted to questions arising out of the war in Europe and its effect upon industrial conditions in Canada.

President Address.

The address of the president, Mr. E. G. Henderson, laid stress upon the necessity for consideration of private advantage or of personal gain being subordinated to considerations of what would promote the cause of King and country; while a conference of Canadian manufacturers should always be recognized as an occasion for serious thought and earnest effort, the present year in view of the war demanded a greater recognition in this respect. The president referred to the action of the

association at the outbreak of the war in urging upon its members that in supplying military equipment of any kind, care should be exercised to see that material and workmanship were of the highest; that a contract for such supplies should never be regarded as the occasion for exacting additional profit, but always as the occasion for rendering the Empire valuable aid; that each member should do his utmost to minimize unemployment even though it sometimes involved the sacrificing of profits; that every encouragement and assistance should be given those who thought of enlisting, and, lastly, that the dependents of those on active service should be amply provided for. These obligations, the president believed, had been well lived up to by the manufacturers of Canada. It had been alleged that in the matter of army contracts some manufacturers had shown an undue greed for profit. If such charges could be established the offender should be dealt with as severely as the laws of the land would permit. The president was of the opinion, however, that any such reprehensible conduct had not been characteristic of the manufacturers as a class, but on the contrary that the services afforded by Canadian manufactur-

ers in the great majority of cases left little to be desired. The president in this connection expressed his approval of the Premier's action in appointing a commission of business men to look after purchases of war material.

Labour and Unemployment.

Dealing with the question of unemployment and the steps which had been taken by the association for its relief, the president referred to the suggestion of the association for a rigid adherence to the "Made-in-Canada" doctrine and the acceptance of orders at prices that would yield no profit rather than that the work upon these orders should be lost to the country. Where payrolls had to be reduced the association had suggested shortening the hours of labour and giving partial employment to all in preference to discharging a portion of the staff and giving full employment to the remainder. "I am happy to believe," the president stated, "that throughout the past year, which has been one of severe strain, manufacturers as a class have studied the interests of their employees with more than usual care; the fact that rates of wages have been well maintained at a time when the supply of labour so far exceeded the demand bears eloquent testimony to an attitude of fairness and of helpfulness on the part of employers. Machinery has frequently been kept in motion for which there was no business justification. Enterprise and resourcefulness have been displayed in the securing of orders upon which there was no commensurate return, all to the end that work might be provided and distress relieved." The president also pointed out the assistance given through the continuation of public works by federal, provincial and municipal governments. The enlistment of 100,000 men for active service was another important factor in reducing the ranks of the unemployed. Were Italy's participation in the war followed by the entry of Rou-

mania, Bulgaria and Greece on the side of the allies, there should be an exodus of these nationalities returning to their colours that should bring the problem still nearer solution. The distribution throughout Canada of some \$200,000,000 of shell contracts had revealed the fact that in the case of machinists the country was threatened with a shortage of labour. The building trades unfortunately showed no signs of a return to normal conditions, though with a good crop they would undoubtedly improve in the fall. The *Labour Gazette* had estimated there were still 70,000 unemployed in the larger cities alone. If this were true and if anything like the same proportion held good in the smaller places it pointed to the fact that earnest thought and thorough organization were still needed for the final solution of the problem.

Production.

In speaking of the suggestion that there should be an organized movement to place surplus labour back on the land, the president stated he believed this could and should be done. There were large tracts of unoccupied lands in close proximity to all the cities conveniently situated to those temporarily out of work and the opportunity for giving employment in this way should not be neglected, the feature in connection with the work which specially commended being that while reducing unemployment it would increase production which undoubtedly was one of Canada's pressing duties. In this connection the president spoke favourably of the federal agricultural policy being carried out under the direction of Dr. C. C. James. The various activities of the Department of Agriculture showed the thoroughly practical character of the department's work and suggested unlimited opportunities for useful service which, in the opinion of the president, ought to be subsidized as freely as the revenues of the country would permit.

Canada's Fire Waste.

Attention was drawn to the enormous losses in Canada through fire, much of which was preventable. What was wanted in Canada was not greater efficiency in fighting fires, but more zeal in preventing fires.

Transportation.

In taking up the question of transportation, the president stated that the interests of the association during the past year had centred around the application of railways for permission to increase their rates both on international and domestic traffic, and in this connection attention was drawn to the fact that as buyers of manufactured goods the railways afforded one of the largest and steadiest markets and anything that would impair their chances of success would indirectly impair those of manufacturers. While the railways had pointed out that the proposed increases should follow as the necessary result of the increased cost of doing business by higher taxes, higher wages and new duties required of them by legislation, the manufacturers contended that the results shown during the year when business of all kinds was away below normal, afforded no satisfactory ground upon which to base a new schedule of rates, but that on the contrary the question should be decided after an examination and an intelligent understanding of the conditions prevailing when trade was normal. For these reasons the association had stood out resolutely for an order requiring the railways to show cause.

The Outlook.

In summing up the outlook, the president, while believing the future was full of uncertainties, so far as business was concerned, saw many features of encouragement. Financial conditions were showing sure signs of improvement. The spread between imports and exports had been greatly reduced by decreasing the former and increasing the latter. Be-

fore the year was out the exports would predominate which would mean that instead of adding to trade debts, the country would have begun to pay some of them off. Borrowings for new equipment had ceased and attention had been turned to the more important task of putting the existing equipment to productive use. "So far as manufacturing industry is concerned," said the president, "an added incentive to production is afforded by the tariff increases recently enacted coming as they did at the time when outside competition for domestic orders was being pressed almost to the point of demoralization, they ushered in a change which proved to be most welcome. Through them the home market has been made more secure and a strategic position has been created for the Canadian manufacturer from which to attack the problem of export trade with improved chances of success. It is true of course that many raw materials are now taxed that formerly were free and in certain cases this might appear to cause, and does perhaps cause, some hardship. Generally speaking, however, such taxes have been accepted without demur, partially on account of the fact that finished products are protected by a corresponding advance, but mainly because they are recognized as the most logical means of raising an emergency revenue." In addition to these causes the allies had shown their ability to control the situation in Europe and sooner or later the hopefulness and confidence thus inspired would be certain to be reflected in larger buying. The enormous orders should help materially in tiding the country over the period of uncertainty that always preceded the harvesting of a new crop, which naturally was looked upon as the most important single factor making for prosperity. The crop this year gave promise of being unusually large. On the whole the president's estimate of the situation was that the worst had been passed and that from now to the end of the war business should slowly but steadily improve.

For the period following the declaration of peace the president was unable to share the optimistic views that had been expressed in some quarters. The high prices prevailing could hardly be expected to continue with the passing of the urgency which was their main cause. It was to be remembered, too, that millions of men were temporarily withdrawn from their ordinary occupations of production by reason of the war and that the shortage thus created would be quickly overtaken once the war was ended. The advent of lower prices which for these reasons seemed inevitable might be less significant were there any fair hope that the volume of business could be increased. To some extent it could, perhaps, in connection with the reconstruction of those areas that has been devastated, though the amount of money available for such reconstruction would at first be very limited. Too much could not be hoped for in the way of securing a large part of the foreign trade now lost to Germany and Australia, as if the allies were victorious these countries would be required to pay a heavy war indemnity and this they would not do unless allowed to produce and pay off their debt with the fruits of their production. In regard to immigration, too, it had been claimed that after the war the flood of immigration in Canada would be resumed. It was pointed out that for such a movement only one reason could be advanced, namely, the desire of Europeans to remove themselves to a land where the horrors of war could never overtake them. But would this not assume the willingness on the part of Germans and Austrians to take up their abode with the enemy they have sworn to hate, and would it not also assume on Canada's part to try to assimilate the class of people of whom we should naturally be suspicious? What had made former immigration profitable was the money and effects which settlers brought with them, whereas a considerable portion of any immigration that might come would likely be refugees.

It was the president's judgment, therefore, that the country should prepare itself for a period, not necessarily of hard times, but of tension, that would call for all the resourcefulness and enterprise that could be commanded. It would be a period that would witness on a considerable scale the weeding out of inefficiency; of cheapening methods of production and improving the quantity of products. "For this reason," said the president, "I attach great importance to the proposal that we equip ourselves quickly and effectively for undertaking research work of every kind relating to our resources."

The Secretary's Report.

The report of Mr. G. M. Murray, secretary of the association, referred to the fact that while the association had passed through a period of continuous trade depression extending back for eighteen months, the association's financial position had been strengthened and its numerical strength maintained.

A Successful Year.

The association had had a successful year. It had brought about a rapprochement with farming interests in the West and paved the way for future conferences that would undoubtedly prove mutually beneficial. The association had been instrumental in forming a strong company to promote the sale of Canadian goods abroad. It had inaugurated a progressive campaign to create a preference in the home market for goods made in Canada. The interests of the membership had been safeguarded in connection with the general revision of the freight classification. An attack upon the rights of manufacturers under the judgments of the Railway Board in regard to switching had been defeated and these judgments had been clarified and extended in the association's favour. The association had checked, temporarily at least, an effort to bring about a general advance in freight rates,

more especially on international and export traffic. An appeal to the Privy Council in the John Deere cases had been won, thereby establishing the right of a federally incorporated company to carry on business in every part of the Dominion without let or hindrance from provincial enactment. Important modifications had been secured in the Workmen's Compensation Act of Ontario, and the Government of Nova Scotia had been persuaded to frame its legislation on this subject in harmony with the association's views. — The manufacturers of Ontario had been organized into a series of safety associations for the prevention of accidents as a result of whose good work it was confidently hoped the assessments could be greatly reduced. The association had been represented at every meeting of the Board of Customs and had secured for its members numerous rulings of real value. The commercial intelligence service had been improved and extended and adapted to the changed conditions brought about by the war. The association had memorialized the Government to establish a commercial museum in Canada and to lay the foundations for a broad-based system of industrial research, in regard to both of which matters the association hoped for favourable action.

Membership.

In regard to the membership of the association the secretary pointed out that the association had not experienced an evenly balanced growth in all parts of the Dominion. While it had gained in the East, it had lost in the West. Ontario and Quebec showed progress in numbers and activity; the Maritime Provinces in activity only, but west of the Great Lakes there had unfortunately been a loss in both. So far as the Prairie Provinces had been concerned the showing was not considered cause for uneasiness as the falling off of membership in these provinces was likely to be recovered with changed circumstances. In British Columbia, however, it was pointed

ed out, the association has undoubtedly gone back, due partly to the deplorable condition of the lumber industry from which the association's membership had always been largely recruited, and partly to the activities of an independent organization of manufacturers. There was no question of rivalry between the two organizations and nominally the association still had a British Columbia branch, but since the birth of the new association it had been allowed to become dormant for the reason that as a branch of a national organization it could not consistently undertake the wider programme of local work which its contemporary mapped out for itself, whereas that contemporary could assume and presumably discharge with satisfaction all the duties previously appertaining to the branch.

Industrial Canada.

Mr. Murray's report showed that while the earnings of "Industrial Canada," the official organ of the Association, had been affected to some extent through falling off in advertising, this shrinkage had been only to a small extent and the usefulness of the magazine had not been impaired.

New Work.

The secretary's report referred to a great deal of new work which had been undertaken by the association, such as the campaign of advertising in support of the "made-in-Canada" ideas, the possibilities offered by the war for increasing the exportation of manufactured goods, and the organization of safety associations under the Workmen's Compensation Act of Ontario. While additional activity had been occasioned through this work, on the other hand regular lines of work had been prosecuted with less vigour than usual owing to their being overshadowed by problems arising out of the war. Technical education, for example, had received but scant attention. Some notice had been given to industrial research, but as re-

garded the enlargement and the improvement of the school system along technical lines, the association felt that a more favourable time for quickening public interest would be presented after the return of normal conditions.

Report of the Executive Committee.

The executive committee, whose chief function is to supervise the business management of the association's affairs, reported that despite a year of unusual strife the efficiency of the organization had been maintained throughout with no impairment of its financial reserves. The financial statement showed that after meeting all requirements in the matter of service, and after increasing the reserve for depreciation, the association had surplus assets \$2,65.21 in excess of what they were a year ago. The report discussed the question of war contracts and outlined the course of the association in regard to this subject, stated what had been done in the interests of increasing Canada's export trade and the association's activities in regard to industrial research, and pointed out in this regard that so long as other countries could be drawn on for materials necessary in manufacturing processes, the need for research work had not been felt so urgently, but now that some of these materials had been cut off the subject had become increasingly important. The report referred to the conference held in Winnipeg last November with representatives of Western agricultural interests and considered that much good for both agricultural and manufacturing industries should result from the regular and frequent renewal of an acquaintance begun under such favourable circumstances.

Report of "Made-in-Canada" Committee.

A report was presented by the committee appointed to promote the "Made-in Canada" idea. The newspaper and

advertising campaign was explained and particulars given in regard to the finances of the undertaking. While it had been expected to realize a sum of at least \$150,000, the total subscriptions received had been only \$29,433.33. The campaign through the medium of the newspapers cost in all \$25,902.17. There had also been charged up to the fund the cost of a booklet and sundry items aggregating \$1,068.06. The report also stated the reasons advanced for failure to support the campaign by those who adopted an attitude either of indifference or opposition. These reasons dealt for the most part with technical matters in connection with methods of manufacturing and marketing. In some instances, however, the refusal to support the campaign was dictated by necessity, even where the campaign itself met with hearty approval. Various other matters such as the amount of outside support received, criticisms of the Made-in-Canada principle, and a plan for a copyrighted label were dealt with.

Report of Membership Committee.

The report of the membership committee showed a net increase of eighteen, a result which under the circumstances was considered gratifying. At the beginning of the association's fiscal year the membership stood at 3,043; at the end of the year, 3,061. The applications accepted totalled 267, the resignations 249. Of the 249 resignations accepted, 91 were due to the cessation of business, the discontinuance of manufacturing operations or to liquidations, 17 to amalgamations and 39 to hard times. The remaining resignations, 102 in number, were prompted by a variety of causes but for the most part were made up of firms dropped from the roll because of their repeated failure to answer correspondence. The report presented the following table comparing the present distribution of the association's membership by provinces with what it was a year ago:

Province.	1914	1915	Gain	Loss
Prince Edward Island..	4	4
Nova Scotia.....	99	90	..	9
New Brunswick.....	66	66
Quebec.....	774	789	15	..
Ontario.....	1,702	1,751	49	..
Manitoba.....	253	246	..	7
Alberta & Saskatchewan	50	47	..	3
British Columbia.....	95	68	..	27
Total.....	3,043	3,061	64	46

Report of Legislation Committee.

The report of the legislation committee dealt chiefly with the committee's efforts in what has come to be known as the John Deere Plow Company case which the association had interested itself in as a means of securing a decision upon the question of the validity of the licensing laws of the different provinces, whereby Dominion companies were required to become practically re-incorporated in every province in which they sought to carry out their corporate objects. The case had resulted in a successful conclusion for the association. The committee's report referred to action which had been taken by some of the provinces in view of the decision and to the increase in the number of Dominion incorporations and the corresponding reduction in provincial incorporations. The committee's report dealt also with other matters of legislation, such as patent law reform, bankruptcy and other questions.

Special Committee on Workmen's Compensation.

The report of the special committee on Workmen's Compensation referred to criticisms from time to time voiced by the Canadian Manufacturers' Association in regard to the Ontario Workmen's Compensation Act and to the fact that at the last session of the legislature, after the Act had been in operation for two months, an amended Act was adopted consisting of 34 sections. The re-

port stated that in the framing of these amendments the committee had not been consulted nor afforded opportunity of taking part in the discussion of the amendments and in this connection regretted "the absence of any adequate representation in the legislature, not only of Ontario but of the other provinces, and, for that matter, the Parliament of Canada of the manufacturing interests of the country."

Merits of Act.

The report, in speaking of the merits of the Workmen's Compensation Act, stated that some excellent features were evident in practice as they had been anticipated in theory. Claims were adjusted expeditiously without waste of time in court of procedure, or waste of money in litigation fees. Workmen received their compensation without any contest over the question of fault, thus placing the matter of compensation on the basis of adjustment and insurance rather than of indemnity. The disposition of employers on the whole had been to give the Act a fair chance and to extend to the Board their sympathy and support in its administration. "This," stated the report, "with the exercise of good faith and the spirit of give and take will no doubt bring about the adjustment of a great many difficulties which are incidental to setting in operation a new scheme."

The Act's Defects.

The committee found, however, that the Act had shown in its initial operation certain defects. The system of fixing the rates of assessment were in some instances objected to, and what were considered inequalities pointed out, as were also what the committee considered certain defects of administration. The method of meeting the expenses of administration was also criticized, and in this connection it was stated that no assessments were being made upon railway companies, navigation companies,

etc., which it was believed in the event of any part of the cost of administration falling upon manufacturers, would mean that the manufacturers were paying for the administration of the Act for the railway and navigation companies. Exception was taken also to that part of the Act which deals with what is known as the "waiting period," and it was stated in this connection that numerous cases had already arisen where injuries which ought ordinarily to have laid a man off for a day or two only, or perhaps should not have laid him off at all, had been "nursed" for the full period of seven days, and it was stated that in some of these cases a compensation had been paid without any apparent consideration of the reports of the employers as to the circumstances. There were in addition other phases of administrative policy which the association regarded as unsatisfactory. The report stated, however, that notwithstanding the unsatisfactory character of some features of the Act, the committee were determined with all earnestness to co-operate with the Workmen's Compensation Board to make the system a success.

"We desire" stated the report, "to testify to the ability and earnestness of the Commissioners in undertaking a very great task under difficult conditions. It was most natural that there should be on the part of the Board a disposition to defend the Act from criticism. It was necessary, however, if the system was to be successfully administered that faults and potential faults should be pointed out at the time when the system was in the making and precedents were being set. While the Board were cordial in their acceptance of offers on the part of the Canadian Manufacturers' Association to co-operate in working out the problems of administration there is some reason to think that from the standpoint of the Board co-operation was more or less synonymous with submission. This may have been natural enough, but it was also natural that differences of view should arise and be strongly maintained as between the Canadian Manufacturers' Association and the Workmen's Compensation Board. Your committee are hopeful that a working basis has been reached in which the authority of the Board and its disposition to administer the Act in a fair and reasonable manner are recognized on the one hand, while on the other, it is recognized that the Canadian Manufacturers' Association, as the protagonists of the whole system, and the representatives of the bulk of the industries of the province, are entitled to have their views and representations given due consideration and weight."

The committee testified to the hearty support and co-operation of the Board in the matter of the formation of accident prevention associations, some twen-

ty-five of which were in various stages of organization, and in this connection the committee recommended that whereas the organization of these safety associations had been in charge of the Legal Department of the Canadian Manufacturers' Association, and the work had assumed such proportions that the department was compelled to ask for assistance, the matter should be handled by a separate organization created for the purpose. Mr. H. D. Scully of the Canadian Home Markets Association was recommended for the position.

Reference was made to the activity of the committee in connection with the introduction of a Workmen's Compensation Bill in the Nova Scotia Legislature and of the changes which had been made in the bill on the representations of the Canadian Manufacturers' Association. The bill as finally passed was regarded as a readable and workable doctrine. In British Columbia, also, where a Workmen's Compensation Bill had been introduced, the association had made representations and the bill had been laid over until the subject could be more thoroughly investigated. A number of conferences had taken place between representatives of the association, boards of trade and labour organizations, looking to the adoption of a Workmen's Compensation Act based upon the Ontario Act.

Other Reports.

Amongst other reports presented to the meeting were those of the tariff committee, dealing for the most part with technical matters in regard to appraisements, customs rulings, etc., and a report of the transportation committee discussing questions of baggage conditions, carriage claims, freight rates classifications and other similar matters.

Resolutions Passed.

Amongst the resolutions passed by the convention may be mentioned the following:

(1) That the Canadian Manufacturers' Association urge upon its members that as producers of munitions or military equipment of any kind they endeavour at all times to supply what is required of them in the highest quality of workmanship and material and at fair prices;

(2) That as employers of labour they use their best influence to encourage recruiting from among their employees, both for over-seas service and to maintain the strength of the active militia, and that as far as may be possible they set for their employees a good example by offering themselves for such service;

(3) That the Canadian Manufacturers' Association, respectively urges upon the Dominion Government the appointment of a thoroughly competent commission, properly empowered for the purpose of seriously investigating transportation conditions in Canada, and making such reports and recommendations as may seem proper, and that the Commission to be appointed include the Chairman of the Board of Railway Commissioners as well as as one qualified representative each from manufacturing, commercial, transportation and agricultural interests;

(4) That the Canadian Manufacturers' Association while recognizing fully the difficulties existing at present, would welcome any effort the Dominion Government may put forth in the way of conferring with the Imperial Government with the object for arranging for the placing of ships necessary for the transport of Canadian goods from Canadian ports to the United Kingdom, to the Allied Countries, and to other parts of the British Empire; of ships necessary for the transport of Canadian goods from Canadian ports to the United Kingdom, to the Allied Countries, and to other parts of the British Empire;

(5) Resolved that the Canadian Manufacturers' Association in annual meeting assembled record again its opinion that a well developed system of technical education is not only prerequisite to the proper development of our national resources but a necessity to the industries of our Country if they are to hold their own in competition for World trade. Especially does our Association emphasize the importance of the part to be played by scientific research in such a system, and urges upon the Federal Government the desirability of taking immediate steps to provide for this need, preferably through the appointment of a commission that will ascertain the problems which call most pressing for solution and then devise ways and means for utilizing the facilities we already possess as a nation for the solution of those problems, and that this Association pledges itself to support such a commission to the best of its ability;

(6) That the Canadian Manufacturers' Association again places itself on record as deploring the enormous losses which Canada suffers each year by fire, reiterating its firm belief that these losses which in the end are a tax collectable in the form of insurance premiums, can be largely prevented by education and organization. That as a means to this end the Governments of those provinces that have not yet provided themselves with the services of a competent Fire Marshal be memorialized to do so with the least possible delay, and that the Commission of Conservation be requested to interest itself in the solution of this problem, which is so obviously cognate to the purposes for which it was created, and endeavour to stimulate and to co-ordinate the work to be done by provinces, by municipalities and individuals.

Election of Officers.

The officers elected for the ensuing year were:

President—J. H. Sherrard, Alaska Feather & Down Co., Ltd., Montreal.

Vice-President—Thos. Cantley, Nova Scotia Steel & Cola Co., Ltd., New Glasgow.

Second Vice-President—S. R. Parsons, The British American Oil Co., Ltd., Toronto.

Treasurer—Geo. Booth, Booth-Coulter Copper & Brass Co., Ltd., Toronto.

At a luncheon on the day of the concluding session of the convention, an address was delivered by Brigadier-General Alexander Bertram, chairman of the Shell Committee, in which General Bertram explained what had been done by the committee in regard to the handling of war munitions in Canada.

LABOUR DISPUTES IN GERMANY IN THE YEAR 1914.

THE following article, which is reproduced from the British Labour Gazette of June, 1915, will no doubt prove of interest to readers of the *Labour Gazette* at this time:

An article in the *Deutscher Reichsanzeiger* of May 26 reproduces some of the statistics relating to strikes and lockouts in Germany in 1914, the annual report on which has recently been published by the Imperial Statistical Office.

It is stated that in consequence of the war the statistics of the year, with the exception of the first seven months, do not compare with those of other years. On the outbreak of the war all disputes

which were then in progress speedily came to an end; very few strikes occurred subsequently, and no lockouts were recorded at all after July. Of the total number of disputes which took place during the year 88.6 per cent ran their full course in the period before the war, 9.4 per cent were settled shortly after the outbreak of the war, and 2.0 per cent began and ended after that event.

The total number of strikes which ended during 1914 was 1,115 (apart from 12, directly affecting 1,201 workpeople, as to information which was received too late for inclusion). The following table

shows the number of strikes and of persons directly affected during the decade 1905-1914:

Year.	Number of strikes.*	Number of Work-people directly affected.
1905.....	2,403	408,145
1906.....	3,328	272,218
1907.....	2,266	192,430
1908.....	1,347	68,392
1909.....	1,537	96,925
1910.....	2,113	155,680
1911.....	2,566	217,809
1912.....	2,510	406,314
1913.....	2,127	254,206
1914.....	1,115	58,682

*In German strike statistics all disputes, however, small are included. There is also a tendency for a strike to be counted more than once, when it extends over an area wide enough to comprise two or more distinct local authorities.

The largest number of strikes in 1914—613, or 55 per cent of the total—occurred in Prussia; there were 142 (12.7 per cent) in Saxony, 108 (9.7 per cent) in Bavaria and 38 (3.4 per cent) in Alsace Lorraine.

The majority of the strikes (798, or 71.6 per cent) were confined to single establishments. These involved 52.1 per cent of the total number of workpeople on strike during the year.

The following table shows the number of strikes and of workpeople directly affected in each group of trades in 1914, with the corresponding figures for 1913:

Group of Trades.	No. of strikes terminated.		No. of Strikers.	
	1914	1913	1914	1913
Building.....	386	691	17,504	45,084
Mining Smelting, etc.....	16	91	1,773	75,423
Metal and Engineering.....	177	380	10,661	69,832
Textile.....	20	70	1,692	10,465
Clothing and Cleaning.....	65	95	2,224	8,485
Transport.....	57	114	7,861	9,859
Printing and paper.....	16	30	4,056	2,284
Chemical (including Gas and Oil).....	14	33	400	2,280
Stones and earths.....	120	152	6,186	8,309
Woodworking.....	114	199	4,768	8,299
Food, Tobacco, etc., preparation.....	44	96	1,629	5,632
Leather.....	29	45	1,040	1,789
Other.....	57	131	1,902	6,465
Total.....	1,115	2,127	58,696†	254,206

†The items add to 58,696, but the total number of strikers during the year is stated in the text of the source to have been 58,682.

The majority of the strikes of 1914 were of short duration, 411, with 15,980 strikers, lasting less than six days. On the other hand, 124, with 8,602 strikers, lasted from 31 to 50 days; 123, with 8,408 strikers, from 51 to 100 days; while 48, with 3,960 strikers, lasted more than 100 days.

Disputes as to wages gave rise to the largest number of strikes. Out of a total of 1,708 demands, 884 came within this category, while 230 related to hours, the

remaining 594 demands being concerned with working arrangements, dismissal of workmen, etc.

As regards the outcome of the strikes, the proportion of cases in which the workpeople obtained their demands in full was about the same as in 1913, being 17.0 per cent, as compared with 16.7 per cent in the previous year, while the proportion ending in favour of the employers was greater than in the preceding year (44.9 per cent as against 41 per

cent). In the remaining disputes (38.1 per cent) neither employers nor workpeople were entirely successful; the corresponding percentage in 1913 was 42.3 per cent.

The total number of establishments affected by the strikes of 1914 was 5,213, in which 193,414 workpeople were affected. Of these establishments, 1,221, or 23.4 per cent were compelled to close down by reason of the strikes. Of the total number of workpeople employed, 30.3 per cent struck work, while those employed in the same establishments who were thrown out of work through strikes numbered 2,622.

The lockouts that came to an end in 1914 numbered 108, and involved 833 establishments, with 36,458 workpeople. All were begun before the war; 91, with 12,138 persons locked out, ended before the outbreak of the war, and 17, affecting 24,320 persons, terminated shortly after that event.

With regard to the result of the lockouts, the proportion ending wholly in favour of the workpeople was 5.6 per cent, the employers were wholly successful in 43.5 per cent, while the remaining 50.9 per cent ended in compromises.

Since the Commencement of the War.

With regard to strikes and lockouts which began and terminated in the period from the outbreak of the war down to the end of March, 1915, the *Reichsarbeitsblatt* for May states that these numbered in all 52, and involved, directly and indirectly, 4,775 workpeople. Of these 26, (24 strikes and 2 lockouts) took place during the first quarter of 1915.

Group of Trades.	No. of disputes.	No. of Workpeople directly affected.
Building.....	7	111
Mining and Smelting.....	7	1,391
Metal and Engineering.....	12	1,290
Textile.....	3	161
Clothing.....	1	62
Transport.....	6	104
Paper.....	2	198
Stones and Earths.....	2	239
Woodworking.....	1	166
Food Preparation.....	6	206
Leather.....	2	22
Other.....	3	79
Total.....	52	4,359

It is pointed out that these disputes were, as a matter of fact, less serious than would appear from the figures, owing to their short duration. The average duration of all disputes during the period above stated was 4.77 days. The average number of working days lost by each workman involved was 4.32, whereas the average period lost by each person directly involved in disputes during the years 1909-1913 amounted to 27.99 days.

Except in four cases the disputes affected individual establishments only; in three of these exceptions two establishments were affected and in one case four. The total number of establishments involved was thus 58. Ten of these were performing work directly for the military authorities, and "in several other cases the establishments were employed indirectly in supplying army requirements."

The proportion of disputes which ended wholly in favour of the workpeople was 21.1 per cent, while 55.8 per cent ended wholly in favour of the employers, and 23.1 per cent in a compromise.

NEW YORK STATE INDUSTRIAL COMMISSION.

New Body takes place of former Commissioner of Labour and various other important officials.

A STATUTE of the first importance to labour interests of the State of New York was enacted by the Legislature of that state at its recent session and became law on the twenty-second of May last. In brief, the legislation abolished the office of Commissioner of Labour, the Industrial Board and the Workmen's Compensation Commission of the City of New York. The statute, on the other hand, created a State Industrial Commission to consist of five commissioners, and to this Commission were transferred all the powers which had been previously attached to the offices, etc., abolished. The new statute creates an Industrial Council, also, of five persons representing employees and five persons representing employers, to be appointed by the Governor, to advise the Commission. The new State Industrial Commission has power to make investigations concerning conditions of labour generally and to make rules and regulations. The statute provides for action in the Supreme Court to review the legislation by which the State Commission is established or the rules and regulations or orders made under its authority.

Shortly after the legislation became effective the Governor of the State of New York appointed five commissioners as follows: John Mitchell (chairman), James M. Lynch, Wm. H. H. Rogers, Louis Wiard, and Edward P. Lyon. The first two of these names are well known in industrial circles. Mr. John Mitchell (chairman) was formerly president of the United Mine Workers Association and has been for some time a member of the Workmen's Compensation Commission of New York State. Mr. Lynch has

been for the past year or two Labour Commissioner of the State of New York, and has been for many years prominent in labour circles, his connection with them coming by way of the Typographical Union with which he has been prominently identified. Messrs. Rogers, Wiard and Lyon are less known in the industrial world. Mr. Rogers is president of the Rochester Brick and Tile Company and is a member of the Rochester, N.Y., Chamber of Commerce. Mr. Wiard is a former mayor of Batavia, N.Y., and vice-president of the Wiard Plow Company. Messrs. Rogers and Wiard may be supposed, therefore, to represent to some extent the interests of employers. Mr. Lyon, the fifth member of the Commission, is a Brooklyn lawyer, who had been for fifteen years president of the Brooklyn Y. M. C. A. and is stated in a biographical sketch to have been "prominently mentioned at various times as a candidate for the Supreme Court."

The five members of the Industrial Commission will each receive a salary of \$8,000. This is the salary formerly paid to the Labour Commissioner of the State of New York, but is \$1,000 in excess of the salary drawn by the members of the Workmen's Compensation Commission (which now disappears), save in the case of the president, who had received an annual salary of \$10,000.

The appropriation provided under the statute for the Industrial Commission is \$1,000,000, which, however, is stated in the press to be \$500,000 less than the appropriation which would have gone to the Workmen's Compensation Commission and the Labour Department, which have now disappeared.

SETTLEMENT OF DISPUTE BETWEEN THE DAVIE SHIPBUILDING AND REPAIRING COMPANY, OF LEVIS, QUE., AND ITS EMPLOYEES.

IN compliance with a request received from Mr. George D. Davie, president of the Davie Shipbuilding and Repairing Company of Levis, Que., Mr. Victor DuBreuil, one of the Fair Wages Officers of the Department of Labour, visited Levis on June 16, for the purpose of lending the good offices of the Department of Labour in connection with the settlement of a dispute between the above mentioned company and its working staff, composed of its ship carpenters, riveters, holders-up, etc., to the number of about 90 in all. Conferences were held by Mr. DuBreuil on that day and on the following day with the parties, which resulted in a settlement providing for an increase of 25 cents per day all round. An agreement was also signed between the parties for a period of one year in the terms following:

Terms of Agreement Between Davie Shipbuilding and Repairing Co., Ltd., and its Employees.

Levis, Que., June 17, 1915.

We, the undersigned Davie Ship Building and Repairing Company, Ltd., employers of the first part, and Albert Ruel, Louis Laflamme, Ernest Regin, Nep. Fleury, Hubert Samson, Theodule Lemieux and Honore Drapeau, employees of the second part, duly named members of the committee representing the various classes of labour employed on repair works on steamers, and all other vessels, steam or sailing, which shall be constructed within one year after the date mentioned below, on the following conditions, namely:

(A). We, the said Davie Shipbuilding and Repairing Company, Ltd.:

1. To pay an increase of twenty-five cents (25) per day to all salaries from

the date mentioned below for permanent repairs or others except in the case of foremen and blacksmiths.

2. The men shall not absent themselves from nor quit work without permission on holidays (National Labour), King's or Queen's birthdays, except on obligatory religious holidays.

3. The men shall not quit work without permission (except in the case of sickness) sooner than three minutes before the midday and 6 o'clock evening whistles blow.

4. Any workman unable to go to work shall be obliged to so report and state the cause. These workmen shall also conform to all the other obligations already imposed for the purpose of the Government and good order in our shipbuilding and repair yards.

5. If during the course of the next coming one year any difference should arise between us (employers and employees) such difference shall be submitted to a permanent council of arbitration, of which one of the members shall be named by ourselves (the employers) an arbitrator appointed by the men, and those two arbitrators shall have full power to name a third arbitrator, who shall act as chairman, and all decisions shall be final, in accordance with the report of the majority of the said council.

6. If any change is asked for at the expiration of the said one year one or other of the parties interested, 30 days' notice shall be given.

7. It is furthermore agreed by both parties that in all cases of emergencies when requested by the company the men shall work overtime except when pre-

vented by legitimate reasons such as sickness, etc., and for this extra time worked the company agrees to pay them at the rate of double time of pro rate (on repair work and time and one-half on new work).

8. We, the said representatives of the committee of workmen, endorse and accept for and in the name of all the workmen in our own name without reserve all the conditions, agreements and salaries above mentioned by Messrs. Davie Shipbuilding and Repairing Co., Ltd.

9. In order to ensure the complete fulfilment of this agreement, we, the members of the committee, acting for and in the name of each of our co-workers, bind ourselves to furnish personal security in order to guarantee the execution of the terms of this agreement, this security not to exceed \$50 each.

10. The terms of the present agreement to be in force from the twenty-fifth day of June, 1915, until the twenty-fifth day of June, 1916.

(Sgd.) ERNEST BEGIN.
HUBERT SAMSON.
ALBERT RUEL, SR.
LOUIS LAFLAMME.

PRICES, WHOLESALE AND RETAIL, CANADA, JUNE, 1915.

I. WHOLESALE PRICES.

Index Number.

June, 1915.....	147.3
May, 1915.....	147.6
June, 1914.....	135.3

The numbers, it will be understood, are percentages in each case of the average price level prevailing during the decade 1890-1899, the period selected by the Department as the standard of comparison throughout its investigation into wholesale prices. Some 272 articles, carefully selected to represent Canadian production and consumption, are included in the calculation.

THE Department's index number of wholesale prices for June was on almost the same level as in May. If an abnormal rise in the prices of spelter and zinc were included, the index number would stand at 149.5. Steep rises occurred in other metals also, so that the index number for the sub-group stood at 203.0 as compared with 195.0 for May, and if the rises in spelter and zinc were included for June this number would

have been 250.8. Prices were also higher in hog products, imported fruits, turnips, lead pipe, iron pipe, copper wire, and barb wire. Prices were lower in grain, cattle and beef, sheep and mutton, butter, cheese, fresh fish, flour, wool, cotton, tin, New Brunswick spruce deals, linseed oil and turpentine.

As compared with the same month a year ago, the chief increases appear in Grains and Fodder, Dairy Products, Miscellaneous Groceries, Woollens, Flax Products, Leathers, Metals, Paint, Oils and Glass, Crockery, Drugs and Chemicals, and Sundries. The chief decreases appear in Fish, Fruits and Vegetables, Cottons, Fuel, Lumber, and Raw Furs.

The accompanying table of the Department's index numbers, arranged by groups of commodities into which the investigation has been divided, shows the average price level for May, 1915, as compared with that of the preceding month and with that of the corresponding month last year.

TABLE SHOWING INDEX NUMBERS BY GROUPS OF COMMODITIES FOR JUNE, 1915, MAY, 1915,
AND JUNE, 1914.

	Number of commodities.	Index Numbers.		
		June, 1915.	May, 1915.	June, 1914.

* Eight commodities off the market, fruit, vegetables, etc. a. Strawberries only. b. Apples only. c. Including an abnormal rise in the prices of spelter and zinc the index number for other metals is 250.8 and for all commodities is 149.5.

More detailed information as to the price movement during June is as follows:

Grains and fodder.—Manitoba wheat declined from \$1.44 $\frac{1}{4}$ at the end of May to \$1.18 $\frac{3}{4}$ by the third week in June, but during the next week advanced to \$1.32 $\frac{1}{4}$. Good crop reports in Canada and the United States, large receipts of wheat in Europe, and rumours as to the opening of the Dardanelles, which would permit Russian wheat to be marketed in England, were the reported factors in the fall in prices. Less favourable crop reports in United States, and better demand for European shipment, were followed by advances, though prices fluctuated considerably. Ontario winter wheat fell to \$1.30 in the first week and to \$1.11-1.13 by the last week. Barley was somewhat easier as demand was poor. Western oats declined to 53c, but rose to 57 $\frac{1}{4}$ c in the last week in sympathy with wheat. Corn was down to 75c early in the month, but soon rose to 80c and was then fairly steady. Flaxseed fell from \$1.65 to \$1.50. Ontario peas and rye were also considerably lower. Hay was higher at Montreal but lower at Toronto. Bran and shorts were again easier.

Animals and meats.—Western cattle were down to \$8.50 for best quality, but rose to \$8.85 in the last week as demand was better. Prices rose at Toronto also after the second week and reached \$8.85 in the last week. Dressed beef eased off early in the month from the high point reached in May, and was then steady. Hogs rose to \$9.25 at Toronto, f.o.b. shipping point, but fell to \$8.50. Dressed hogs fell 50c per cwt. Bacon, hams, lard and barrelled pork were

slightly higher. Sheep were down to \$5.00-6.25, and mutton declined to \$12.00-12.50. Spring lamb, dressed, was up to \$20.00-23.00. Fowl were slightly lower.

Dairy products.—Creamery butter had fallen to 27 $\frac{1}{2}$ -28c at Montreal, but rose to 28 $\frac{3}{4}$ -29c. At Toronto creamery solids fell to 26-28c and remained steady. Dairy prints were also lower at 21-23c. Receipts at Montreal were reported lighter than a year ago. Eggs rose from 23-24c to 35c at Montreal for selects. New-laid eggs were also higher at Toronto. Some shipments to Great Britain were reported.

Fish.—Fresh halibut declined to 7c per lb. at Canso, N.S. Salmon trout was down to 10c and 12c. Fresh whitefish was slightly higher at 15c. Catches of cod, mackerel and herring on the Atlantic coast were reported good. The markets for dried fish in the West Indies were not good as prices were low and demand was light. Canned salmon was advanced slightly in some markets.

Fruits and vegetables.—Winter apples were practically off the market. Canadian strawberries came on the market in quantities at Toronto at 13-15c about the middle of the month. By the last week the price was down to 11c for good quality, but as low as 7c for lower grades. The crop was fairly good in the Niagara peninsula, but in other parts of Ontario varied according to locality. The crop in Quebec was very light owing to frost in May. In the Maritime Provinces the crop was reported large. In British Columbia the yield was lighter than last year. Bananas rose from \$1.40-1.75 to \$1.50-2.25 per crate. Messina lemons were

slightly firmer. Navel oranges were higher at \$3.00-4.00 per box. Evaporated apples were $\frac{1}{2}$ c higher at 8-8 $\frac{1}{2}$ c. Currants, Patras, were also $\frac{1}{2}$ c higher at 8 $\frac{3}{4}$ -9c. Potatoes were easier at Montreal and steady at Toronto as supplies were ample. Beans were lower at \$3.20-3.25 per bushel for hand-picked. Onions were steady at Toronto, but were off the market at Montreal except for imported varieties. Turnips were higher at 35-50c per bag. Canned vegetables were in good supply and declined toward the end of the month.

Miscellaneous groceries.—Flour declined in sympathy with the wheat market, most grades being 60c per barrel lower. Rice was reported firm and tapioca was slightly higher. Tea was advancing on primary market owing to increased consumption. Barbados molasses advanced 3c per gallon on the primary market. Glucose was slightly lower, but firmed later. Honey was firmer at 12 $\frac{1}{2}$ c per lb. Maple sugar declined from 10-11c to 9-10c. Pepper was firmer.

Textiles.—Ontario washed wool declined to 25-30c, and unwashed to 18-25c. Raw cotton was lower, the market being dull. Silk, raw, was steady. Jute was lower, but hessian advanced slightly. Flax fibre and tow were slightly easier. Floor oilcloth rose from 23 $\frac{1}{2}$ c to 25c per square yard.

Hides, leathers, boots and shoes.—Prices were steady.

Metals and implements.—An abnormal rise in the price of spelter occurred,

the price reaching 30c at Toronto as supplies were difficult to obtain and demand was strong. Zinc sheets rose from 15c to 25c per lb. Galvanized sheets and barb wire also advanced in sympathy with spelter. Steep advances also occurred in quicksilver and aluminium. Lead rose to 6 $\frac{1}{4}$ c per lb., and brass from 22 $\frac{1}{8}$ c per lb. to 32 $\frac{1}{2}$ c.

Fuel and lighting.—Anthracite coal advanced 10c per ton at Montreal. Connellsville furnace coke was easier.

Building materials.—New Brunswick spruce deals declined \$2.00 per thousand as large quantities were manufactured and ships were scarce. Black iron pipe advanced from \$4.42 to \$4.59 per 100 ft. Lead pipe rose from 8c per lb. to 9c. Copper wire was $\frac{1}{2}$ c higher. Linseed oil was lower, and turpentine declined 5c. Putty rose 10c per cwt.

House furnishings were steady.

Drugs and chemicals.—No changes were reported.

Miscellaneous.—Mink furs, raw, dark, rose 50c per skin. Hops were steady. Pulp and paper markets were fairly steady. Raw rubber was unchanged.

Course of Prices in Other Countries.

The accompanying table, which includes the latest findings available of index numbers of prices in Great Britain, United States and France, will enable a review to be made as to recent movements and tendencies in prices in these countries as compared with Canada.

INDEX NUMBERS OF WHOLESALE PRICES FOR CANADA, GREAT BRITAIN, UNITED STATES
AND FRANCE.

	CANADA.	GREAT BRITAIN.		UNITED STATES.			FRANCE.

(a.) Base 1890-1899=100; 272 commodities included.

(b.) Base 1901-1905=100; prices of 44 commodities at January 1st of each year and the end of each month

(c.) Prices in 1867-1877=100; 45 commodities included.

(d.) Total cost at the first of each month or year of a certain quantity of 96 commodities.

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included.

(h.) Index Number for August 15th, \$9.8495.

The *Economist*, London, June 5, 1915, reports:

Although the general level of prices at the end of May was slightly below that of the previous month, the rise in the price of food was so large as to counteract the fall, with the result that our index number for May remains the same as it was a month ago, namely, 3,327 (151.2). . . . The only rise recorded in May is in the first group of foodstuffs, cereals and meat, which has risen no less than 46 points, or $5\frac{1}{2}$ per cent. during the month, meat being responsible for the greater part of the increase. The chief factor making for high prices in the corn trade is the shortage of supplies, owing to the large Continental demand. . . . In the second group of food products, covering tea, coffee, sugar, butter, &c., tea and butter are slightly higher, but sugar is a little lower than a month ago. In the textile group, prices of raw cotton, yarns and cloth have all fallen from last month's level, in the absence of anything like a good demand. . . . The wool trade is still busy, and prices continue steady. The jute market is firm, and new crop prospects are favourable, but business is limited. . . . The decline in the mineral group is brought about chiefly by the fall in the price of steam coal, which was quoted at 23s, as compared with 28s a month ago and 30s two months ago. Iron and steel prices are unchanged. Amongst the minor metals, copper and tin are higher than a month ago. . . . In the miscellaneous group timber quotations are unchanged. . . . There is a small rise in rubber and a decline in tallow.

The *Statist*, London, June 12, 1915, continuing Sauerbeck's index number, reports:

There was a further upward tendency in the prices of commodities in May, the advance during the month being equal to 1.6 per cent., which raised the index number to 107.6. Compared with June, 1914, a normal month immediately preceding the outbreak of hostilities, the rise in the number has been 26.4, or about $32\frac{1}{2}$ per cent. Higher prices than those at the end of May have not been current since 1873, when the number for the year was 111. . . . The greatest percentage increase in prices during the past month occurred in animal food (meat and butter), where, with the exception of pork, there was a general rise, especially in beef. The number for animal food was 7.6 per cent. higher for the month at 134.5, thus making a total rise of almost 38 per cent. since June.

Bradstreet's, New York, June 12, 1915, reports:

For the time being commodity prices tend to seek a lower level, but the situation is such that downward changes are likely to prove transitory, foreign demands for numerous articles being so strong as to work sharp upturns, while the uplift in home trade may be counted upon to spread out and thus enhance quotations in quarters long depressed. . . . Six groups advanced, a similar number declined, and one, coal and coke, notwithstanding a seasonal rise in anthracite coal, remained stationary. Breadstuffs, provisions, fruits, textiles, metals and naval stores all slumped. Live stock, hides and leather, oils, building materials, chemicals and drugs and miscellaneous products moved up.

The index number of the *Analyst*, New York, including 25 foodstuffs, arranged to represent a theoretical family's budget of food, stood at 144.26 at the end of June as compared with 149.97 at the end of May and 142.87 at the end of June, 1914.

II. RETAIL PRICES.

THE features of the month in retail prices were the advances in meats, lard, cheese and eggs, while butter, flour and potatoes were lower. Milk and coal also declined to summer prices in several localities. Sugar fluctuated while beans were upward.

Notes on Retail Prices.

Beef.—The price of sirloin steak rose at Sydney, N.S., at Three Rivers, St. Hyacinthe, Montreal, and Hull, Que., at Peterborough, Hamilton, St. Thomas and Owen Sound, Ont., at Brandon, Man., at Saskatoon, Sask., at Edmonton and Lethbridge, Alberta, and at Vancouver, Victoria and Fernie, B.C. Round steak similarly rose at Sydney, N.S., Fredericton, N.B., St. Hyacinthe, Montreal and Hull, Que., at Ottawa, Peterborough, Hamilton, Guelph, St. Thomas and Owen Sound, Ont., Brandon, Man., Regina and Saskatoon, Sask., Edmonton, Alberta, and at New Westminster, Victoria and Fernie, B.C. The price of rib roast declined at Port Arthur and Fort William, Ont., but advanced at St. John, N.B., at Three Rivers, St. Hyacinthe and Montreal, Que., at Ottawa, Peterborough, Guelph and London, Ont., at Brandon, Man., at Regina and Saskatoon, Sask., at Edmonton, Alberta, and at Victoria and Fernie, B.C. Medium shoulder roast was lower at Port Arthur and Fort William, Ont., but was higher at St. Hyacinthe, Montreal and Hull, Que., at Ottawa, Peterborough, London and St. Thomas, Ont., at Brandon, Man., at Saskatoon, Sask., at Edmonton, Alberta, and at New Westminster and Vancouver,

B.C. At Brandon, Man., a shortage in cattle was reported, owing to the fact that last fall farmers were selling livestock rather than pay the prevailing high prices for feed, and as the shortage was now being felt, meats were rising steadily.

Veal.—The price of veal declined at Hull, Que., and at Port Arthur and Fort William, Ont., and advanced at Quebec, St. John's and Montreal, Que., at Orillia, Berlin and St. Thomas, Ont., at Brandon, Man., at Edmonton, Alberta, and at New Westminster, Fernie and Vancouver, B.C.

Mutton was reported lower in price at Kingston, Port Arthur and Fort William, Ont., and at Vancouver and Victoria, B.C., but higher at Montreal, Que., at Peterborough and Berlin, Ont., at Brandon, Man., at Regina and Saskatoon, Sask., and at New Westminster, B.C.

Pork.—The price of fresh roasting pork declined at Port Arthur and Fort William, Ont., and at Lethbridge, Alberta, but advanced at Three Rivers, St. John's and Hull, Que., at Ottawa, Belleville, Orillia, Hamilton, Guelph, Berlin, London and St. Thomas, Ont., at Brandon, Man., at Regina and Saskatchewan, Sask., and at Vancouver and Fernie, B.C. Pork chops were also lower at Port Arthur and Fort William, Ont., and at Lethbridge, Alberta, and were higher at St. John's and Hull, Que., at Brockville, Belleville, Hamilton, Guelph, Brantford, Berlin, Stratford, St. Thomas and Owen Sound, Ont., at Brandon, Man., at Saskatoon, Sask., at Edmonton, Alberta, and at New Westminster, Vancouver and Fernie, B.C. The price of salt pork declined at Victoria, B.C., but rose at Three Rivers, St. John's and Hull, Que., at London and St. Thomas, Ont., at Brandon, Man., at Saskatoon, Sask., and at New Westminster, B.C.

Bacon.—The price was reported lower at Newcastle, N.B., and higher at Sherbrooke, St. John's and Hull, Que., at

Belleville, Peterborough, Niagara Falls, St. Catharines, Hamilton, Guelph, St. Thomas and Owen Sound, Ont.

Fish.—Fresh fish were quoted somewhat lower at Charlottetown, P.E.I., at Newcastle, N.B., at Toronto, Ont., at Saskatoon, Sask., and at Vancouver, B.C., but were reported higher at Westville, N.S., at Sherbrooke and Hull, Que., at Brandon, Man., and at Edmonton, Alberta. Salt herrings remained steady throughout the Dominion, but were not quoted in a number of the cities. The price of canned salmon was reported lower at Brockville, Belleville and Fort William, Ont., and higher at Halifax, N.S., and at Saskatoon, Sask.

Lard rose at Sherbrooke, Sorel and St. Hyacinthe, Que., at St. Catharines, Ont., at Brandon, Man., at Prince Albert, Sask., and Lethbridge, Alberta, and at New Westminster, Vancouver, Victoria and Nanaimo, B.C.

Eggs.—New laid eggs declined in nine of the cities but advances were reported in twenty-two. Packed eggs were lower in four cities and higher in six, but were reported to be off the market in a large number of localities.

Milk.—Prices were somewhat lower at Newcastle, N.B., at Sorel, St. John's and Hull, Que., at Brockville, Orillia, Port Arthur and Fort William, Ont., and at Edmonton, Alberta. Most of the changes reported were from the winter to the summer prices.

Butter. — Dairy butter advanced in one locality, but was reported lower in thirty-seven, while creamery butter was down in forty-one cities. Both dairy and creamery butter were reported very plentiful in most of the localities, and further declines were expected.

Cheese.—The price of old cheese was quoted lower in Brandon, Man., and higher in seventeen cities, while new cheese declined in Toronto, Ont., and Victoria, B.C., but rose in thirteen cities.

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a quarter of each locality usually occupied by workmen.

The exact quality for which the quotation is given is set forth in the case of each commodity, and in order that the statistics may be available for purposes of comparison. Such comparisons, however, will as in a family budget.

The list of localities includes nearly every place having a population of 10,000 people, and is

The quotations contained in the table have been furnished by the correspondents of the *Labour Gazette* quoted, etc., from the Department.

RETAIL PRICES OF STAPLE

§Delivery extra. e. Lignite. f. Natural gas. g. Per bag of 100 lbs. h. Tamarac, jackpine, etc.
i. Millwood, mixed hard and soft, per load of ¼ cord. j. Slabs, 1-3 cord. k. Lower price to Coal Com-
pany employees only; run of mines coal, \$2.75 to \$3.75.

A heavy demand for Canadian cheese for export purposes was reported.

Bread rose at Sorel, Que., from 3½ cents per pound to 4 cents.

Flour prices showed declines in twenty-five cities but were higher in Fort William, Ont., and Fernie, B.C. Wholesale prices were reported lower in a number of localities.

Rolled oats declined in price at Newcastle, N.B., at Moosejaw, Sask., and at Vancouver, B.C., but rose at Belleville and Guelph, Ont., at Regina, Sask., and at New Westminster, B.C.

Rice.—Medium rice rose at Port Arthur, Ont., at Winnipeg and Brandon, Man., and at Victoria, B.C., but declined at Newcastle, N.B., at London, Ont., and at New Westminster, B.C. Patna rice similarly advanced at Winnipeg and Brandon, Man., but declined at London, Ont.

Tapioca was reported lower at London, Ont.

Canned vegetables. — Tomatoes declined at Victoria, B.C. At Vancouver, B.C., the price rose but later declined to the former level. Peas and corn remained steady throughout the Dominion.

Beans.—Dry beans showed a decline at Sherbriike, Que., and at Vancouver, B.C., but were higher at Moncton, N.B., at Peterborough, St. Catharines, Guelph, Berlin and Port Arthur, Ont.

Apples, evaporated, were higher at Sherbrooke, Que., and at Port Arthur and Fort William, Ont.

Prunes were higher in price at Newcastle, N.B., and lower at Vancouver, B.C.

Sugar.—Granulated sugar was reported higher at Halifax, N.S., at St. John, N.B., at St. John's, Que., at Belleville, London and Port Arthur, Ont., at Brandon, Man., and at Prince Albert, Sask.

At St. Thomas, Ont., the price declined but after a few weeks rose again to the former level. Yellow sugar rose at Halifax, N.S., at St. John, N.B., at St. John's, Que., at London and Port Arthur, Ont., and at Brandon, Man., and was lower at St. Thomas, Ont., and at Victoria, B.C.

Tea.—The price of black tea rose at Charlottetown, P. E. I., at Kingston, Belleville and Berlin, Ont., at Saskatoon, Sask., and at Vancouver, B.C., but was quoted lower at Truro, N.S. Green tea was higher at Quebec, Que., at Kingston, Belleville, Berlin, Ont., at Saskatoon, Sask., and at Vancouver, B.C.

Coffee rose at New Westminster, B.C.

Potatoes were reported higher in price in seven of the cities and lower in nineteen and were reported to be plentiful in many localities.

Vinegar remained steady.

Starch was higher at Victoria, B.C., but lower at London, Ont.

Coal.—Anthracite coal advanced at Peterborough, St. Thomas, Port Arthur and Fort William, Ont., and declined at Halifax, N.S., at St. John, N.B., at Three Rivers, Que., at Guelph, Berlin, Galt, Stratford, Chatham and Windsor, Ont. Soft coal rose at Windsor, Ont., but declined at Fredericton, N.B., and Guelph, Ont.

Wood. — Hard wood was reported higher at Port Arthur and Fort William, Ont., and at Saskatoon, Sask., but was lower at Sorel, Que., and at St. Thomas, Ont.

Coal oil.—The price of coal oil rose at Vancouver, B.C.

Rentals. — Rates for houses with and without sanitary conveniences declined at Medicine Hat and Edmonton, Alberta, and a decline was reported in rents for houses without sanitary conveniences at Chatham, Ont.

FAIR WAGES SCHEDULES AND CLAUSES IN GOVERNMENT
CONTRACTS AWARDED DURING THE MONTH
OF JUNE, 1915.

DURING the month of June, 1915, the Department received for insertion in the *Labour Gazette* information relating to seven contracts awarded by various departments of the Government. Of these, five were awarded by the Department of Railways and Canals and two by the Department of Public Works. All of these contracts contained fair wage schedules.

DEPARTMENT OF RAILWAYS AND
CANALS.

Construction of works for protecting the Government dam at Valleyfield, Quebec, on the Beauharnois Canal. Name of Contractors, Carlton Construction Company, Limited, Ottawa, Ont. Date of Contract, June 1, 1915. Schedule rates.

Class of Labour.	Rate of wages per day of 10 hours.
General foreman.....	\$5.00
Labourers.....	1.75
Foreman labourers.....	3.00
Cribwork builders.....	3.00
Mould builders.....	3.00
Derrickmen.....	2.50
Steam derrick engineer.....	4.00
Steam derrick fireman.....	3.00
Stone crusher runner.....	3.00
Stationary engine driver.....	3.50
Stationary fireman.....	2.50
Steam drillers.....	3.50
Steam drillers' helpers.....	2.00
Divers, with outfit.....	15.00
Divers, without outfit.....	10.00
Divers, helpers.....	5.00
Driver, one horse and cart....	3.00
Driver, 2 horses and wagon...	5.00

Fabrication and delivery of the super-structure of a steel highway bridge to be erected across Head Race to Mills north of Old Lock No. 17, Cornwall

Canal. Name of Contractors, The Hamilton Bridge Works Company, Limited, Hamilton, Ont. Date of Contract, June 9, 1915. Amount of Contract, \$483.

Class of Labour.	Rate of wages per day of 10 hours.
General foreman.....	\$4.00
Carpenters.....	2.50
Blacksmiths.....	2.50
Blacksmiths' helpers.....	2.20
Structural iron workers.....	3.50
Riveters.....	3.50
Rivet heaters.....	2.50
Stationary engineers.....	3.00
Painters.....	2.50
Ordinary labourers.....	2.00
Driver, 1 horse and cart.....	3.00
Driver, 2 horses and wagon...	4.00

Manufacture and erection of the superstructure of a single track railway swing bridge on the line of the Canadian Northern Railway over the Trent Canal, Severn Division, at Washago, Ontario. Name of Contractors, The Hamilton Bridge Works Company, Limited, Hamilton Ont. Date of Contract, June 1, 1915. Amount of Contract, \$38,633.

Class of Labour.	Rate of Wages per day of 10 hours.
Bridge erection foreman	\$0.40 per hour.
Assemblers.....	0.35 "
Riveters.....	0.35 "
Rivet heaters.....	0.30
Buckers-up.....	0.35 "
Structural iron workers.....	0.35 "
Hoisting engine driver.....	0.35 "
Carpenters.....	0.30 "
Painters.....	0.25 "
Watchman.....	0.20 "
Machinists.....	0.30 "
Machinists' helper.....	0.20 "
Builders' labourers.....	0.22½ "
Team, wagon and driver.....	0.40 "
Horse, cart and driver.....	0.30 "

Construction and erection of two steel highway swing bridges on the Severn Division of the Trent Canal; one at Port Severn Lock Swing Bridge, Port Severn, Ontario, and the other at Muskoka Road Swing Bridge, Washago, Ontario. Name of Contractors, The Hamilton Bridge Works Company, Limited, Hamilton, Ont. Date of Contract, June 1, 1915. Amount of Contract, \$3,380 and \$8,200, respectively.

Class of Labour.	Rate of wages per day of 10 hours.
Bridge erection foreman.....	\$0.40 per hour.
Assemblers.....	0.35 "
Rivettors.....	0.35 "
Rivet heaters.....	0.30 "
Buckers-up.....	0.35 "
Structural iron workers.....	0.35 "
Hoisting engine driver.....	0.35 "
Carpenters.....	0.30 "
Painters.....	0.25 "
Watchman.....	0.20 "
Machinists.....	0.30 "
Machinists' helpers.....	0.20 "
Builders' labourers.....	0.22½ "
Team, wagon and driver.....	0.40 "
Horse, cart and driver.....	0.30 "

Supply and erection in place, complete, of twelve (12) wagon valves and twelve (12) cylindrical valves for the Locks of the Severn Division and Bobcaygeon Lock, Trent Canal. Name of Contractors, Dominion Bridge Company, Limited, Montreal, Que. Date of Contract, June 1, 1915. Schedule rates.

Class of Labour.	Rate of wages per day of 10 hours.
Foreman for labourers.....	\$0.30 per hour.
Labourers.....	0.20 "
Carpenters.....	0.25 "
Rivettors.....	0.35 "
Buckers-up.....	0.35 "
Heaters.....	0.30 "
Stonecutters.....	0.45 "
Teamsters.....	0.20 "
Driver, 1 horse and cart.....	0.30 "
Driver, 2 horses and wagon...	0.45 "

DEPARTMENT OF PUBLIC WORKS.

Construction of Section Two of Jetty, Steveston (Fraser River, B.C.) Name of Contractor, Marsh-Hutton-Powers Co., Ltd., New Westminster, B.C. Date of Contract, June 4, 1915. Unit prices.

Trade or Class of Labour.	Rate of Wages: Not less than the following.
Foreman carpenter.....	\$5.00 per day of 9 hours
Carpenters.....	4.25 " 9 "
Blacksmiths.....	4.50 " 9 "
Blacksmith's helpers.....	3.25 " 9 "
Ordinary labourers.....	3.00 " 9 "
Driver with 1 horse and cart..	5.00 " 9 "
Driver with 2 horses and wagon	7.00 " 9 "

Alterations and additions to Carslake Hotel for Post Office (postal station "A"), Montreal, Que. Name of Contractor, R. E. Edwards & Son, Montreal, Que. Date of Contract, May 28, 1915. Amount, \$3,000.

Trade or Class of Labour.	Rate of Wages: Not less than the following:
Carpenters.....	\$0.45 p. h., 9 h. per day.
Bricklayers.....	0.55 " 9 "
Masons.....	0.50 " 9 "
Plasterers.....	0.55 " 8 "
Stonecutters.....	0.50 " 8 "
Painters and glaziers.....	0.40 " 9 "
Plumbers and steamfitters....	0.42½ " 9 "
Electricians.....	0.40 " 9 "
Electricians helpers.....	0.27½ " 9 "
Sheet metal workers.....	0.40 " 9 "
Builders labourers.....	0.30 " 9 "
Ordinary labourers.....	0.22½ " 9 "
Metal lathers.....	0.50 " 9 "
Wood lathers.....	0.45 " 9 "
Cement finishers.....	0.40 " 9 "
Tile layers.....	0.55 " 9 "
Driver with one horse and cart.	3.50 per day of 9 hours.
Driver with two horses and wagon.....	5.75 per day of 9 hours.

POST OFFICE DEPARTMENT.

During the month of May, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages, and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.	\$ 1,203.13
Making and repairing rubber dating stamps and type also other stamps.	261.02
Supplying stamping material and repairing stamping pads.	1,823.12
Repairing Post Office Scales.	13.80
Supplying New Mail Bags.	5,201.26
Repairing Mail Bags.	3,409.54
Supplying Mail Bag Fittings.	10,476.59
Making and repairing miscellaneous articles of Postal Stores.	229.18
Making and supplying street letter boxes.	1,279.20
Making and supplying articles of official uniform.	11,904.93

TRADE DISPUTES DURING JUNE, 1915.

THREE new disputes were reported to the Department of Labour during June, as compared with six during June, 1914.

Analysis of Trade Disputes during June.

Number and magnitude.—Nine strikes were reported in existence in Canada during June, two more than during the previous month and eight less than in June, 1914. Twenty-three firms and 317 employees were involved in the disputes of the month, including 13 firms and 118 employees concerned in the new disputes. During June, 1914, 145 firms and 3,828 employees were involved in the disputes of the month, including 116 firms and 2,631 employees concerned in the new disputes.

Time losses in working days.—The loss of time to employees through trade disputes during June was approximately 6,002 working days as compared with 7,375 working days lost in May, and 67,904 days lost in June, 1914. The new disputes of the month accounted for a loss of 1,724 working days as compared with 37,979 working days lost as a result of new disputes in June, 1914.

Trades affected by new disputes.—The following table shows the trades affected by new disputes of the month and the number of employees in each group:

TRADES.	No. of disputes.	No. of employees
Mining	1	43
Building.	1	35
Clothing.	1	40
Total.	3	118

Localities affected by new disputes.—The new disputes of the month occurred in Nova Scotia, Quebec and Ontario.

Causes of new disputes.—The new disputes of the month were for the following causes: (1) increased wages; (2) against the employment of non-unionists; (3) refusal of some employers to sign a new agreement when the old agreement had expired.

Results of disputes.—Four of the disputes of the month were settled at the end of June. These included:

TABLE OF TRADE DISPUTES DURING JUNE, 1915.

Occupation.	Locality.	Alleged Cause or Object.	No. of Firms or Establishments affected.	Approximate No. of Employees affected.		Date of Commencement.	Date of termination.	Result.
				Male.	Female.			
DISPUTES BEGINNING BEFORE JUNE.								
<i>Building:—</i> Plumbers & Steamfitters.....	Victoria, B.C.....	Against reduction in wages.....	5	33	Feb. 16, 1915	Unsettled at end of the month.
Plasterers & Plasterers' Labourers..	Toronto, Ont.....	Against employment of particular persons and for recognition of the union.....	1	80	Mar. 17, 1915	June 22, 1915	Not officially "declared off" but work where strike occurred completed.
<i>Metal:—</i> Moulders.....	Smith's Falls, Ont..	Against reduction in wages.....	1	40	May 1, 1914	Unsettled at end of the month.
Moulders.....	Owen Sound, Ont...	Against reduction in wages.....	1	16	Oct. 6, 1914	May 10, 1915	No agreement reached, strike dropped. (Information not reported to Department until end of June).
Sheet Metal Workers.....	Toronto, Ont.....	Jurisdictional—between carpenters and sheet metal workers....	1	20	June 25, 1914	Unsettled at end of the month.
<i>Food and Tobacco Preparation:—</i> Brewery Workers....	Montreal, Que.....	Demand for shorter hours, a minimum wage scale and recognition of union.....	1	10	June 15, 1914	Unsettled at end of month.

DISPUTES BEGINNING DURING JUNE.

<i>Mining—</i>							
Coal Miners.....	Westville, N.S.....	For increased wages.....	1	43 June 24,	June 28,	Men returned to work on question being referred to conciliation.
<i>Building—</i>							
Plumbers & Steam-fitters.....	Port Arthur & Fort William, Ont.....	Employers' refusal to sign a new agreement on expiration of old one.....	11	35 June 1,	Unsettled at end of month.
<i>Clothing—</i>							
Garment Workers...	Montreal, Que....	Against employment of non-unionists.....	1	40 June 2,	June 23,	Employees discontinued strike and employers continued to maintain "open shop."

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for the other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

- (1) Coal miners, Westville, N.S.
- (2) Plasterers and plasterers' labourers, Toronto.
- (3) Moulders, Owen Sound.
- (4) Garment workers, Montreal, Que.

Disputes beginning before June.

Trades disputes existing June 30, and continued from earlier months were as follows:

- (1) Plumbers and steamfitters, Port Arthur and Fort William, Ont.
- (2) Plumbers and steamfitters, Victoria, B.C.
- (3) Moulders, Smith's Falls, Ont.
- (4) Sheet metal workers, Toronto, Ont.
- (5) Brewery workers, Montreal, Que.

Conditions remained practically the same as in the previous month in regard to all of the above strikes.

Plasterers and plasterers' labourers, Toronto.—The strike of plasterers and plasterers' labourers which occurred March 17, 1915, as a result of a contractor importing labourers from Montreal to work on a building in Toronto at a rate of wages lower than that provided by an agreement between the union workers and Toronto firms, was terminated about June 22. The strike was not officially called off but owing to the fact that the building, upon which men were working when the strike occurred, was completed, and also owing to the fact that many plasterers and plasterers' labourers were out of employment on account of general dullness in the building trades, it was decided to consider the strike terminated.

Moulders, Owen Sound.—On October 6, 1914, a strike occurred of sixteen employees of the Canadian Heating and Ventilating Company of Owen Sound against a proposed reduction of wages. The men were asked to accept a ten per cent. decrease in their wages, but owing to an agreement made in January, 1914,

whereby there were to be no decreases or increases asked for, the men refused to accept the proposed reduction and went on strike. After being out three weeks the men offered to go back to work if the firm would dismiss strike breakers. The company, however, refused to do this and the strike continued all through the winter. On May 10, the men finally let the strike drop, though it was only at the end of June that this information was received in the Department.

Disputes beginning during June.

Three new disputes occurred during June,—coal miners at Westville, N.S.; plumbers and steamfitters, Port Arthur and Fort William; and garment makers at Montreal.

Coal Miners, Westville.—On June 24, forty-three employees of the Intercolonial Coal Mining Company of Westville, N.S., went on strike for a ten per cent increase in wages. On June 28, the men returned to work, leaving the question to conciliation.

Plumbers and Steamfitters, Port Arthur and Fort William.—Thirty-five journeymen plumbers and steamfitters in the employ of thirteen different firms in Port Arthur and Fort William struck work on June 1, when employers refused to accept a new schedule drawn up by the union. During the month two firms, one in Port Arthur and the other in Fort William, signed the men's conditions maintaining the rates of pay and hours of labour as they existed during the former agreement. The men went back in these two shops but the strike was being maintained against the other shops at the end of the month.

Garment Workers, Montreal.—On June 2, forty employees of the Imperial Ladies' Tailoring shop of Montreal went on strike, objecting to work with non-unionists and demanding that only members of the union be engaged in the shop. On June 23, the strike was terminated, employers continuing to maintain an "open shop."

INDUSTRIAL ACCIDENTS DURING THE MONTH OF JUNE, 1915.

Under this heading, account is taken of such accidents only as were sustained by workmen in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the country or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Bureaus of Mines of Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Bureau of Labour of Saskatchewan, and the Provincial Building Inspector of Manitoba, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

ACCORDING to the record of industrial accidents maintained by the Department of Labour, 84 workpeople were killed and 205 injured during the month of June, 1915. The record for the month of May was 95 killed and 202 injured, while the record for the month of June, 1914, was 317 killed and 438 injured. Comparing the record for June with that for May it is found that there is a decrease of 11 in the fatalities and an increase of three in the number of workers injured. A comparison of

the record for June, 1915, with that for June, 1914, shows there to have been a decrease of 233 in the number of workers killed and 233 in the number injured.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF JUNE, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.
Agriculture.....	7	8	15
Fishing and hunting.....	5	5
Lumbering.....	6	6	12
Mining.....	14	43	57

Total.....	84	205	289

TABLE OF FATAL INDUSTRIAL ACCIDENTS DURING JUNE, 1915.

Trade or Industry.	Locality.	Date.	Number.	Cause of Fatality.
<i>Agriculture:—</i>				
Farmer.....	Brooks, Alta.....	June 21	1	Gored by a bull.
".....	Alingly, Sask.....	" 19	1	Kicked by a horse.
".....	Stratford, Ont.....	" 14	1	Buried in a cave-in of gravel.
".....	St. Capeton, Que.....	" 14	1	Premature explosion of dynamite.
".....	Sunset, Sask.....	" 23	1	Kicked by a horse
".....	Holstein, Ont.....	" 2	1	Mangled by saw of woodcutting machine.
Farm laborer.....	Brandon, Man.....	" 9	1	Horses ran away.
<i>Fishing and Hunting:—</i>				
Fishermen.....	Tabusintac, N.B.....	" 21	5	Perished in a storm.
<i>Lumbering:—</i>				
Sawmill employee.....	Granton, Ont.....	" 24	1	Mangled by a circular saw.
River drivers.....	La Matine Rapids, LePine River (75 miles north of Maniwaki, Que.)..	" 25	5	Drowned.

TABLE OF FATAL INDUSTRIAL ACCIDENTS DURING THE MONTH OF JUNE, 1915—Continued.

Trade or Industry.	Locality.	Date.	Num-ber.	Cause of Fatality.
Mining:—				
Mining engineer.....	Cobalt, Ont. (Kerr Lake Mine)....	" 25	1	Explosion of dynamite.
Miner.....	Joggins Mine, N.S.....	" 1	1	Fall of rock.
".....	Glace Bay, N.S. (No. 10 col. Res. M.)	" 4	1	" "
".....	Joggins Mine, N.S.....	" 14	1	Haulage cable broke, car plunged down incline.
".....	Sydney, N.S. (No. 7 col.).....	" 14	1	Run over by a mine car.
".....	Sydney, N. S. (No. 9 col.).....	" 15	1	Fall of rock.
".....	Glace Bay, N.S. (Hub No. 7 col.).....	" 17	1	Run over by a mine car.
".....	Westville, N.S. (Drummond Col.).....	" 28	2	Crushed by mine cars.
".....	Sydney, N.S. (Dom. No. 2 col.).....	" 29	1	Struck by a mine car.
".....	Portneuf, Que.....	" 1	1	Explosion of dynamite.
".....	Rossland, B.C.....	" 7	1	Fall of rock.
".....	Phoenix, B.C.....	" 8	1	Struck by flying rock.
".....	".....	" 25	1	Fell into an ore chute.
Railway and Canal Construction:—				
Crane-man.....	Thorold, Ont.....	" 10	1	Struck by a falling rock.
Building Trades:—				
Painter.....	Montreal, Que.....	" 4	1	Fell from a ladder.
Carpenter.....	Hespeler, Ont.....	" 9	1	Fall—scaffold collapsed.
".....	Calgary, Alta.....	" 26	1	Drowned—fell from bridge he was working on.
".....	Montreal, Que.....	" 26	1	Fell from scaffold.
Cement workers.....	Calgary, Alta.....	" 23	2	Fall—scaffold collapsed.
Metal trades:—				
Iron worker.....	Hamilton, Ont.....	" 1	1	Struck by a flying piece of metal.
Implement maker.....	".....	" 29	1	By a fall.
Sheetmetal worker.....	Toronto, Ont.....	" 3	1	Mangled by machinery.
Iron workers.....	McBride, B.C.....	" 1	2	Fall—scaffold collapsed.
".....	New Glasgow, N.S.....	" 19	1	Mangled by machinery.
Lineman.....	Windsor, Ont.....	" 23	1	Electrocuted.
".....	Welland, Ont.....	" 24	1	" "
".....	St. Lambert, Que.....	" 11	1	" "
".....	Dundas, Ont.....	" 18	1	Fell from a pole.
".....	Windsor, Ont.....	" 30	1	Electrocuted.
Cranesman.....	Jonquiere, Que.....	" 23	1	Crushed by a falling crane.
Employee, steel foundry.....	Longue Pointe, Que.....	" 22	1	Crushed between girders.
Bridge worker.....	Quebec, Que.....	" 18	1	Drowned—staging on which he was working collapsed.
Dry dock employee.....	Halifax, N.S.....	" 10	1	Struck by hoisted piece of machinery.
Shipyard employee.....	Montreal, Que.....	" 16	1	Fell into an excavation.
Food and Tobacco Preparation:—				
Employee fish and cold storage plant.....	Prince Rupert, B.C.....	" 17	1	Fell into elevator shaft.
Bakery employee.....	Montreal, Que.....	" 1	1	Burned to death in a fire which destroyed bakery establishment.
Steam Railway Service:—				
Brakeman.....	Cumberland, B.C.....	" 9	1	Derailment of cars.
".....	Banff, Alta.....	" 24	1	Crushed between cars.
".....	Sherbrooke, Que.....	" 17	1	" "
Sectionman.....	Passmore, N.B.....	" 22	1	Struck by a train.
Bridge painter & Ry. constable.....	Kingston Mills, Ont.....	" 1	2	Struck by a train.
Painter.....	Montreal, Que.....	" 25	1	Struck and run over by a train.
Watchman.....	Rideau, Ont.....	" 3	1	Struck by a train.
Navigation:—				
Captain.....	St. Paul's Isl. (St. Lawrence river.).....	" 11	1	Fell over board.

IMMIGRATION AND COLONIZATION.

THE official statements given below except where otherwise indicated, by with regard to British emigration, courtesy of the Department of the Interior, the number of homestead entries made, land patents issued, etc., are published,

BRITISH EMIGRATION.

During the month of May, 1915, the number of passengers leaving the United Kingdom for British North America, according to official returns of the British Board of Trade, was as follows:

Month.	NATIONALITY									
	English.		Welsh.		Scotch.		Irish.		Total British Subjects.	
	1915	1914	1915	1914	1915	1914	1915	1914	1915	1914
May.....	1,855	9,537	11	110	408	3,335	101	854	2,375	13,837

Owing to delay in the receipt of returns by the Department of the Interior, it has not been possible to include in the present issue of the *Labour Gazette* the usual statements regarding homestead entries and lands patented.

REPORTS OF DEPARTMENTS AND BUREAUS.

The following reports of departments and bureaus were received at the Department of Labour, Ottawa, during the month of June, 1915.

DOMINION REPORTS.

Express Statistics.

Express Statistics of the Dominion of Canada for the year ended June 30, 1914. Ottawa: King's Printer, 1915. Pages, 35.

THE Express Statistics compiled by the Department of Railways and Canals for the year ended June 30, 1914, are based on reports received from all the express organizations operating in Canada, of which there were nine. The operating mileage of these express companies in Canada during this period was 36,648.49 miles, compared with 32,557.48 in the previous year. The gross earnings amounted to \$12,646,451.99, which was \$181,036.97 less than in 1913. The operating expenses, however, showed an increase of \$503,087.55, amounting to \$6,246,632.28 in 1914, and express privileges, that is, payments for the right to operate over railway lines and other carrying agencies, amounted to \$6,016,364.07, an increase of \$307,955.84. The falling off in gross earnings was attributed to the application of a reduced tariff imposed by the Railway Commission, and to the introduction of a parcels post service by the Government.

Coal Fields in the North-West Provinces.

Coal Fields of Manitoba, Saskatchewan, Alberta and Eastern British Columbia (Revised Edition). By D. B. Dowling, Department of Mines. Geological Survey, Memoir 53. Ottawa: Government Printing Bureau, 1914. Pages, 150.

An idea of the vast resources of coal in Canada is afforded in a Memoir is-

sued by the Department of Mines on the Coal Fields of Manitoba, Saskatchewan, Alberta and Eastern British Columbia. In these portions of the Dominion alone it is estimated that there exist 95,598 square miles of coal lands, having approximately 1,176,825,000,000 tons of coal in reserve. Of this quantity 769,000,000 tons are anthracite and semi-anthracite, 242,313,000,000 tons are bituminous, 847,321,000,000 are sub-bituminous, and 86,422,000,000 tons are lignite.

The Memoir contains a historical summary of coal mining in these provinces, a geological description of the various coal-bearing formations, and analyses of coals in Canada, Wales, New Zealand and Australia, and the United States.

ONTARIO REPORT.

Technical Education.

Report of the Director of Industrial and Technical Education of the Province of Ontario for the year 1914. (Being Appendix V to the Report of the Minister of Education for the year 1914.) Toronto: King's Printer, 1915. Pages, 12.

The Report of the Director of Industrial and Technical Education of Ontario shows a continued growth of this branch of education. New schools for evening classes were opened at Goderich, Oakville, Oshawa, Port Credit and Woodstock, and additional classes were added to existing schools in many other localities. General industrial courses are provided for boys in day schools at Brantford, Hamilton, London and Toronto, and for girls at London and Toronto. The Toronto Technical School has established a Technical High School course to prepare students for the Matriculation examination, admitting to the Faculty of Applied Science of the Uni-

versity of Toronto and Queen's University, Kingston. Mining departments are established in connexion with the High Schools at Haileybury and Sudbury, where a special effort is made to connect the course of study with the industrial needs of the community, at the same time providing the essentials of an English education.

The limitations of the evening schools are pointed out, and the opinion is expressed that the ideal system would appear to be a full-time industrial school for pupils between the ages of fourteen and sixteen, followed by part-time courses combined with a modern system of apprenticeship. The chief obstacles in the way of establishing industrial day schools come from lack of accommodation and equipment, to secure which would involve a large expenditure of money, and it is contended that capital expenditures should be met in part from Provincial or Dominion funds.

OTHER REPORTS RECEIVED.

Canada.—Revision of the Act Respecting Banks and Banking.

Minutes of Proceedings, Evidence, &c., Committee on Banking and Commerce during Parliamentary Session of 1912-1913.

Ninth Report of the Board of Railway Commissioners for Canada for the year ending March 31, 1914.

Department of Agriculture, Experimental Farms, Division of Horticulture. Summary of Results Horticulture, 1914. Prepared by W. T. Macoun, Superintendent of the Branch Experimental Farms and Stations. Bulletin No. 82, 1915.

Evidence Given Before the Select Standing Committee on Agriculture and Colonization, Fifth Session, Twelfth Parliament, 1915.

Department of Mines, Geological Survey. Memoir 64. No. 52, Geological Series. Preliminary Report on the Clay and Shale Deposits of the Province of Quebec, by J. Keele.

Ontario.—Forty-Seventh Annual Report of the Inspector of Prisons and Reformatories of the Province of Ontario for the Year Ending October 31.

Eighth Annual Report of the Game and Fisheries Department, 1914.

Feeble-Minded in Ontario. Ninth Report for the Year Ending October 31, 1914.

Department of Agriculture. Report of the Women's Institutes, 1914. Part I.

Loan Corporations' Statements: Being Financial Statements made by Building Societies, Loan Companies, Loaning Land Companies, and Trusts Companies, for the Year Ending December 31, 1914.

Great Britain.—Returns of Accidents and Casualties as Reported to the Board of Trade by the Several Railway Companies in the United Kingdom During the Year Ending December 31, 1914.

Australia.—New South Wales Statistical Register for 1913. Part XIII—Local Government.

United States.—Federal Department of Labour, Children's Bureau. Infant

Mortality, Montclair, N.J. A Study of Infant Mortality in a Suburban Community. Bureau Publication No. 11.

Twentieth and Twenty-First Annual Reports of the Chief State Factory Inspector of Illinois.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Workmen's Compensation Act.—Employee rendered blind through a fellow-worker's act.—Employer's liability.

ON May 14, 1913, the plaintiff was working in one of the defendant company's yards when a spark from a passing locomotive entered his left eye. A fellow-worker took the spark out with the aid of a cotton rag. Subsequently, another fellow-worker, noticing that he was still suffering, took a cotton rag he was carrying in his own pocket, dipped it into water and washed his eye. The plaintiff went to the hospital May 15. The following day he was examined by a doctor, who found both eyes affected with an infectious disease, the left eye being ulcerated. On the third day the right eye also became ulcerated, and the plaintiff ultimately completely lost the use of his eyes. He sued the company, claiming an annuity equal to one-half his wages, or \$300.

The company claimed the condition of the workman's eye was due to a disease existing before the accident, and was not the consequence of an accident happening during or on account of the work in which the workman was employed. It was proved, however, that

the workman was otherwise perfectly sound, and the Superior Court took the view that the disease could only have been communicated by contact with the cotton rag used by one of his fellow-workers to rub the plaintiff's eye and that the accident was one happening during and on account of his employment, and awarded the plaintiff the \$300 annuity asked for. This decision was confirmed by the Court of King's Bench. (*Flore v. Canadian Pacific Railway Company.*)

Inexcusable fault.—Railway employee.—Workmen's Compensation Act.

In an action by the plaintiff for an indemnity for the death of her husband, killed while in the performance of his duties in the employ of the defendant company, the Superior Court awarded her the full amount of her claim, or \$2,025. The facts of the case were as follows:

The deceased was employed by the defendant company as a switchman at Point St. Charles, Montreal. On January 21, 1913, instead of walking to the point where he was to turn the switch, he mounted on a flat car which was the last of four cars which were slowly moving towards the point where his duty called him to turn the switch, and at a distance of about 20 feet from this point he jumped off from about the middle of the car where he was seated to the ground, a height of about 5½

feet, and in doing so his feet turned from under him, and falling to the ground he was struck on the head by a bolt of the axle-tree of the car from which he had jumped, and died from the effects of the injuries received almost immediately and before medical assistance could reach him.

The defendant company's answer to the action was that the deceased was killed by jumping from a moving car in violation of the company's rules and regulations with which he was perfectly well acquainted, and contrary to the rules of ordinary caution; that through his negligence and imprudence he was guilty of an inexcusable fault for which the company could not be held responsible.

The Court, after reviewing the facts of the case, considering that "the evidence indicates that the deceased acted as he did in order to save time and to perform his work expeditiously," and that "it does not appear from the evidence that the accident was caused by the inexcusable fault and negligence of the deceased," condemned the company to pay the plaintiff the sum of \$2,025 as asked for. This judgment was confirmed by the Court of Review. (*Papin v. Grand Trunk Railway Company.*)

Workmen's Compensation Act.—Indemnity.—Inexcusable fault.

The plaintiff, employed by the defendant company, was washing her hands in a toilet room when a piece of the ceiling fell and struck her on the head. She took an action against the company, and the evidence showed that the company had the ceiling of the room sound and all defective parts removed. One part was not removed because it was not thought to be in a dangerous condition, and it was the very one that fell on the plaintiff, causing a permanent incapacity for work, and the Superior Court awarded her 50 per cent. of her wages, or an indemnity of \$143 per year. The plaintiff appealed from

this judgment, claiming the accident was due to an inexcusable fault on the part of the company and asking that the amount of the indemnity be raised to \$5,000. Chief Justice Sir Horace Archambeault, in rendering the decision of the Court of King's Bench, attempted to define the term "inexcusable fault" as follows: "An inexcusable fault is a gross, I might almost say a wilful fault. The employer, knowing of the danger, must refuse or neglect to do anything to avoid it." In this case, there certainly had been negligence on the part of the defendant company, but the Court held it could not be considered an inexcusable fault, as the defendant had done some repair work and did not do more because it was thought all threat of any danger had been removed. The appeal was in consequence dismissed with costs and the judgment of the trial justice affirmed. (*Dougan v. Auer Incandescent Light Manufacturing Company.*)

ONTARIO CASE.

Master and servant.—Injury to servant—Negligence of fellow-servant.

An action was brought for damages for personal injuries sustained by the plaintiff while in the service of the defendant company. The plaintiff was in the employment of the defendant company in its engine-house in the village of Chapleau. He was what is known as "hostler's helper," and part of his duty was to open and close certain double doors to permit the locomotives to get in and out of the engine-house, whenever so requested by those in charge. The hostler was a second cousin of the plaintiff.

The plaintiff claimed that the received a signal for the opening of the doors, and that the duty of the hostler who was temporarily in charge of the locomotive was to await the answering signal from the plaintiff before moving the engine. The plaintiff alleged that he

had opened one of the doors, but could not quickly open the other half, because it was loaded with ice at the bottom. He claimed that the hostler brought out the engine without receiving the signal from the plaintiff, and that the engine struck the partly open door, inflicting severe injuries upon the plaintiff. The plaintiff did not bring his action within the six months from the occurring of the accident, and, therefore, was not within the Workmen's Compensation for Injuries Act. His claim of negligence at common law was that the defendant company did not employ an efficient and competent man for the duties which the hostler had to perform. Something was said also as to the ice, but that point was ignored by the jury in their answers. The defendant claimed, on the other hand, that they had every reason to consider the hostler an efficient and competent man, therefore the judge did not find that he could be considered negligent in his work. The action was dismissed with costs. (*Levack v. Canadian Pacific Railway Company.*)

SASKATCHEWAN CASES.

Contract.—Wages.—Farm labourer.

A farm labourer, according to his statement, was hired at \$35 per month until harvest, and during harvest was to get harvest wages. He worked until harvest, and then demanded harvest wages. The farmer with whom he had hired refused to give any increase in wages, contending that the hiring was for the season at \$35 per month. The labourer thereupon left the farmer's employ, although notified by the farmer that if he did so he would not get anything. The farm labourer then brought an action.

According to the defendant's version, the plaintiff was hired at \$35 a month for the season, and with the exception of a little money for tobacco and other small necessities, the wages were not to be paid until the end of the term when

the grain had been threshed. The learned trial judge dismissed the action, and, therefore, accepted the defendant's version of the contract. A contract such as the defendant had set up was held to be an entire one, and the plaintiff was bound to complete the term before he became entitled to recover anything. The appeal was dismissed with costs. (*La Plante v. Kinnon.*)

Master and servant.—Injury to servant

Judge Lamont laid it down in a recent decision in the Supreme Court of Saskatchewan that if a guard which was originally on a laundering machine in a laundry was taken off and an accident ensued to an employee, the employer was liable for damages. The case was one of considerable importance to employees in the different laundries.

The plaintiff, who sued through her mother, was employed in a laundry worked by steam power, and claimed that while employed at a steam mangle for the purpose of ironing different fabrics, and in the act of inserting a laundry bag her right hand was caught by a roller and drawn in between a roller and another portion of the machine. As a result it was alleged that the plaintiff's right hand was badly crushed, scalded and burned, the cords of the hand drawn together, the control of two of her fingers lost, and that her hand was badly mutilated and shrunken.

At the time of the injuries the plaintiff was earning \$8 a week and it was claimed that as a result of the injuries her earning capacity had been greatly impaired; that she would never be able to earn an income equal to what she earned prior to the injuries; that she would always suffer great pain as a result of the injuries, and that her capacity for the enjoyment of life would be greatly lessened. The plaintiff alleged that the injuries were due to the negligence of the defendant in failing to provide proper and safe machinery

and not securely guarding so far as practicable the roller of the mangle, which, it was alleged, was a dangerous machine, and that he had failed to give warning to the plaintiff of the dangerous nature of the mangle and had not instructed her as to the proper method of operating it.

The plaintiff also alleged that after the accident she returned to her employment and was engaged in lighter tasks, but after working for about four months gave up her position on the advice of her medical advisor and on account of suffering from two poisoned fingers contracted while employed at the laundry. She stated at the time of the accident there was no guard on the machine, but that one had been affixed since.

The defendant in his evidence claimed that it had been operated for months without a guard and no accident had taken place. He acknowledged that he had not done anything to protect the operators on the machine. It was also argued for the defendant that when he employed an efficient and capable manager, his responsibility ceased, and that the plaintiff knew of the dangerous character of the machine, if it was dangerous at all. In regard to the damages he argued that the injury plaintiff had received did not materially decrease her prospects of earning a living, and that while she might not be able to earn her living at a laundry there were other occupations in which she could earn equally as good, if not a better living.

The Judge found that the defendant was guilty of negligence in having machinery which was not safe to operate. The defendant had removed the guard which the manufacturers had placed on

the machine, evidently for the protection of the operators, which constituted negligence on the part of the plaintiff. The defendant was therefore liable, and he gave a verdict for the plaintiff for \$1,200 and costs. (*Oxenham v. Modern Steam Laundry.*)

ALBERTA CASE.

Master and servant.—Servants of City of Edmonton.—Notice of dismissal unnecessary.

An application to quash an order made by the Police Magistrate for the city of Edmonton requiring the said city to pay \$122 for wages was made in the Alberta Supreme Court, Appellate Division. The complainant was dismissed without notice on the ground that the city was reducing expenses. He claimed as wages the sum that would have been earned up to the end of the month during which he was dismissed, and for one additional month.

The judgment of the Court held that a servant of the city of Edmonton who was employed under a by-law was not, by virtue of a provision of the Edmonton charter, entitled to any notice of dismissal or to any damages for the failure to give such notice, and it was immaterial whether or not the servant was employed before or after the enactment of the said provision. The city was called upon to pay the costs of the application. (*Hackett v City of Edmonton.*)

BRITISH COLUMBIA CASE.

Negligence.—Defective system.—Injury to employee.

An action was brought by a bridge worker to recover damages for injuries received while in the employ of the de-

fendant company. During bridge construction a travelling crane was operated on elevated tracks under a system which did not provide for signals on every occasion when it was set in motion and it was not provided with guards for the protection of workmen employed upon the elevated stagings. A signal was given on starting the crane, at some distance from the workmen. Shortly afterwards it came to a momentary stop and moved on again towards the workmen without any further signal and plaintiff was injured. In his action for damages the plaintiff charged want of proper system and guards.

The Court of Appeal set aside a judgment in favour of plaintiff, upon a general verdict by the jury, and ordered a new trial for the purpose of assessing damages under the British Columbia "Employers' Liability Act," on the ground that it had been admitted that there was a system in existence which, if properly carried out, would have been sufficient for the protection of the workmen. The appeal was allowed with costs, and the trial judgment restored. (*Creveling v. The Canadian Bridge Company.*)

THE LABOUR GAZETTE

AUGUST, 1915.

INDUSTRIAL AND LABOUR CONDITIONS DURING THE MONTH OF JULY, 1915.

1.—GENERAL SUMMARY.

DURING July industrial and labour conditions showed little change from those of June. The usual midsummer lull was apparent in many lines of industry, and, if anything, conditions were quieter than in the previous month. The recruiting in Canada of some 1,700 mechanics for work in munition factories in Great Britain had the effect of diminishing the supply of this class of workmen in the Dominion, and the effort to fill this scarcity improved opportunities of employment for skilled workers in metal and similar trades. Harvesting operations which became fairly active in some localities by the end of the month also afforded additional opportunities of employment.

The outlook for a good crop continued bright, though heavy rains in a number of localities towards the end of the month did some damage. Conditions in the fishing industry continued active on the Atlantic coast, though outside of Prince Rupert there was little activity in British Columbia. Sawmills were busy in Eastern Canada, and an improvement was noticeable in the operations of mills in British Columbia. Mining, in both coal and metal mines, continued to improve. There was little

change in manufacturing lines, though the demand for agricultural implements was somewhat improved. Little activity was noticeable in railway construction. Conditions were fair in water transportation, but traffic departments of the railways were quiet.

The Department's index number of wholesale prices stood at 147.1 for July as compared with 147.3 in June and 134.6 in July, 1914. If the steep rises in spelter and zinc in June and July were included in the calculations, the index numbers for June and July would stand at 149.5 and 149.7 respectively. Advances occurred also in several other metals. The chief declines were in flour and oatmeal. Prices were lower also in sheep, fowl and turkeys, cheese, whitefish and salt mackerel, strawberries, canned corn, peas and tomatoes, maple sugar, calfskins, New Brunswick spruce deals, newsprint paper and raw rubber. Prices were higher in grains, hay, eggs, milk, potatoes, turnips, glucose, wool, beaver cloth, knitted woollen underwear, cottons, jutes, harness leather, copper, lead, quicksilver, solder, tin, spelter, zinc, galvanized sheets and barb wire, lead pipe, red lead, copper wire, grindstones, fire bricks, plaster of Paris, white lead, Paris green, mixed paints, anthracite coal, muskrat skins and Manilla rope.

The LABOUR GAZETTE, in its accounts of proceedings, abstracts of reports, legal decisions, quotations, or other records of matters of concern to labour, is not to be regarded as necessarily endorsing any of the views or opinions which may be expressed therein.—Ed.

Interruptions to Industry.

There was little interruption to industry through trade disputes. Two new strikes were reported during July, one of which was settled within a few days of its occurrence. At the end of the month seven strikes were in existence, the greater number of which were strikes which commenced several months before July and which affect comparatively few workmen.

Among industrial establishments, etc., destroyed by fire or through other causes, the following may be mentioned:

Nova Scotia.—At Berwick, July 17, J. W. Hutchinson's planing mill, loss \$10,000; also the Berwick Fruit Company's evaporating plant, loss \$3,000; at Kentville, July 7, the Dominion & Atlantic Railway roundhouse; at Miltnov, July 27, McLeod lumber mill and box factory, loss \$10,000; at North Sydney, R. Moore's livery stable, loss \$3,000.

New Brunswick.—At Bathurst, Bathurst Lumber Company's premises; at Chatham, July 19, Miramichi pulp mill, property of the Dominion Pulp Company, loss \$50,000; at Fredericton, July 1, Crystal Steamship Company's warehouse; at Newcastle, July 5, D. M. Sullivan's sawmill at Red Bank, loss \$40,000; at Sussex, July 30, storehouse, contents owned by the Massey-Harris and Sussex Manufacturing Companies.

Quebec.—At Beloeil, July 6, the cordite section of the Canadian Explosives Company's plant, loss \$20,000 (nine employees of the company lost their lives and five were severely burned; fire was not caused by an explosion; the cordite burned so rapidly that employees' escape was cut off); at Chicoutimi, July 20, J. T. Laferriere's store, loss \$4,000; at Bury, July 20, L. H. Martin's sawmill and boilerhouse; on July 5, lumber, property of Messrs. Gilmour & Hughson, loss \$10,000; also on July 16, lumber, property of Messrs. Gilmour & Hughson, loss \$5,000; at Lake Megantic, July 13, P. H. Renaud's sawmill and stock of lumber; at Montreal, July 9, Zenon Charboneau's sawmill, loss \$20,000; July 22, M. Broadben's cigar and stationery store.

Ontario.—At Alexandria, July 14, Grand Trunk Railway station and restaurant; at Burlington, July 31, Taylor Bros. dry goods and general store, loss \$4,000; at Cache Bay, July 19, Gordon Lumber Company's sawmill, loss \$150,000; at Chatham, July 17, Canadian Pacific Railway freight sheds, loss \$3,000; at Haileybury, July 14, lumber mill, property of the Dunbar Lumber Company, loss \$15,000, and A. Murphy's flour and grain warehouse, loss \$3,000; at Hamilton, July 2, Roussel planing mill, loss \$8,000; at Lansdowne, H. Leacock's blacksmith shop, F. McNamance's carpenter shop and H. Snyder's paint shop; at Norland, July 16, James Bryant's sawmill; at Orillia, July 16, municipal buildings (town hall) and theatre, loss \$25,000; also on July 23, Wilson Bros. garage (lady bookkeeper in garage burned to death); at Rodney, July 10, stock of baskets and berry boxes, property of Rodney Woodenware Company, loss \$2,500; at Smithville, Robt. Book's planing mill, loss \$5,000; at Starkville, July 15, Jackson's sawmill; at Thorold, July 14, laboratory of the Coni-

agas Reduction Company, loss \$10,000; at Wallaceburg, July 19, The Colinge block, loss \$5,000; at Warren, blacksmith shop, hardware store, hotel, post office, and ten dwelling houses, loss \$6,000; at Welland, July 30, skating rink, agricultural hall and poultry buildings, loss \$5,000; at Westminster, July 27, cheese factory and quantity of cheese, loss \$10,000; at Windsor, July 12, Dimock & Armstrong's business block.

Manitoba.—At Winnipeg, July 25, four barns and 67 head of cattle at Union Stock Yards, loss \$10,000.

Saskatchewan.—At Caron, July 12, Saskatchewan Trading Company's general store, Merchants' Hotel, Bank of Hamilton, post office and telephone exchange, loss \$50,000.

Alberta.—At Ponoka, Alexander & Tugman's flour mill, loss \$5,000.

Changes in Wages and Hours of Labour.*

A number of wages charges went into effect during July, most of them in the nature of increases. One hundred labourers in the employ of the Steel Company of Canada at Hamilton received an advance of 1½ cents per hour, and various other classes of labour employed by the same company received increases ranging from 2 cents to 5 cents per hour. Twenty-five moulders, employees of a machine shop at Galt, Ont., were given an increase of 15 cents per day, and various other workers in the employ of the same firm were voluntarily conceded increases. At Saanich, B.C., the salaries of 35 school teachers were reduced ten per cent.

Conditions in the Industries and Trades.

Conditions of employment during July in the several industries and groups of trades throughout Canada, as indicated by reports of correspondents of the *Labour Gazette*, and by information received at the Department of Labour from other sources, may be briefly summarized as follows:

*In the June issue of the *Labour Gazette* at pp. 358 and 1373 it was stated that members of the Plumbers' and Steamfitters' Union at Halifax had received an advance of 2 cents per hour, which brought the rate to 42 cents an hour. The statement should have read an increase of 1½ cents per hour, bringing the rate to 40 cents per hour. See fuller particulars in special article on "Changes in Rates of Wages and Hours of Labour" elsewhere in the present issue of the *Labour Gazette*.

Agriculture.

Favourable conditions prevailed in most parts of the Dominion in regard to field crops. Early fruits were good and the outlook for later varieties excellent. Haying was in progress at the end of the month and an excellent crop was reported in most districts. Heavy rains interfered to some extent with cutting and damaged grain in a number of localities.

An improvement was noticeable in the demand for farm help. In the Maritime Provinces the cutting of hay which was completed in some districts and in active progress in others at the end of the month, furnished employment to many men. In Quebec and Ontario, also, haying provided considerable employment, though cutting was later than in some parts of the Maritime Provinces. In the Hamilton, Ont., district the supply of farm labour was not equal to the demand, though the wages offered were considered good. At Galt and Berlin, Ont., from \$1 to \$1.50 per day with board was being offered, but an adequate supply of labour was not coming forward. At Woodstock, Ont., many men from the factories were finding temporary employment at harvesting. At Chatham, Ont., good farm hands were also in demand and high wages were being offered.

In the west the demand for harvest hands was setting in, though from most parts it was reported that large numbers of men would not be required until about the middle of August. At Winnipeg over 2,000 men were sent from the city to work on farms. At Regina the Provincial Government Labour Bureau opened an office in the Labour Temple for the purpose of supplying farmers with help, and large numbers of applications were being received from all over the district. The rates offered were from \$35 to \$40 per month until harvesting commenced, when the prevailing rates were to be paid.

A bulletin issued from the Census and Statistics Office, giving estimates of the

crop in Canada based upon appearances at the end of July, estimates the average yield per acre of fall wheat in Canada for 1915 at 28.10 bushels, as compared with 21.41 bushels last year. In area harvested, in average yield per acre and in total yield, the fall wheat harvest of 1915 is expected to be the largest on record. Spring-sown grain crops continue to show an excellent average condition.

Fishing.

Fishing on the Atlantic coast continued to give good returns. Excellent catches were reported from Digby, N.S., and at Lunenburg and Yarmouth conditions were also good. Some good catches of herring were made in Halifax harbour.

Fishing on the Pacific coast, while reported good at Prince Rupert, was quiet in other districts. The run of salmon in northern waters was smaller than expected and considerably less than the catch of recent years. On the Fraser, also, fishing was poor, and although nearly 2,500 licenses were taken out, results were disappointing to both fishermen and canners. The run of spring salmon was reported the poorest in years, and very few sockeye had come up the Fraser at the end of the month. Humpback were reported more plentiful, but canners were reluctant to put them up without orders in advance.

Six vessels of the whaling fleet left for the west coast of Vancouver during the first week of July, four less than the number usually engaged. Whales were reported plentiful and a fair season's catch was expected.

Lumbering.

Lumbering operations continued fairly active in Eastern Canada and some improvement was noticeable in British Columbia. At Newcastle, N.B., lumber mills were all working full time, but were hampered somewhat in shipping operations by scarcity of vessels and

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

high freight rates. Heavy rains resulted in the breaking of booms on the Miramichi river and several million feet of logs were lost. St. John mills were busy, most of them sawing for the English market. In the Quebec district all of the large sawmills were running, with the prospect of continuing late in the season to complete the cut.

At Ottawa all the mills were running, with water fairly high. Tonnage at Montreal owing to scarcity of grain was more plentiful and shipments to the United Kingdom were proceeding at a satisfactory rate. Pulp mills were fairly well employed.

At New Westminster, B.C., an improvement was reported and mills were running full time. The shingle business was reported good.

Mining.

Coal mining in Nova Scotia continued active, with a fair demand for coal. Work was a little broken at the Dominion collieries owing to a shortage of coal-carrying vessels. A number of men were laid off at one of the Sydney Mines collieries owing to a deficient section of coal, but were not expected to be out of employment long. Inverness colliery worked only three days per week. Conditions at Springhill were satisfactory. More coal was being produced than for the past three years and men were working steadily. At Westville some collieries reported a shortage of labour owing to the fact that many men were leaving the mines and engaging in the manufacture of munitions. Collieries, however, operated full time.

In the West some improvement was noticeable at Lethbridge owing to an expected improvement in the demand for coal with the approach of fall and cooler weather. The two Galt mines were working three days a week. Coalhurst and Commerce mines were working full time. At Fernie conditions remained in practically the same condition as during

the previous month. There was a brisk demand from smelters for coke and the ovens at Fernie were busy. At Nanaimo, the mines in the city and district did better during the month than for some time, but were not working to full capacity.

Metal mining continued active. Despite the low price of silver all of the producing mines at Cobalt were working full time, and in some cases more men were taken on. Practically all English-speaking miners were employed, and the number of foreigners out of work was small. There were fewer idle men at the camp than at any time within the past two years or more.

In British Columbia the improvement noted last month was continued, there being a revival of activity in zinc and lead mines. Operations at Greenwood were increased and the Rossland mines continued busy.

The antimony mines at Lake George, N.B., about 25 miles from Fredericton, were leased by a Montreal company, and it was expected operations would commence at once.

Manufacturing.

Manufacturing conditions in Canada showed little change from those of the previous month, war orders continuing to account for most of the activity. Some improvement was noticed, however, in establishments manufacturing agricultural implements. The steel plants at Sydney had a good month, with prospects of continued activity for some time to come. Shoe factories in Quebec were quiet for the most part, though some leather manufacturing establishments in the province were very busy on war orders. Furniture factories in the Berlin and Woodstock districts were very quiet, a number of factories being closed down indefinitely. Textile mills were busy for the most part, though handicapped by the difficulty in obtaining dyes. Fruit and vegetable canning factories were busy.

Railway Construction.

Little increase was noticeable in railway construction. Work was commenced on the new Intercolonial Railway station at Derby Junction and tenders were awarded for the construction of several new bridges on the Canadian Eastern branch of the Intercolonial Railway. A contract for the erection of a new steel bridge over the Petitecodiac between Moncton and Coverdale has been awarded by the Provincial Government. A railway spur to the site was under construction and work upon the foundations of the bridge was expected to commence at once. At Three Rivers several hundred men were employed on the construction of the electric road. Railway construction in the country north of Edmonton continued active, but the supply of labour was far greater than the demand.

During the month the London and Port Stanley Railway was officially opened, a number of representatives from Western Ontario towns and cities being present. At the end of the month gangs were still at work making final improvements.

General Transport.

Conditions in general transport continued fairly active in some lines, though quiet in others. The falling off in immigration and in imports kept the railways comparatively quiet. Tourist traffic up to the end of the month was reported to be below that of last year by more than thirty per cent. At Halifax conditions for 'longshoremen were good. About 122 men left for Hudson Bay during the month to be absent about four months. This caused a shortage for a few days, but enough men were soon available to handle the work offering. At St. John ship labourers were well employed in handling deals being shipped to the United Kingdom.

At St. Thomas increased activity was noticeable in the Pere Marquette shops, and the hours were increased from 32 to 45 per week. Traffic departments of the different railways, however, were not busy, though regular men were fairly well employed. At London railway passenger traffic was also reported lighter than during the past year, and fewer people left for summer resorts than in previous years.

The Trades.

Building.—Building trades showed no improvement, and on the whole were much quieter than during the previous month.

Metal.—Metal trades continued fairly busy, machinists particularly continuing to be actively engaged.

Printing.—Printing trades were fairly well employed, though dullness was apparent in some localities.

Clothing.—Clothing trades on the whole were quiet. Shoe factories were not active except in some cases where war orders were being executed.

Woodworking.—Conditions generally in the woodworking trades showed some improvement from those of the previous month. Furniture factories were quiet.

Food and Tobacco Preparation.—Trades engaged in the preparation of food continued to be actively engaged, while the tobacco trades remained very quiet.

Leather Trades.—Leather trades for the most part continued active.

Transport.—Conditions continued fairly active with 'longshoremen and

other workmen connected with water transportation. Railway workers were also more actively engaged than during the previous month.

Unskilled. — Opportunities for unskilled labour were improved somewhat by the increasing demand for farm help which the commencement of harvesting operations in a number of districts at the end of the month made more pronounced. The continuation also of recruiting for overseas service assisted in improving the unemployment situation.

Canadian Trade and Revenue.

Foreign and Imperial Trade.—During June, 1915, there was a decrease in the total value of imports entered for consumption in the Dominion of Canada, as compared with the corresponding month of 1914, the amounts being \$36,784,276,

and \$45,957,427 for 1915 and 1914 respectively. The decrease for the two months ended June 30, 1915, against the same period of 1914 amounted to \$28,048,371. The total value of domestic exports during June, 1915, amounted to \$42,805,846, an increase of \$14,805,546, as compared with the same month of 1914. The total value of domestic exports during the three months of the fiscal year ended June 30, 1915, was \$113,578,221, as compared with \$75,759,006 for the same period of 1914. During June, 1915, increases were shown in the products of the mine, the forest, animals and their produce, agriculture, manufactures and miscellaneous merchandise, and a decrease was shown in the fisheries. The following table gives the latest official summary of Canadian foreign trade:

Canadian Trade, June, 1915.

The June, 1915, bank statement shows an increase in paid-up capital of 1,736, the total at the end of June being \$113,984,389. There was an increase in deposits in Canada payable on demand, the totals being \$349,057,351 and \$113,982,653 for June and May respectively. Notes in circulation amounted to \$99,625,426, as compared with \$99,125,136 for May, an increase of \$500,290. Loans to cities, towns, municipalities, etc., amounted to \$46,889,816 and other current loans to \$759,934,154. During May, 1915, the total amount of these was \$804,579,549. The figures, therefore, for June show an increase of \$2,244,421.

Canadian Revenue.—Canadian revenue for the month of June, 1915,

amounted to \$11,433,970.57, as compared with \$12,088,228.50 for the month of June, 1914. For the three months ended June 30, 1915, the total amount was \$33,193,266.72, as compared with \$33,660,389.91 during the corresponding period of the previous year. The expenditure on capital account for June, 1915, was \$2,948,938.26, as compared with \$2,322,204.51 during June, 1914. The total expenditure for the three months ended June 30, 1915, was \$5,320,144.24, as compared with \$4,160,954.86 during the corresponding period of 1914. The expenditure on capital account comprised \$2,747,839.14 on public works, including railways and canals, and \$201,299.12 on railway subsidies.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

Mr. R. H. Coats Appointed Dominion Statistician and Chief of Census Branch.

MR. R. H. COATS, for several years an officer of the Department of Labour and during recent years Editor of the *Labour Gazette* and Chief Statistician of the Department, was appointed as from July 1, 1915, Dominion Statistician and Chief of the Census Branch of the Government Service. Mr. Coats has been with the Department of Labour since 1902, when he became Associate Editor of the *Labour Gazette*. Later, when the Department extended its statistical enquiries, this branch of its work was placed in the general charge of Mr. Coats. Mr. Coats' name has become specially identified with a series of reports on Wholesale Prices published by the Department and beginning with a volume issued in 1910, covering researches into the period 1890-1909; reports have been issued annually from that date. The average of prices for the period 1890-1909 was taken as a basis for measuring fluctuations in wholesale prices, and an index figure

was thus established which has come to be regarded, not without reason, as a barometer, substantially, of the cost of living. Information gathered during each month becomes the basis of a monthly price index printed in the issue of the *Labour Gazette* for the month following, and each year since 1910 a volume has been printed and published by the Department in which the whole subject of prices has been exhaustively considered. The value of these successive reports has been recognized by publicists and economists, and by the press, and there has been much demand on the Department for copies, of which several thousand have been annually distributed. Two or three years ago Mr. Coats was appointed a member of a departmental committee which made a somewhat extensive investigation into the whole subject of Dominion statistics and various plans were formulated by the committee which looked to secure a greater measure of co-operation and unity than had prevailed in the past with respect to this subject. Later the value of the work accomplished by Mr. Coats in the region of statistics was further recog-

nized by his appointment as a member of the departmental Board which was entrusted with an investigation into the whole subject of high cost of living. Mr. Coats took an active part in the work of this Board, the report of which has not yet, however, appeared. Mr. Coats would seem in this way to have demonstrated his fitness for the more responsible position of Dominion Statistician, in which he may be expected to find wider scope for work in the important realm of statistical research and co-ordination.

As Chief of the Census Branch, Mr. Coats succeeds the late Archibald Blue, who passed away a year or two ago after many years of faithful and effective service.

Mr. Coats was born at Clinton, Ont., in 1874, and graduated from Toronto University in 1896.

Satisfactory arrangements have been made, it may be added, for the continuance in its entirety of the statistical work in this Department which had been under Mr. Coats' charge.

*Trades and Labour Congress of Canada
Issues Call for Convention; to be
Held in Vancouver, B.C.,
September 20, 1915.*

During July the Trades and Labour Congress of Canada issued a call for its annual convention, which will commence in the Labour Temple Building, Vancouver, B.C., September 20, 1915. The call refers to the success of the convention held at St. John, N.B., last year, and brings to the attention of its affiliated organizations the following section of the constitution dealing with the introduction of resolutions:

"Sec. 2.—That all resolutions for the consideration of the Congress shall be received by the Secretary-Treasurer not later than ten days prior to the opening of the convention, the same to be printed and issued at the opening session of the Congress. Resolutions submitted contrary to this section can only be introduced and dealt with by the Congress on a two-thirds vote of the delegates present. The Executive shall appoint a Committee

on Resolutions from the credentialed delegates, and said committee shall meet at least one day prior to the opening of the convention for the purpose of considering all business submitted to them."

"The forthcoming convention, states the call, "will be perhaps the most important in the history of the Congress. Many legislative questions of vital interest to labour in Canada will be discussed and decisions arrived at. In addition a great number of pressing difficulties arising out of the gigantic struggle in Europe will face the delegates for consideration and decision. The industrial situation in Canada is much different at the time of issuing this call than when our last convention was held. At this convention policies of great moment to the working class in Canada will have to be outlined. Among the many subjects for consideration which need our continued attention are:

"1. The conditions arising from unemployment in the industrial centres in Canada.

"2. Dominion and Provincial legislation affecting labour interests.

"3. Enforcement of the misrepresentation and monetary clauses of the immigration laws all the year round.

"4. The proposed 8-hour Labour Bill.

"5. Workmen's Compensation Acts in various provinces.

"6. Amendments to the Industrial Disputes and Investigation Act.

"7. Fortnightly payment of wages on all railways.

"8. Proposed amendments to Dominion Elections Act, including:

(a) the abolition of the \$200 deposit now exacted;

(b) the making election day a public holiday.

"9. Old age pensions and all the issues that are therewith connected."

The notice concludes by emphasizing the importance of greater efforts, closer application and stronger organization, and urges all bodies affiliated with the Trades Congress to elect efficient delegates at an early date.

Board of Investigation Commences Inquiry Into Street Railway Wage Differences at Vancouver, B.C.

The Board of Investigation appointed under the Industrial Disputes Investigation Act to investigate the matters in dispute between the B. C. Electric Company and Division No. 101 of the Amalgamated Association of Street and Elec-

trical Railway Employees of America—which includes Vancouver, New Westminster and Victoria—commenced its enquiry at Vancouver on July 19. Representatives of the company and of the employees appeared before the Board, which held a number of sessions throughout the week, at which the company's side of the case was presented. The following week the men's side of the case was presented. A full account of the findings of the Board, when announced, will be published in the *Labour Gazette*. An article dealing with the establishment of this Board appeared in the June issue of the *Gazette*.

Second Semi-annual Convention of New Brunswick Federation of Labour.

The second semi-annual convention of the New Brunswick Federation of Labour was held at Moncton, N.B., July 2 and 3. Some 25 delegates representing various labour bodies affiliated with the Federation were in attendance, and a number of matters dealing with questions affecting the Federation were discussed. The following officers were re-elected: president, J. L. Sugrue, St. John, N.B.; secretary, P. D. Ayer, Moncton, N.B. Mr. C. M. Melanson of Moncton was elected vice-president.

II.—REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

Conditions in the labour market in Amherst and surrounding districts showed some improvement over last month. This was especially noticeable in the Canadian Car and Foundry Company's plant, which had between four and five hundred men employed, and was still taking on more; a large number of these working on shells and boxes.

The piano factory, which had been running at full capacity, closed down for two weeks for repairs and stock-taking.

Customs receipts for the months of June and July showed a large increase over previous months, and wholesale and retail merchants also reported an improvement.

The weather during the month of July was good for farmers, some of whom had already commenced haying, and reported a very large crop and of excellent quality.

Coal mining throughout the district was very satisfactory. At the mines in Springhill more coal was being produced

than for the past three years, and the men were working steadily.

Halifax.

Conditions generally were fair during July. In the building trades some branches had plenty of work, although carpenters and bricklayers reported work very unsteady. Work in the printing and allied trades was not as brisk as in June, some members of these trades being laid off.

Boilermakers, iron shipbuilders and labourers had a good month.

Along the waterfront conditions have been very good. About 122 men, mostly longshoremen, sailed for Hudson Bay on July 10, and will be absent about four months. This caused a shortage of skilled men for a few days, but later enough men were available to handle the work offering.

The contract for the erection of the new concrete pier for the Furness Withy Company, costing half a million dollars, was awarded to the Nova Scotia Construction Company. Men were at work tearing down the old wharf and warehouses.

Good progress was made during the month on the work at the Deep Sea Terminals, and also on the railway cutting.

Haying was in progress, and the farmers reported a heavy crop.

Fishermen in the vicinity of Halifax reported very good catches during the month. Some good catches of herring were taken off the harbour.

Sydney.

Labour conditions were fairly active. The larger industries continued to improve and to employ more men. The city mechanics, however, were quiet, and the season so far for them has been a quiet one. - But everything compared, trade conditions were much better than in July of last year.

Sydney steel plant had a good month. A fourth blast furnace was blown in, which added to the output. Other departments worked fairly steady. Prospects were good for a few months. The steel plant at Sydney Mines had a good month with large outputs.

The coal trade was active with fair demand for coal. Work was a little broken at the Dominion Collieries, because of a shortage of coal carrying vessels. Inverness Colliery only worked three days per week. At the end of the month 200 men were laid off at No. 4 colliery. Sydney, owing to a deficient section of coal. It was expected, however, that the men would not be long out of work, employment being available at the same and other collieries.

City mechanics, such as foundry men, wood workers, etc., were quiet.

Transportation by rail and by water was fairly heavy.

Wholesale and retail business was nearly normal.

No change of note took place in staple articles for household use.

Considerable work was done on Sydney streets.

A large number of men found employment on the Intercolonial Railway from Sydney to Grand Narrows.

The hay crop was looking good, and with fine weather there will be abundance of this fodder in Cape Breton Island.

Fishing was good during the month. Cod, haddock and lobsters were plentiful. A few days before the end of the fishing season for lobsters a gale destroyed a large number of lobster pots. The catch, however, was secured before this and was but slightly affected.

Truro.

Labour was well employed during the month, but there was a slight slump near the close owing to the woollen department of Stanfields Ltd. closing down for a few weeks. The cotton department, a new feature of the big plant, was running full strength on a 90,000 garment order.

All other industries were running steadily.

Shell making machinery, \$27,000 worth, has been ordered by the concern that is taking over the Truro Engineering plant.

Mechanics, builders and labourers were well employed, building operations being quite brisk.

Farmers began housing a fine crop of hay, and there was a brisk demand for farm hands.

Railway operations showed no improvement.

Printers, tailors and painters were well employed, though not rushed.

Lumbering operations were being carried on quite briskly.

Shad and salmon fishing in the Cobequid Bay was very satisfactory.

The usual summer season quiet in retail business began with the end of the month. Wholesale business was quite satisfactory.

Bank clearings and customs receipts were normal.

The cost of living continued steadily. Tea advanced five cents a pound, and butter fluctuated; meats remained firm at stiff prices, but the kind offered generally was first class.

The Dominion Chair Company, Ltd., Bass River, took advantage of the scarcity of raw material and closed down for the holidays, which permitted many of the employees who own small farms to get in their hay.

The coal mine at Kemptown and the pipe works at Londonderry remained closed down.

The Tripoli Company are operating their plant at Castlereagh. It is proposed to manufacture 600 tons of fossil flour this year. The war has cut off German competition, therefore the demand for it in the United States is greater than ever.

Westville.

The demand for labour continued during July and was much greater than the corresponding month of last year. The various collieries reported a decided shortage of labour, largely owing to the fact that many men are leaving the mines and engaging in the war munition business, which continued extremely active.

Eastern Car Company, Nova Scotia Steel & Coal, McNeil's, and Cummings' were all working three eight-hour shifts per day.

Machinery has been installed in Victoria Rink, Stellarton, for shell making, and the plant will soon begin turning out war munitions, giving employment to a couple of hundred men.

Railway traffic showed an improvement over last month and was about normal.

Wholesale and retail trades reported a larger volume of business than during the corresponding month of last year.

Lumbering continued active.

The coal mines operated full time and the outlook for this industry is good. While the Drummond Company showed a slight gain over the same month of last year, the Acadia showed a substantial increase. The Allan Shafts are gradually increasing their output since resuming operations are were averaging

about one hundred and fifty tons per day.

Woollen mills continued active.

PRINCE EDWARD ISLAND.

Charlottetown.

Conditions in the labour market were fairly good, comparing favourably with previous years.

Industrial activity continued and merchants, manufacturers and others felt confident that the coming fall would probably be an extremely active season.

The usual seasonal commercial inactivity was noticeable during July. The steamers of the Plant Line, plying between Boston, Halifax and this city, which were taken off this port, resumed the sailings during the month.

The Interstate Silver-Black Fox Company, Limited, has been registered, with capital of \$11,000, divided into shares of \$10 each. The Boston, Oregon and Prince Edward Island Fox Company, Limited, has been registered with a capital of \$20,000, in \$50 shares.

Haying was in full swing, and a good crop was expected. The potato crop was reported excellent.

A new oyster company was formed and registered under the name of Foxley Bay Oyster Company, Limited. The capital stock is \$15,000, divided into 1,500 shares of \$10 each.

The fishing industry is active, large catches of cod and haddock coming into the local market.

Lumber mills were all active.

All the local industries were very active.

Eighty-six per cent. of the total land area of the island is under cultivation and the crop prospects for the coming fall were excellent. In some quarters, owing to excessive wet weather, they are not as good as others, but on the whole the output will be very large if the remaining part of the season continues favourable. The lobster season was a short one this year, but the catch was good while it lasted. As a consequence

of this plentitude the packers were able to buy lobsters at a price which promises to yield them a profitable return. In other fisheries the island fishermen have also done well. The fox industry has not been in the prosperous state it was a year or two ago.

NEW BRUNSWICK.

Fredericton.

Prosperous conditions prevailed throughout this district during July, there being little unemployment during the month.

Railway and steamboat traffic was brisk and the number of tourists was increasing. The market gardeners along the river now supply the steamers with a good amount of freight and give evidence that there has been a considerable advance in that branch of agricultural labour. The farmers generally report a splendid outlook for this year's crops. Haying was well under way and a good yield of superior quality was reported.

The Process Engineers, of Montreal, have leased the antimony mines owned by the Canadian Antimony Company, at Lake George, York County, about 25 miles from Fredericton, and operations will be commenced immediately. Negotiations have been going on between the two companies for the past few months and an agreement has been reached whereby the Process Engineers, Limited, have leased the property from the present owners for a term of three years, on a basis by which the new proprietors will pay the cost of mining leases, the interest on the mortgage on the property, and a royalty based on the tonnage of finished product extracted from the mines.

Moncton.

Throughout July both industrial and commercial conditions have presented a very satisfactory state of activity and show marked advances over those prevailing during the preceding month and also over the corresponding period of last season. The local supply of labour

was all employed and in several lines was insufficient to meet the demand and has been supplemented by assistance from other localities. Building operations continued very active, being much in excess of last year with a consequent briskness among the building trades. About 25 stonecutters and 40 other help were at work upon the new Central Methodist church and the walls were rapidly rising. The new brick and stone Presbyterian church was about completed. The civic Board of Works had a pay roll of 101 men and was doing a large amount of permanent street and other work. The J. A. Marvin Ltd. biscuit factory was in active operation. It has a pay roll of 97 employees and to fill orders found it necessary to work night shifts. A material advance over the last season's record was also reported.

Active conditions prevail in the Government railway shops. The Record Foundry and Machine Company plant are engaged in the manufacture of munitions and are employing more hands than last year. Machine shops, the hat and cap factory and the underwear factory were also experiencing active conditions. The excavation work of Main street subway was nearing completion and the concrete work was also well advanced. About 60 men were employed and night shifts were still maintained.

The contract for the erection of the new steel bridge over the Petitecordiac river between Moncton and Coverdale has been awarded by the Provincial Government. A railway spur to the site is under construction and work upon the foundations will begin at once.

The semi-annual convention of the New Brunswick Federation of Labour was held in this city on July 2 and 3 and was well attended.

The cultivation of the crops and the performing of the statute labour upon the highways have kept the farmers busily employed during the month. Haying is considerably later than last year and but little had been done. The hay crop at the end of the month was showing up well and promised to be heavy.

All other crops presented a promising appearance though a little later than other seasons. Strawberries, both wild and cultivated, were abundant. The outlook of local cheese factories was also good with wholesale price from 17 to 18 cents per lb.

Newcastle.

The condition of the local labour market remained steady during the past month. There was a good demand for all classes of labour. In some cases the demand exceeded the supply and men have been drawn from the neighbouring districts.

The corner stone of the new Miramichi hospital was laid on July 1, and it was then announced that the cost of the structure would be in the vicinity of \$38,000. Much other building was also going on locally, while at Bathurst some 510 carpenters were employed in building operations. The contract for the installation of a water and sewerage system has been awarded for the sum of \$131,000.

Work also commenced on the new Intercolonial Railway station at Derby Junction, while tenders are being called for the construction of four new bridges on the Canada Eastern branch of the Intercolonial Railway.

Heavy rains during the past month have retarded agriculture and seriously affected the lumbering and fishing industries. Several million feet of logs were lost by the breaking of the South-west Miramichi boom on July 10, the logs destroying many nets of the salmon fishermen, causing a loss of several thousand dollars.

Farmers were busy harvesting the hay crop, which was reported the best for years. All other crops, although somewhat late, promised a good yield.

The lumber mills were all working full time, but were hampered somewhat in shipping operations by the scarcity of vessels and high freight rates. Two local mills were also destroyed by fire during the past month, but the men who were

thus thrown out of employment were working night shifts in another mill.

All other local industries were working full time, and the outlook was very promising.

St. John.

The labour market continued inactive during July, especially in the building trades. Machinists were in demand and the sawmills were running regularly. Ship labourers were well employed, several steamers and barges having arrived during the month to take deal cargoes.

The new 80-candle power light on Partridge Island has been completed. The light cost \$9,000, and can be seen 45 miles. The period of flash is eight seconds.

Bank clearings for the four weeks ending July 22 were \$6,188,834, and for the corresponding period last year \$6,973,632, being \$784,798 greater in 1914 than in 1915, and \$258,782 greater than for the four weeks ending June 24 of the current year.

The following are the returns from the Dominion Savings Bank for the month of June: deposits, \$57,576.70; withdrawals, \$74,576.39.

Inland revenue receipts for June were \$19,319.44, and for the corresponding period last year \$15,492.05, an increase of \$3,287.39.

The customs revenue for June amounted to \$190,882.94, and for the month of June, 1914, \$123,138.13, a gain of \$67,744.81. For the quarter the receipts were \$597,961.85, compared with \$426,391.12, an increase over last year of \$171,570.73.

The following statement of exports from St. John to the United States for the quarter ending June 30 shows a decrease of \$20,538.87: domestic exports, \$573,042.45; returned American goods, \$16,963.01; total, \$590,005.46.

For the corresponding period in 1914: domestic exports, \$777,912.10; returned American goods, \$22,632.23; total, \$800,544.33.

Fishing in the Bay of Fundy has been unprecedented during the latter part of July, one schooner landing a cargo of 188,000 lbs. at Digby, N.S.

There was a sale of unmarked logs at the Board of Trade rooms, St. John, on July 8. Spruce merchantable logs were purchased by Ussher Miller at \$13.50 per thousand, with battens at two-thirds. Pine logs were bought by Stetson, Cutler & Company at \$6.75. Cedar and haematack sold at \$8.75, and the hemlock at \$5.75, full size, to Frasers, Limited, Fredericton. These prices are for logs at Fredericton.

St. Andrews.—The Maritime Wholesale Hardware Association held its annual meeting at the Algonquin hotel on July 7. Reports of a satisfactory nature were submitted and adopted. Robert Bartsch, St. John, was elected president, and R. R. Simmons, Halifax, vice-president. The secretary and treasurer were to be named later.

QUEBEC.

Hull.

Labour conditions showed an improvement over last month. Labour was well employed, and many men found work in Ottawa on army equipment contracts. Several families have also left for the Western Provinces, where they have taken up farms.

Hay was housed in excellent condition. The yield, according to reports, will be under the average. Fine weather conditions during July had a good effect on the grain crops and the yield will be above the average.

According to merchants, there was a decrease of from 10 to 20 per cent. in several lines of business, as compared with July of last year.

Bank reports were satisfactory.

Montreal.

The situation as regards employment seemed a little worse during July than in June. Workmen engaged in metal

trades were quite busy except where their trades were not connected with the many industries stimulated by the demand for war munitions of one sort or another. The printing trades were very dull with the prospect that they would be worse in August. There was a fair amount of activity in the textile trades, especially in the cotton mills, although these are still handicapped by the difficulty of getting the dyes for which they had allowed themselves in past years to become absolutely dependent on Germany. The leather market was firm under a fairly good demand by boot and shoe manufacturers, although those of Montreal were not buying heavily. The English demand was good, however, and contractors for military equipment were cutting considerable stock. Some manufacturers of fur goods reported orders turning out better than calculated, and comparing favourably with those received a year ago.

Business in lumber and general structural material was very quiet in consequence of the restricted building operations. There have been a large number of outside buyers, even from far West, making a personal selection from stocks in wholesale houses anticipating difficulty later in getting certain goods. Increases in prices of carpets and rugs, linoleums, of woollen clothing of all kinds and of Swiss silks were announced by the wholesalers as a result of manufacturing increases. Retailers are oversupplied with flour, and some mills have closed down for a brief period. Departmental stores have had a fairly brisk trade through the medium of cheap sales.

The Canadian Car and Foundry Company has received an order from the railway executive committee of the British War Office for 1,200 four-wheel, Continental type, 22-ton, steel-frame box cars to be manufactured at the local plants. The total value of the order is placed at \$1,200,000. The Montreal Technical School has offered its apparatus for the purpose of turning out certain lathe attachments and instruments

required for the manufacture of shells. The principal, Mr. Macheras, was authorized to start the advanced pupils at once at this work.

The Canada Cement Company states that it is doing a very fair business and that the falling off in trade has been less than anticipated.

At the meeting of July 15 of the Trades and Labour Council the president, Mr. John T. Foster, and Mr. G. R. Brunet were elected as delegates to represent the Council at the Trades and Labour Congress opening in Vancouver on September 20 next. Delegates Matthieu, Bastien and Brunet were elected by acclamation to replace members of the executive committee who had been unable to attend meetings.

The Charity Organization Society reports a 10 per cent. decrease in the number of men asking for partial help. Recruiting has also removed a large number from the city. According to figures furnished by Colonel E. W. Wilson, the officer commanding the 4th division, Montreal has sent 12,500 men for active service since last August. In addition to this, recruiting has been going on well for the other battalions now being formed. By the time these are filled up a total of 17,000 men will have gone from Montreal. Two other French-Canadian regiments have been authorized from this district as well. The governing committee of the Montreal Stock Exchange has sent out a notice suggesting to members that they insist on employees of military age and physical fitness taking up military work of some kind. At recruiting meetings through the month speakers have promised their men that any enlisting for active service would have their jobs kept for them, and that their families would be given half pay if they were married. The relaxation in the physical requirements allowing men 5 feet 2 inches in height to enlist made room for others anxious to go to the front.

Red Cross groups have been formed during the month, and their activity has increased all-over the country in answer

to the demand for the beds and the comforts they have been sending to the soldiers, the wounded and the prisoners in Germany. The Patriotic Fund will assist the wives and families of Italian soldiers in the same way as they have been doing those of the French and Belgian allies who have been called to the front from Montreal. Up to July 22 there were 4,867 applicants, distributed among the three contingents as follows: 1st, 1,584; 2nd, 1,872; and 3rd, 1,411. More than 300 women and the same number of children have been sent to relatives in the British Isles.

A special committee of the City Council was formed on July 12 for the purpose of negotiating with the Bell Telephone Company for a reduction of telephone rates. In collecting the amusement tax the theatres are to be given a percentage of the tax for their work. It is a cent tax on every admission, and the proceeds will go to city hospitals and charitable associations.

Paving work has been held up for a long time because of an injunction against the city accepting a tender for 1,800,000 paving blocks when the price had been asked for on a small quantity.

In the 33,445 dwellings in Montreal only one out of five is occupied by the proprietor according to the annual report of the city assessors issued last month. In the populous wards the proportion goes up as high as one out of 30. From 1880 to 1914 the land values have increased from \$78,387,000 to \$850,000,000, the latter figure including property exemptions amounting to \$215,000,000. The vacant lots are greatly in excess of those built upon.

The City Health Officer's report for 1914 just issued shows a satisfactory decrease of 1.73 in the thousand in the death rate. On May 1 last the list of 6,600 properties on which taxes had been unpaid for two years indicated what were to be sold by the sheriff on October 15 if still unpaid. Since then more than half of the proprietors have settled up.

The dearth of imports and immigration still keeps the railroads comparatively quiet. Tourist traffic is below that of last year by more than 30 per cent. The heat waves stimulated it to some extent, but it is still well under last year. The total grain which came through the Lachine Canal to the end of July was 20,913,456 bushels, just 12,571,127 less than for the same three months of the navigation season last year. The total grain in July was 3,258,860 bushels as compared with 9,940,153 in July, 1914. Flour passing through was about one-sixtieth of that a year before. One reason for the small amount of wheat is that 35 lake freighters used to carrying grain are in ocean service. However, the grain is nearly cleared away to make room for the Western crop later. Customs returns for July were also more than \$100,000 below the same month in 1914.

The Tooke earnings are lower than in 1914, and the Montreal Tramways Company net earnings have decreased by 4.27 per cent. The gross receipts were \$6,525,231 as compared with \$7,142,804 in 1914, and the expenses were \$3,713,996 as compared with \$4,206,114 in 1914.

The bank clearings for July aggregated \$268,847,983, a decrease of 21.4 per cent. as compared with the same month last year, but they also exceeded all other months since the beginning of the war.

The following report shows the operations during the months of June and July, 1915, of the Montreal Free Employment Bureau established by the Government of Quebec:

	Male.	Female	Total.
No. of positions offered	843	82	925
No. of applicants for positions	1,010	96	1,106
No. of persons placed	740	71	811

Quebec.

The month has been a good one for labour. A large number of building permits were issued, causing briskness in the building trades. These permits were mostly for repairs or extensions, no very large or costly buildings having been started during the month. The only exception to general activity was the shoe factories and leather trades which were quiet.

Two new constructions that will afford employment to a number of men are the new station for the Intercolonial Railway in Levis and the new Bickell Bridge work; this latter should start before the end of the month and the cost of the construction will be \$116,000. In the ship-building industry there were 460 men employed, there being some 20 large-sized motor boats on the stocks and a couple of steamers in the dock for repairs.

Farmers have commenced gathering the hay crop and if they are able to save their hay in good condition the hay crop for this year will be a record one. The weather so far has been perfect and all crops promise a fine yield.

In the lumbering industry all of the big saw-mills were running, the prospects being that they will run late this season to complete the cut as in a large number of cases the logs that were held up last year, owing to low water, have been floated to the mills this year; this in addition to the winter's cut provides a larger quantity than usual.

Work upon the new Union Depot at the Canadian Pacific Railway station has commenced. The ground has been fenced in and the old freight shed demolished, a large number of men being employed here. Quebec has also four of its machine shops engaged in the manufacture of shells. These shops are now very busy, together with the Ross Rifle Factory, which is still further increasing its number of employees,—the present number employed being 2,140. The Dominion Arsenal was also working

to its capacity. Extensions are being made to this plant and prospects are exceptionally favourable.

Sherbrooke.

Labour generally was in fair demand. There was considerable building going on. The Sherbrooke Construction Company were still employing a lot of men on the new Protestant school. A lot of men were employed at the building of the new Roman Catholic cathedral. The Bell Telephone building, costing about \$60,000, has been commenced by the Anglin Company of Montreal. There were also quite a number of private residences receiving repairs. The Union Twist Drill Company, which purchased Butterfield & Company's large twist drill and other tool shops at Rock Island, are building a large addition to the plant.

The machine shops were still busy making shells, etc. McKinnon & Holmes were still busy with the addition to their plant and will give employment when completed to about 50 more men.

The town of Bedford has commenced work relaying pipes, etc., for a system of water works. The woollen mills were also fairly busy.

Farmers were busy cutting and storing their hay, which was a fair average crop in this section, especially where the land had been properly fertilized. Other crops looked fine.

Butter and cheese factories were getting good prices, but a large quantity of the cream in this section is purchased by

The lumbering business was dull at present. Mining continued the same as last month.

Sorel.

There has been no material change in the conditions of industry during July as compared with the previous month.

Skilled and unskilled men have been well employed.

Most of the industrial establishments in the district have been running full

time, some overtime. In the foundries and machine shops, especially, more men have been employed. This applies particularly to the foundries and machine shops where shells are being made.

Trade in general, both wholesale and retail, has been most satisfactory.

Farmers have been busy gathering their hay crop which is a better one than was anticipated.

The cost of living continues high but farm products are plentiful and prices of same reasonable. High prices still prevail for some commodities, especially meat.

Farmers have been very active, haying being pretty well advanced. A great many farmers are kept busy marketing their fruit and vegetable crops. Great care is being given to stock and poultry raising and dairying is very satisfactory. Already a considerable quantity of cheese and butter has been shipped to Montreal and other large centres.

The many industrial establishments in the district have been actively engaged.

St. Hyacinthe.

Labour conditions were about the same as during the preceding month but were decidedly quieter than during July of last year, especially in the building industry, which was at a standstill. The sash and door, iron, boot and shoe and leather industries were quiet, while the other local industries had a fairly active month. The city corporation and the gas company have undertaken considerable work, employing a large number of men.

Wholesale and retail trade was rather quiet, but some activity is expected after the harvest. Banks reported a good month with satisfactory collections.

Digging well No. 3 of the Canadian Natural Gas Company at St. Barnabé has been completed. Gas was found at a depth of 2,300 feet.

The cost of living was about the same as for some time past. Rents were still high and were expected to rise again next fall.

The general condition of agriculture was good. The hay crop was a good one, both in quantity and quality. All farm products sold well and at good prices. There seemed to exist a general desire to give more attention than in the past to stock and poultry raising, dairying, fruit growing and gardening. This is due to a greater demand for farm products on account of the war. Labour was in good demand and was not met by the supply.

St. John's and Iberville.

The labour market showed some improvement over the preceding month as far as manufacturing industry was concerned. Some activity prevailed in many branches with the exception of the building trade, where there was much unemployment. Among bricklayers, masons, carpenters and building labourers the offer by far exceeded the demand. There was a marked improvement in the metal and engineering trades. The Singer Manufacturing Company was more active; the hours of labour, which had been reduced last fall, were increased. An addition is being built to the St. Johns Straw Works; this company has important contracts to fill and will employ a larger number of hands as soon as the new factory is completed. The Excelsior Straw Works also intend to increase their staff in September, on account of large orders for the 1916 season. The Cluett-Peabody Company was not active during the month. The factory will be closed on July 31 until August 16 in order to give the employees some rest.

Navigation was more active during the last week. Many boats passed through the harbour, carrying large quantities of ore from the United States to Canadian points.

Business in general was quiet. Banks reported a fair month.

There was some change in the cost of living. The price of meats, butter, rice, fish and potatoes has increased, but cheese was cheaper.

The condition of agriculture was good. Farmers were very busy cutting their hay crop.

Fishing on the Richelieu was quiet. Lumber dealers reported a quiet month. Sash and door factories were very quiet.

Three Rivers.

Labour conditions have improved since last month. The demand for labourers was greater than in previous months. They were mostly employed for the building of the tramway line, on road construction and for the Bell Telephone Company, which is laying part of its wires of the business centre of this city under ground.

The export of lumber, especially by steamer, promises to be a record one this year, four ships being loaded here during July.

The city has relaid and repaired the sidewalk surrounding Champlain Park.

Farmers were busy gathering their hay crop which is pretty fair.

Fishing was quiet in this district.

Lumbering was active as was also sawing and shipping.

All factories ran full time.

The Three Rivers Traction Company's electric road is the only one under construction, but there were several hundred men employed and the work is progressing very rapidly.

The St. Maurice Construction Company has obtained the contract for the construction of the big dam on the upper St. Maurice river.

ONTARIO.

Belleville.

The condition of the labour market for the month of July in this city showed some improvement over June owing to the fact that building operations were more active. The building of two trunk sewer lines in the western part of the city was giving employment to a number of men and on Front street three buildings are being erected, one a fine block by the Canadian Bank of Commerce and

the other for a moving picture company. A few dwellings were also being erected and the prospects were that within the next few days contracts would be let for the building of pavements on a portion of two or three streets in the city.

The various manufacturing concerns in the city reported business fairly good. Wholesale and retail merchants did a good month's trade.

Farmers were especially busy gathering in crops, which are exceptionally good in this locality. The hay crop was light, but the grain crop is one of the best yields for years. The root crop also promises to be good.

Cheese factories, of which there are many in this district, were very busy, the product being in excess of former years owing to the farmers increasing their dairy herds. The prices obtained for cheese during the month averaged $13\frac{1}{2}$ c on the board, an exceptionally high price.

Berlin.

There is very little change in the labour market as compared with last month. Factories were working double shifts on shell manufacturing with plenty of orders on hand. The canneries and button factories, trunk and bag factories, rubber factories, felt factory and automobile factory were busy, while several large furniture factories were closed down indefinitely. The Hibner furniture factory was busy on a large order for wooden boxes for packing army shells. This along with their regular work will keep the factory busy for some time. Shirt factories, robe and clothing factory, biscuit factory, shoe factories, foundries, glove factories and cigar factories are not rushed, but are all keeping their full staffs on.

Unskilled labour, although fairly well employed, was not so much in demand as last year on account of less work being undertaken. The construction of new sidewalks, grading, and putting down permanent roadways has provided work for a number of unskilled labourers, but

as ratepayers are given the preference of work on these undertakings many single men and foreigners were idle. During the month work was commenced on the large addition to Zion church, the cornerstone of which was laid on Saturday, July 24. The addition will be used as a Sunday school, and the estimated cost is \$25,000. Work on the Metcalfe Candy Factory, corner of Weber and Cameron streets, was started, as well as on a number of houses. Work on the Longo fruit warehouse, the Merchants' Bank, the Bricker block, the Schantz block, and alterations to the Debus block were progressing nicely.

Customs returns for June were \$56,934.17, against \$35,881.90 for June, 1914, an increase of \$21,052.27. For the first six months of 1915 returns were \$289,750.91; for the first six months of 1914 returns were \$224,560.11, an increase of \$65,190.80.

Wholesale and retail trade was fair, and the cost of living remained about the same as last month. The price of flour went up 30 cents per hundred; butter also advanced a few cents. There were no strikes or labour troubles, and wages are considerably lower than a year ago.

Farmers were offering \$1.00 per day and board, a much lower rate than prevailed last year. Hay and wheat crops are fair, but rain has interfered with the harvesting of same. Rain has slightly damaged the hay crop.

Brantford.

Labour conditions during July have not changed materially from those reported for June, about the same number of men being unemployed, and with the same prospects ahead. While some factories have closed down during the month, others have shown increased activity, and also a number of able-bodied men have enlisted for overseas service. The fact that about 1,000 men have left the city for overseas service has had the effect of modifying the intensity of the problem of unemployment. The work-

ers, where munitions of war are manufactured, are busy, and advertisements for machinists are being inserted in the local press; other manufacturing firms, however, were generally quiet.

The industries reporting normal activity are the silk industry and the makers of gasoline engines. While the latter industry enables the workers engaged to work a little extra time at the end of the month, most workers were on short time. The stone works have been shut down for two weeks, and the Ham & Nott Screw, Refrigerator and Spring Bed Works were closed for a longer period. Moulders and others have been started to work at the Malleable Iron Works.

The building trades continued very quiet, many men usually employed in those trades having secured other work.

Retail merchants find business very poor and as a consequence fewer retail clerks are employed.

During the month the civic authorities purchased Mohawk Park, a splendid natural park, as a public amusement and recreation ground. Work has been commenced in cleaning up and doing necessary repairs. It is proposed to make greater improvements in future years.

A proposal to part with a portion of the newly acquired Grand Valley Railway, without a referendum to the people, is being fought by the Trades and Labour Council and others.

Work has been completed on the new power station, and power supplied by the Hydro Electric Commission will be utilized instead of that supplied by the Western Counties Electric Company for running the street car service.

Agriculture has suffered to some extent, owing to an excessive rainfall. While most of the hay was secured undamaged, a quantity was partially spoiled. Difficulty in harvesting the wheat crop has been experienced, and a large quantity yet remains standing. Berries have been moderately plentiful, and a large supply of vegetables was marketed. While more people have

this year grown vegetables for sale, a larger number than usual have developed home gardens, consequently the demand is not equal to the supply.

Manufacturing was generally quiet.

Railroad construction was progressing; work on the new bridge was going ahead steadily.

Other industries were quiet.

Paris. — Conditions remained unchanged.

Burford.—The canning factory has been busy throughout the month.

Brockville.

During the month of July labour conditions showed no improvement over the preceding month, and were not as favourable as the previous year. The supply of labour exceeded the demand and many were unable to find employment.

The Church street pavement was nearly completed.

Unusual activity prevailed in the brass and steel trades, especially on war orders.

The barbers report a change in wages from \$15 per week to \$12 per week and are requested to work full time without the usual half holiday.

The cost of living has increased to some extent. New potatoes, on account of old potatoes not being obtainable, were selling high.

Agriculture was unusually active in haying operations and market gardening, the price of vegetables being fairly low.

Manufacturing generally was only fair. The James Smart Manufacturing Company was closed from July 1 to July 15 for taking stock, with the exception of the brass department, the tool department and a part of the moulding department which was busy on war orders. The brass department was working day and night shifts.

The St. Lawrence Engine Company and the Gilbert Motor Boat Company are fairly active on motor boats. The Canada Carriage Company, the Walthosen Hat Corporation and the Halls Lim-

ited, manufacturers of gloves, mitts, ties and suspenders, are only fairly active. The hat trade is rather quiet, while the glove manufacturing industry is only fair.

Smith's Falls.—The moulders' strike continues unchanged except for the fact that strike benefits were paid to the 40 affected men.

Chatham.

There was little change noticed in labour conditions during July as compared with the previous month, with the exception of the Carriage and Wagon Company. The Wm. Gray Campbell Company and the Chaplin Wheel Works closed down the first of the month for stocktaking purposes, both firms laying off a large number of hands. This annual stocktaking was brought on a month earlier this year.

Building was brisk, being considerably in advance of the first six months of 1914.

Foundry and machine shops were fairly busy. The Dowsley Spring and Axle Works were very active, having more fires and a greater number of men than in 1914.

The Canadian Wolverine Brass Company had not commenced operations at the end of July. There were about 60 employees affected when the building was burned and these were compelled to look elsewhere for employment, many leaving the city for Walkerville and Windsor.

Freight traffic on all railroads has been light.

Dry goods merchants report trade fully as good as the corresponding month of 1914.

While the city engineer has not had as many men in his employ this year more money has been expended in city work.

Real estate agents reported quietness prevailing during the month, the number of vacant houses having increased.

Farmers were very active the latter part of the month but owing to the heavy rainfall during the greater part of the month they were unable to complete the cutting of hay which has resulted in hay and wheat cutting being done concurrently necessitating considerably more help than would otherwise be required. Good farm hands were in great demand and highest wages were being offered.

Cobalt.

Indications at the end of the month were that the greatest crops in the history of Northern Ontario would be harvested this year. The wheat crop promised to break records in the yield per acre, while the acreage sown this year is at least one-third greater than last year. The hay crop is very heavy and the bulk of the crop was cut and in the barns. Root crops, too, are equal to any in the past six years.

Despite the low price of silver all of the producing mines in the camp were working full time, and in some cases more men have been taken on. In this respect O'Brien and Seneca Superior led with the greatest increase. The mines which mill and refine the ore on the ground are as a rule all storing their ore in New York and borrowing money on the product to carry on mining operations until a change for the better occurs in the market price of silver. There were fewer idle men this month than last. According to the secretary of the local miners' union, No. 146, practically all of the English-speaking miners were employed at the end of the month. Among the foreigners there were a number of men out of work, but the number was very small. It may be said that there was fewer idle men in the camp than at any time within the past two years or more.

Galt.

General industrial activity prevailed in this city and prospects were for a continuance of these conditions. While

some industries were not as active as in former years, yet there were plenty of work for all classes of labour.

Certain classes of skilled labour were in demand during the month, and farm hands were needed in some localities, the rate being \$1.50 a day with board, which, however, was not acceptable.

The moulders' trade was improving, and the Galt Stove Foundry was working full time again.

All the big factories in the city were still working night and day on Government contracts.

The Canada Machinery Corporation, Limited, was working 11 hours a day. This firm raised the wages of its moulders voluntarily 15 cents per day three weeks ago. The same firm intends to build a large extension to its already extensive plant here.

The printers in one office were still working short hours.

Guelph.

Labour conditions were not improved during the month and prospects were far from as good as at the same period last year. In the building trades there was very little prospect of work.

Manufacturing concerns were quiet, with the exception of the Page-Hersey Iron and Tube Company, which after having been practically closed for the past 12 months, resumed operations and was expected soon to have about 100 men at work.

The contract for the new cement reservoir at the waterworks pumping station has been awarded to Brandon & Hollingsworth, of Hamilton, at a contract price of \$8,600. Most of the work will be done by local men.

Quite a number of men were employed by the Board of Works and Sewerage Commission on street paving.

Wholesale and retail merchants report trade fair.

The customs receipts for the month of June were \$20,627.91, showing an increase of \$6,546.59 as compared with the corresponding month of last year.

Farmers have been rejoicing in the prospects of an abundant harvest, but heavy and continuous rains during the latter part of the month retarded haying and caused anxiety regarding grain crops.

Hamilton.

The condition of the labour market during July showed considerable improvement over the previous month, due largely to improved manufacturing conditions and a call for men to take the places of those who have enlisted for overseas service, as well as a heavy demand for men to work on fruit and grain farms.

The building trades, which have been very quiet this year, were still slack, with not much likelihood of conditions improving in the near future. Cigar-makers, who have been working on short time for several months, are still very quiet.

At the end of the month there were five factories under construction. These concerns, which will start work as soon as their buildings are finished, are: The Procter-Gamble Company, Dominion Sheet Metal Company, Canadian Horse-shoe Company, the Canadian Cartridge Company, and the T. Eaton Company.

Several departments of the International Harvester Company, which have been closed down for some time, resumed operations about the middle of the month, including the coremakers and the malleable iron foundry. The press room, saw shop, and the grey iron foundry will resume operations on August 5. The company is working on implements for next year's use, of which it has received large orders from the West. It is estimated that the plant will be kept busy until next June.

Out of about 250 local mechanics who offered their services to the British Government, to work on war munitions, ninety-four were accepted and left early in July for England. It was expected that another draft of men would be taken later on.

Work on the Hamilton-Toronto highway was progressing rapidly. Concrete work has been commenced between Burlington and Hamilton and will likely be finished on this end of the road by the first week in September. The machines the Commission now have in use for this work cover 400 feet daily at a width of 18 feet. The supply of labour available for work on this end of the highway has not been equal to the demand but it was expected that when the works department finished its programme of work mapped out for this season, which it expects to complete about the end of August, there would be an abundance of labour available. The civic works department was keeping 850 men employed at the end of the month.

The W. E. Sanford Manufacturing Company has posted up a notice stating that employees of the company enlisting for overseas service will have their positions kept for them and will be compensated for all pecuniary losses they may sustain by doing so until the end of the war.

The Bell Telephone Company of Canada is also keeping open the positions of all who enlist for active service at home or abroad and are to assist the dependents of their employees who are serving the Empire.

Work was under way on the construction of the new Hamilton Independent Foresters' Hall. The building will be two storeys high and will cost about \$12,000. Excavation work for a mammoth factory building for the T. Eaton Company, Limited, was progressing rapidly and tenders for the construction of a big building are being called for. The T. Eaton Company has leased the top flat of the Rilett Block and was arranging to commence manufacturing early next month.

The seven and one-half per cent duty on raw materials for manufacturers, combined with the extra business caused by the war, has resulted in a large increase in custom receipts at the port of Hamilton, over the amount collected last year. The statement issued for the

month of June shows receipts to have been \$364,300.72, an increase of \$147,339.21 over the same month last year.

The Hamilton District Trades and Labour Council has passed a resolution endorsing the efforts of the local Recruiting League and has appointed a committee to act in conjunction with the league in securing recruits.

The local mail carriers have been granted a half holiday on Saturdays during the months of July and August.

A steady volume of business was reported from both wholesale and retail merchants, and although trade was not back to normal yet a marked improvement was shown over last month.

Farmers had a busy month haying and harvesting. Continued wet weather during the first half of the month kept haying back considerably. The wheat crop which was being harvested at the end of the month is a splendid one, and the yield per acre promises to be the heaviest in some time. One farmer threshed 200 bushels from five acres. Oats were coming along well and promise a good crop.

Fruit growers were exceptionally busy. The strawberry and raspberry crops were both heavy and retailed at prices below those of last year. Growers had no trouble in disposing of English and black cherries at handsome prices, but the common sour varieties, of which there was an abundant crop, were hard to get rid of. The supply of farm help has not been equal to the demand, even though the wages offered this year have been good.

Manufacturing was somewhat better generally than during the previous month. The firms working on war munitions were exceptionally busy, many of them working day and night shifts.

Bank clearings for the month of July totalled \$12,832,549, as compared with \$13,434,976 for July of 1914.

Burlington.—By-laws have been passed providing for the construction of an overflow sewer and the acceptance of a lighting contract with the Dominion Power and Transmission Company, of

Hamilton. This was a new agreement, providing for both house and street lighting. Work on the new Radial freight shed was rapidly nearing completion.

Waterdown.—The village basket factory had a number of men and boys engaged in the shop, and was doing a thriving business.

Beamsville.—Fruit growers were satisfied with crops and sales. Prices were fair except in the case of sour cherries, and the outlook for the coming crop of peaches, pears, plums and grapes was considered generally satisfactory.

A big gang of men were brought down from Hamilton and work commenced on the raising of the H. G. & B. tracks on King street.

Dundas.—The Hydro linemen commenced work on the new line to Lynden.

Kingston.

The condition of the labour market during July showed little improvement over the preceding month, building operations particularly being very slow, and many of the building trades being still out of work. A great number of mechanics have taken advantage of the activity in the Canadian Locomotive Company Works and were busily engaged in making shells, etc.

The work that this company has on hand is the redeeming point in a season of much inactivity. They have now to erect a large trestle for the purpose of storing cars loaded with parts of locomotives, which will be shipped out of the country at the end of the year. The trestle will run out into the water about 150 feet from William street, adjoining the property of the company.

Excavation was going on at Wolfe Island for a new Catholic church at that place, and a number of local men were being employed in getting out stone for the building, operations on which were expected to commence this fall.

The Government has taken over from the county the part of the road leading from the Causeway to the military camp, and a number of men were busy crushing stone, etc., for macadamizing the road and putting it into good shape. The military camp has been a good thing for the teamsters and carters, who have improvised all kinds of conveyances for the purpose of carrying the soldiers to and from the camp. In fact the city in general was deriving great benefit by having the soldiers in training in this vicinity. The work on the new Causeway was being pushed ahead. It was expected that the Hamilton Steel Works would soon be busy at the steel work, but owing to the non-arrival of the steel they have been delayed.

Tenders have been called for a new storehouse for Truman & Cohen. The building will be 92 feet by 46 feet and three stories high, with either stone or concrete foundation and brick above.

Steamship traffic was exceptionally light, and quite a number of boats were forced to lay up owing to lack of business.

Frequent rains have improved the agricultural outlook, and crop conditions generally were very good, grain especially promising to be a very heavy yield.

There has been an abundant crop of all kinds of berries. The price of hay was still on the increase, being from \$18 to \$22 per ton.

London.

Industrial conditions continued fair, with very few men out of work.

The city has under way a large amount of civic work, such as new roadways, sewers, sidewalks, gutters, etc.

The Board of Education have four new schools under construction, but they have not yet advanced far enough to give employment to the required number of bricklayers.

Among other buildings under construction are the following: Advertiser Job Printing Company, three storeys;

three stores on Richmond street south; several stores on Maitland street south; six new stores at Dundas and Rectory streets, and a number of residences.

Railroad passenger traffic was much lighter than last year, and fewer people have left for summer resorts than in previous years.

Machinists and brass workers were exceptionally busy, night and day shifts being worked in some shops.

The London and Port Stanley Radial Railway was officially opened on July 22, when representatives from most Western Ontario towns and cities were present. The rolling stock is all new and of the best, and the trip to Pt. Stanley, 23 miles, is being made in 50 minutes.

Crop conditions in this district were never better. Wheat was being cut and a heavy yield was expected. Pastures were good and a lot of butter was being made by the creameries. Raspberries are a very heavy crop of good fruit. Corn and oats promise a large crop.

The soldiers in the London camp were given the opportunity to work in the country for a month helping to take off the harvest, but not many have availed themselves of the opportunity.

Niagara Falls.

There was little change in the industrial situation from June. There was no serious condition of unemployment, but building trades were quiet, some lines of manufacturing dull and, altogether, it was the quietest July that Niagara Falls has had in many years.

The new Baptist church and an addition to the Kitchener Street school were the most important new buildings under construction.

The Bentley sporting goods factory was being enlarged.

Commercial activity was below normal and real estate conditions were not good.

A Trades and Labour Council was organized.

So far, all crops have been good. Wheat, oats and early fruits yielded

bountifully. The agricultural outlook was excellent.

The new shoe-fittings factory had six months' work ahead. The Dominion Chain Company laid off forty hands, temporarily. The Niagara Falls Canning Company was running short time between fruit crops. Other "busy" factories were: shredded wheat, corset, suspender, neckwear, and carriage mountings.

Welland.—A wine company was organized. A factory will be erected in time to handle this year's grapes.

Port Colborne.—A test section of the pure water conduit, which is to run from Lake Erie to St. Catharines, was being built here. It is 300 feet long and four feet in diameter.

Orillia.

The labour situation continued fairly satisfactory. While conditions were scarcely as good as a year ago, there was little unemployment. The factories were rather quiet, except for those engaged in the manufacture of munitions.

The smelter here has begun to treat molybdenum, which is used for hardening guns and other armament. This is a new industry for Canada. The ore comes from Renfrew county.

The municipal buildings were destroyed by fire on the night of July 16. The loss was about \$25,000 and the insurance \$19,000. The town council is taking steps for the immediate reconstruction of the building.

The summer tourist business was well up to the average, though the cottages were slow in filling up. August was expected to be better than last year. There were, however, comparatively few excursions, for which this town is a centre. The steamboat business has been poor.

The Orillia Water, Light and Power Commission has completed a contract with the Standard Chemical Company at Longford Mills for the supply of 200 horsepower of electrical energy to the company for their chemical plant. This

involves the construction of nine miles of transmission line. The work was already under way. The line will cost about \$12,000.

Ottawa.

Little change in the local labour situation was evident during July, and while on the whole slight improvement was shown this was of a temporary nature, being the usual seasonal activity. The printing trades were quieter than in June; the building trades showed increased activity but mainly on small contracts and no big work was in prospect. The majority of the other trades were fairly busy with unskilled labour still very dull.

During July Bricklayers and Stonemasons secured a three-year renewal of their agreement with the contractors which had expired on April 30. The old contract called for a wage of fifty-five cents an hour for an eight-hour day. The contractors offered forty cents an hour for a nine-hour day and later offered forty-five cents an hour. A deadlock resulted and a further offer to renew the agreement for five years at the old terms was rejected. Negotiations were continued, however, with the result that the agreement calling for fifty-five cents an hour for an eight-hour day has been renewed for three years. About 250 bricklayers and stonemasons were affected.

One hundred and five skilled mechanics from Ottawa and vicinity left on July 15 to engage in manufacturing war munitions in England.

A civic report presented during July showed that from April 24 to June 26, 2,808 unemployed registered at the City Hall, of whom 2,558 were married. Work was secured for 1,080. Aliens among the applicants numbered 1,357.

About 400 men were engaged in street work for the city during the month.

The city plans to start the erection of a new bridge over the canal in the near future and this with an overland pipe waterworks scheme is expected to support work for many.

Towards the end of the month, low water in the Ottawa river made it exceedingly likely that the Booth mills would have to be at least partially closed down in a short time.

Local members of the Journeymen Barbers of Ontario have started a movement to secure authority from the General Executive Board to pay death benefits in the case of any member who may be killed while on active service.

Misled by an alleged employment agent, to whom they paid excessive fees, 39 Polacks were recently sent from Ottawa and became stranded at Fort Coulonge. One of the agents concerned was fined \$39 in police court.

Local No. 209 of the Journeymen Horseshoers has disbanded, through financial depression and war conditions.

The non-employment of single men of military age for the purpose of stimulating enlistment was discussed by the Allied Trades and Labour Association. A vote was taken which resulted in a tie.

Four hundred unemployed in Eastview have organized in a demand that the town council supply some means of employment.

Owen Sound.

Labour conditions have slightly improved over those prevailing in June. The employment of about fifty labourers in the city street improvement work, the construction of a \$15,000 power house, together with alterations to a number of houses have given considerable employment.

The contract has been let for the construction of a new curling rink estimated to cost about \$11,000.

Business has been as good as expected, being almost as good as that for July, 1914.

The crop prospects were good and business with the farmer has been quite normal.

The nail factory has been very busy filling British orders. Factories engaged in the manufacture of wooden wares report business quiet.

The McQuay Tanning Company are doubling the capacity of their plant.

Peterborough.

The condition of the labour market for the month of July showed some improvement over the previous month but was not up to the standard of the corresponding month of last year, and while female labour was active there was some idleness among the male workers. In the building trades there was very little doing. A good many of these have found employment at other work. The factories working on war munitions were running night and day shifts.

The Board of Works have been doing a lot of street work constructing storm drains and sewer work and they will start paving operations in the first week of August. The Bell Telephone Company have been putting in conduits and the Street Railway are putting in heavier steel rails and extending their line preparatory to paving the street. This gives a great many men employment who can find no work at their own trade.

The Utilities Commission by-law to borrow \$50,000 for the purpose of building an electric sub-station was carried. This means a better lighting service for the city.

The farmers were very busy cutting their crop. Wheat was in good condition and free from rust. There was considerable smut in the oat crop; the straw was of good length and well headed out. The hay crop was about harvested and while not a good crop was far ahead of the last year or so. There has been a good demand for farm labour.

At the last meeting of the cheese board the price of cheese took quite a drop, from 15 3-16 to 13 3/8 cents.

Most manufacturing industries were well employed. Those working on munitions of war were working day and night. The Wm. Hamilton Company have some big contracts for water

wheels; they have also received a good order for canal lock fittings.

Lindsay.—The Boving Company has been reorganized and expect to start operations about August 15. They will manufacture hydraulic machinery. Lindsay's tax rate this year will be 37 mills on the dollar, an increase of two mills over that of last year.

Port Arthur and Fort William.

There was very little change in the condition of the labour market from that which obtained last month. With the exception of the employment of more men for the making of shells no new work has developed.

There has been no important change in retail prices. Flour and butter have declined in price and the price of tea has risen. Rentals were low to what they have been, and with the exodus of many families from the cities there were many houses to rent.

The agricultural industry is flourishing among those settlers who have established themselves for some years on the land. The weather has been for the most part damp and cold, but with the latter end of the month very warm sunny weather was generally prevalent and the crops were coming on well, especially all root crops and hay.

The fishing industry was being followed by many who in former years worked at more remunerative employment.

The Pigeon River Mill, Port Arthur, is making their summer cut and was working full time. There is not much local trade for lumber, but something is being done in the export trade, a large consignment of laths having been sent to Detroit this month from this mill.

The Canadian Northern Railway has put in rails connecting with the Canadian Pacific Railway through Port Arthur, making their eastern connection through the city. With this small exception nothing has been done in railway construction.

Sault Ste. Marie.

Industrial and commercial quietness prevailed during July. There was a slight improvement at the steel mill, and in the city, because of the commencement of Government buildings. Farm crops have greatly improved during the last month, and as the crop acreage has been increased the yield should be quite good. From indications there will be but little building done outside of the Government buildings. There was considerable stir at Gaudreau, a mining camp on the Algoma Central Railway, due to a couple of good mining prospects.

Labour conditions generally showed a little improvement over last month, but below that of July last year.

The revival of work on the trap rock industry at Richards Landing, and new street making at Sault Ste. Marie, have improved labour conditions somewhat.

Stratford.

The condition of the labour market during July showed activity among both male and female workers, as the knitting, woollen, biscuit and candy factories gave employment to more girls than in previous months. Four factories in Stratford were working on the manufacture of shells, some of them with day and night shifts. The construction of residences and commercial houses kept the building trades busy.

The Bartlett Automobile Company of Toronto have secured the Morlock Factory in Stratford South, and employ several mechanics and intend to have models of three cars finished to demonstrate at Toronto Exhibition.

Wholesale and retail merchants report trade fairly good.

A number of men were employed in the erection of a new garage; it will be of steel construction, and when finished will be one of the largest in the city.

The customs figures at the local port show an increase of over \$2,000 for the month of June as compared with the

same month 1914; June, 1915, \$20,593.00; June, 1914, \$18,211.55.

The returns of the excise department for the month of June were \$4,376.15, a decrease of \$1,000 for the same month 1914.

The farmers had a busy month, and as far as can be learned there was no shortage of farm labourers. The crops generally are going to be heavier than expected. The frequent rains have made it difficult to harvest the hay and fall wheat crop.

All manufacturers were active, especially the workers in the manufacture of shells.

St. Catharines.

Labour conditions during July compared favourably with those for June. The building trades were a little more active during the month.

The steel laying on the St. Paul street viaduct, which will take about three months to complete, was progressing favourably. Work on the new moving picture theatre on James street was rapidly progressing, the side walls being under course of construction.

Work on the new Salvation Army citadel was in progress, part of the side walls being in course of erection.

Longley & Rymer, working on a sub-contract for Newman Bros., are laying sidewalks in Glen Ridge.

The city day gang was working on the rocmac pavement on Vine street, and grading Helliwell's lane preparatory to concreting it.

Ground has been broken for a new business block on Queen street in the rear of the Bank of Commerce. The new building will be two storeys in height and will contain two stores.

Wheat cutting has commenced throughout the district and the yield is fairly good in most sections. Hay was a fair crop.

All the canning factories were busy.

The new sanitary dairy building is completed.

The big dredge "Delver," which only recently was raised and repaired after months of immersion in the lake, has been dredging out a channel deep enough to allow the four big concrete cribs already completed to be towed to Pt. Weller.

Fire completely destroyed the chemical laboratory of the Coniagas Reduction Company a short time ago.

Pt. Dalhousie.—Labour conditions generally were fair during the month.

Merriton.—Labour conditions continued active.

Thorold.—Activity on the canal was about the same as reported for June, operations continuing steadily.

St. Thomas.

There was no demand for labour during the month of July, conditions being about the same as during the previous month. Increased activity was noticeable in the Pere Marquette shops, resulting in those employees having their weekly hours increased from 32 to 45. The traffic departments of the different railroads, however, were not busy. Regular men on the railways were fairly active but spare men were not actively employed. The unemployment situation has to some extent been relieved on account of a number of men enlisting for overseas service and it was expected that with the commencement of the harvest season all men who desired work could be accommodated. Work was not plentiful in the building trades, conditions being very dull for men employed in work of that kind. Local industries were quiet.

Local markets have been well attended in this city. Produce was plentiful and good prices prevailed. A heavy down-pour of rain and hailstones caused severe damage to the crops in some districts grain ready for the reaper being levelled to the ground. With a few more days of favourable weather the wheat would have been in the barns. However, the damage was confined to certain districts.

Manufacturing was quiet.

The new electric road from London to Port Stanley was formally opened during July. Construction gangs were still at work making final improvements.

Toronto.

Labour conditions during July were similar to those prevailing in June, with continued lessening of unemployment, owing to enlistments and departures to find work elsewhere. The building trades were most seriously affected, as but little new work was undertaken. Manufacturing industry in nearly all lines, excepting the production of war munitions and supplies, continued quiet.

Employment agencies note a scarcity of young single men looking for work in consequence of the large number who have enlisted, most of those now unemployed being married or elderly men.

An analysis of the growth of Toronto during the five years 1911-1915, compiled by the Board of Municipal Research, shows that in that period the assessment has increased over 80 per cent while the population has increased 33 per cent or less. The result is that where the people in 1911 paid an average of \$14.72 per head in taxes, the average payment in 1915 had increased to \$27.80, or \$139 for a family of five.

The Board of Education has awarded contracts for the new wing of McMurich Avenue school, amounting to \$29,036.

The Cherrolet Motor Company of New York and Flint, Mich., will establish a Canadian branch plant in Toronto with a capital of \$500,000 and expects to begin operations in September.

The Dunlop Tire Company will erect a three-storey addition to their factory on Booth avenue at a cost of \$30,000.

The Canada Metal Company will erect a two-storey addition to their plant on Fraser avenue to cost \$15,000.

The Robert Simpson Company, Limited, of Toronto, have decided to build a large mail order warehouse at Regina, Sask., as a distributing point for their

western trade, which will cost not less than \$150,000.

The Borthwick Bakery will put up a two-storey brick addition to their plant at 11 Davies avenue, to cost \$14,000.

The City Council has authorized the building of the Bloor street civic car line from Dundas street to Quebec avenue at a cost of \$125,000.

The Ontario Railway Board has decided that the Toronto Railway Company cannot extend its tracks on Yonge street to Farnham avenue, the Toronto terminus of the Metropolitan Railway. The franchise of the latter company covering this portion of Yonge street expired in June and the tracks have been removed by the city.

The receipts of the Toronto Railway Company for the first six months of the year were \$2,787,323, as against \$3,034,801 for the first half of 1914. The city's percentage was \$507,120, being \$55,249 less than for the same period last year.

Difficulties have arisen in connection with the harbour improvement work in the eastern part of the harbour. The Canadian Stewart Company had let sub-contracts for pile-driving to the Herron Bros. Company and the I. A. Hodge Company. A portion of the work done by the sub-contractors was stated to be defective and the Canadian Stewart Company ordered them to suspend operations. The Stewart Company say that all defective work will be made good.

Receipts at the Custom House for June amounted to 51,517,623, being more than for any previous month this year, with the exception of March, and \$129,836 in excess of the receipts for June, 1914.

Machinists were busy in connection with shell manufacture but other classes of metal workers were quiet. The wood-working trades, including piano-makers, were quiet. Harness and leather workers were active. Printers, bookbinders and lithographers had a quiet month. Custom tailors and garment workers were quiet; boot and shoe workers and hat and cap workers were fairly well employed. The provision trades were gen-

erally steady. Brewery workers and cigar makers found trade dull; hotel and restaurant help were quiet. Railway and street railway men and others engaged in transportation were less active than usual at this season. Navigation was below normal but improving. Many unskilled labourers were out of work. On the 13th the Toronto Railway Employees Union renewed the agreement with the company fixing the scale of wages for two years.

Farmers were busy haying, but operations towards the close of the month were much interfered with by heavy rains. The grain crops promised well, a heavy yield being anticipated. Some injury to potatoes was reported as the result of too much moisture.

Markham. — The waterworks system will be considerably extended to supply the suburb of Mount Joy, recently annexed to the town.

North York. — A "good roads" policy will be adopted similar to that obtaining in the southern part of the county. A number of roads, including the continuation of Yonge street north from Richmond Hill will be improved.

The Toronto Typographical Union on July 29 accepted the award of the board of arbitration respecting a new agreement with the publishers of the six Toronto daily newspapers in place of that which expired June 30. The new agreement is for one year with no change in wages or hours of work.

Windsor.

Labour conditions during July were not improved over last month, there being very little new work going on and the work reported in last month's report being about finished.

The manufacturers have only been fairly active. The Pemberthy Injector and Brass Works have closed down and the Ford Motor Company also closed down for two weeks.

Building trades were only fair this month, there being only a small amount of work, requiring few men, while last

month there was a few fair-sized buildings under construction.

There has been about enough work to keep men of this locality employed, but the unemployed come in from other cities and towns, and it is impossible for them all to find employment.

Prices of real estate remained the same, but there was no demand for property of any description.

Anticipations that the steel plant at Ojibway would boom this district were not being realized and the prospects were very poor.

Farmers are having good crops this year, but harvesting was backward on account of too much rain towards the latter part of the month.

Woodstock.

Factory managers continued to report conditions as far from satisfactory. Were it not for the relief afforded by some orders for war supplies they would be much worse. The local factory of the Canada Furniture Manufacturers, Limited, was running with only a very small staff. The local wagon-makers were very slack. The same is true of the manufacturers of organs and pianos. Some of the smaller factories reported conditions nearly normal, and a few others were busy with war contracts.

There was no building going on, and as a consequence most of the bricklayers, masons, carpenters and plasterers were either idle, working on short time, or working at something else. The farmers, however, were busy harvesting their wheat and hay crops, and a good many men from the factories were finding temporary employment at this work.

The labourers seemed to be better off than the skilled mechanics. Most of them were finding employment at one thing or another, either in town or country.

Dry goods men and clothiers reported business dull. Grocers who have been optimistic heretofore were beginning to complain. Nevertheless, the number of those who were wholly unemployed

was not very large. There was no great surplus of labour to begin with, and a good many men have already left the community, either for the neighbouring country or for some other centre.

MANITOBA.

Brandon.

There has been a continued improvement in the state of the labour market during the past month. While the opportunities for employment are not so numerous as for the corresponding month of last year, they showed a decided increase over those of last month.

The City Council has kept up an active programme of civic works, such as street grading, sidewalk building, sewer and water mains, street railway extensions, etc.

The Department of Agriculture has authorized the spending of \$2,000 for road improvements between the Industrial School and the Experimental Farm, this work will be done under the direction of the city officials.

A very successful summer exhibition has just been concluded. The attendance broke all previous records, as Brandon had the only big Fair in the province.

Business was improving in the wholesale and retail stores, and also on the railroads. Railroad trainmen were getting runs more frequently than at any time during the past six months.

During the month there were slight decreases in the prices of potatoes, butter and flour. There were slight increases in the prices of meats.

Excellent crop weather prevailed. All grain crops never looked better. With a continuation of favourable weather a record yield will be obtained. Barley cutting was just commencing, but wheat was not expected to be ready until about August 10. As the acreage is much greater than last year and the yield heavier, an unusually large number of men will be required for harvesting and threshing.

Winnipeg.

Industrial conditions showed but little material change in the city at any period during the month. The building trades were very slack, and the prospects for the remaining three months of the building season were anything but bright. Some branches of the metal and engineering trades were fairly busy, but there was ample labour supply to meet the demands.

Other skilled trades were but poorly employed. Much optimism prevailed regarding crop conditions. The necessary rainfall has been general throughout the province. Over 2,000 men were sent from the city to work on the farms. R. McKenzie, secretary of the Manitoba Grain Growers' Association, visited a large number of farming districts of Manitoba during the month, and gave it as his firm opinion that the crop this year would be more than the average for the past ten years. There appears to have been an increase in the acreage of corn, but the corn crop will be poor this year. Mixed farming did not make as much progress in 1915 as in 1914 or 1913.

The Winnipeg Co-operative Society made an assignment during the early part of the month. It was anticipated, however, that the society would resume business in the near future.

Applications for help at the Winnipeg Free Employment Bureau were as follows: in the city, 590; out of the city, 185; all of which were filled.

The amount of grain inspected at Winnipeg during the month was as follows: wheat, 2,038,500 bushels; oats, 1,064,000 bushels; barley, 104,000 bushels; flax, 112,750 bushels.

Selkirk. — The season for catching whitefish will likely be brought to a close on August 2, being eight days earlier than usual. The catch from June 1 to June 24 was 1,782,000 lbs., and no more than 718,000 lbs. will be allowed to be caught before the close of the season, which will make the total catch 2,500,000 lbs. Half of the catch is shipped

fresh to points in the United States and Canada, and half is kept in cold storage for a while before being disposed of. The fish is sold f.o.b. Selkirk at 7 cents per pound. The number of fishermen operating on Lake Winnipeg during the month was 500, and the fishing stations along the lake shore were five. Two or three steamers, eight tug boats and 99 sail boats were in use throughout the month.

SASKATCHEWAN.**Moose Jaw.**

The labour situation changed but little during the month of July except that during the latter part a local firm started a contract for the manufacture of shells and put on three shifts, giving employment to about 100 men. Farmers commenced taking on help, but this class of help will not be required to any extent until about the middle of August.

Crop conditions were never better in the history of the country, and while the yield will not be exceptionally heavy, all portions of the province will secure a crop and very little damage has been done by hail. Harvest will not be general until about the twentieth of August, and operations will last for a considerable time.

Prince Albert.

The labour market remained inactive and there was no change in the conditions which have prevailed for several months past. Towards the end of the month the demand for farm help increased, and this was expected to continue for the next month. The supply, however, was equal to the demand, and it is inadvisable for outside labour to try this district for employment.

Out of 130 applicants for employment in munition manufacturing in the old country some 25 were accepted for the practical tests.

The prices of staple products have remained very steady, dairy produce being low compared with previous years.

The intermittent rains coupled with favourable sunny weather have worked wonders with the crop, which now promises to exceed the average for the district.

The Prince Albert Lumber Company, to relieve the unemployment situation, has been running double shift and will continue this until harvest.

Regina.

The labour market showed great improvement during the latter part of the month. The city has 160 men employed putting down sewers. This work will finish in about a week, then the men will be free for the harvest.

The Robert Simpson Company of Toronto has acquired by purchase Blocks 78 and 79, located on Broad street between Fourth and Fifth avenues. These blocks were purchased from the city at a nominal figure, and the Robert Simpson Company is to erect buildings on the property to the value of \$150,000 within one year from July 19, 1915. The company has given the City Council a bond for \$100,000 to fulfil the conditions entered into by the company and the city. One of the conditions is that the company have within one year to employ 300 people and 90 per cent. of these will be local people. The representatives of the company expressed the opinion that the number of employees might be increased to 500 within 12 months.

The Provincial Exhibition, which closed July 30, provided work for a number of engineers and machine men. The building trades still remained very dull.

The crops were looking excellent and a large number of men will be needed to help in the harvest fields.

The Provincial Government Labour Bureau has opened an office in the Labour Temple for the purpose of supplying farmers with help. A very large

amount of applications for men are being received from all over the district. The rates offered are \$35 and \$40 per month until harvesting commences, after which the prevailing rate will be paid.

Saskatoon.

The labour situation showed a seasonal improvement over last month.

Farmers were taking on extra men in preparation for the harvesting of the wheat crop. Men, however, are coming into the city from outside points awaiting opportunities to get work on the farms. It will be another month before there will be any general demand for labour for harvesting operations.

Two carloads of butter were shipped from the city to Australia.

The crop was looking fair, and expectations were that it would be about a week late. The frost-touched grain was heading out, but will undoubtedly ripen unevenly. There will likely be considerable shrunken grain or else some shelling.

There are some dry districts reported, especially in the district east of Battleford; elsewhere rain was plentiful.

In this vicinity the best fields of wheat according to experienced men promise a yield of from 20 and 25 bushels per acre. The backward growth in some fields prevent an estimate of the yield being made.

Wind and hail did considerable damage in various localities.

ALBERTA.

Calgary.

Unemployment continued. The city closed all public works on the 15th, with the exception of the work on the Centre street bridge, where a temporary bridge will be built, with a view to assisting farmers to obtain labour. There was no building in the city. Mechanics in the building trades, also unskilled labour who have followed that class of work are

enlisting for overseas service, another battalion having been raised in a short time. Sixty per cent of the bricklayers and masons are either at the front or in training. This is probably the highest percentage in any one organization in the city, but it shows to what extent the members of the organizations are enlisting.

There was no great demand for farm labour. The civic Labour Bureau has sent out 54 men on farms this month; it will be a matter of three weeks at least before harvesting becomes general. Reports from the province show that the crops are good, but late, and sunshine is needed. The harvest may give employment to a large number who are now unemployed. Harvesting is only a few weeks at the most and will not be sufficient to tide the men over the long winter.

At the Fruit Growers' Conference held here at the beginning of the month, interesting information was given on who gets the benefit on the sale of produce. A box of apples cost the consumer \$1.50; the retailer gets 25c., the wholesaler 25c., the broker 2½c., the railway company 28c., the selling agent 8½c., the packing association 36c. The cost of picking and hauling was 8c., and the grower gets 17c.

The British War Munitions Committee have to date chosen 82 applicants for war munition work who left to-day for the East.

Leather workers are still busy on war contracts.

Two local factories are manufacturing shells, but can only employ a few men because of their equipment.

On July 21, the first provincial plebiscite on prohibition was taken and resulted in a majority for the bill of about 20,000.

The Associated Charities have given relief to 238 families this month who were in acute distress.

A demonstration of the capacity of the Southern Alberta Oil Well was

given. The valve being removed, a column of oil shot up to the height of 100 feet and when replaced after 25 minutes showed no decrease in the flow, the analysis being 58 per cent gasoline, 28.4 per cent kerosene, 3 per cent lubricating or spindle oil and 9 per cent paraffin residue. The company is now organizing a refinery company capitalized at \$200,000, to handle the oil.

Edmonton.

The further recruiting of two battalions in this city decreased the number of unemployed during the latter part of the month. There was a fair demand for farm hands and railroad labourers, July showing quite an improvement in the demand for unskilled labour over the month previous. Conditions for skilled mechanics did not improve any and many of this class have left the city.

A notice from the British Mission of Enquiry into the armament labour supply, to the effect that certain classes of mechanics called for in the first notice would not be required, caused considerable disappointment among those applicants who could not qualify for positions as required by the new list issued.

Railway traffic was light and wholesale and retail trade quiet.

Farmers were busy gathering the hay crop at the close of the month and there was a fair demand for farm labour with a slight increase in the wages offered. There was a noticeable increase in the acreage being cleared and made ready for cultivation, this also causing a demand for extra labour. While reports on the hay crop were favourable, an over-abundance of rain retarded growth and unless the next month is dry and much warmer the outlook for a good yield is unfavourable. No serious damage was caused by frost.

Coal mining was quiet.

Railway construction in the north country was active, but the supply of labour was far greater than the demand.

Lethbridge.

Labour conditions during July improved somewhat over what they were during June. According to a census taken at the beginning of the month there were 347 men employed in the city on whom were depending from 500 to 600 other people. This state of unemployment has been altered by the coal mines opening up for the fall trade and the haying season coming on. Numbers of men have found work in the country amongst farmers. There is no building going on and no public works.

Bank clearings are still below the average. For the week ending July 15 they were \$297,000 as against \$368,716 for the same week last year.

There is no change in the rate of wages or hours.

Cost of living remained almost stationary, and there is a plentiful supply of garden produce. In some cases house rent has been lowered.

Farmers were very busy haying. There is a good crop as the season has been favourable.

Market gardening, poultry raising and dairying are being followed with great success this year.

The two Galt mines are working three days a week. The Coalhurst and Commerce mines are working full time. The demand for coal was expected to increase during the fall and winter months.

BRITISH COLUMBIA.**Fernie.**

The employment of labour generally throughout this district for the month of July has not improved, remaining comparatively the same as it was during the preceding month. The reduction in the labour supply by the internment of 300 odd enemy aliens during the early part of June had the effect of giving a trifle more steady employment to the remaining British and allied workers in the coal mining industry. During the

present month, however, conditional releases have been granted to 150 of the original number interned, most of whom migrated to the Prairie Provinces, where they intend following agricultural pursuits on land of their own or belonging to relatives, until such time as they can consistently resume their chosen occupations. A further reduction in the local labour supply is anticipated shortly, when the Italian reservists mobilize, which will be in the near future, as transportation and instructions have already been received by the local Italian consul, in whose district some 600 men will be affected when all drafts have been completed.

No noticeable improvement was in evidence this month by the commencement of new work, nor was there any additional depression brought about by the cessation of work.

In all branches of the particular trades the conditions as it affects them left them as they were during the month of June. As an indication of the present conditions with regard to the printing trade here is the announcement that the publication of the "District Ledger," the official organ of District No. 18, United Mine Workers of America, will be indefinitely suspended at the end of July. The cause for this action is assigned to the present financial stringency.

Railway traffic in so far as the operation of the trains was the same as during the preceding month, although the passenger traffic was extremely light. The wholesale and retail trades, on the whole, were dull.

No alteration in the rates of wages or the hours of labour were reported during this month.

July was a quiet month with regard to the attitude of labour. No unrest other than that which necessarily follows on account of the prevailing slack times was evident.

The cost of living was not materially affected by either an advance or decline during the current month.

Agriculture in this locality was fairly active.

Lumbering remained exceedingly quiet, but the post dealers report a demand for this class of material, equal to that in preceding years.

The coal mining industry remained in the same condition practically as during the previous month. The manufacture of coke maintained its favourable status due to the brisk demand for this commodity in view of the smelters in the boundary section, operating to full capacity.

Nanaimo.

There has been very little change in labour conditions in this district during the month and the number of men out of employment was about the same as reported for June. Business men, wholesale and retail, reported business as very quiet especially in clothing and other articles for which there was no demand.

There has been no general change in rates of wages but casual outside work has in many cases been paid for at a lower rate than before the war.

There has been very little change in the cost of living during the month.

The farmers are busy with their harvest, which is expected to be above the average this year.

The fishermen of the district were hardly doing anything except supplying the small local trade.

The sawmills of the district were working steadily but not to their capacity. The logging camps are very quiet with not many men employed.

The coal mines of this city and district have done better this month than for some time, but were not working to their full capacity.

Railroad construction work in the district is about at a standstill.

There is very little work being done by the city other than sufficient, at reduced wages, to partially relieve the unemployment situation.

The Provincial Government is doing quite a lot of road work, affording em-

ployment to a considerable number who would otherwise be idle.

Nelson.

There has been no improvement shown in the building trades during July. The number of unemployed has decreased somewhat during the month owing to the demand for men in and around the mines. City work was practically at a standstill; there were a few small cottages being built along the lake and a few ranchers were making some improvements on their buildings. The Nelson foundry and machine shops were busy.

The small fruit season was about at a close. There was a fair average crop of all fruits excepting cherries, which were a complete failure owing to the very wet weather.

The lumbering industry was quiet. The mill at Edgewood, however, was running to full capacity and shipping lumber to the prairie provinces.

Mining prospects have increased and never looked better than at the present time. The Lucky Jim mine, which has been closed for some time, is to resume work shortly. There has been a sufficient amount of zinc ore contracted for to guarantee its opening up and a force of men will be put to work immediately. The shipment will be made to the Granby Mining and Smelting Company plant at Neodesha, Kansas. The crude ore will be consigned first, pending the milling of the concentrated material which is to be treated at the Ivanhoe mill at Sandon, B.C. The Ivanhoe mill is being put in shape for operation. The repairs to the mill were about completed. The Slocan Star mine was running day and night, employing about 65 men, producing 14 tons of zinc concentrates and between four and five tons of lead concentrates. The Standard Silver Lead Mining Company, Silverton, has secured a contract from the Trail smelter. They are operating both the mine and the mill, storing zinc concentrates until a contract is obtained. The Surprise mine,

owned by Chicago people, was employing about 50 men, and was shipping about 300 tons of zinc concentrates monthly besides considerable crude ore to the Empire Zinc Company New Jersey plant. The Rambler-Cariboo employs from 50 to 60 men and was forwarding lead concentrates to the smelter regularly. The Cork mine between Kaslo and Zincton, B.C., is employing between 35 and 40 men; the ore is principally lead.

The Ruth mine at Sandon was beginning operations, with a full force of 50 men. The new tramway from the mine to the mill has been completed and was ready for service. The new oil flotation process in the Hewett mine near Silverton is a pronounced success in the separation of the lead and zinc. The company have a large smelting contract and were employing from 50 to 60 men. Great activity prevailed around the Glens farm at Silverton where a 100-ton concentrator is in course of erection. The Eureka mine near Nelson has been bonded and it is stated a gang of men will be put to work at once.

Greenwood's big industry has started and coke is being shipped from Coleman. It requires 100 tons per day to feed the big furnace. At the Mother Lode mine, the hoist is being changed. About 75 men will be employed at the mine and 50 at the smelter. The mines at Rossland are running full blast. The Centre Star and Le Roi No. 1 continue to be the best producers.

New Westminster.

There has been practically no change in the labour situation during July. New work started has no more than compensated for other work being completed. Piling on the Brackman-Ker elevator has been completed and construction work begun. Work was begun on the foundation of a \$6,000 two-storey business block, and a few small houses are being built.

The paving work on Twelfth street has been finished and the work on Sixth street was nearing completion. The city

has employed about the same number as during June, but some married residents find it difficult to get employment. The number of unemployed estimated by the civic employment bureau was the same as during June.

Weather conditions have been splendid for harvesting the hay and an excellent crop is reported although in some localities lack of rain caused a lighter crop than usual. The fruit crop has been a good one and prices were holding up well. The grain was filling well and some of the wheat was already cut.

Fishing has so far been very poor and although nearly 2,500 licenses have been taken out results have been very disappointing to both fishermen and canners. The spring salmon run has been the poorest in years and so far very few sockeye have come up the Fraser river. Humpback are more plentiful but the canners do not care to chance putting them up unless they have advance orders for them.

Lumbering showed a slight improvement, the mills running full time (10 hours) and all the Fraser mills were running. Shingle business was good. Sash and door factories find business still dull and were working short time.

Prince Rupert.

No new works of any description were started during the month. A third contingent of soldiers left for overseas service, relieving the labour market considerably, but unemployment still prevailed to a great extent. A by-law was passed by the City Council for the purpose of forcing barbers to close daily, holidays included, at 7 p.m. instead of 10 and 11 p.m. Provincial legislation was passed during the last session of the Legislature giving municipalities power to pass such a bylaw.

The fishing industry is growing larger every month. The returns for June were higher than ever. The halibut catch was 1,700,000 lbs.; salmon, 1,255,500 lbs.; cod, 8,800 lbs.; sales, 1,000 lbs; total, 2,965,500 lbs. The value of the total

catch was \$148,275. Of the salmon catch 305,700 lbs. were mild-cured; 7,135 cases canned and 197,600 lbs. fresh.

The first crab-canning industry to commence operations here was the Crown Fish Company, which opened during July.

Vancouver.

No real improvement can be reported in respect to the condition of unemployment which has prevailed here for some time now. Far more labour of all kinds was available than there was demand for. Business firms in all lines still continued to report reductions in staffs and wages, the latter varying from ten to forty per cent.

Relief work for married men, and relief in kind was still being given out by the civic relief department. During the six months ending June 30, \$108,860 was spent on relief and relief work, although only \$106,000 was set aside previously for this purpose. Necessitous cases of absolute distress accounted for the over expenditure.

As against this unusual expense, only \$427,886 out of anticipated revenue of \$5,298,165 up to June 31 had been paid into the city treasury, which was badly hampered by overdue taxes. While no mention has been made officially of a tax sale in the city to realize this deficit, in South Vancouver a tax sale for a similar purpose has been held.

Out of the money spent in relief by the city, \$76,018 was for food, \$23,727 for beds, and the balance for relief work, fuel and miscellaneous items. The relief department, in addition to this amount, has distributed \$15,000 contributed by the Provincial Government. Civic representatives have approached the railway officials in an effort to get cheap fares for men to be sent to the farming provinces for the harvest season.

The departmental officials and staff at the City Hall have been put on three-quarters time and salary. The Council is considering the abolition of alder-

manic and mayoral salaries, and the finance committee has announced that after September 15 great difficulty will be experienced in financing civic works unless some arrangements of an exceptional nature can be made.

The school teachers and educational staff generally have been contributing and distributing relief separately from the civic scheme. The school relief has been stopped for the time being until the winter. As a result 100 men who had been working four hours per day have been laid off. Relief to 200 families has also been stopped on this account.

Inland revenue receipts for June were \$35,854.08 as compared with \$44,610.06 for June, 1914.

The commission seeking mechanics for British war munition factories has been in the city during the past month, and out of the 4,000 who applied for positions some 400 were accepted, and have left for England. A small quantity of ammunition work is being done here in the shape of preparing shell cases from steel billets.

International officers of the 'long-shoremen's union have been here endeavouring to reach an understanding with local shipping companies regarding wages and working conditions. The matter was still undecided.

The Federal Department of Labour has appointed a Board under the Industrial Disputes Investigation Act to inquire into matters in dispute between the British Columbia Electric Railway Company, which operates urban and inter-urban cars in and out of Vancouver, and the local union of street railwaymen. The company wishes to reduce wages 15 per cent. and the men are seeking a renewal of their former agreement, made in 1913.

The local Trades and Labour Council has elected the following officers for the current term, expiring January next: president, J. H. McVety; vice-president, R. P. Pettipiece; secretary, G. Bartley; secretary-treasurer, Miss H. Gutteridge; statistician, F. A. Hoover; sergeant-at-

arms, J. Sully; trustees, F. W. Welsh, F. Knowles and S. J. Crawford.

Victoria.

Similarly to many previous months, labour was poorly employed during July, and excepting in some of the iron and metal trades, the number of unemployed was fully as large as during the previous six months. This applies not only to unskilled labour, but to the skilled trades as well.

More than 1,000 mechanics filed applications for work with the British Mission of Enquiry into Armament Labour Supply, and of this number 238 were finally accepted as suitable for the work and have gone to Great Britain.

Work has commenced on the Saanich paving and waterworks contracts, which will give employment to at least a hundred men for several months.

The Dominion Government has let a contract for building an observatory on Little Saanich Mountain, at a cost of \$75,000.

Six vessels of the local whaling fleet left for the fishing grounds on the west

coast of Vancouver Island during the first week of July. Owing to delay in starting operations this year only six of the whalers will be sent to sea, four remaining idle in port. Whales were reported plentiful and a fair season's catch was predicted.

The run of salmon in the rivers of Northern British Columbia has been smaller than expected, and considerably less than the catch of recent years.

The barbers of the city have petitioned the City Council asking for the compulsory closing of all shops at 7.30 p.m. on days from Monday to Friday, inclusive, and on Saturday at 10 p.m., with absolute closing on Sunday.

The Victoria Trades and Labour Council elected the following officers for the ensuing term: president, A. S. Wells; vice-president, G. Phillbrook; recording secretary, F. Holdridge; financial secretary-treasurer, John Day; statistician, C. Sivertz; sergeant-at-arms, P. Fisher. The executive committee elected is as follows: A. S. Wells, G. Phillbrook, F. Holdridge, John Day, C. Sivertz, J. Bradley and J. Beckett.

CONDITIONS DURING JULY AFFECTING WOMEN WORKERS IN LEADING INDUSTRIAL CENTRES.—REPORTS OF WOMEN CORRESPONDENTS TO THE LABOUR GAZETTE.

Montreal.

Conditions affecting female labour have not differed during the month of July from those reported for June. Although July 1914 was considered dull both commercially and industrially, women workers found more regular employment than during the month just elapsed. For factory workers in particular the situation is precarious. Besides reducing their staffs to a minimum, manufacturers, always excepting those filling orders for the army, are unable to give regular work owing to the lack of orders. Wholesale and retail merchants are not ordering ahead, thus preventing

clothing, boot and shoe manufactories from undertaking their usual work in anticipation of the demand for the coming season.

Child Welfare.—The usual attention given at this season to the public playgrounds has not been wanting. Two new playgrounds are being started. This year for the first time the Parks and Playgrounds Association has inaugurated a lending library for boys and girls under 15 years.

Each week the municipal authorities have organized a children's picnic to St. Helen's Island. These have been attended by thousands.

The report of the Municipal Assistance Department for 1914 was presented during this month to the Board of Control. It alludes to the great work done by the milk stations, 22 in number, which were aided by the city to the extent of \$11,000.

Hygiene. — A new regulation has recently been adopted by the City Council against the use of newspapers or other printed paper for the wrapping of any article of food. This custom was very common in small stores; in future, anyone using such paper, otherwise than as an outside wrapper on parcels, will be summoned before the recorder and a fine not exceeding \$40 imposed, in default of which a term of imprisonment will be imposed.

Social Service. — A central bureau for English Catholic social and philanthropic work has been opened, at 316 Lagachetière street west, by the Catholic Social Service Guild and the English section of the Saint Vincent de Paul Society. The Catholic Literature League will also have its headquarters in these offices. The activities undertaken by this bureau will include the following: Placing persons in orphanages, homes, hospitals and institutions, finding situations for the unemployed, looking after juvenile delinquents, and seeing to the protection of women and children.

Mutual Benefit Societies. — A feminine section was established recently by the "Société des Artisans Canadien Français," this organization, like "l'Alliance Nationale" (see *Labour Gazette*, July, 1915, page 55) having decided to extend to women the benefits of membership. Many women of the working classes will profit by these newly formed branches.

Toronto.

The establishment of a provincial system of employment offices under the control of a commission of eight, of which two should be women, has been advocated by the Ontario Commission on Unemployment. The commission has been making a thorough general survey of

conditions, and as a result has come to the conclusion that the present organizations—chiefly the private employment agencies—have rendered only a negligible service to the community at a cost to the unemployed out of all proportion to what they have accomplished.

It is proposed that the new commission should have control of all appointments to agencies, control and inspection of all private agencies, and manage the employment bureau through a director with a practical knowledge and understanding of the problems connected with employment. He would have as assistant a woman of ability and training to look after the women's department of the bureau.

Of special interest in these columns is the fact that the commission recommended in dealing with unemployment of children just past school age, that all primary schools supported by public funds provide within a limited time facilities for domestic and manual or agricultural instruction, that the parents be given the option of leaving the child in school until the fifteenth birthday, placing it in an industrial, agricultural or domestic school from the fourteenth to the fifteenth birthday, or of taking the child from school at fourteen for any of these pursuits to be combined with part time school instruction until the sixteenth birthday. It is also recommended that committees be established in the cities to assist in advising children as to the choice of occupation and the need of further training.

Child Welfare. — Two more clinics have recently been established in Toronto, making twelve in all. In addition post-graduate clinics are held at the Children's Hospital (infants' department) once a week for the benefit of the physicians taking the well-baby clinics. At this clinic cases that present difficulties are discussed and the modern scientific advances in handling infants demonstrated. There is now a movement on foot to make the treatment in all the clinics uniform.

Preventive medicine in Toronto took another step forward with the establishment of a new whooping cough clinic at the Hospital for Sick Children. This is unique in that it is the first of its kind in America and one of the few of the world.

In the United States and Canada diphtheria is said to cause the death of more infants than any other disease and whooping cough comes second on the list. Facts illustrating the importance and need for such a clinic have led the Hospital for Sick Children to act in co-operation with the Board of Health in establishing this first clinic.

Seven physicians have offered their services to study conditions and endeavour to establish new points in the diagnosis, treatment and prevention of this disease. A special room has been set aside for the clinic, which is devoted entirely to the children. The quarters have their own street entrance and are so situated that they have no connection with the wards of the hospital, thus making contagion impossible. For the first time in history in Toronto patients are to be labelled so that friends and neighbours will know that there is danger. Complete blood examinations are made of each patient.

Tailoresses and Garment Workers. — Reports from garment workers' headquarters denoted a serious state of affairs among them. There is very little business passing through the shops and many employers, who have never done so before, are closing their shops for a month. Of those fortunate enough to be employed, scarcely any are able to make a full week's wage. It is stated that practically no work is expected next month and the improvement in September will be much smaller than last year, which means a serious outlook for the winter. No war orders for such firms have been received in Toronto since spring. One large firm has dismissed a number of tailoresses and taken on in their stead men, who will now work for the same wage as the women and are said to be better workers.

Factories. — The Simpson Knitting Mills have received a recent order that will keep them busy till the end of the year. This will require night work in many of the rooms and the girls are glad of this opportunity to earn a good wage.

The fresh fruit season is always the busy time for the jam factories and extra hands have been taken on for sorting berries and cherries.

Many girls who have positions have been afraid to ask for the customary vacation for fear of an enforced holiday later.

Domestics. — Conditions among domestics have changed but little in the past month. The demand for experienced cooks and cook-generals is still very great, and it has been impossible to fill all applications for these and for other domestics. At the Women's Welcome Hostel twenty immigrants were registered this month and of 200 applications only 32 were filled. The greatest difficulty is found in filling positions in the country, for in spite of actual want there are a great many reasons why women cannot leave the city and are able to do nothing but work by the day.

Waitresses. — The secretary of the Waitresses' Union, which has been recently formed in Toronto, states that the union has as yet only 18 members although there are said to be 7,000 waitresses in the city. Both employers and employees are slow in recognizing sufficiently the advantages of organized labour. In consequence many waitresses are working 13 or 14 hours a day with a weekly wage of 14 or \$5, and proprietors of hotels and restaurants find cause for complaint in the services rendered by their waitresses. It is believed that the general public could assist in the matter of organization by asking for the badge of the union of those who serve them in restaurants.

Recreation. — The city playgrounds are having their busiest season now. There are 11 of these, employing as supervisors 16 men and 22 women. For the women supervisors, most of whom

are employed permanently by the Playgrounds Association, there is a regular winter course of instruction in industrial work, folk games and dancing two half days a week from October till April.

A new feature this summer is the instruction in swimming given the playground boys five times a week at three different tanks. In addition there are two bath centres in connection with the playgrounds. As yet the girls have no instruction in swimming but have the free use of bathing suits at Kew Beach.

Playgrounds were first established in Toronto in 1909 and last month the attendance was 105,501, which is 14,301 more than for the same month last year.

Winnipeg.

Little change can be reported in the labour market for women. The greatest demand appears to be for domestics for the farms, while the largest numbers seeking employment are foreign girls seeking hotel and restaurant work and domestic work, also young girls desiring easy places in the home where experience is not essential. The provincial office for farm help reports great difficulty in securing girls to go to the farms.

The Summer School at the University making a study of social and economic questions is being well attended, upwards of 100 taking all or part of the courses of instruction. This is intended to stimulate interest in local problems and aid in their solution. Large numbers of social service workers are taking the course.

Nearly 200 Manitoba teachers are taking the summer courses at the Kelvior Technical High School, where instruction is being given in dressmaking, cooking, basketry and design, wood and iron working, drawing, modelling, as well as in nature study, school gardening and elementary agriculture.

Domestics of all classes are well employed, though the demand for help in the city is somewhat less than in the spring. Various agencies report difficulty in securing help for the country. Hotel and restaurant help is not well

employed, though many have found work at the summer resorts. Women with children seeking day work are finding it difficult to secure, mostly due to it being the holiday season when so many families are at the various summer resorts. Domestic positions where low wages are offered are not being filled.

Very little is being offered in the way of factory employment. Laundry help is not in demand save for some very heavy work, which the Free Employment Bureau was unable to fill. The bookbinders (women) are working about forty-five per cent short, with short time as well. The garment workers were working short time but all are employed.

Store help was well employed during the first ten days of the month owing to it being Patriotic Week with reduced rates on all railroads.

Stenographers are finding more to do; the holiday season has made openings for substitute work, giving employment to practically all experienced stenographers.

Bookkeepers find more difficulty in securing employment than stenographers.

Except as stated above, and those who are working on the playgrounds, particulars of which were given last month, school teachers are not working at present.

Nurses are not very busy, but the waiting list is reduced to 48, there being many away on vacation.

Figures from the Winnipeg Free Employment Bureau for June are as follows:

	Offered.	Filled.
Agents	4	2
Cooks	5	1
Day workers	265	256
Domestics	155	80
Factory helpers	1	...
Housekeepers	11	6
Housemaids	3	3
Kitchen women	7	6
Laundresses	2	1
Laundry workers	1	...
Nurse girls	19	17
Waitresses	22	13
Dressmakers	1	1
Weavers	1	0
	497	386

Relief by the Associated Charities for June was given to 38 new cases and a total of 361 families; the causes being as follows:

Sickness.....	75
Tuberculosis.....	27
Accidents.....	8
Rheumatism.....	6
Cripples.....	5
Blindness.....	3
Widows.....	86
Man away.....	50
Desertion.....	26
Old age.....	12
Imprisonment.....	10
Misfortune.....	1
Separation.....	9
Previous unemployment.....	8
Immigrants.....	5
Under employment.....	7
Insanity.....	6
Immorality.....	6
Inadequate wage.....	6
Non-support.....	3
Intemperance.....	1
Domestic difficulties.....	1

Vancouver.

Labour conditions for women remained very much the same during the month of July as for the previous month, the supply of woman labour of all kinds being in excess of the demand, while a tendency to lower still further wages and piece work rates in factory employments was noticed.

The regular monthly report of the City Relief Association shows that some fourteen hundred families are dependent upon relief through the inability of the head of the family to obtain employment. The free Civic Employment Bureau, which is now a part of the relief department, succeeded in placing sixty-one women in positions during the month, leaving on their books the names of some three hundred women still seeking employment.

The report from the Women's Employment Bureau also shows that an increasing number of married women are registering their names as seeking "day work," many of whom have expressed their willingness to earn money to support their families, by working in the harvest fields of the prairies, if transportation were provided.

There is no doubt that the very serious

general unemployment of the last year has a decided bearing on the lack of employment for women in such occupations as laundry work, factory work of all kinds and those working in department stores.

A report of the City Council shows that from January 1, 1915, to June 30, 1915, a sum of \$108,500 was spent on relief. About \$75,000 of this amount went for food, \$23,000 for beds and the rest for rent, fuel, etc. In addition to the money spent by the City Council to relieve distress caused by unemployment, a recently issued report of the War Fund Committee shows that twelve hundred and seventy-two families, dependents of the men who have enlisted, are being cared for out of the fund, a sum of \$79,195 having been expended so far. The report further states that the recruiting campaign of the past month has nearly doubled the work of the war committee; one hundred and thirty-two families registered during the first fourteen days of July, the expenditure increasing at the rate of almost \$1,000 per week.

The various women's organizations are devoting their efforts to Red Cross and similar patriotic work, with the exception of the Victorian Order of Nurses. The work of the order is increasing day by day and although a very successful "Tag Day" was held recently to raise money, so many cases cared for by the nurses are from families who are unable to pay, draws very heavily on the funds of the organization.

The question of the employment of white women and girls by Orientals and the employment of Orientals as domestics, was again raised by the Social Service Council, a resolution being passed unanimously at the last quarterly meeting, protesting against the employment of white women by Orientals. A copy of the resolution was ordered sent to the Premier, Sir Richard McBride. A further protest was made against the employment of Orientals in hotels and as domestics, while so many white men and women were unable to obtain employment. Those present at the meeting

were urged to use their influence on those who employed help to think first of the many white men and women seeking work, without which they were dependent on relief.

At the opening session of the summer school for teachers, held regularly every year during the vacation period in Victoria, a record attendance of teachers from all parts of the province was reported.

Reports from particular employments show that during the past month the demand for domestic help was less than for the month of June, while a number of women of various trades and occupations registered as willing to take domestic work in the absence of any other kind. The average wage for domestic help was \$12 per month, only an occasional demand being made for a cook or a cook-general at \$18 or \$20 per month.

Overall and shirt makers, also ladies' garment makers were fairly well em-

ployed. Enquiry shows, however, that only about half the number of women are employed this year as compared with previous years in these particular employments, laundry workers being similarly situated. Boot and shoe workers were fully employed. Biscuit and candy workers employed worked full time, but a considerably reduced number are employed at this work as compared with previous years. Tailoresses were unemployed or on short time, July being between seasons. Many waitresses and sales clerks worked a week and laid off a week, turn and turn about.

The demand for stenographers remained very low, quite a number being unable to find employment, the salaries of some employed again being reduced.

Conditions for any kind of women labour were not at all desirable, while the general unemployment in Vancouver and the vicinity gives very little hope of a change in the immediate future.

THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—PROCEEDINGS DURING JULY, 1915.

AN application was received on July 19 for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the British Columbia Electric Railway Company, Limited, and its electrical workers, members of local unions numbers 213, 230 and 558 of the International Brotherhood of Electrical Workers, at Vancouver, Victoria and New Westminster, respectively. The dispute in question related to alleged reductions in wages and increased hours, adverse changes in working conditions and the discharge of certain employees. In the application it was claimed that 150 employees were directly affected thereby. A Board was established by the Minister of Labour on July 31, Mr. Edmund H. Morrison, of Vancouver, B.C., being appointed a

member thereof on the employees' recommendation. Before the Board was established in this matter the Department endeavoured to have the dispute referred by agreement to the Board which had recently been constituted under the Industrial Disputes Investigation Act, to deal with a dispute between the British Columbia Electric Railway Company, Limited, and its employees, members of the Amalgamated Association of Street and Electric Railway Employees of America. The parties concerned were not, however, willing to have the matter dealt with in this way. Under these circumstances the Minister felt that he was obliged, under the statute, to establish the separate Board requested. At the end of the month of July, the Board had not been completed by the appointment of the other members.

ONTARIO COMMISSION ON UNEMPLOYMENT.

THE Ontario Commission on Unemployment has issued an interim report of an exceptionally interesting character. The report recommends in brief, the establishment of a provincial Department of Labour and the institution in connection therewith of a provincial Labour Exchange System. Parts II and III of the report are devoted to concise careful statements on the two questions regarded by the Commission as having an intimate bearing on the whole subject of unemployment, viz., (1) Relation of unemployment to the schools; (2) Insurance against unemployment.

The Commission is understood to be continuing its enquiries. The text of the interim report presented to the Ontario Government is as follows:

PART I.

Public Employment Agencies.

The Ontario Commission on Unemployment have unanimously agreed that some form of public employment office should be established by the state to replace the system now in operation in Ontario which is in urgent need of being modernized and made efficient.

The organization of industry is now so far-reaching and the demand for labour so fluctuating that the individual workman, however able, willing and skilled he may be, may not succeed in finding employment at the work he can do best, although employment might be available if the labour market were properly organized. It is evident that the worker should not be required longer to bear the burden of finding a job by his own unaided efforts. Immigrants trained in agriculture come into the cities and towns with the raw material of common labour. An increasing number of women seek industrial employment, but for the most part without direction. What has

been done to regulate the labour market, or to gain real knowledge concerning it, has been sporadic and inadequate.

The Private Employment Agencies, managed on a commercial basis, have not yielded desirable results, but on the contrary their activities have caused many manifest abuses. They have dealt chiefly with unskilled labour and are as a rule avoided by skilled workmen. They are not in touch with managers of skilled trades and are not recognized by them. Thus they have been able to render only a negligible service to the community at a cost to the unemployed out of all proportion to what they have accomplished.

The existing Government Labour Exchanges were established before the work they were called upon to do was properly understood. Whatever may have been the value of their work, changing industrial conditions require an extension and reorganization of the system. Out of the existing condition of affairs, there can be but one result. The unemployed bear the burden of the resulting disorganization. They pay agency fees, car fare to various places of prospective employment, and they waste their vitality and time in wearying efforts day after day to find work, which a central clearing house could have told them either did or did not exist. On the other hand, industries bear the burden of handling misfits and the losses consequent upon a shifting or inadequate force of workmen.

The following are some of the services which can, and in the opinion of your Commission, should be rendered to the workmen of Ontario:

1. Through a central employment office they should be put in touch with all positions open in each particular trade in their own municipality and elsewhere in the province.

2. If there are no openings at the time in the workman's own trade, he should be informed of alternative posi-

tions that are available in his own municipality, and, if necessary, elsewhere.

3. The workman should be kept in touch with by the employment office so that he may re-enter his own trade as soon as opportunity offers.

4. If his own trade is overcrowded or stagnant, he should be given such information as will guide him wisely in the selection of another occupation where opportunity of steady employment is more probable.

5. Everything necessary should be done by the employment office to ensure his getting employment when he presents himself at the workshop, thus preventing waste of time and vitality with consequent loss to himself and his family.

6. It is essential also that the employment office should furnish such information and advice as will assist in the selection of the right kind of occupation for children.

"There should be in every community a central point to which the child could turn to learn all about industries, all about opportunities in staple trades and new lines of business, to know which were decaying, overcrowded or 'blind alley' trades, and what vocation was best suited to its education, temperament and qualifications. Thus to save the child from misdirection would cut off the source of supply to the great stream of casual workers which continually swells the ranks of the unemployed."*

7. The office should devote part of its activity to the problem of employment for old men, who although of serviceability and character, are often needlessly left without work, and to problems of like character in which various handicaps impose hardship upon otherwise employable men and women.

8. The employment office should also devise some effective method of separat-

ing the shirkers from those who want work, so that compulsory labour may be provided for the tramp and loafer, and in this way the burden of charitable agencies may be lessened.

9. The causes, personal and industrial, contributing to unemployment can be studied constructively only in connection with employment offices under Government control, which alone can secure the information and data necessary.

10. An important service would be to lessen the industrial unrest which often is the result of an inadequate annual income arising from irregularity of employment, although the wage rate per hour apparently may be ample. The greater regularity of employment and certainty of earnings which should result from efficiently conducted offices would remove one of the admitted weaknesses of our existing industrial system.

Your Commission is convinced that nothing but a properly constituted State Employment Bureau can make the above plans and policies effective.

Another equally indispensable service can be rendered in connection with immigrants. Some people are frequently imposed upon by private labour agencies, and the need of direction, guidance and advice in their case is most important.

Our present methods of dealing with them are exceedingly faulty. The Government through the Employment Offices recommended, could render invaluable services and make up in a large measure for the present deficiencies. There is need, for example, of providing them, through Government bulletins, with information in their own language, so that they may be correctly informed of work, wages and opportunities in this country. Something, too, should be done to inform them as to their duties and privileges as Canadian citizens.

In many cases, immigrants could be directed to the land where they would be of the best service to themselves and to the country. This is now being done with no small degree of efficiency, but unquestionably with more thorough or-

*Charles B. Bames, Director New York State Bureau of Employment, in "The American Industrial Opportunity."

ganization, and the co-operation of the different Departments concerned, the industrial communities could be relieved of many people who have had agricultural training in the countries from which they come, but who through lack of means or lack of knowledge seem unable to find places on the land in Ontario.

It has been represented to your Commission that reserves of labour are inseparable from industry. If so, it is the duty of the State to keep such reserves as low as possible, and by co-operating with employers of labour to improve the existing methods of caring for such reserves as are really necessary.

Your Commission have considered carefully the relative advantages and merits of Municipal, Provincial and Federal Employment Bureaux. Their conclusion is that, all things considered, the establishment of a Provincial System of Employment Offices would be the most effective method of dealing with the immediate situation.

It is recognized that such offices cannot create new work, but if efficiently conducted, they will prevent an enormous waste of energy on the part of workmen and more speedily ensure for employers a dependable supply of labour. Experience wherever such Bureaux are in operation confirms their practicability and usefulness. We do not recommend a too extensive or complicated system. On the contrary, we strongly advise the establishment only of the nucleus of such a system under conditions which will permit it to be conducted with ability and success.

The system proposed can be extended as its usefulness and desirability are proved. It should be borne in mind that in the future the problems of immigration and employment will be more pressing and serious than they are to-day. It is the judgment of your Commission that no other organization can supply such data and information concerning the whole field of labour and industry as will enable the Government to act with wis-

dom, decision and definiteness in dealing with the pressing industrial problems of the day.

In this connection, we would emphasize the importance of securing as Deputy Minister a man of unquestioned competency and equipment. He should understand the technical principles involved in the business of the Bureau, and he should be a capable manager. The results to be obtained largely depend upon his qualifications for the position.

One of the advantages that a State Bureau has over private agencies is its power to centralize information and to co-operate with the spending departments of the municipalities as well as the Provincial and Federal Governments. The problem of employment is so great that it is necessary to link up all large avenues of employment with agencies furnishing reliable data as to the labour market. By this means expenditure upon necessary public works may be made to compensate for industrial depression; the evils of seasonal distress may be measurably lessened and the large surplus of labour intermittently employed, for instance in harvesting, may be absorbed without the existing disorganization. By the co-operation of province with province, through wise leadership, and of the provinces with the Dominion, much may be done to prevent the otherwise unavoidable recurrence of labour crises, and to deal helpfully with such crises when they do arise.

Ultimately, perhaps, a system of Provincial Employment Offices might develop into a Federal System covering the whole country, exercising an intelligent judgment upon problems of immigration and wisely assisting to distribute labour as changing industrial conditions demand. Moreover, wisely officered, such an organization might gradually take on new duties and obligations and become an invaluable social, benevolent and educational influence in every community.

Your commissioners, therefore, respectfully recommend:

1. That a *Provincial Department of Labour* be created either as a separate, or in connection with an existing Department of the Government.

2. That a *Provincial System of Employment Offices* be established in seven urban centres, Ottawa, Belleville or Kingston, Toronto, Hamilton, London, North Bay, Port Arthur, or Fort William, and that this be extended, subsequently, as required to include other important industrial centres.

3. That this system of employment offices be placed under a *Provincial Commission*, composed of not more than eight (8) members, of whom two (2) shall be women; and upon which workmen and employers shall be fairly represented; that the members be paid their travelling expenses, and work without salary; and that the Deputy Minister of the *Provincial Department of Labour* be chairman of such Commission.

4. That the *Provincial Labour Commission* shall have absolute power in determining the test through which those to be appointed to positions in connection with *Employment Bureaux* must pass; the selection of those to be appointed and their promotion.

5. That the control and inspection of *Private Employment Agencies* under the laws of the Province of Ontario and orders enforcing them to be given to the *Provincial Labour Commission*.

6. That the system of *Employment Bureaux* be managed by the *Provincial Labour Commission* through a director with practical knowledge and understanding of the problems connected with employment, whose chief duty shall be to supervise the work of his staff and to develop new methods of dealing with the problem; the director to be secretary of the *Provincial Labour Commission* without a seat on the Commission.

7. That the director shall have associated with him as assistant a woman of training and ability who will act as assistant secretary to the *Provincial La-*

bour Commission, her chief duties to be the inspection of the *Women's Department* of the *Employment Bureaux*, and the study of employment for women.

8. That with each *Local Employment Bureau* shall be associated a small advisory committee appointed by the *Provincial Labour Commission*.

9. That the local advisory committee shall have such power as may be determined from time to time by the *Provincial Commission*.

10. That in such *Employment Bureaux* as the *Provincial Labour Commission* shall decide, separate departments for men, women and juvenile workers be maintained.

11. That representation be given to women on the local advisory committees.

12. That the *Employing Bureaux*, in all cases of strikes or lockouts, remain neutral and notify applicants for work at the *Employment Bureau* when such strikes and lockouts are in progress.

13. That, if possible, privileges be secured from the Dominion Government to enable workers living at a distance from an *Employment Bureau* to make application for employment at any post office, and mailing the same, free of charge, to the nearest Bureau.

14. That the *Provincial Labour Commission* shall have the power to require from employers and workmen such reports as they deem necessary.

PART II.

Relation of Employment to the Schools.

The Commission are satisfied that much unemployment occurs in the transition from the school to paid employment. Almost unsupervised, boys and girls drift in and out of occupations, for which they find themselves unsuited. Nor does this ill-effect terminate with adolescence. After several years of work, without educative value, or prospect of permanent employment,

numbers are left untrained and unemployed. They naturally drift into the ranks of unskilled labour, and at best have a precarious livelihood.

Unemployment among adults is due not only to causes beyond the control of individuals, but also to defects of character. Whatever the school can do to prevent the development of those defects will directly lessen unemployment of the kind that is most difficult to handle.

It must be remembered that most children leave the school at the age of fourteen. Real mental awakening seldom occurs until afterwards. An added year of education, given partly to academic work and partly to manual or trade training, would prove of incalculable advantage. Through this added year aptitude might be discovered and capacity for self-support ensured in a way not possible when the child leaves school at fourteen and begins work without special training. The Department of Education has shown itself alive to the great need of instruction for young people in industrial, agricultural and household occupations. Arrangements have also been made for raising the school age to fifteen in localities which recognize the increase in efficiency thus to be secured. But even these provisions have not kept pace with the changing industrial system. There is need for further decided action.

A. Your commissioners, therefore, respectfully recommend that the Act regulating attendance at school subject to the provisions of the Truancy Act 9, Edward VII, Chap. 92, be amended in these respects:

1. To require all primary schools supported by the public funds to provide within a limited time facilities for domestic and manual or agricultural instruction;
2. To raise the school age, so as to leave with the parent the choice, either

- (a) of leaving the child in school until the fifteenth birthday, or
- (b) of placing the child in an industrial, agricultural or domestic school from the fourteenth to the fifteenth birthday, or
- (c) of removing the child from school at the present school age for an industrial, agricultural or domestic pursuit, to be combined with part-time industrial, agricultural or domestic instruction until the sixteenth birthday.

B. The Juvenile Departments of the Local Employment Bureaux should be placed in charge of a second assistant director, with whom may be associated one or more investigators to prepare vocational information.

In order that parents and children may fully realize the need of additional training, and lest the drifting of children from job to job destroy the result of this extended education, it is desirable that some permanent agency be formed to connect the schools with the life work of pupils and by personal influence to supplement this vocational information. It is essential, therefore, that vocational guidance should be made a part of the school system of Ontario, under the Department of Education. To this end your commissioners respectfully recommend that the educational authorities be given power to establish:

1. In the country, committees to study and promote country employments with a view to finding occupation for young people in the country, and for the extension of manual, domestic and agricultural instruction in the schools of the district;
2. In the cities and towns, committees to assist in advising children as to choice of occupation and the need of further training for their work.

The committees referred to should co-operate with the assistant director in the organization and management of the Juvenile Department of the Local Employment Bureau.

While the initiative should rest in every case with the education authorities there will be places in which these authorities neglect to use their power. In such cases power should reside with the director of Employment Bureaux to establish such an organization as circumstances may demand.

PART III.

Insurance Against Unemployment.

Unemployment which is due to personal defects calls for special reference and will be the subject of a later report of the Commission. For unemployment resulting from the fluctuation or the temporary dislocation of business, workmen are not, however, responsible. The extent of this fluctuation in 1913 and 1914 has been the subject of a special enquiry. It was found that the average number continuously employed during 1913 by 651 manufacturing establishments was 78,039. During 1914 this number was reduced to 14 per cent. Applying the same measurement to all industrial operatives in Ontario, as shown by the census returns of 1910 (without including the increased number employed in the intervening years and making all necessary deductions) it is found that the extent of industrial unemployment during 1914 equalled the full working time of at least 20,000 persons. This does not mean that the number stated was continuously out of work, but from the information obtained it would appear that the average period unemployment (1914) for not less than 70,000 industrial operatives was about 15 weeks.

Working men engaged in strictly seasonal employment are not included in these figures. The number of these is not available, but is known to be large. Their period of unemployment in 1914

is indicated by returns from the building trades, secured by the Ontario Bureau of Labour, in which the average number of "days idle" is estimated at 83. While in these trades a considerable period of idleness is, to some extent, provided for in the rate of wages, this is not generally the case in the manufacturing occupations of the province.

To meet the conditions referred to, your commissioners are of the opinion that some form of unemployment insurance is desirable in the interest alike of the workmen and of the municipalities affected.

Representations have been made to the Commission in favour of compulsory governmental insurance. But in this province such a system will not be possible for some years, as there are no reliable statistics upon which to calculate the risks of unemployment. So far compulsory insurance has been adopted on a considerable scale only by the British Government. The calculation of risks was based, in England, on statistical data, furnished by the labour unions and extending over sixty years.

Denmark and France, unable to maintain a compulsory governmental scheme, have adopted other methods. Using that instinct of self-help which sometimes leads the best-paid workmen to provide their own insurance, they give state subsidies to societies giving unemployment benefits. These subsidies make insurance possible, on a scale far greater than otherwise would be the case. As a financial safeguard, certain limitations of benefit are required. These limitations may be made less stringent as more information accumulates. Each extension, of course, increases the protection afforded by the system.

While it is not yet possible to provide for this province anything so comprehensive as the British scheme of insurance, it is possible and desirable to establish a partial system by co-operation with associations of workmen.

Your commissioners, therefore, respectfully recommend:

1. That financial assistance be given by the Government of Ontario to those voluntary associations of workmen which undertake to provide unemployment benefits for their members.
2. That the assistance to such associations equal 20 per cent. of the sums disbursed by them in unemployment benefits under regulations approved by the Provincial Actuary and sanctioned by the Lieutenant-Governor in Council.
3. That the collection of statistics relating to the causes and risks of unemployment be entrusted to the Department of Labour recommended in Part I of this report.

BRITISH COLUMBIA LEGISLATION AFFECTING LABOUR.

THE third session of the thirteenth parliament of British Columbia, which began on January 21 and ended March 6, passed in all 73 measures, of which 67 were public acts. Among these are a number of measures which have a special bearing on labour and industry. A Workmen's Compensation Act, modelled along the lines of the Ontario measure, was introduced, but laid on the table until next session in order that the Bill could be discussed by interested parties and such amendments made as might be deemed advisable.

Legislation affecting Agriculture.

A number of measures having an important bearing on the agricultural industry of the province were passed, chief of which are the "Agricultural Act, 1915," which provides for agricultural credits, and an Act relating to Noxious Weeds.

Agricultural Act:

The Agricultural Act, in addition to providing agricultural credit for agricultural development, which is its main feature, consolidates several other acts formerly embodied in the Agricultural Associations Act, and thus extends to various agricultural associations incorporated under the act the same opportunities in regard to loans enjoyed by individual borrowers.

The Act is to be administered by a commission composed of five directors, one of whom will be the superintendent and manager and devote all his time to the work; two will be practical farmers, and the Deputy Minister of Finance and of Agriculture will be members ex-officio. The three appointed directors are to hold office for ten years, subject to removal only for cause or an address from the Legislative Assembly. All employees are appointed by the commission subject to the approval of the Lieutenant Governor in Council, and the commission has power to make regulations to carry out the purposes of the Act. Working capital is to be raised by the issue of securities by the commission, to be guaranteed by the Provincial Government. Until further authorized by the Legislature the amount of securities to be issued is not to exceed \$15,000,000. The bonds are sold under the direction of the Minister of Finance, who determines the rate of interest, the term, not exceeding twenty years, and the limit below which the securities may not be sold. A reserve fund is created to which all losses and net earnings are debited or credited. There is provision also for a sinking fund.

Loans to Agriculturists.

The provisions in regard to loans are designed to encourage agricultural development, and safeguards are provided against the procuring of loans on land held for speculative purposes. Loans

¹Chap. 2 B. C. Statutes, 1915.

are made for the following purposes: Acquiring land for agricultural use, paying off indebtedness on such land, clearing or otherwise improving such land, erecting buildings, buying live-stock, and in general for any other purpose of increasing the efficiency of farming operations and for the carrying out of the lawful objects of agricultural associations. Loans are to be justified by the value of the security offered, by the desirability of the improvements for which the loan is desired, by the borrower's ability to make a fair living for himself and family after paying the semi-annual instalments. In the case of an association the loan is to be justified by solvency, earning power and prospects of success.

The minimum amount of any loan to an individual is fixed at \$250 and the maximum at \$10,000, though with the sanction of the Lieutenant Governor in Council a larger loan than \$10,000 may be made to an association. In order to assist the small borrower, applications for loans not exceeding \$2,000 are to receive consideration before those for larger amounts, and loans of large amounts are only granted when funds are available after applications have been considered. Sixty per cent. of the valuation of the security, based upon its productive value, is fixed as the maximum loan, the value of land to be calculated on its value after the proposed improvements have been effected. Loans are to be advanced in instalments in proportion as the work of improvement proceeds. A loan cannot be used for any other purpose than the one for which it has been granted.

The rate of interest is decided by the commission, but may not exceed by more than one per cent. per annum the rate actually paid on the net amount realized from the sale of bonds.

The Act provides for three kinds of loans: (1) long dated loans; (2) short dated loans; (3) single season loans. The long dated loans are calculated to

provide for the needs of permanent improvements, such as land clearing, draining, irrigation, etc. The short dated loans are intended for less permanent improvements, such as erection of buildings and fences, purchase of stock, machinery, etc. Single season loans may be advanced for the purpose of buying seed, fertilizers, and generally for financing farm operations while the crop is being produced.

Long dated loans may be granted for 36½ years, 30 years or 20 years, and are to be repaid in half-yearly instalments of equal amount. The system of repayment is so arranged that during the first years the charge on account of repayment of principal is very small, but increases in the same proportion as the interest decreases, so that the total half-yearly charge on account of principal and interest remains the same during the entire period. Short dated loans may be made for a period of from three to ten years, repayable on such terms as the commission may decide in each case. The maximum amount of short dated loans is \$2,000 to individual borrowers and \$10,000 to associations. The interest charged on these loans and the security required are the same as for long dated loans. The requirements and regulations in respect of single season loans are the same as those for short dated loans, except that they are not to exceed twelve months, and the form of security is to be a promissory note and a mortgage. A borrower may be granted a second loan on the same security as the previous loan, provided that the aggregate amount of his loan shall not exceed 60 per cent. of the valuation. The mortgagor may repay the full amount of his debt or any portion thereof on an interest due-date, provided the amount of such reduction shall be \$25 or any multiple of \$25.

In case of failure to pay amounts due under the mortgage or to expend the loans as proposed, or to comply with any covenant under the mortgage, the commission may take possession of the

property and may dispose of it by sale or lease, or appoint a receiver, without recourse to a law court. The Act is to come into force on a date to be named by proclamation of the Lieutenant Governor in Council.

Noxious Weeds Act.

The Noxious Weeds Act² provides for the destruction of noxious weeds by the occupant, or in the case of lands not occupied by the owner. Weeds must be cut down, burned or effectively destroyed as often as may be necessary to prevent the ripening and scattering of their seed, between Apr. 1 and Nov. 1 in each year. The Council of any municipality is deemed to be the owner of municipal lands and is empowered to make due provision by by-law for the eradication and destruction of noxious weeds growing within the limits of the municipality and on roads and highways immediately adjoining the municipality. Railway and irrigation companies are required to destroy weeds along their respective rights of way, and in case of their neglect to do so officers of the municipality are empowered to cut the weeds and charge the cost to the companies. Provision is made for the appointment of inspectors, and on notification by an inspector to cut or destroy weeds on their property, owners or occupants failing to do so are liable to a penalty not exceeding \$100 and costs.

Any person who sells or gives for seed purposes any grain, grass or other seed amongst which there is present seed of noxious weeds in greater proportion than five to one thousand of the seed sold is liable to a fine of not less than \$10 nor more than \$100, and the magistrate making any conviction may order the seed sold contrary to the provisions of the Act confiscated or destroyed. Any person who knowingly conveys any noxious weeds from one farm to another, either in threshing machines, fanning

mills or otherwise, is liable on conviction to like penalty.

Legislation affecting Relations of Employers and Employees.

A number of the measures passed directly affect the relations between employers and employees, namely (1) "An Act for the Protection of Workmen engaged in Industrial Operations," (2) An Act to amend the Employment Agencies Act," (3) An Act to amend the Factories Act, (4) An Act to amend the Master and Servant Act, (5) An Act to amend the Municipal Act, and (6) An Act to amend the Shops Regulation Act.

An Act for the Protection of Workmen engaged in Industrial Operations, known shortly as the "Ambulance Act, 1915,"³ provides that every employer of labour directly or indirectly operating any mine, camp, construction work, or industry employing more than 30 persons, and being situated more than six miles from the office of a medical practitioner, shall at all times maintain in or about such industry or works at least one person possessing a certificate of competency to render first aid to the injured, and shall also provide a good and sufficient ambulance box or boxes. The secretary of the Provincial Board of Health is empowered to determine the qualifications necessary to obtain a certificate of competency to render first aid to the injured, and any duly qualified medical practitioner may issue certificates in accordance therewith. Employers are required to forward to the Provincial Secretary the name of the person qualified to render first aid, and the number of his certificate of competency, and any employer directly or indirectly operating for more than six days without such competent person shall, upon summary conviction, be liable to a penalty not exceeding \$50, and in default of payment of such to

²Chap. 66 B. C. Statutes, 1915.

³Chap. 4 B. C. Statutes, 1915.

imprisonment for a period of not more than three months. Incompetent persons presuming to possess a certificate are liable to a penalty not exceeding \$50, and in default of payment to imprisonment for a period of not more than three months. The Act does not apply to coal mines operating under the "Coal Mines Regulation Act."

Employment Agencies.

An Act to amend the "Employment Agencies Act"⁴ to the Employment Agencies Act of 1912, a section providing that no employment agency holding a license under the Act shall, directly or indirectly, give or pay to any employer or to the foreman or agent of an yemployer in respect of the hiring of an employee any share or part of the fees specified in such Act, and employers, foremen or agents, directly or indirectly are not allowed to take or receive from a license holder any share or part of such fees.

Factories Act.

The Factories Act is amended⁵ by a change in the definition of a factory. Under the original Act a factory was defined to be a building, workshop or structure of a description definitely set out in the Act, where five or more persons are employed. In the amending Act the word "five" is changed to "three."

Master and Servant Act.

The Master and Servant Act is amended⁶ in certain particulars. That part of the Act relating to the selection of medical practitioners is changed by providing for the selection of medical practitioners upon a majority vote of the servants or workmen, instead of as in the original measure, leaving it to individual workmen to select their own doctor in each case. Workmen or servants are also

given power to change the name of the medical practitioner by meeting and resolution on one month's notice to the employer.

That part of the old measure which deals with the handling of the medical attendance fund is changed by requiring the employer to keep in more detail an account of the medical fund, and provides in addition to the power already conferred by the original Act to a committee of workmen or servants to inspect and audit the account, that a statement of such account verified by statutory declaration shall be filed with the Provincial Secretary on the first of January and the first of July in each year, and any person who contributes to the medical fund shall, upon application to the Provincial Secretary, be supplied with a copy of such statement upon the payment of 25 cents. The new measure provides, also, that where the majority of the workmen engaged by a master through any cause whatever cease to work for more than one month for the master, and any money contributed to the medical fund by the workmen is held by the master, it shall upon request in writing signed by a majority who contributed to said fund be handed over to said workmen, or committee appointed by them, and shall be divided pro rata among all persons contributing to same. The new Act also provides that any master who neglects to pay out the medical attendance fund or any portion thereof, or withholds or attempts to withhold the fund or any portion thereof from the medical practitioner to whom the same is payable under the Act, is liable to a penalty of \$50.

Municipal Act Amended.

That part of the Municipal Act providing for the payment of license fees for various industrial enterprises is amended⁷ by the addition of a clause which provides for the exemption from payment of license fees of any person

⁴Chap. 23 B. C. Statutes, 1915.

⁵Chap. 25 B. C. Statutes, 1915.

⁶Chap. 42 B. C. Statutes, 1915.

⁷Chap. 46 B. C. Statutes, 1915.

employed as a journeyman or for wages only, and not employing any other person or persons.

Shops Regulation Act.

The Shops Regulation Act is amended⁸ by a change in the definition of a shop, which is defined to include, in addition to the other establishments named by the act, barber or hair-dressing shops, though premises where a barber or hair-dresser is attending a customer or the customer's residence are not included in the definition.

Miscellaneous Measures.

In addition to the above measures, a number of Acts affecting labour indirectly were passed, amongst which may be noted measures in the nature of moratoria. "The Allied Forces Exemption Act"⁹ exempts members of the allied forces from certain provisions of the mining laws of British Columbia to enable them to hold title in mineral claims, etc. "An Act to confer certain Powers upon the Lieutenant Governor in Council respecting Contrats relating

to Land"¹⁰ provides for the postponement of payments of principal under certain circumstances, it being left to a Judge of the Supreme Court of British Columbia to decide whether inability to continue payments is attributable to the war or whether in his opinion justice and right demand that some relief be given. The Act is to remain in force during the continuance of the war and for a period of six months thereafter. "An Act to amend the 'Iron Placer Acts' "¹¹ sets out that deposits of magnetic iron in the form commonly known as "black sand" are known to exist in lands already occupied, but cannot be located by free miners under any statute, and makes provision for the granting of leases of such mineral land. "An Act to enable the Lieutenant Governor in Council to grant Relief from Penalties and Forfeitures in relation to Moneys payable to the Crown and in relation to similar matters"¹² provides for the postponement of the payment of moneys payable to the Crown, the Act to remain in force for a period of twelve months from the date it was passed.

¹¹Chap. 44 B. C. Statutes, 1915.

¹²Chap. 48 B. C. Statutes, 1915.

SPECIAL MEETING OF UNION OF CANADIAN MUNICIPALITIES.— UNEMPLOYMENT QUESTION DISCUSSED:

A SPECIAL meeting of the Union of Canadian Municipalities was held at Niagara Falls, July 20 and 21, at which a number of resolutions were passed dealing with the question of unemployment in Canada and the problems arising out of it. Mayor Church of Toronto acted as chairman and those present represented the principal Eastern municipalities. The Union of Manitoba Municipalities was also represented.

The President of the Association, Mayor Church of Toronto, speaking in regard to the question of unemployment, stated that the municipalities would do

their part if the Dominion and Provincial Governments would assist and do their part. There should, he considered, be some system of registration by which those out of employment could be registered at the border and also at the port of entry. The Union, he believed, should also have the co-operation of the various departments of the Governments, including the Post Office, Immigration and Labour Bureaus.

Later in the proceedings of the convention, the question of unemployment was considered under the following heads: (1) Report of the meeting of

mayors at Ottawa; (2) established information; (3) propositions of the Dominion Government; (4) relieved soldiers; (5) immigration.

The representative of the Manitoba Union of Municipalities presented a resolution of the Executive of that Union, which was adopted by the meeting. This resolution was as follows:

"That in the opinion of the Executive of the Union of Manitoba Municipalities, representation should be made to the Immigration Department of Canada by the Executive of the Canadian Union of Municipalities with the object of having further supervision and help for the immigrant who has come to Canada with the intention of going on the land, so that he may be encouraged in this intention. Further, that if this be done there will be fewer unemployed in our towns and cities, two-thirds of whom come to Canada with the intention of farming."

Mayor Walters of Hamilton made the following motion, which was adopted:

"That inasmuch as it is the opinion of this body that the final solution of the unemployment conditions in Canada must come through placing the idle agriculturist on the land, to this end we would strongly urge that immediate steps be taken to select suitable agricultural districts throughout the Dominion, where conditions are favourable for settlement, settlers to be allotted not more than 40 acres each, and to receive from the Government by way of a loan, sufficient money to purchase stock and such implements as are required, and to assist settlers until such time as they can become self-sustaining, such advances to be a charge against the land, and to be repayable in instalments covering a period of years."

Alderman Morley Wickett of Toronto made the following motion, which was adopted:

"That each province be memorialized to consider the advisability of setting apart a substantial sum of money to purchase cheap blocks of land near urban centres suitable for garden cultivation and settlement, open them on a favourable basis and develop where necessary in connection with tried out successfully in other countries such as Belgium and Massachusetts."

The discussion on unemployment was brought to a close by Mr. W. D. Lighthall, K.C., the Secretary of the Union, who moved the following resolution:

"That this Executive Committee of the Union of Canadian Municipalities shall press for the organization by the City Council in each large city, and by Provincial Governments, of a Joint Committee on Unemployment to consist of two or more special delegates from each of the following bodies: The Dominion Government, the Provincial Government, the City Council, the Board of Trade, the Manufacturers' Association, and representatives of Labour and the principal Charity Boards, with the object of working on a harmonious plan for dealing with this question practically during the coming winter."

Other resolutions passed by the meeting having to do with questions of unemployment or kindred questions were the following:

"That in view of the question of unemployment in our municipalities, that the Dominion Government be respectfully requested to take such further means as may be within their power to obtain for Canadian manufacturers the manufacturing of war material and equipment for the allied troops, and to make arrangements at as early a date as possible."

"That the municipalities do put forth their best efforts to secure suitable employment for the wounded and disabled soldiers who return from the

war, in order that they may be amply provided for."

"Resolved, that the Dominion Government be urged by the Union of Canadian Municipalities to select upon the Commission, which they have announced their intention of appoint-

ing, a representative of the municipalities, whose duty will be especially to study and advise upon the problems arising out of unemployment," in addition to those now proposed, viz., reports of agriculture, transportation and finance."

MINE ACCIDENT AT COAL CREEK, B. C.

Finding of Commissioner appointed to enquire into explosion in January, 1915.

THE findings of Mr. John Stewart, who was appointed a Commissioner under the "Public Inquiries Act" of the Province of British Columbia, to inquire into the causes that led to an explosion in what is known as the "B. North Mine" at Coal Creek, B.C., in January last, have recently been given out, and as the findings of the Commissioner deal directly with matters affecting the ventilation and safety of coal mines, the full text of the report is here printed in full.

Commissioner's Findings.

"I find that the cause which led to the explosion in the B. North Mine at Coal Creek, in the County of Kootenay, on the second day of January last, was the ignition of an accumulation of gas in the mine consequent on the stoppage of the ventilating fan.

"There are so many circumstances connected with the above recited state of affairs that I find it necessary to go to some length to explain the conditions prevailing at this mine prior to and at the time of the explosion.

"About seven o'clock on the morning of January 2 last, several workmen arrived at the mine with the intention of going to work. Alexander McFegan, a fire boss, who should have been on duty ahead of these men, was delayed at the office on some business with the book-keeper and before his arrival at the mine, the explosion occurred.

"Mr. Williams, the mine inspector, holds the theory that John Pollik, who arrived with the others at the mine for the purpose of going to work, ignited the gas. Mr. Caufield, the superintendent, is of the same opinion and I incline to think that they are right. The theory of Mr. Williams and Mr. Caufield is that Pollik, while waiting for Fire Boss McFegan to arrive, wandered towards the fan house and while lighting his cigarette, ignited the gas. This theory is borne out by the fact that Pollik's dinner pail was found intact on the steps of the fan house after the explosion occurred. The story given by Pollik immediately after the accident, differs, but the mere fact that he is a foreigner and probably afraid of getting into trouble explains this to a large extent. He disappeared before the date set for the inquiry.

"The evidence given before me shows that, most of the time and particularly on what are known as idle days, there has been a lamentable want of discipline on the part of the mine officials. This seems all the more glaring when the fact is taken into consideration that B. North is a gaseous mine. Mr. Caufield, the superintendent, admitted that the mine was gaseous, as did also Mr. McFegan, the mine overman; in fact nearly all the witnesses to whom the question was put admitted that B. North is a gaseous mine. It would appear, therefore, that the most rigid discipline should have

been enforced and that the happy-go-lucky and apathetic manner in which the officials went about their duties is particularly reprehensible.

“Ventilating Fan.”—A short description of this very important machine and the manner in which it has been operated will, I think, be in order.

“The fan is of the ‘Murphy’ type and is driven by an electric motor which also furnishes power to haul the output of the mine as well as light a portion of the main tunnel. The electric motor is controlled by a contact switch, which, when the load is too heavy, is automatically ‘cut out,’ causing the fan to stop. It is necessary, therefore, for someone to throw the switch in again before the fan can start up.

“The fan man was, in some cases, the haulage man and as a great deal of his time was taken up with haulage, his duties as fan man became almost of secondary consideration. The chief inspector obtained, in evidence, the fact that the fan could stop without the fan man’s being aware of it (see evidence of

“James Stockwell, a fan man, stated Fan Man Ferguson, page 30). Ferguson also stated that the fan would sometimes stop five or six times during a shift, also that he once had instructions from the fire boss to close down the fan from 6 p.m. till 9.30 p.m. on an idle day when no one was going to work in the mine that night. (See page 33.)

“James Stockwell, a fan man, stated that for three or four weeks there was no fan man on the day shift and that the fire bosses operated the fan during that time, also that the fan was standing when he went on duty at 11 p.m. Christmas night. (See pages 36 to 38.)

“Edward Shimmons, a fan man, stated that he was employed by Fire Boss David Shanks to work on the bogie and to ‘keep an eye on the fan.’ (Bogie man is another name for rope rider.) Shimmons said that the fan would stop

once or twice during a shift. (See page 53.)

“It would seem, therefore, according to the evidence of the fan men, that the operation of the fan has been of the most casual nature. On idle days when the fire bosses were engaged in the mine doing repair work, the services of the fan man were dispensed with and the fire bosses operated the fan as best they could. One fan man (Ferguson) went so far as to say that he left off work at three o’clock instead of waiting till six o’clock and this without permission, without the knowledge of the fire boss and without the knowledge of the overman.

“No complaint appears to have been made and no fault found with anyone by William McFegan, the mine overman, for this reprehensible conduct. Mr. McFegan did not examine the reports of the fire bosses as he should have done nor was he able to tell the chief inspector whether the fan ran between the 1st December and the 2nd January. (The evidence goes to show that the fan was standing at 3 p.m. on 31st December and had not started up at the time of the explosion.) The only answer Mr. McFegan could give the chief inspector on this point was that he expected that the men under him would look after their duties; in fact I doubt very much if Mr. McFegan thoroughly awoke to the responsibilities of his position until the explosion occurred. He appears all the more guilty when the fact is taken into consideration that, on a recent visit, the chief inspector took him aside and, in a friendly way, cautioned him that B. North had in it all the elements that go to make a dangerous mine. I place a great deal of the responsibility for the accident on William McFegan, the mine overman, but not all of it.

“It is hard for me to understand how all this negligence should have escaped the notice of Mr. Caulfield, the mine superintendent. I am well aware that he is superintendent of all the Coal Creek mines and that he must therefore

be a very busy man; nevertheless I feel impelled to say that the safety of the mines should have been his first consideration.

Mr. Caufield examined B. North mine on 18th December and again on 28th December and it is quite clear that his perusal of the report book, between those dates, must have been of a very superficial character or he would have discovered that the fire bosses had not visited the mine at all during the Christmas holidays—a period of about 60 hours.

“Mr. Caufield admitted that he did not properly examine the report book and the only excuse he could offer was that he expected that his officers would attend to their duties.

“I am of the opinion that Mr. Caufield’s indifference is the cause of the slipshod manner in which his officials went about their business, resulting, as it did, in this unfortunate explosion.

(Signed) JOHN STEWART,
Commissioner.”

CHANGES IN RATES OF WAGES AND HOURS OF LABOUR DURING THE SECOND QUARTER OF 1915.

IN the accompanying statistical table detailed information is presented relating to changes in rates of wages and hours of labour reported to the Department of Labour during the second quarter of 1915.

General Result.

During the second quarter of the present calendar year, including the months of April, May and June, few changes in wages were reported to the Department of Labour. Altogether 15 changes were recorded involving approximately 5,221 employees, as compared with 23 changes involving 6,783 employees during the corresponding period of 1914. The greatest number affected by wages changes were metal workers, unskilled labourers and civic employees.

Of the 15 changes which took place, seven were increases in wages, five were decreases in wages, one was an increase in wages and a reduction of working hours, one was an increase in working hours, and one was a reduction in working hours only.

The following table shows the approximate number of employees affected by changes which took place in the different trades:

TABLE SHOWING BY INDUSTRIES AND GROUPS OF TRADES THE NUMBER OF EMPLOYEES AFFECTED BY CHANGES IN WAGES AND HOURS OF LABOUR IN CANADA DURING THE SECOND QUARTER OF 1915:—

Trade or Industry.	No. of Changes.	No. of Employees Affected.
Mining	2	60
Building trades.....	4	95
Metal workers.....	2	2,550
Woodworking trades.....	1	25
Civic Employees.....	4	416
Unskilled labour.....	2	2,075
Total.....	15	5,221

Changes by Industries and Trades.

The following is a statement of the changes in wages and hours of labour reported to the Department of Labour as having gone into effect during the second quarter of 1915, arranged by industries and trades:

Mining.—Two changes affecting miners went into effect on April 1. Powerhouse engineers at Fernie, B.C., were granted an increase of 55 cents per day under the terms of an agreement be-

tween the Western Coal Operators' Association and District No. 18 of the United Mine Workers of America.

At Nanaimo, B.C., on April 1, about 60 employees in the Vancouver-Nanaimo Coal Company had their wages reduced ten per cent. This reduction involved men engaged on contract work only.

Building.—In the building trades four changes were reported as having gone into effect during the second quarter of 1915, as compared with seven during the first quarter of the present year. One of these changes took place in Nova Scotia, two in Ontario and one in Saskatchewan.

On May 1, plumbers in Halifax, N.S., to the number of about 50, received an increase in wages from 38½ cents to 40 cents per hour, being an increase of 1½ cents per hour. This increase was the result of an award made by a Board of Arbitration appointed to settle a dispute which was in existence from May 1 to August 29, 1914.

Bricklayers in London received an increase of 5 cents per hour on May 1, making the rate 55 cents per hour from that date. This change was brought about by an agreement entered into between the Builders and the Union on May 1, 1914, for five years by which 55 cents per hour was to be paid from May 1, 1915, until the expiration of the agreement.

At Orillia, a minimum wage for carpenters was fixed at 35 cents per hour for a nine-hour day from April 1, 1915. Prior to this date carpenters were paid from 27½ cents to 35 cents per hour for a ten-hour day. This change was brought about by the efforts of the United Brotherhood of Carpenters and

Joiners, No. 1607, organized in July, 1914.

On July 1, 15 plumbers in Saskatoon received an increase from 50 cents per hour to 60 cents per hour, 44 hours to constitute the number of working hours per week.

Metal.—Two thousand five hundred and fifty employees were involved in the two changes which took effect among metal workers. At Amherst, N.S., on May 3, 150 employees of the Canada Car and Foundry Company agreed to work two hours more per week, bringing their working time per week up to 50 hours instead of 48.

At Ford, Ont., on April 16, the Ford Motor Company made an arrangement by which their employees at the head establishment and in branches throughout Canada would get increases equivalent to between 15 and 60 per cent., and by which working hours would be reduced from nine to eight per day, a minimum wage of \$4 a day being established by the change.

Woodworking.—Only one change took place in the woodworking trades during the second quarter of 1915. This occurred at St. Hyacinthe, Que., where 25 bench workers, machine workers and others employed by L. P. Morin & Son had their wages reduced from \$1 to \$3 per week. The former rate of wages ranged from \$8 to \$15 per week and after the change from \$7 to \$12 per week.

Civic employees.—Four changes were reported as having gone into effect among civic employees, affecting policemen at Moncton, N.B., St. John, N.B., Ottawa, and the whole of the police staff at Vancouver, B.C. At Moncton, seven policemen had their wages increased on

		2,000		\$3.00	\$2.25					

April 1, the increase ranging from 70 cents per week in some cases to \$1.05 per week in others.

On June 1, 50 policemen at St. John, N.B., were given an increase of 25 cents per day. The hours of the day squad were fixed at nine, while the night squad work twelve hours.

At Ottawa, police constables and detectives to the number of 90, as the result of agitation on the part of the local Trades and Labour Council and the press, had their working time shortened from seven days per week to six days per week, the change taking place on April 1.

On June 1, 269 employees of the police staff in Vancouver were notified by the City Council that from that date their wages were to be reduced. The reductions varied from \$60 in some cases to \$1,200 in others.

Unskilled labour.—On April 1, 75 labourers in the employ of the Ottawa Improvement Commission had their wages reduced from 21½c per hour to 19½c per hour.

At Vancouver, on June 11, civic labourers to the number of 2,000 had their wages reduced by 75 cents a day, making the regular rate of pay per day \$2.25 instead of \$3.00 as formerly.

RETAIL PRICES IN NEW ZEALAND, 1891-1914.

THE Journal of the Department of Labour, New Zealand, for June, 1915, contains a report on an investigation into the course of retail prices and house-rent in New Zealand from 1891 to 1914, by Malcolm Fraser, Government Statistician. The commodities included in the inquiry are divided into four groups:

Group I. *Groceries.*—Bread, flour, oatmeal, rice, sago, tapioca, tea, coffee, cocoa, sugar, salt, pepper, jam, honey, golden syrup, treacle, raisins, currants, apricots (tinned), peaches (tinned), pears (tinned), prunes (dried), apricots (dried), potatoes, onions, salmon (tinned), herrings (tinned), starch, blue, soap, tobacco.

Group II. *Dairy Produce.*—Milk, butter, cheese, eggs, bacon (shoulder), bacon (middle cut), ham.

Group III. *Meat.*—Beef: sirloin, brisket, prime rib, rump steak, top side, stewing-steak, corned round, corned roll, corned brisket; mutton: leg, shoulder, loin, neck, chops; pork: leg, loin, belly, chops; sausages: beef, pork; tripe.

Group IV. *House-rent.*

Quotations of predominant prices were obtained in the four chief centres of population, Auckland, Wellington, Christchurch and Dunedin, quarterly for each year back to 1891. Index numbers were calculated for each group and for each city.

Scope of Inquiry.

"Early in 1914 it was decided that steps should be taken and arrangements made for the proper and systematic collection and record of data to enable official price-index numbers to be included for the future in the New Zealand statistics. It is intended that such index numbers should cover wholesale prices, retail prices and import and export values. It was decided that, as wholesale prices are general

*Average index numbers, weighted according to population, of twenty-five representative towns.

rather than local, it would be sufficient if these were confined to the four chief cities. Retail prices, which are more influenced by local conditions and more directly related to "cost of living," were to be collected for twenty-five towns selected as being representative of inland and seaport districts throughout the Dominion. In initiating the system, also, it was considered advisable to extend the inquiry back to 1891 if possible, or as far as reliable data could be obtained. It was also decided that the prices for the future should be recorded at monthly intervals. For back years, however, it would not be practicable to obtain reliable data more frequently than quarterly, nor to attempt the collection of retail prices outside of the four chief centres. . . . Complete data back to 1891 has been obtained in the case of retail prices for all cities except Christchurch, where prices of groceries were obtainable only from 1899. In the case of wholesale prices, which cover a much greater range of commodities, the particulars are still incomplete. In these circumstances, and because public interest at the present time is so much centred in the cost of living it was decided to proceed with the computation of the retail-price-index numbers, leaving those for 'wholesale' and 'imports and exports' to be issued at a later date."

The system of index numbers adopted is the "aggregate expenditure" method devised by Mr. G. H. Knibbs, Commonwealth Statistician, for Australia, described in his report on *Prices, Price Indexes and Cost of Living in Australia*, issued in December, 1912. In applying this method to prices statistics for New Zealand the base period selected was 1909-1913. The total consumption per annum in the Dominion of each commodity included in the inquiry was estimated. From the average price of each commodity the aggregate expenditure on the commodities in each group and for all commodities each year was calculated. The aggregate expenditure for the base period was made equal to 1,000 and the relative changes in cost in the several groups, and for all commodities, as compared with the base period were then calculated, the results being shown as index numbers. These are given in the report for each of the four cities for each year back to 1891.

In fuel and light it was found that the extent to which coal, gas, electricity, etc., were used in the several cities varied

to such an extent that it was impossible to compute index numbers which would indicate the actual bearing of this group on the total cost of living. From the data as to prices of the seven commodities included in this group (coal, coke, fire-wood, gas, kerosene, electricity and candles) index numbers were computed for Wellington from 1893 to 1914, for Christchurch from 1903 to 1914, and for Auckland and Dunedin from 1907 to 1914.

The accompanying table, No. I, summarizes the principal findings of the investigation as shown by the index numbers in each group.

For the year 1914 index numbers for each quarter were calculated from the data as to prices and house-rent in twenty-five selected towns, based also on the period 1909-1913. Index numbers for the Dominion for each quarter and for the year 1914 were calculated by averaging the index numbers of these localities, weighted according to population. This weighted average for the year 1914 was found to be appreciably different from the average of the four chief centres (for which the record 1891-1914 was obtained) only in house-rent. In this case the inclusion of the smaller towns, where rents are lower, accounts for the difference.

The accompanying table, No. II, shows the Dominion index numbers by quarters for the year 1914.

The "purchasing power of money" is shown in the report from year to year in the several cities for each group by tables showing the amounts that would be paid to purchase what would have cost on the average one sovereign (twenty shillings) in the period 1909-1913.

WAR PRICES IN CANADA.

A Review of the Prices Situation since the Outbreak of War.

BEFORE the outbreak of war at the end of July, 1914, prices of commodities had been on high levels for some time in Canada as well as in other parts of the world. The further advance which immediately followed, particularly in foods, was all the more significant as foods had shown some of the greatest and most general advances, causing the high cost of living to become an acute problem. But the rise in prices before the war had occurred during a period of prosperity in trade and industry in which employment was abundant and advances in wages were possible in many instances. On the outbreak of war, however, Canada was passing through a reaction from the recent expansion, during which prices had risen steeply. Trade and industry had flourished from the beginning of the century except for a brief reaction in 1907-1908, following the financial panic in the United States, and recovery from this had been rapid. In 1910 prices had almost recovered from the drop in 1908 and further steep advances occurred in 1911 and 1912. In 1913 the steeply upward movement ceased, although some commodities still advanced. The crest of this wave of prosperity appeared toward the end of 1912, when something like a boom in real estate, stocks, and the markets for some commodities was felt.

The positive effects of this boom were experienced in Canada for some months in 1913, although the outbreak of the Balkan War in the fall of 1912 had led to some financial stringency in Europe which immediately affected financial conditions in America as well and gradually exerted a strong depressing influence on commerce and industry. The Bank of England rate of discount remained at 5% during this time and it

was only in January, 1914, that financial conditions improved sufficiently to cause a drop to 3%. The effects on Canadian trade and industry, however, had been serious. The rapid development since 1900 with only a pause in 1907-1908, had involved a great increase in agricultural areas, in development of mines, forests, water-powers, etc., the construction of two transcontinental railways, many miles of additions to other railways, with terminals, rolling stock, etc., an increase in water traffic (lake and ocean), with harbour improvements, shipbuilding, etc., the building and equipment of factories, the growth of manufacturing and trading cities and of new towns in the newly opened areas, a great immigration including farmers from the United States as well as of labourers from Europe and skilled workmen from Great Britain along with other classes, and also a considerable migration of population from Eastern to Western Canada and from rural districts to urban centres. Under such conditions all commodities found a ready market, the home demand for most commodities kept ahead of production, prices advanced and in turn made possible increased purchasing power among all classes of the people, and this in turn caused greater demand. Exports of cattle, butter, eggs, etc., declined and finally ceased, and meat and butter were imported into Western Canada from New Zealand. The great and constantly increasing supply of imported capital, and the expansion of credit inevitable in such conditions, prevented the rising prices from checking the development of the country and the growth expansion of trade. The several commodities reacted in price according to conditions affecting their own peculiar markets from time to time, but the net

result of these conditions was a steeply upward movement. In 1911 a higher level was reached than that from which prices had receded in the crisis of 1907, in 1912 foods were on record levels throughout the world, chiefly as a result of drought and crop shortage in various countries in 1911, and materials also rose steeply under a remarkably good demand.

Turn of the Tide.

The tide began to turn early in 1913. The good crops throughout the world in 1912 had lowered food prices greatly by the end of the year and the financial stringency early in 1913 depressed the markets for materials. European financial conditions were depressed by the Balkan wars, while in the United States pending readjustments in trade and industry tended to quiet industry. In Canada the development continued in the way of completion of great undertakings in railway and other construction, but curtailment has already become necessary. Municipalities had difficulties in getting money for further improvements, the real estate boom collapsed, immigration slackened, the demand for many materials fell off and factory production began to decrease. Unemployment was felt, though chiefly from the fall in construction. The manufacturing of textiles, clothing, boots and household goods, as well as of construction materials, was seriously affected by the lack of demand. The markets for many foods were also affected. These depressing conditions prevailed chiefly in Western Canada, but the reaction was also gradually felt in the Eastern provinces. The difficulty in obtaining money in London tended to curtail imports so that the increase over 1912 was only five per cent. Exports on the other hand increased by 22 per cent. The increase in agricultural areas, the extension of stock-raising in Western Canada, the development of mining, lumbering and manufacturing were showing the results of the great

expenditure in developing the country. Owing to the faith of English investors in the future of Canada and their recognition of the necessity for completing the equipment for transportation and distribution, imports of capital in 1913 greatly exceeded those in 1912, in spite of financial stringency and the higher rates of interest necessary to be paid. Trade therefore showed comparatively little contraction even during the latter part of the year, and though demand for some commodities fell off, markets were not seriously weakened and prices of materials did not fall materially.

Opening of 1914.

The year 1914 therefore opened with some favourable features. Food prices had fallen from a high level in 1912 as a result of good crops in 1912 and 1913. Financial conditions were improving, the Bank of England rate was down. Though trade was slow in many lines, large stocks had not accumulated and markets had therefore not become demoralized and prices did not have to be seriously cut. Recovery, however, appeared to be slow, an important factor being indicated in the fact that large sums of money had been sunk in real estate during the boom, some of it overvalued and much of it not available for industrial, commercial or residential purposes for some time to come. Further, many purchasers had to keep up payments, and so funds were held from profitable or new investment. Signs of improvement increased, however, as favourable spring weather promised good harvests and the financial, commercial and industrial losses due to the reaction were gradually liquidated and capital began to accumulate. The trade and industry of the Dominion was settling down to the new conditions, and to the realization of the anticipated production from resources ready for development, with the feeling that rock bottom had been reached and the upward movement was beginning.

The tariff revision in United States had opened markets to many Canadian products, notably cattle and hogs, wool, fish and lumber, and the effects of this had already been felt to some extent. Prices had shown considerable weakness from the first of the year, many foods declining as the season advanced. Sugar, flour, oatmeal, butter and vegetables were cheaper than for some time, meats were receding from the high levels reached in the autumn after removal of customs duties in United States, and good crop prospects weakened the grain markets. Some materials were declining, demand being light, but scarcity kept up others, such as hides, leather, wool, cotton and lumber.

Outbreak of War.

The outbreak of war at the beginning of August changed conditions in nearly all markets. Grain, flour, bread, oatmeal, tea and sugar immediately rose, meats began to advance, cotton slumped, and metal markets were greatly disturbed. Supply and demand in most lines were quite uncertain. Fears of a financial breakdown, of interruption to ocean shipping, and the demoralization of industry led to suspension of business in many lines. In Canada prolonged dry weather in the West at a critical period in the grain season seriously discounted the advantages of the high prices of grain. Many constructive operations were stopped or threatened to stop as a result of financial difficulties. The loss of export markets caused some manufacturing industries to cease operations. The measures taken by the British, Canadian and other Governments, however, eased the situation, while financial operations and ocean trade soon resumed and great activity soon appeared in many lines in connection with the operations of the war. The export demand for grain was strong and many foods suitable for army supplies advanced in price. Orders for military equipment caused activity in textile, boot and metal industries. Transportation of

military supplies partially made up for the loss on regular trade. Prices advanced in some materials, which became scarce and difficult to obtain. On the whole, however, as conditions settled, readjustments were made on levels lower than the high point to which prices had risen in August. As the British and Canadian Governments prepared for greater armies and for prolonged operations larger orders were obtained by Canadian manufacturers. The textile industry had difficulties in obtaining further supplies of wool and dyestuffs and prices advanced considerably. Hides and some grades of leather were scarce and rose steeply in price. The metal markets gradually recovered from the dullness which had prevailed as large orders were given for shells and guns, and for machines for making these, to be installed in new plants.

Conditions Below Normal.

Trade and industry, however, were still far below normal. Although municipalities were able to obtain some money in the United States and to proceed with some undertakings, all building and construction was greatly curtailed. Unemployment became a serious problem in many localities. The lessened purchasing power of the public was felt in the markets for most goods and tended to lower the prices of many commodities. Meats soon receded and livestock declined. Export demand kept up the prices of cheese, butter and eggs until late in the spring of 1915 and tended to keep up meats. Flour rose to record prices in February and again in May, but then dropped considerably. Steep advances occurred in metals in February and continued from time to time afterwards, notably in zinc, antimony, quicksilver, lead, tin, copper and brass. Drugs and chemicals had risen steeply on the outbreak of war, some being in demand for explosives, some for hospital supplies, and others being difficult or expensive to import. Carbolic acid rose from 10 cents per pound

in August to \$1.50 in February. Although, apart from commodities used in war or unobtainable on account of war, markets had steadied to a great extent by the approach of summer, price levels were considerably higher than before the war and indications were that as a result of losses during war and great consumption of supplies high levels should be expected for some time to come.

The effects of decreased purchasing power in households appeared in the markets for canned goods, meats, clothing materials, boots, etc., which had experienced such a demand up to 1913. Similar results appeared in the industrial demand for many commodities, particularly constructive and building materials. Government orders for military supplies, particularly food, clothing, guns, shells, etc., made up for the loss of normal demand only to some extent. Readjustments were necessary, and sometimes difficult, in factory equipment, processes and supply of materials, in order to change to manufacturing for military needs. Markets were therefore variously affected according to individual conditions. The result was that, apart from commodities used in war or unobtainable on account of war, the markets showed comparative steadiness by summer, but with a few exceptions price levels were considerably higher than before the war and indications were that as a result of losses due to war and great consumption of supplies, high levels were to be expected for some time to come. The additional taxation in nearly all countries in the world, directly or indirectly due to war conditions, becomes an important factor in raising prices whether levied directly on commodities as customs or excise duties or indirectly through taxes on property, income, expenditure, etc. Additional customs and excise duties imposed in Canada in August, 1914, and again in February, 1915, along with stamp and other special taxes, were followed by some advances in prices.

Price Fluctuations.

The accompanying tables of index numbers of wholesale prices show the main movements from July, 1914, to July, 1915, and enable comparison to be made in each group for each month of the first half of the current year and with the same month a year before.

It will be seen that the principal increases are in the groups Grains and Fodder, Dairy Products, Miscellaneous Foods, Textiles (woollens), Metals (zinc, copper, etc.), Miscellaneous Building Materials, Paints, Oils and Glass, Drugs and Chemicals. The only great decrease appears in Raw Furs, but Fish, Fruits and Vegetables and Lumber showed lower levels.

The table of index numbers of wholesale food prices shows the change in foodstuffs in greater detail. Only foods available for use are included, that is wheat and livestock are omitted, while flour and meats are included. Fish, fruits and vegetables on the market only for a few months each year are also omitted. All groups rose immediately on the outbreak of war and remained on levels higher than a year before except meats, fish, fruits and vegetables. In these the supply was not reduced seriously by war conditions and demand was curtailed.

Retail Prices.

In retail prices the accompanying budget of weekly expenditures shows the changes in the staple foods and in fuel and also in rentals. The cost of a list of some thirty foodstuffs shows a rise from \$7.42 in July, 1914, to \$7.80 in July, 1915. The increase was due chiefly to the rise in flour, bread, rolled oats, sugar, tea and coffee, butter and cheese. The increase in the retail price of tea was probably greater than shown by the average prices quoted as the rise in price created a tendency to use cheaper qualities. Potatoes, however, were much

TABLE SHOWING INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS OF COMMODITIES FROM MONTH TO MONTH, JANUARY, 1914, TO JULY, 1915.

*Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

cheaper, owing to a large crop. Meats rose in the autumn of 1914, but declined, rising, however, again in June, 1915. Coal, wood and coal oil show little change. Rentals show the greatest decline, more than offsetting the rise in food prices in the average for the Dominion. The decline in rents was greatest in Western Canada. In many cities it was reported that some people out of employment were departing and others were doubling up in houses to curtail expenses. Other people were moving into cheaper houses. Landlords were lowering rates to keep tenants or obtain new ones. The comparative cost of these staple commodities in the several provinces in each quarter during the past eighteen months is shown approximately in the accompanying tables. Owing to the difficulty in ensuring that the same quality of each commodity is quoted in each locality comparisons among the several provinces are valuable more as to general results than in detailed figures. In the calculations for coal, wood and coal oil no allowance is made for the varying extent to which these are used in the different provinces.

Foreign Food Prices.

The United States Bureau of Labour Statistics has issued a special bulletin on "Foreign Food Prices as Affected by the War." In the *Monthly Review* of the Bureau for July the report is summarized as follows, in part:

Much of the information of the report was obtained through the consular service of the Department of State, and, in the main, covers the period from August to December,

1914. Prices are given for 18 countries and represented by reports from over 100 cities, towns, and consular districts.

The report shows that the first effect of the war was the same practically throughout Europe. Its outbreak was followed by a sharp rise in prices due mainly to panic and uncertainty. In some countries legislative measures were at once taken to check this rise. In others the Governments strictly adhered to a hands-off policy and trusted to the natural course of events for readjustment. Within a fortnight the first panic was over and except in the actual war zone prices began to fall. In most places, however, prices did not drop to the July level, and after an interval again took an upward turn, which has probably not yet reached its climax.

The price figures available are somewhat incomplete, but almost everywhere the upward tendency of prices appears. Potatoes were among the few articles which showed a fall in prices in most of the more important countries. Meat, also, was another important article which in many places increased but little in price.

Flour, on the other hand, showed decided changes. Russia is the greatest wheat exporting country of Europe, and the war practically shut off its foreign markets. It is not surprising, therefore, to find that the price of wheat flour had actually fallen in Moscow. In Germany and Austria the rise was marked, prices compared with the July level in Germany showing an increase of 25 per

cent. by December and 34 per cent. by January. In Vienna the increase by December was 73 per cent. and by January 82 per cent. In Switzerland, the Netherlands, and Great Britain, flour prices in December were 13 or 14 per cent. above the July level, but later figures show a continued increase in February, reaching 24 per cent. in the Netherlands and 33 per cent. in Great Britain. Bread prices in most cases followed those of wheat flour. In Germany and Austria, however, the increases in the prices of bread were somewhat less than those in the price of wheat flour.

Sugar prices showed marked differences, resulting from the war, in different localities. In France the best sugar beet fields lie in the northern parts, which were early invaded, and as a result the price of sugar rose sharply. Germany and Russia are sugar exporting countries, and in Berlin and Moscow sugar showed little change in price. England imports its entire supply, and in London the price rose 70 per cent. Turkey usually imports her sugar from Russia and from Austria. The Russian supply was shut off altogether when Turkey entered the war, and the Austrian supply was reduced to what could be brought through by rail, a very uncertain dependence.

Administrative and legislative measures to check the rise in cost of necessities were very generally taken. Denmark, Egypt, Great Britain, Italy, Russia, Spain and Turkey prohibited the export of practically all foodstuffs. France, Norway and Sweden

listed certain articles which must not be exported, and Holland placed an embargo on butter and cheese.

Fixing maximum prices, especially for foodstuffs, by some Government agency was a very common measure. To some extent it was used by every country included in the Bureau's report, although in Great Britain and Sweden so little of the sort was done that these countries might almost be excepted.

Notes from British Labour Gazette.

The *Labour Gazette* of the British Board of Trade for July reported on retail prices of food in the United Kingdom on July 1, in Berlin and in Vienna in May. In the United Kingdom prices were on the whole little higher than a month before, imported meat, fish, tea and eggs showing some advances, while flour and bread declined.

As compared with the prices prevailing in July, 1914, sugar showed an advance of about 68 per cent. and fish of about 64 per cent. Flour is about 50 per cent. and bread about 40 per cent. dearer. The prices of British and of imported meat averaged about 40 per cent. and 50 per cent. higher respectively. With the remaining articles the average change varied from an advance of 33 per cent. in the price of cheese to a slight reduction in the price of potatoes.

The general increase in retail prices of food since the beginning of the war, making an allowance for the relative importance of the several articles in working class households, is rather greater in large towns than in smaller places, and may be estimated at 35 per cent. for the former and at 30 per cent. for small towns and villages.

Prices in Berlin for the month of May were compared with prices in July, 1914, from official data published in the *Statistische Korrespondenz*. Though allowance was made for incomplete data the general level of food prices appeared

65 per cent. higher than in July, 1914. The greatest increases appeared in peas, beans, lentils, rice, eggs, lard, bacon, pork, butter, flour and bread.

Prices in Vienna were reported

higher in May, 1915, than in April, 1914, in all lines quoted except sauerkraut, the greatest increases being in beef, bacon, bread, rice, beans, eggs, lard and margarine.

PRICES, WHOLESALE AND RETAIL, CANADA, JULY, 1915.

I. WHOLESALE PRICES.

Index Number.		
July, 1915.....		147.1
June, 1915.....		147.3
July, 1914.....		134.6

The numbers, it will be understood, are percentages in each case of the average price level prevailing during the decade 1890-1899, the period selected by the Department as the standard of comparison throughout its investigation into wholesale prices. Some 272 articles, carefully selected to represent Canadian production and consumption, are included in the calculation.

THE Department's index number showed a slight decline in July. The chief decreases in prices were in flour and oatmeal but levels were also lower in sheep, fowl, turkeys, cheese, whitefish, salt mackerel, strawberries, canned corn, peas and tomatoes, maple sugar, calfskins, New Brunswick spruce deals, newsprint paper and raw rubber. Prices were higher in grain, hay, eggs, milk, potatoes, turnips, glucose, wool, beaver cloth, knitted woollen underwear, cottons, jutes, harness leather, copper, lead, quicksilver, solder, tin, spelter, zinc, galvanized sheets, barb wire, lead pipe, red lead, copper wire, grindstones, fire

bricks, plaster of Paris, white lead, Paris green, mixed paints, anthracite coal, muskrat skins, and Manilla rope. If the steep rises in spelter and zinc in June and July were included in the calculations, the index numbers for June and July would stand at 149.5 and 149.7 respectively.

As compared with the same period last year prices were higher in the groups: Grains and Fodder, Dairy Products, Miscellaneous Groceries, Woolens, Jutes, Flax Products, Oilcloths, Hides, Leathers, Boots and Shoes, Metals and Implements, Miscellaneous Building Materials, Paints, Oils and Glass, Crockery and Glassware, Table Cutlery, Drugs and Chemicals, Liquors and Tobacco, and Sundries. Prices were lower in Animals and Meats, Fish, Fruits and Vegetables, Cottons, Fuel, Lumber, and Raw Furs.

The accompanying table of the Department's index numbers, arranged by groups of commodities into which the investigation has been divided, shows the average price level for July, 1915, as compared with that of the preceding month and with that of the corresponding month last year.

TABLE SHOWING INDEX NUMBERS BY GROUPS OF COMMODITIES FOR JULY, 1915, JUNE, 1915 AND JULY, 1914.

*Seven commodities off the market, fruit, vegetables, etc. a. Strawberries only. b. Strawberries, cherries and raspberries. c. Including normal rises in the price of spelter and zinc the index numbers for June and July would be 149.5 and 149.7 respectively and for the sub-group Other Metals, 250.8 and 269.4.

More detailed information as to the price movement during July is as follows:

Grains and fodder.—Manitoba wheat, No. 1 Northern, had risen to \$1.32 $\frac{1}{4}$ per bushel at the end of June, and after easing somewhat rose to \$1.40, but afterwards fell to \$1.37. Ontario winter wheat had declined to \$1.11-1.13 at the end of June, but rose to \$1.18-1.20, later falling to \$1.14-1.17. The wheat market had been affected by favourable reports as to crops in the United States and Canada, and the firmness was caused by reports as to wet weather in United States, for a short time. Oats advanced in sympathy with the wheat market, Western oats rising to 63 $\frac{1}{4}$ c at Winnipeg, and easing off, while Ontario oats averaged 3c higher than in June. Barley was down to 69 $\frac{3}{4}$ c at Winnipeg for No. 3 Western, but rose to 73c as a better demand sprang up. Corn rose from 79 $\frac{1}{2}$ c to 84 $\frac{1}{2}$ c, for American, No. 2, Yellow, at Georgian Bay ports. Flaxseed declined from \$1.51 $\frac{1}{4}$ to \$1.39 on account of the light demand. Peas and rye were nominal at the same quotations as in June. Hay advanced \$1.00 at Montreal, No. 1 being up to \$22.00-22.50, and at Toronto rose to \$16.50-18.50. Bran and shorts were steady.

Animals and meats.—Best butchers cattle at Toronto rose to \$9.10 per cwt. under good demand, but eased off to \$8.75. At Winnipeg choice butchers declined to \$7.25 as a large supply of grass-fed cattle came on the market. Hogs rose to \$8.90-9.00, at Toronto, but declined to \$8.40-8.60 on account of heavy receipts. Bacon advanced 1c per lb. and ham $\frac{1}{2}$ c, but lard declined $\frac{3}{4}$ c. Sheep averaged lower than in June. Fowls declined 2c and turkeys 1c per lb.

Dairy products.—Finest creamery butter declined at Montreal from 28 $\frac{1}{2}$ -28 $\frac{3}{4}$ c to 27 $\frac{1}{4}$ -27 $\frac{1}{2}$ c. Dairy butter rose at Toronto from 21-23c to 22-24c. Prices were still 3 to 4c higher than a year ago. Cheese fell from 17 $\frac{1}{4}$ -17 $\frac{1}{2}$ c to

13 $\frac{7}{8}$ -14c. Supplies were heavier and demand from England was light. Milk was up to 17c per gallon at Montreal. Eggs, selected, advanced from 25c to 26c at Montreal, and fresh eggs were upward at Toronto. Supplies were becoming scarce in Ontario, but the receipts from Western Canada eased the market.

Fish.—Fresh whitefish declined from 15c to 13c per lb. at Toronto, and frozen from 9c to 7-8c. Salt mackerel fell from 6c to 5c, and salt herring rose from 2c to 2 $\frac{1}{4}$ c. In the Atlantic cod fisheries, the Lunenburg fleet was reported to be having fair success. The first cargoes of the spring catch were sold at \$5.50 per quintal at Lunenburg. The shore fisheries reported a good catch of cod. The mackerel catch was reported a failure except at the Magdalen Islands. Supplies of herring were reported large.

Fruits and vegetables.—Strawberries declined to 5-9c according to quality, but advanced later. Cherries were down to 50-60c. Raspberries averaged slightly lower. Messina lemons advanced 50c per case. California Valencia oranges came on the market at \$4.00-4.50 as compared with \$3.25 last year. Old potatoes rose from 42 $\frac{1}{2}$ c to 50c per bag at Montreal. Turnips advanced from 35-50c to 50-60c per bag. Canned vegetables were lower on account of large supplies. Tomatoes were reported to have declined to 80c per dozen and corn to 72 $\frac{1}{2}$ c.

Miscellaneous groceries.—Flour continued to decline from the lower levels reached in June on account of good stocks, light demand and the uncertain wheat market. Manitoba first patents were down to \$7.20 per bbl. at Toronto or \$7.00 for car lots. Straight rollers declined to \$5.80 for small lots and \$5.60 for car lots. Oatmeal fell from \$3.92 $\frac{1}{2}$ to \$3.50 per bag. Rice was firmer, but eased off as supplies were received. Rangoon rice rose from \$3.70 to \$3.75 per cwt. Glucose advanced 10c per cwt. The sugar market was steady but showed some firmness. Maple sugar

declined 1c to 8-9c per lb. Cream of tartar was firm.

Textiles.—Ontario washed wool rose from 35-30c to 36-41c, and unwashed wool from 18-25c to 27-31c. A line of knitted woollen underwear rose from \$9.50 to \$10.00 per dozen. Beaver cloth advanced from \$1.75 to \$1.85 per yard. Prices of carpets, rugs, linoleum and woollen clothing were also reported higher owing to the increased manufacturing costs. Raw cotton was slightly higher at New York. Grey cotton averaged higher, but prints were slightly lower. Japan silk was down to \$3.10, and classical Italian to \$3.55 per lb. Jute and hessians were higher, demand being better. A large supply of hessians was bought by the British Government.

Hides, leather, boots and shoes.—Calfskins declined from 15c to 14c, but harness leather rose 1c per lb.

Metals and implements.—Spelter had risen to 30c per lb., although there was practically no buying at that level, but eased off later to 23c. Galvanized iron advanced in sympathy with spelter. Galvanized sheets rose from \$4.55 to \$5.80 per cwt. Zinc sheets were quoted nominally as high as 40c. Aluminum advanced from 26-27c to 30-32c. Copper rose from 21c to 22c. Lead advanced from 6½c to 7½c. Quicksilver rose from \$75.00-80.00 to \$90.00-95.00 per flask. Bar silver declined to 47½c per ounce. Tin rose from 42c to 47-48c. Solder rose from 27c to 28c. Grindstones advanced from \$1.30 to \$1.45 per cwt.

Fuel and lighting.—Anthracite coal advanced 10c per ton. Connellsville furnace coke rose from \$1.50-1.55 to \$1.60, demand being better.

Building materials.—New Brunswick spruce deals declined further from \$17.00 to \$15.50 per M. Stocks were larger and ships available for transport

tation to England were scarce. Supplies of timber in England from Sweden and the north of Russia were also larger. In Ontario a fair volume of business in lumber was passing in rural districts. Fire bricks advanced to \$24.00-40.00 per thousand. Plaster of Paris was up to \$2.20 per barrel. Lead pipe rose to 9-9½c per lb. Red Lead rose from \$7.00 to \$10.00 per cwt. Copper wire advanced from 20-20½c to 21½-22c per pound. Galvanized barbed wire fencing rose from \$2.72 to \$2.80 per cwt. Mixed paints were higher on account of the rise in materials. White lead rose \$1.50 per cwt., being up to \$10.50. Paris green rose to 25c per lb., as stocks were low. There was a good demand for use in killing potato bugs. Other colours were also upwards. Linseed oil declined 10c per gallon as flaxseed was cheaper and demand was light. Turpentine declined from 67c to 64½c per gallon.

Drugs and chemicals.—Opium was firmer. Quinine, alum and borax were upward.

House furnishings were steady.

Miscellaneous.—Raw muskrat furs advanced 1c per skin. English hops were 3c higher as a result of fly attacks on the vines. Newsprint paper was down 5c, to \$1.85-1.95 per cwt. Pulp, ground wood, was easier at \$15.00 per ton. Sulphite pulp was somewhat firmer. Manila rope advanced from 15½c to 16c per pound. Raw rubber declined 1c per lb.

Course of Prices in Other Countries.

The accompanying table, which includes the latest findings available of index numbers of prices in Great Britain, United States and France, will enable a review to be made as to recent movements and tendencies in prices in these countries as compared with Canada.

(a.) Base 1890-1899=100; 272 commodities included.

(b.) Base 1901-1905=100; prices of 44 commodities at January 1st of each year and the end of each month

(c.) Prices in 1867-1877=100; 45 commodities included.

(d.) Total cost at the first of each month or year of a certain quantity of 96 commodities.

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included.

(h.) Index Number for August 15th, \$9.8495.

*Revised figures.

The index number of the *London Economist* at the end of July stood at 149.1, as compared with 147.7 at the end of June and 116.6 at the end of July, 1914. The largest advance in July was in cereals and meat. Other food products, textiles and minerals were also higher, but miscellaneous articles were lower.

The Sauerbeck index number, continued in the *Statist*, London, was slightly lower at the end of June than at the end of May, as a result of lower prices for food, especially wheat, flour, and meat.

Bradstreet's, New York, July 10, 1915, reported:

Large exports and attenuated import trade have operated to advance prices of a number of commodities, hence Bradstreet's index number of prices of staples as of July 1 shows a new high level, higher by a shade even than the high point touched on August 15, 1914, following the outbreak of the war. The July 1 number is \$9.8598, a rise of 1.4 per cent. over June 1, of 7.8 per cent. above August 15, 1914. Nine groups of commodities advanced, while four declined, conspicuous in the latter respect being breadstuffs, due to large crop prospects; building materials, due to dullness in new construction; fruits and oils.

Dun's Review, New York, July 17, 1915, reported as follows:

In spite of the fact that many articles of consumption gained in value, Dun's index number of commodity prices showed a further recession last month because of the continued decline in breadstuffs and the lower cost of meats and provisions. Thus, the total on July 1 fell to \$124.958, against \$125.992 a month previous, and only \$119.708 on July 1, 1914. Two years ago the figures were down to \$116.319, which was the lowest level reached since the spring of 1911.

The index number of the *Annalist*, New York, including twenty-five foods, stood at 145.17 for the first week in August as compared with 144.69 for the same date in 1914.

II. RETAIL PRICES.

THE feature of the month in retail prices was the general decline in flour, in sympathy with the wheat market and wholesale market for flour. Eggs and tea were upward but butter, cheese, rolled oats, and sugar were lower.

Notes on Retail Prices.

Beef.—Sirloin steak was reported higher in price at Hull, Que., and at Vancouver, B.C., and lower at Sorel and St. John's, Que., and at Toronto, Berlin and Chatham, Ont. Round steak similarly advanced at Sorel and St. John's, Que., and at Ottawa and Toronto, Ont., and declined at Hull, Que., at Hamilton, Ont., and at New Westminster, B.C. Rib roast and medium shoulder roast rose at Sorel and St. John's, Que., and at Toronto, Ont., and declined at Hull, Que., and Vancouver, B.C., and medium shoulder roast alone, advanced at St. Thomas, Ont. At Toronto it was reported that a good demand for the best cattle for export caused an increase in the price of choice cuts.

Veal was somewhat lower at Sorel, Que., at Peterborough, Ont., and at New Westminster, B.C., and higher at Ottawa, Toronto, and Hamilton, Ont., and at Vancouver, B.C.

Mutton.—The price of mutton declined at Montreal, Que., and at New Westminster, Vancouver and Victoria, B.C., and advanced at Halifax, N.S., at Ottawa, and Berlin, Ont., and at Winnipeg, Man.

Pork.—Fresh roasting pork advanced at St. John, N.B., at Hull, Que., at Ottawa and Stratford, Ont., and at New Westminster, B.C., and declined at Saskatoon, Sask. Fresh chops were also lower at Saskatoon, Sask., and higher at Ottawa, Orillia and London, Ont. Salt pork, Canadian Mess, was reported lower at Truro, N.S., at Hull, Que., at Saskatoon, Sask., and at New Westminster, B.C., and higher at Berlin, Ont., and at Brandon, Man.

Bacon.—Breakfast bacon was reported to be higher in price at Sydney, N.S., at Newcastle, N.B., at Ottawa, Orillia, Toronto, Woodstock, St. Thomas and Chatham, Ont., and lower at Niagara Falls, Ont., and at Lethbridge, Alberta. At Ottawa, Ont., it was stated that a demand from Europe had raised the price of smoked meats.

Fish.—Fresh fish were reported lower at Peterborough and Stratford, Ont., and at New Westminster and Victoria, B.C., and higher at Hull, Que., and at Belleville and Toronto, Ont. Salt herrings from the barrel were steady throughout the Dominion. Canned salmon declined at New Westminster, B.C., but advanced at Cobalt, Ont.

Lard was upward at Hamilton, Galt and Chatham, Ont., and at Fernie, B.C.

Eggs. — New laid eggs advanced in price in twenty-three of the cities and declined in nine. Packed eggs similarly advanced in seven cities and declined in two, and in many cities were reported to be off the market. At Montreal it was stated that farmers were holding their eggs for hatching purposes, therefore shortening the supply.

Milk declined at Truro, N.S., at Sorel, Que., and at Kingston, Ont. At the latter point the supply was reported to be exceptionally heavy.

Butter.—Dairy butter was higher in ten cities, but was lower in twenty-one. Similarly creamery butter was reported down in twenty-four cities and higher in nine. In the Maritime Provinces supplies were reported plentiful, but in some localities in Ontario it was stated that farmers were shipping their cream out instead of making butter.

Cheese.—Old cheese advanced at Edmonton, Alberta, but declined at Ottawa, Peterborough, St. Catharines and Stratford, Ont. New cheese was higher at Amherst, N.S., at Brantford, Stratford, St. Thomas, Ont., and at Edmonton, Alberta, and was lower at St. John, N.B., at Montreal, Que., at Ottawa, Brockville, Orillia, St. Catharines, Berlin and Cobalt, Ont., and at New Westminster, B.C.

Bread was reported lower at New Westminster, B.C.

Flour declined in thirty-one of the cities and advanced in one. These de-

clines were reported to be due to the recent reductions in the wholesale price.

Rolled oats were lower at Fredericton, N.B., at Brockville, Toronto, Cobalt, Ont., and at Lethbridge, Alberta, and higher at Edmonton, Alberta.

Rice.—Good medium rice was lower at Newcastle, N.B., and at Fort William, Ont., and Patna rice was lower at Edmonton, Alberta.

Tapioca advanced at Berlin and Cobalt, Ont., and at Vancouver, B.C.

Canned tomatoes, peas and corn were lower at Brockville, Ont., and at Brandon, Man., while at Vancouver, B.C., canned tomatoes alone advanced. At Brockville it was reported that the reduction in these goods was made to encourage buying in order that old stocks might be cleared out.

Beans.—The price of beans was down at Truro, N.S., and up at Sorel, Que., at Berlin, Ont., at Brandon, Man., at Saskatoon, Sask., and at Vancouver, B.C.

Evaporated apples were reported lower at Sorel, Que., and higher at Cobalt, Ont.

Prunes.—The price of prunes advanced at Newcastle, N.B.

Sugar.—Granulated sugar was lower at Truro, N.S., at Sorel, Que., and at Prince Albert, Sask., and higher at Newcastle, N.B., and at Peterborough and St. Thomas, Ont. Yellow sugar declined at St. Thomas, Ont., and at Victoria, B.C., and advanced at Truro, N.S., at Newcastle, N.B., and at Peterborough, Ont.

Tea.—Black tea was higher at Truro, N.S., at Peterborough, Toronto, Guelph and Port Arthur, Ont. Green tea advanced also at Peterborough, Toronto, Guelph and Port Arthur, Ont.

Coffee was reported higher at Berlin, Ont., and lower at Brandon, Man.

Potatoes.—The price of potatoes was lower in eighteen of the cities and higher

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a quarter of each locality usually occupied by workmen.

The exact quality for which the quotation is given is set forth in the case of each commodity, and in order that the statistics may be available for purposes of comparison. Such comparisons, however, will as in a family budget.

The list of localities includes nearly every place having a population of 10,000 people, and is

The quotations contained in the table have been furnished by the correspondents of the Labour Gazette quoted, etc., from the Department.

k. Lower price to coal company employees only, run of mines coal, \$2.75 to employees, \$3.75 to others.

in fourteen. The coming of new potatoes was a factor which contributed to the lowering of the price of old stocks.

Vinegar.—White wine vinegar was somewhat higher at Victoria, B.C.

Starch remained steady throughout the Dominion.

Coal.—Anthracite coal was higher at Halifax, N.S., at Sherbrooke, St. Hyacinthe, Que., at Peterborough, Niagara Falls, Galt, Guelph, Woodstock, Owen Sound, Port Arthur and Fort William, Ont. In most cases these increases were reported to be the usual advances from the summer price. At Quebec, Que., and at St. Catharines, Ont., the price was re-

ported lower. At Quebec city it was stated that stocks in retailers' hands were heavy and buying slow.

Wood.—Both hard and soft wood were reported unchanged.

Coal oil was steady.

Rent.—Rates for dwellings both with and without sanitary conveniences were lower in Niagara Falls, Ont., while a reduction was reported at Toronto for houses without sanitary conveniences. At Niagara Falls it was stated that in some cases families were doubling up and in others that landlords were reducing their rates in order to hold good tenants.

FAIR WAGES SCHEDULES AND CLAUSES IN GOVERNMENT CONTRACTS AWARDED DURING THE MONTH OF JULY, 1915.

DURING the month of July the Department received for insertion in the *Labour Gazette* information relating to 11 contracts awarded by the Department of Public Works. Of the above 11 contracts there was one which contained a fair wage schedule. In the 10 other contracts no fair wage schedules were inserted, but the general fair wage clauses providing for the payment of the rates generally accepted as current in the locality where the work is being carried on were inserted. A statement is added for supplies, given by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System.

Trade or Class of Labour.	Rate of Wages: Not less than the following:
Masons.....	\$0.55 p. h., 8 h. per day.
Stonecutters.....	0.55 " 8 " "
Bricklayers.....	0.55 " 8 " "
Sheet metal workers.....	0.40 " 9 " "
Carpenters.....	0.40 " 9 " "
Metal lathers.....	0.45 " 9 " "
Plasterers.....	0.50 " 9 " "
Electrical workers.....	0.35 " 9 " "
Plumbers and steamfitters....	0.44 " 8 " "
Painters and glaziers.....	0.33 " 9 " "
Plasterers' labourers.....	0.30 " 9 " "
Builders' labourers.....	0.30 " 9 " "
Ordinary labourers.....	0.25 " 9 " "
Driver with one horse and cart	\$3.00 per day of 9 hours.
Driver with two horses & wagon	5.30 " 9 hours.

Fair Wages Schedules.

The contract containing a fair wages schedule was as follows:

Agricultural Building, Experimental Farm, Ottawa, Ont.—Name of contractor, Wm. Ashe, Ottawa, Ont. Date of contract, July 29, 1915. Amount, \$5,-300.

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wages schedule, but contained the following clauses providing for the payment of wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the foregoing clauses were the following:

DEPARTMENT OF PUBLIC WORKS.

Electric light wiring and fittings in Custom House, St. John, N.B.—Name of contractor, Wm. J. O'Leary & Company, Montreal, Que. Date of contract, March 31, 1915. Amount, \$3,970.

Waterproofing basement of Custom House, Quebec, Que.—Name of contractor, Standard Paint Company of Can-

ada, Limited, Montreal, Que. Date of contract, June 28, 1915. Amount, \$6,157.

Construction of new buckets, tumblers, etc., dredge "Mastodon."—Name of contractor, The Jenkes Machine Company, Limited, Sherbrooke, Que. Date of contract, June 30, 1915. Amount, \$35,295.

Fittings in Post Office, East Angus, Que.—Name of contractor, The Berlin Interior Hardwood Company, Limited, Berlin, Ont. Date of contract, July 27, 1915. Amount, \$2,040.

Fittings in Postal Station "G," Toronto, Ont.—Name of contractor, The Berlin Interior Hardwood Company, Limited, Berlin, Ont. Date of contract, July 27, 1915. Amount, \$2,189.

Customs fittings in Public Building, Bracebridge, Ont.—Name of contractor, The Berlin Office and Fixture Company, Limited, Berlin, Ont. Date of contract, July 29, 1915. Amount, \$528.

Fittings in Post Office, Medicine Hat, Alta.—Name of contractor, The Berlin Office and Fixture Company, Limited, Berlin, Ont. Date of contract, July 29, 1915. Amount, \$3,398.

The dredging contracts containing a special clause were as follows:

Dredging, Rocky Point, P.E.I.—Name of contractor, V. T. Bartram, Toronto, Ont. Date of contract, June 29, 1915. Contract price: Class "B" \$0.16-95-100c. per c. yd. (scow measure).

Dredging, Eastern Gap, Toronto, Ont.—Name of contractor, R. Weddell Company, Trenton, Ont. Date of contract, July 2, 1915. Contract price: Class "B" \$0.11c. per c. yd. (scow measure).

Dredging, Lower Derby, (South-west Miramichi River, N.B.)—Name of contractor, Peter England, Chatham, N.B. Date of contract, July 19, 1915. Contract price: Class "B" \$0.36c. per c. yd. (scow measure).

The said contractor further agrees and binds himself to pay to the workmen engaged in the said work such rates of wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district where the work is to be carried on, and if there are no current rates of wages in the district, then fair and reasonable rates; in the event of a dispute arising as to what is the current or a fair and reasonable rate of wages for any of the classes of labour required, it shall be determined by the Minister of Labour, whose decision shall be final.

POST OFFICE DEPARTMENT.

During the month of June, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages, and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Supplying stamping material and repairing stamping pads.....	\$ 125.00
Supplying New Mail Bags.....	11,466.30
Repairing Mail Bags.....	660.24
Supplying Mail Bag Fittings.....	1,859.37
Making and repairing miscellaneous articles of Postal Stores.....	35.37
Making and supplying street letter boxes...	3,702.00
Making and supplying articles of official uniform.....	570.11

TRADE DISPUTES DURING JULY, 1915.

TWO new disputes were reported to the Department of Labour during July, one less than the number recorded for July, 1914.

Analysis of Trade Disputes during July.

Number and magnitude.—Nine strikes were reported in existence in Canada during July, two less than during the previous month and eight less than in July, 1914. Twenty firms and 529 employees were involved in these nine disputes including two firms and 260 employees concerned in the new disputes of the month. During July, 1914, 141 firms and 1,993 employees were involved in disputes, including three firms and

207 employees concerned in the new disputes of the month.

Time losses in working days.—The loss of time to employees through trade disputes during July was approximately 6,740 working days as compared with 6,002 working days lost in June and 42,853 days lost in July, 1914. The new disputes of the month accounted for a loss of 1,420 working days as compared with 987 working days lost as a result of new disputes in July, 1914.

Trades affected by new disputes.—The following table shows the trades affected by new disputes of the month and the number of employees in each group:

TRADES.	No. of disputes.	No. of employees
Metal	2	260
Total.....	2	260

Localities affected by new disputes.—Both of the new disputes of the month occurred in the province of Ontario.

Causes of the new disputes.—The new disputes were for the following causes: (1) against reduction in wages; (2) against reduction in wages and employment of particular persons.

Results of disputes.—Two disputes were settled during July. In one case the strikers' places were filled, and in the other the men returned to work at reduced rates.

Disputes beginning before July.

Trade disputes existing July 31, and continued from earlier months were as follows:

- (1) Plumbers and steamfitters, Victoria, B.C.
- (2) Plumbers and steamfitters, Port Arthur and Fort William, Ont.
- (3) Moulders, Smith's Falls, Ont.
- (4) Sheet metal workers, Toronto, Ont.
- (5) Cap makers, Toronto, Ont.
- (6) Brewery workers, Montreal, Que.
- (7) Iron moulders, Peterborough, Ont.

Conditions remained practically the same as in the previous month in regard to all of the above strikes.

Cap Makers, Toronto.—A strike of cap makers occurred on June 20, but was

only reported to the Department during July. This strike was the result of the company attempting to reduce the wages of its employees. The employees also demanded that the shop should be a strictly union one and to this the employers objected. The dispute remained unsettled at the end of July.

Paper Makers, Donnacona.—On June 24, employees of the Donnacona Paper Company of Donnacona, Que., went on strike in sympathy with paper makers in various parts of the United States. No demands were made to the employing company. On July 19, the plant was again in operation with a new force of men working under the same conditions as previous to the strike.

Disputes beginning during July.

Two new disputes occurred during July, iron moulders, Peterborough; and labourers at Sault Ste. Marie.

Iron Moulders, Peterborough.—Ten men employed by a Peterborough lock works went on strike over a disagreement about piece-work prices and objection to company's proposal to inaugurate a day-work system. No settlement was reported at the end of July.

Labourers, Sault Ste. Marie.—On July 15 about 250 labourers in the employ of the Algoma Steel Company at Sault Ste. Marie went on strike owing to a wage decrease of ten per cent. and objection to working under a certain employee of the company; this decrease being part of general reductions made by the company in salaries and wages on account of the war and, as it was stated, in order to keep the plant going on reduced time. A conference resulted in the men resuming work at the reduced rates upon the promise that as soon as conditions warranted, increased wages would be granted. The employee objected to was dismissed.

TABLE OF TRADE DISPUTES DURING JULY, 1915.

Occupation.	Locality.	Alleged Cause or Object.	No. of Firms or Establishments affected.	Approximate No. of Employees affected.		Date of Commencement.	Date of termination.	Result.
				Male.	Female.			
DISPUTES BEGINNING BEFORE JULY.								
<i>Building</i> — Plumbers & Steam-fitters.....	Victoria, B.C.....	Against reduction in wages.....	5	32	Feb. 16, 1915.....	Unsettled at end of the month.
Plumbers & steam-fitters.....	Port Arthur & Fort William, Ont.....	Employers' refusal to sign a new agreement on expiration of old one.....	8	20	June 1, 1915.....	" "
<i>Metal</i> — Moulders.....	Smith's Falls, Ont.....	Against reduction in wages.....	1	40	May 1, 1914.....	" "
Sheet Metal Workers.....	Toronto, Ont.....	Jurisdictional—between carpenters and sheet metal workers....	1	15	June 25, 1914.....	" "
<i>Clothing</i> — Cap makers.....	Toronto, Ont.....	Against reduction in wages and for a union shop.....	1	12	June 20, 1914.....	" "

Food and Tobacco Preparation.— Brewery Workers	Montreal, Que.	Demand for shorter hours, a minimum wage scale and recognition of the union.....	1	10	June 15, 1914.....	Unsettled at end of the month.
	Donnacona, Que.	In sympathy with a strike in progress in the United States	1	140	June 24, 1915..	Strikers' places filled.

DISPUTES BEGINNING DURING JULY.

Metal:— Iron moulders.....	Peterborough, Ont. .	Against reduction in wages.....	1	10	July 12, 1915.....	Unsettled at end of the month.
	Sault Ste. Marie, Ont.	Against reduction of wages and employment of particular persons	1	250	July 15, 1915..	Men returned to work at reduced rates. Person objected to dismissed.

* Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for the other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF JULY, 1915.

Under this heading, account is taken of such accidents only as were sustained by workmen in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the country or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Bureau of Mines of Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

DURING the month of July, 1915, according to the industrial accident record of the Department of Labour, 58 workpeople were killed and 254 injured. The record for the month of June was 84 killed and 205 injured, and that for the month of July, 1914, was 94 killed and 596 injured. A comparison of the July record with that for the month of June shows that there were 26 fewer workpeople killed and 49 more injured in July than in June. There were 36

fewer workpeople killed and 342 fewer injured in July, 1915, than in July, 1914.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF JULY, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING THE MONTH OF JULY, 1915.

Trade or Industry.	Locality.	Date	Number.	Cause of Fatality.
Agriculture—				
Farmer.....	Durban, Man.....	July ..	1	Gored by a bull.
".....	East Hill, Ont.....	" 12	1	Mangled by gasoline engine.
".....	St. Fulgence, Que.....	" 30	1	Kicked by a horse.
".....	Ste. Genevieve, Que.....	" 13	1	Struck head on barn door arch.
".....	MacRorie, Sask.....	" 27	1	Buried in cave-in of well.
".....	MacLaren's Landing, Ont.....	" 29	1	Horses attached to a hay rake ran away.
Farm Laborer.....	Mitchell, Ont.....	" 13	1	Kicked by a horse.
Fishing and Hunting—				
Fishermen.....	St. John, N.-B.....	" 9	3	Drowned,—boat capsized.
Lumbering—				
River driver.....	Parry Sound, Ont.....	" 22	1	Crushed by logs.
Feller.....	Teak Island, B.-C.....	" 24	1	Crushed by falling tree.
Sawmill employee.....	Portapique, N.-S.....	" 14	1	Mangled by machinery.
Mining—				
Miners.....	Thetford Mines, Que.....	" 10	2	Fall of rock.
".....	Black Lake, Que.....	" 15	1	" "
".....	New Waterford, N.-S., (Col. No. 2).	" 22	1	Fall of coal.
".....	Sydney, N.-S. (Hub Col.).....	" 3	1	" "
".....	" (Reserve, No. 5 mine).....	" 9	1	" " and rock.
Quarry workers.....	Rosemount, Que.....	" 30	1	Premature explosion of dynamite.
Mine driver.....	Coalhurst, Alta.....	" 20	1	Run over by a mine car.
Smelter employee.....	Granby, B.-C.....	" 19	1	Crushed by machinery.
Building Trades—				
Carpenter.....	Montreal, Que.....	" 5	1	Fell from a scaffold.
Sheet metal worker.....	Toronto, Ont.....	" 20	1	Fell from a building.
Laborer.....	Montreal, Que.....	" 22	1	Struck by a swinging derrick chain.
Metal trades—				
Metal worker.....	Toronto, Ont.....	" 10	1	Fell down elevator shafts.
".....	".....	" 10	1	Fell from a building.
Boiler maker.....	Toronto, Ont.....	" 3	1	Crushed between wall and hoist.
Lineman.....	Toronto, Ont.....	" 20	1	Fell from a pole.
".....	Grimsby, Ont.....	" 16	1	Electrocuted.
Food and Tobacco Preparation—				
Brewery worker.....	Montreal, Que.....	" 8	2	Asphyxiated.
Steam Railway Service—				
Brakeman.....	Dunmore, Alta.....	" 21	1	Run over by a train.
".....	Fort Erie, Ont.....	" 1	1	Crushed between locomotive and a car.
Painter.....	Campbellton, N.-B.....	" 26	1	Drowned,—fell from a bridge.
Shed Porter.....	Montreal, Que.....	" 5	1	Falling case of merchandise.
Employee.....	Geneva, Ont.....	" 4	1	Run over by a train.
Electric Railway Service—				
Conductor.....	Toronto, Ont.....	" 25	1	Fell from running board of street car.
Navigation—				
Dredgehand.....	Upsalquitch, N.-B.....	" 7	1	Drowned,—fell from a scow.
Longshoreman.....	Montreal, Que.....	" 21	1	Fell into hold of vessel.
".....	Halifax, N.-S.....	" 15	1	Drowned,—fell from bundle of deals.
Miscellaneous Transport—				
Teamster.....	Hull, Que.....	" 6	1	Drowned,—wagon went over edge of wharf.
".....	Dixville, Que.....	" 2	1	Crushed by a wagon.
".....	Montreal, Que.....	" 5	1	Crushed by a falling box.
Public and Civic Employees—				
Government Grain Inspector.....	Fort William, Ont.....	" 18	1	Fell through uncovered opening in grain elevator.
Miscellaneous Skilled Trades—				
Employees of Cordite factory.....	Belœil, Que.....	" 6	9	Burned to death in Cordite factory fire.
Bookkeeper (female).....	Orillia, Ont.....	" 23	1	Burned to death in a fire which destroyed garage.
Unskilled Labour—				
Laborer.....	Montreal, Que.....	" 1	1	Crushed by falling rock.
".....	Transcona, Man.....	" 16	1	Cave-in of a sewer.
".....	Sarnia, Ont.....	" 17	1	Crushed by a wagon.

IMMIGRATION AND COLONIZATION.

THE official statements given below with regard to British emigration, the number of homestead entries made, land patents issued, etc., are published, except where otherwise indicated, by courtesy of the Department of the Interior.

BRITISH EMIGRATION.

During the month of June, 1915, the number of passengers leaving the United Kingdom for British North America, according to official returns of the British Board of Trade, was as follows:

Month.	NATIONALITY									
	English.		Welsh.		Scotch.		Irish.		Total British Subjects.	
	1915	1914	1915	1914	1915	1914	1915	1914	1915	1914
June..	1,029	5,586	2	56	390	1,790	83	417	1,504	7,849

In the present issue of the *Labour Gazette*, statements regarding lands patented and homestead entries are given for two months—May and June,—statements for May not having been received in time for last month’s issue of the *Labour Gazette*.

Lands Patented.

STATEMENT OF LETTERS PATENT COVERING DOMINION LANDS SITUATE IN MANITOBA, SASKATCHEWAN, ALBERTA, BRITISH COLUMBIA, AND THE YUKON TERRITORY, ISSUED FROM THE DEPARTMENT OF THE INTERIOR DURING THE MONTH OF MAY, 1915, AS COMPARED WITH THE MONTH OF MAY, 1914.

NATURE OF GRANT.	May, 1915.		May, 1914.	
	No. of Patents.	No. of acres.	No. of Patents.	No. of acres.

RECENT INDUSTRIAL AGREEMENTS.

DURING the month an agreement between Local No. 15, of the International Association of Heat and Frost Insulators and Asbestos Workers, and the various asbestos companies in Winnipeg came into effect, some thirty members of the union and five firms being concerned. The agreement went into effect on July 1, and is to continue in force until December 31, 1917. The various articles of the agreement are given below:

ARTICLE II.

A work day shall consist of eight (8) hours between 8 a.m. and 5 p.m. with one hour for lunch. The working day shall be known as regular time and shall be time actually employed at work, except on Saturday when work shall cease at 12 noon.

ARTICLE III.

Sec. 1. A time and one-half ($1\frac{1}{2}$) rate shall be paid for work performed between 5 p.m. and midnight and Saturday afternoons, and a double rate shall be paid for all work performed between midnight and 8 a.m. in addition to Sundays and the following holidays: Good Friday, Dominion Day, Labour Day and Christmas Day.

Sec. 2. On work situated where members of the parties of the second part board a work day of ten (10) hours from 7 a.m. to 6 p.m. shall prevail at single time and overtime as herein before provided for in Article 3.

ARTICLE IV.

Sec. 1. The party of the first part hereby agrees that they will not permit any individual or any member of the

firm or their representatives or agents to execute any part of the work of application of materials, and it is distinctly understood and agreed that Local No. 15 will not permit any of its members to estimate on or contract for any work, or to act in any capacity other than that of workman to party of the first part.

Sec. 2. It is distinctly understood and agreed that the members of the party of the second part work only for contractors who conform to this agreement.

Sec. 3. The party of the first part agrees to pay to the journeyman mechanics, parties of the second part, their present rated wages until June 30, 1915, from July 1, 1915, to June 30, 1916, at the rate of (45) forty-five cents per hour, from July 1, 1916, to December 31, 1917, at the rate of (50) fifty cents per hour and to improvers from this date until expiration of this agreement as follows:

Third class—Twenty-five (25) cents per hour.

Second class—Thirty-five (35) cents per hour.

First class—Forty (40) cents per hour, at which latter rate they will be paid until declared mechanics by a competent Board.

ARTICLE V.

Sec. 1. No improver shall execute work unless in company of a journeyman proper, except in cases where first class improvers execute work alone when the services of an improver are not required.

Sec. 2. The number of mechanics in the employ of the party of the first part shall not be less than one-third ($\frac{1}{3}$) of his total working force, of which the im-

provers must not exceed two-thirds ($\frac{2}{3}$) of said working force.

Sec. 3. Whenever necessary common labourers may be employed, when the character of certain work demands it, to mix and distribute insulating materials.

Sec. 4. Within the confines of this agreement the party of the first part agrees to employ only members of the party of the second part in the application of all pipe and boiler coverings and insulations of hot surfaces and ducts, also in the coverings of all cold piping and circular tanks connected with same; this shall cover all alterations, repairing of work similar to above, and the use of all kinds of materials for the purposes mentioned. When Local No. 15 fails to supply the party of the first part with sufficient workmen the party of the first part may employ the necessary workmen whenever and wherever he can, such emergency men to be paid at the regular classification rates as specified in this agreement. They shall work until Local No. 15 furnishes men to replace them.

ARTICLE VI.

Sec. 1. Members of the party of the second part shall be on all work situated six (6) miles from Winnipeg City Hall at 8 a.m. and leave said work at 5 p.m.

Sec. 2. When travelling the members of the party of the second part shall receive single time except where sleeper is provided when no time shall be allowed.

Sec. 3. On work situated beyond six (6) miles from Winnipeg City Hall, where men do not board they shall receive single time while travelling to and from the six (6) mile limit.

ARTICLE VII.

Upon any issue that this agreement is silent or obscure action shall be taken by a Joint Trade Board composed of four (4) sign parties to this agreement and four (4) members (mechanics) of Local No. 15. This Board shall also act as the Examining Board through which mechanics' cards shall be issued and improvers be advanced.

REPORTS OF DEPARTMENTS AND BUREAUS.

The following reports of departments and bureaus were received at the Department of Labour, Ottawa, during July, 1915:

DOMINION REPORT.

Coal Fields of British Columbia.

Coal Fields of British Columbia, compiled by D. B. Dowling. Department of Mines. Geological Survey, Memoir 69. Ottawa: Government Printing Bureau, 1915. Pages, 357.

A Memoir on the Coal Fields of British Columbia issued by the Department of Mines contains a detailed account of the various coal-bearing areas in that province both from a geological and industrial standpoint. It is divided into the Cretaceous and the Tertiary coals, the former of which embrace twenty-one, and the latter twenty areas. The volume is illustrated with a map of the coal

fields of British Columbia, and twenty-three diagrams.

Canadian Shipping.

List of Shipping issued by the Department of Marine and Fisheries, being a list of vessels on the Registry Books of the Dominion of Canada on the thirty-first day of December, 1914.

The Report on Shipping issued by the Department of Marine and Fisheries shows that the total number of vessels on the Register Books of the Dominion on December 31, 1914, was 8,772, measuring 932,422 tons, being an increase of 227 vessels and 35,457 tons, as compared with 1913. The number of steamers on the Register Books on the same date was 4,054, with a gross tonnage of 744,783. Placing the average value at \$30 per ton, the value of the net regis-

tered tonnage of Canada on December 31, 1914, would be \$27,972,660. The number of new vessels built and registered in Canada during the past year was 327, measuring 43,346 tons net register, with an estimated value of \$1,950,570. About 45,163 men and boys, inclusive of the masters, were employed on ships registered in Canada during the year 1914.

QUEBEC REPORT.

Mineral Production.

Report on Mining Operations in the Province of Quebec during the year 1914. Department of Colonization, Mines and Fisheries, Quebec, 1915. Pages, 151.

The Report on Mining Operations in the Province of Quebec shows that the mineral production of that province during the year 1914 reached a value of \$11,732,783, a decrease of \$1,387,028, or 10.57 per cent, compared with the previous year, but greater by \$545,673 than the production of 1912. In 1914 there were employed in mining in Quebec 8,971 workmen, who received in wages a total of \$4,291,735. The most valuable product was cement for which there was received \$3,325,055, followed by asbestos, the value of which was \$2,895,935.

BRITISH COLUMBIA REPORT.

The Mining Industry.

Annual Report of the Minister of Mines for the year ending December 31, 1914, being an account of mining operations for gold, coal, in the Province of British Columbia. Victoria, B.C. King's Printer, 1915. Pages, 544.

The Report on the Mining Industry of British Columbia for the year 1914 contains statistical tables showing the total mineral output of the province to the end of 1914, the production of the past year in detail, and a summary of the production of each of the last four years. Since 1852 the total mineral production of the

province is estimated at the value of \$486,822,745. Of this sum \$73,269,603 represented placer gold, \$81,595,516 lode gold, \$149,814,462 coal and coke, and \$86,939,370, copper. The production for 1914 amounted to \$26,388,825, compared with \$30,296,398 in 1913, there having been a decline in all products except placer gold which increased from \$510,000 to \$565,000, and zinc which increased from \$324,421 to \$346,125.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Damages awarded for loss of toe.

A LIFE pension of \$24 and a lump sum of \$281.25 was awarded recently in a Quebec Court to a labourer who lost his little toe in an accident accruing in the course of his daily work.

The plaintiff had been engaged as a rope man on a moving derrick. One day a wheel of the derrick passed over his right foot, with the result that the small toe had to be amputated, whilst the one next to the small toe became rigid. The plaintiff, who was earning \$2.20 a day, claimed that he had suffered a diminution of earning capacity of one-third. He accordingly asked half salary for all the time he would be laid up, whilst he asked for a pension equal to one-half of the amount whereby his earning power had been decreased. The defendant pleaded gross and inexcusable negligence on the part of the plaintiff and also represented that there had been no reduction in earning power as the plaintiff had been able to return to work at the same salary. However, defendant tendered \$159.50, this being at the rate of \$1.10 for 145 days, though the defendant claimed the plaintiff had been enabled to return to work long before 145 days.

The court after reviewing the case at length found that, according to the testimony of the physicians, plaintiff's strength had been impaired by about 8 per cent. as a result of the accident. Plaintiff was entitled to half salary during all the time he was totally incapacitated from work. He was also entitled

to a pension equal to one-half of the percentage by which his strength or working capacity had been reduced. Judgment as stated. (*Romano v. O'Sullivan*.)

Negligence. — Government Railway. — Brakesman attempting to board moving train.

A brakeman employed on a Government railway attempted to board a way-freight train while in motion. In doing so he slipped and fell, a wheel of the last truck of the van passing over one of his legs, injuring it to such an extent that it had to be amputated. Action was taken to recover damages.

By Rule 48 of the Railway Regulations of December 7, 1889, it was provided that "no person shall be allowed to get into or upon or quit any car after the train has been put in motion, or until it stops. Any person doing so, or attempting to do so, has no recourse upon the Railway Department for any accident which may take place in consequence of such conduct."

It was held (1) that suppliant was a "person" within the meaning of the above rule and was subject to its provisions; (2) that the suppliant accepted the risk incidental to his attempt to board a moving train; (3) that as the proximate cause of the accident was the suppliant's act in attempting to board a moving train he had contributed to the determining cause of his injury and the doctrine of *faute commune* could not be applied even if the railway authorities had been guilty of negligence in allowing the platform of the car by which the suppliant attempted to board the train to be defective—a fact not so found by the court. (*Turgeon v. The King*.)

Workmen's Compensation. — Indemnity awarded widow.

Compensation for the loss of her husband, a workman who died of gastro-enteritis, was granted a widow who sued the defendant company for \$2,000 in virtue of the Workman's Compensation Act. The evidence showed that plaintiff's husband was engaged with a fellow workman in lifting a heavy block of stone when his companion released his hold with the result that the full weight fell upon the deceased. He suffered internal injuries, experiencing pain in the side and abdomen. The internal injuries brought about gastro-enteritis, from which disease the victim died sometime later. The defendant denied that there had been any accident and pleaded that the death of the deceased was brought about by purely natural causes, as he was an alcoholic and the progress of the disease had been the normal and natural evolution.

The court, however, found that there had recently been an accident. The victim had complained to his foreman at the time and had told him of his injuries. He had suffered greatly at the time. The plaintiff had amply proved the relation of cause and effect between the accident and the condition found in the victim immediately subsequent thereto. The proof clearly showed that the death of the plaintiff's husband had been brought about indirectly as a result of a strain he suffered when engaged in lifting the piece of stone. The immediate cause of death was shown to be gastro-enteritis, but this disease had been brought about by the accident. Judgment was given for \$2,000, the full amount claimed. (*Bean v. Asbestos Corporation of Canada.*)

Cutting pulpwood an agricultural pursuit.

—Injury to woodsman.—Compensation Act not applicable.

Action was brought by the plaintiff, a woodsman, claiming an indemnity be-

cause whilst engaged in felling trees for the defendant, who had contracted to supply pulpwood to a pulp company, he cut his foot.

The court after a lengthy review held that the mishap was not one which fell under the operation of the Workmen's Compensation Act, under which the plaintiff claimed, because it was the plaintiff who had injured himself and because the accident did not result from mechanism such as is found in a manufacturing establishment.

The Judge further pointed out that a special provision of the Compensation Act excluded agricultural pursuits from amongst the industries affected by the Act. The plaintiff was to be considered as working for a person engaged in agricultural pursuits, and in no wise in manufacturing. The intention of the legislator evidently was to protect the workman against the mishaps of industrial pursuits and in no wise against the dangers inherent to the cultivation of the soil or forestry operations against which personal initiative rendered it necessary upon them to protect themselves. Such being the law, in the opinion of the Judge, a just application of it to the case then under review rendered it necessary for the court to declare that the felling of trees was an agricultural operation, and a woodsman who injured himself whilst engaged in felling trees had his recourse under the common law and not under the Compensation Act. (*Michaud v. Gagnon.*)

Workmen's Compensation: — Damages awarded for stiff knee.

An award was made for \$650 to a workman who received injuries while in the course of his employment with the defendant company. The action was taken under the Workman's Compensation Act. The plaintiff, who was a mechanic, was engaged in boring sockets in a steel beam in the roof of the defendants' warehouse. He placed his

drill upon the plank upon which he was standing with the result that the plank broke under his weight and under the pressure of the drill exerted against the beam. Plaintiff was thrown to the floor, a distance of twenty-five feet, and fractured the bones of his left knee. Plaintiff alleged permanent partial disability due to the stiffening of the joint and claimed an indemnity equal to one-half of his reduced earning capacity which he estimated at fifty per cent. The medical evidence showed a loss of function in the knee of from fifteen to thirty per cent. While capable of work at which he could stand, he would be incapable of work requiring him to bend very much. Plaintiff agreed to accept and the company to pay \$650 in full of all liability, including costs, and judgment was entered accordingly. (*Gonthier v. Dominion Oil Cloth Company.*)

ONTARIO CASES.

Master and Servant.—Death of servant. —Negligence.

In the April, 1915, issue of the *Labour Gazette*, at p. 1238 there was reported the case of a lineman in the service of the London Electric Company, who was killed by a fall from a pole, which he had climbed for the purpose of removing wires, as the pole was considered unfit for service and a new pole had been erected near the old one. While the deceased was working on the old pole, it moved as if to fall toward the street, whereupon the deceased jumped for the other pole, but failed to catch it and fell to the ground and was killed. The widow of the deceased lineman brought action to recover damages for the death of her husband and was awarded \$2,500 and costs.

The defendant company appealed the case to a higher court, but the appeal was dismissed with costs. (*Christie v. London Electric Company.*)

Damages for death of railway employee.

—Judgment reversed on Appeal.

An employee of the Canadian Pacific Railway Company had been engaged under the charge of a foreman at Welland. His work there having been completed, the foreman, the deceased and three of his fellow-employees, who had been engaged in the work, returned by train to Hamilton, and arrived there shortly before nine o'clock in the evening. Their destination was a car upon the company's line in Hamilton in which they slept and kept their tools. When the party reached the Hamilton station, they went to take a car on the street railway by which they would have reached a point near the sleeping-car. Finding that the car they had expected to take had already left, they decided to get to the sleeping-car by walking along the railway track. The deceased was a comparative stranger in Hamilton, and it was not clearly shown that he knew that the sleeping-car could be reached by the street car line or that it had been the intention of his companions to have taken passage by the car. While walking along the track the deceased was struck by a train, which came up behind him, and died of the injuries thus received. In the trial action judgment was given in favour of the plaintiff.

In appeal, however, it was held that the deceased was paid for his work by the hour and that his right to be paid his wages came to an end when the work at Welland was completed or at all events when he had got back to Hamilton, and that there was no evidence to show that the deceased met his death in the course of his employment; that when his work at Welland was done, his work by the day had come to an end, and he was no longer supposed or bound to conform to the orders or directions of the foreman. The appeal was allowed and the judgment reversed. (*Charpe v. Canadian Pacific Railway.*)

MANITOBA CASE.

Railway. — Negligence. — Uncovered switch rods.

Action was brought by the plaintiff, a switchman, to recover damages for injuries sustained by him while performing his duties. The action was brought both at common law and under the statute, and before the trial judge damages were awarded the plaintiff. The defendant company, however, appealed, with the result that the former judgment was set aside.

The plaintiff while engaged in switching operations in the yards of the Winnipeg joint terminals on July 7, 1913, at about five o'clock in the morning, sustained the injuries in respect of which the action was brought. A flying switch had been made, the plaintiff had cut off two cars and these had been moved to the line where they were to remain. The plaintiff then set the switch so that other cars might be pushed to another track. The cars, which were to be switched, formed the rear end of the train and these had been stopped within three or four feet of the switch at which the plaintiff was standing. After he had set the switch he noticed that the knuckle of the coupler on the end of the car nearest to him was open. He then stepped across the tracks and took hold of the lever, there being a lever on that side only, and tried to open the coupler. In so doing he was performing part of his duties. The lever did not work and then the plaintiff took the knuckle in one hand and shook it while he held the lever with the other hand. He stated that while doing this he held the lever with his right hand, his back being turned to the car. While the plaintiff was so engaged the foreman of the switching crew saw that the switch had been set and gave the engineer the signal to push the cars past the switch. The car at which the plaintiff was working was then pushed forward upon him. It was gathered from the evidence of the plaintiff and of

other witnesses that the end of the car was within three or four feet of the switch rods, while the plaintiff was working at it and before it moved. The first step he took would bring him to the switch rods. Even after he had stumbled on these he hung to the lever and the knuckle and plaintiff claimed that when he caught his feet sufficiently he sprang away from the car.

From the evidence given by other switchmen the judge found that, although the backing of the train was the cause of the accident, the foreman was not negligent in causing it to back; that the plaintiff had tripped on the switch rods; that the tripping had been the cause of the accident; that the plaintiff was not negligent; that the exposed condition of the switch rods constituted the negligence which caused the plaintiff to trip and so occasioned the accident. The Judge stated he had grave doubts whether the evidence was sufficient to enable the jury to find the cause of the plaintiff's fall was the switch rods. According to a statement made by the plaintiff he had been able to keep on the side after getting clear of the switch rods, had taken several steps and then sprung away from the car. It was just as he sprung away from the car that he stumbled on something and fell in front of the car. The conclusion at which the Judge arrived was that the jury were not justified in finding that the defendants were negligent in not covering the switch rods. That being the only negligence found by the jury the plaintiff could not recover at common law. Their finding that the foreman was not negligent in causing the train to back up at the time of the injury prevented the plaintiff from recovering under the Employers' Liability Act.

The Judge expressed regret that the plaintiff had not taken advantage of the Workmen's Compensation Act, under which he might have recovered a certain compensation, rather than stake everything on the chance of recovering a

larger sum in an action of negligence against the employers. The appeal was allowed, the judgment for the plaintiff set aside and a judgment entered for the defendants. (*Mallory v. Winnipeg Joint Terminals.*)

BRITISH COLUMBIA CASE.

Employers' Liability.—Damages awarded miner.

Claiming damages for the loss of a leg in an accident met with while in the employ of the Pacific Coast Coal Mines, Limited, a miner, resident at Ladysmith, brought action under the Employers' Liability Act.

The mishap occurred on September 2, 1914. Plaintiff, it appears, was working on the slope leading to the outlet of the mine when he was struck by a car which was not under control. It had escaped in some manner and was speeding down the incline when the plaintiff was hit. He asserted that he had not seen it until it was a short distance away. He had

jumped, but it was too late, and he was thrown to one side, suffering such injuries that it became necessary to amputate one of his limbs.

In his statement of claim the plaintiff placed the responsibility on the company by alleging a defective system and negligence in not providing a safe place for working. To this the defendant retorted that plaintiff had been guilty of contributory negligence and that he had voluntarily assumed the risk. Plaintiff also claimed that there was no derailing switch, that the car had no stop blocks, that there were not sufficient manholes in the slope, and that there was no warning through a system of inspection. This was all denied by the company which claimed that there were stop blocks or drags provided for the car and that it was thrown from the track by a switch. There was nothing wrong, it maintained, with the working conditions.

The case was heard before a judge and a jury and the result was an award of \$3,600 to the plaintiff. (*Jones v. Pacific Coast Coal Mines, Limited.*)

THE LABOUR GAZETTE

SEPTEMBER, 1915.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

TWO industrial disputes on the Pacific Coast occupied the attention of the Department closely during the past few weeks. The two disputes were in no way associated with each other, but in each case a disastrous strike seemed at one time to threaten. The one dispute concerned the street railway employees of the three cities of Vancouver, Victoria and New Westminster, and the other related to the longshoremen of the Pacific ports. Fortunately at the time of writing the acute stage of the difficulties had passed and danger of a strike seemed to have disappeared. In the case of the street railway dispute, the employees had acted in accordance with the requirements of the Industrial Disputes Investigation Act in referring their differences to a Board of Conciliation. A Conciliation Board had been established and had conducted an unusually comprehensive enquiry. The findings of the Board were not, however, immediately acceptable as a settlement. The contentions of neither party had been conceded. During several days a state of acute tension prevailed and a general strike of street railway employees in the three cities was among the distinct probabilities. The disputing parties were prevailed upon to take the Board's award as a basis of settlement, and after a renewal of direct negotiations the award, with modifications at some points, was converted into a working agreement and the dispute was closed. The longshoremen's industry falls also within the scope of the Industrial Disputes Investigation Act and it seemed not unlikely that its machinery would

be utilized for the adjustment of differences between the Pacific Coast ship owning companies and their longshoremen. The Department, through its resident officer and otherwise, was closely informed on the situation, and there seemed good reason for the view that both parties, had direct negotiations failed, would welcome the intervention of a Board. A particularly difficult aspect of this dispute was that the employees aimed at securing the same conditions in all the Pacific ports in the United States and Canada. There were many evidences of severe friction, but direct negotiations continued during several weeks, the representatives of the employing companies discussing matters at issue freely and frankly with the representatives of the union comprising the employees. Ultimately a working agreement was amicably reached and the latest information received suggests peaceful industrial conditions during the approaching winter season.

U. S. Labour Monthly Review.

The United States Bureau of Labour Statistics has commenced the publication of a monthly journal. The journal is slightly smaller in dimensions than the *Labour Gazette* of Canada, but is comparable with it generally speaking in the nature of its contents, save that the United States publication does not appear to aim at informing its readers as closely as does the *Labour Gazette* with reference to current industrial conditions in the different parts of the country. The United States publication,

which will be known as the "Monthly Review," is under the official control of Dr. Royal Meeker, United States Commissioner of Labour. It is interesting to learn from the first issue of the new journal that the United States Bureau of Labour proposes to gather statistics as to industrial disputes throughout the republic, adopting for that purpose, so far as can be gathered from the particulars mentioned, methods very similar to those pursued by this Department for collecting statistics as to industrial disputes in Canada. For many years the United States authorities in these matters have abstained from attempting to collect and compile such statistics. The industrial conditions in the United States and Canada are closely akin in so many respects that the new departure will be of special interest in the Dominion, permitting, as it will, instructive comparisons in such matters between the two countries.

New York State Industrial School.

In connection with the recent legislation of the State of New York establishing a State Industrial Commission, replacing at once the former Department of Labour and the former Workmen's Compensation Board of the State, provision was made, it will be remembered, for the creation of an Industrial Council to consist of ten members, the membership representing an equal strength of employers and employees. The work attaching to the Council is honorary, no compensation or expenses being paid the members. Some interest attaches to the personnel of the first Industrial Council, the members of which have been named by the Governor of New York State as follows:

Representing the Employer—Edward J. Barcalo, President of the Barcalo Manufacturing Company, Buffalo; G. Emmons, General Electric Company, Schenectady; Richard C. Stofer, President of the Norwich Pharmacal Com-

pany, Norwich; Irving T. Bush, President of the Bush Terminal Company, New York City, and Carleton A. Chase, President of the Syracuse Chilled Plow Works, Syracuse.

Representing the Employee—James P. Holland, Vice-President of the New York State Federation of Labour, New York City; John C. Clark, Vice-President of the New York State Federation of Labour, Buffalo; Thomas M. Gafney, Syracuse; Richard H. Curran, Rochester, and Miss Melinda Scott, President of the Women's Trade Union League, New York.

Industrial Disputes Legislation Fore-shadowed.

In the present issue of the *Labour Gazette* will be found the draft of a Bill foreshadowing legislation of importance with reference to the Department of Labour. The measure proposes the consolidation and amendment of the Industrial Disputes Investigation Act, 1907, and the Conciliation and Labour Act; with the draft are printed certain introductory and explanatory notes. The opening lines of the introductory page state the Minister's object in making known at this time the nature of the proposed legislation: "The accompanying draft Bill respecting Industrial Disputes is printed and distributed for consideration and discussion. It is earnestly requested that its provisions be carefully perused, and that the views and suggestions of those interested be sent to the Minister of Labour." The names of secretaries of all trades union branches in Canada are, it will be remembered, on the complimentary mailing list of the *Labour Gazette* and the publication is mailed to them regularly. It is trusted that officers of organizations which have shown special interest in this legislation will bring to the attention of their members the draft Bill printed in the present issue.

INDUSTRIAL AND LABOUR CONDITIONS DURING AUGUST, 1915.

GENERAL SUMMARY.

INDUSTRIAL and labour conditions during August showed an improvement over those of the previous month. Harvesting operations, which reached their height towards the close of the month, absorbed practically all idle labour in the West, and provided employment for many thousands from the East who were brought in on special excursion trains, several of which were run during August by the large trans-continental railways. Recruiting for overseas service also continued steadily and was a factor in reducing the number out of work.

By the end of the month a large portion of the harvest had been gathered in almost all districts with excellent results. Heavy rains in parts of Eastern Canada did considerable damage to grain and root crops, but owing to the exceptionally heavy yield the general result was expected to be up to the average. Fishing on the Atlantic coast continued good, and the salmon catch in northern waters of British Columbia was reported satisfactory, though on the Fraser river fishing was poor. Operations out of Prince Rupert were good. Lumbering continued active in Eastern Canada and improved considerably in British Columbia. Mining, both coal and metal, in many districts was almost back to normal, and in other localities showed continued improvement. In manufacturing also improved conditions were apparent, with marked activity in a number of lines in many Eastern industrial districts. Factories working on war munitions in many instances were running night and day. Not much change was noticeable in railway construction from conditions of the previous month. Railway traffic and work in the shops improved with preparations for

moving the crops. Water transportation continued fairly active.

The Department's index number of wholesale prices stood at 147.6 for August as compared with 147.1 for July and 136.3 for August, 1914. Grains, animals and meats, fruits and vegetables, and some metals, averaged lower than in July, but price levels were higher in miscellaneous groceries, textiles, hides, iron and steel, drugs and chemicals, and raw furs. In retail prices the cost of a week's supply of a list of thirty-two foods in terms of the average price in some sixty industrial localities in the Dominion was \$7.781 as compared with \$7.797 in July and \$7.679 in August, 1914. The chief decreases for the month were in milk, cheese, bread and flour, but prices were higher in eggs, butter and potatoes. Coal averaged slightly higher and rent slightly lower, there being a decline in the average in British Columbia. As compared with August last year the chief increases appeared in butter, cheese, bread, flour, rolled oats, beans and sugar. Decreases appeared in beef, pork, lard, eggs, milk, evaporated apples and potatoes. Coal and wood averaged slightly lower than a year ago. The decrease in rent was from an average of \$4.80 per week to \$4.09.

Interruptions to Industry.

Four new trade disputes were reported during August, two of which were settled. At the end of the month there were five strikes in existence, two less than in the previous month.

Among industrial establishments, etc., destroyed by fire or through other causes, the following may be mentioned:

New Brunswick.—At Moncton, August 24, Keirstead's drug store and W. D. Charter's men's furnishing store, total loss, \$8,000; at Upper Gagetown, August 19, F. Crosby's lath and saw mill.

Quebec.—At Cookshire, Aug. 26, Standard Chemical Iron and Lumber Company's store; at Eustis, Aug. 25, surface plant of the Eustis Mining Company, loss \$50,000; at L'Assomption, Aug. 2, Bedard's store and carriage factory, loss \$6,000; at Montreal: Aug. 25, Excel Carbon Company's factory, loss \$15,000; Aug. 27, Consumer's Sack and Supply Company's warehouse, loss \$20,000.

Ontario.—At Brockville, Aug. 3, dairy supply warehouse of D. Derbyshire & Company, loss \$3,000; Aug. 3, barns of Wm. Henderson (butcher), loss \$3,000; at Chatham, Aug. 5, Geo. Bergman's tailoring and men's furnishing store, loss \$6,000; at Cobalt, Aug. ., Empire theatre, loss \$3,000; M. Cannon's restaurant, loss \$2,000; Aug. 25, hoist room of the Nipissing Mine shaft, loss \$2,000; at Judgeville, Aug. 5, Willow cheese factory, loss \$1,800; at Kincardine, Aug. 16, pattern shop of the Hunter Bridge and Boiler Works, loss \$15,000; at New Hamburg, Aug. 20, Electric Meter and Metal Stamping Works, loss \$30,000; at Ottawa, Aug. 4, stables of the Ottawa Transfer Company, loss \$1,500; at Pembroke, Aug. 13, factory of the Hardwood Specialties Company, Limited, loss \$40,000, (struck by lightning); Aug. 25, Copeland Hotel stables and ice-house, loss \$4,000; at Toronto, Aug. 19, 1,500 tons of hay at the Union Stock Yards, loss \$15,000; at Windsor, Aug. 20, Zakoor Bros.' theatre, loss \$15,000.

Manitoba.—At Wheatland, Aug. 4, Western Canada Flour Mill Company's elevator, containing 5,000 bushels of grain, loss \$10,000; at Winnipeg, Aug. 22, International Bakery, loss \$3,000.

Saskatchewan.—At Laird, Aug. 2, hotel Laird, loss \$25,000; at Scott, Aug. 5, Kentucky livery stables and premises of the Beaver Lumber Company, total loss, \$13,000.

British Columbia.—At Revelstoke, Aug. 20, Sawyer Bros.' stave mill, stock of staves and lumber, loss \$5,000; at Sandon, Aug. 30, Ivanhoe Concentrator, loss \$50,000; at Vancouver, Aug. 24, seed and nursery store of A. R. McDougal, loss \$3,000; premises of the Winnipeg Casket Company, Cooder Canadian Rust-proof Screen Company, Imperial Trunk Company and M. Wright's wood factory, total loss \$25,000; at Victoria, Victoria Steamship Company's warehouse, loss \$1,500.

Changes in Wages and Hours of Labour.

There was little in the way of changes in rates of wages or hours of labour during August. Machinists at Amherst, N.S., received an increase from 25 cents per hour to 30 cents per hour and machinists' helpers at the same place were raised from 20 cents an hour to 25 cents. Ten machinists and eight helpers were affected. At Berlin, Ont., a contractor reduced the rates of bricklayers in his employ from 50 to 45 cents per hour.

Only a few employees accepted the reduction, the others finding work with other contractors. Labourers employed by a paving company at Peterborough were granted a shorter working day and an increase in wages, the new arrangement giving them 20 cents per hour for a nine-hour day instead of 17½ cents per hour for a 10-hour day as formerly. Unskilled labourers employed by lumbering companies in the Fernie district were given increases ranging from 25 to 50 cents per day. Fan boys at Hillcrest colliery had their wages increased from \$1.10 to \$1.60 per day. A few printers at New Westminster employed on job work had their scale of wages slightly reduced. Some reductions were reported in a coal mine at Nanaimo, and at Victoria a number of employees at the City Hall were placed on half time.

Conditions in the Industries and Trades.

Conditions of employment during August in the several industries and groups of trades throughout Canada, as indicated by reports of correspondents of the *Labour Gazette*, and by information received at the Department of Labour from other sources, may be briefly summarized as follows:

Agriculture.

Favourable weather continued in the West and at the end of the month a large percentage of the grain was cut in some districts. In others harvesting operations were in active progress. A splendid crop was reported in practically all parts of the West. Continued heavy rains in parts of Ontario and Quebec did considerable damage to grain and other crops and rendered harvesting difficult; potatoes in many districts were reported to be rotting. On account of the very heavy yield, however, general crops were expected to give good average results despite the damage by rains.

There was an active demand for farm help in almost all parts of the Dominion, though this demand was, of course, more pronounced in the West. In some parts of the East a shortage of labour was reported, particularly of experienced men, and from a number of localities it was reported that despite the local demand much farm help left for the West. In the West, however, in some districts there was a tendency towards a surplus of labour owing to the large numbers of easterners who took advantage of the usual fall harvesters' excursions run by the large railway companies during the month. The unemployed in Winnipeg were able to secure work at harvesting, but it was reported that a large number of men from Eastern Ontario were unable to secure work as harvesters. Brandon also reported there were large numbers of labourers unable to obtain work. At Moose Jaw from the middle of August there was a good demand for harvest help and all local labour was absorbed, as well as the supply which came from outside points. Wages were \$2.50 per day and men who held out for more had difficulty in getting placed. With the commencement of threshing, however, it was expected that \$3.00 to \$3.50 per day would be paid. In the Prince Albert district little demand for outside harvest help was reported, and a number of men who arrived from outside points were transferred to other districts where employment was available. The growth of mixed farming and the consequent employment of farm hands the year round in the Prince Albert district was given as a reason for the small demand for special harvest labour. At Regina harvesters' wages ranged from \$2.50 to \$3 per day with board. At Edmonton the supply of labour was much greater than the demand, and hundreds of men went to Saskatchewan where the demand was reported good. Large numbers of men also went from British Columbia to engage in harvesting operations in the Prairie Provinces.

Fishing.

Fishing on the Atlantic coast continued good. Sardines and other fish were reported plentiful in the Bay of Fundy. At Sydney herring were plentiful in the early part of the month, but later the catch fell off. Cod fishing was fair. On the whole the season up to the end of the month was a good one for fishermen.

On the Pacific coast conditions also were good in Prince Rupert waters and in the northern salmon waters, though salmon fishing on the Fraser river continued poor, very few sockeye having been secured. The pack in northern waters, however, was expected to be about up to the average. A large number of American boats called at Prince Rupert during the month, also an additional number of Canadian boats. The demand for ice at this port exceeded the local supply.

Lumbering.

Lumbering operations were active in the East and the improvement noted last month in British Columbia was continued. At Newcastle, N.B., shipments to the United Kingdom continued heavy and large crews were employed in loading operations. The mills at the same place were very active and gave promise of continuing so as long as the river remained open. At Quebec, mills were all working, and the season's cut was expected to be a heavy one, though it was thought a large quantity would remain over in the piling grounds, the demand being light and shipments difficult. Ottawa mills were busy, and men were being engaged for the woods.

Log-cutting in the timber limits in the hinterland of Ontario and Quebec for 1916 had begun and men were being sent in. While many lumberjacks enlisted for active service, there were plenty of men available for the woods, though the number required was not expected to be as large as in other years.

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

The wages being offered were from \$12 to \$22 per month with board and lodging.

In British Columbia the lumbering industry, which was in a very inactive state for several months, became more active owing to the good crops and better demand from the prairie provinces, and a number of mills were increasing their outputs. At Fernie improved conditions were reported, and the post and pole business at this point, which had been quiet, also showed signs of improvement. At New Westminster conditions were fairly quiet. The shingle business, however, was good, with a fairly brisk demand. In some districts of British Columbia heavy forest fires caused great destruction of timber, and the burning out of a number of mills and logging camps caused unemployment in some localities.

Conditions on Vancouver Island showed improvement in some districts. From Victoria it was reported that one large mill on the island had enough orders to keep the mills going until the end of the year. Shortage of tonnage, however, hindered shipments to some extent. Saw-mills in the vicinity of Nanaimo were working steadily, but with reduced forces. Logging camps, also, were not employing as many men as usual.

Mining.

Coal mining was active in most of the Nova Scotia collieries, and a noticeable improvement was reported from most of the coal fields of the West. In the Sydney district conditions were much better than in August, 1914. Prospects for continued activity were good, and likely to be affected only by limited transportation facilities. The statement appearing in this article in the August issue with reference to time worked in the Inverness Colliery did not indicate the precise situation. There were 26 working days in the month of July, and the colliery worked 21 of these days. At Westville the demand for coal in-

creased and the Acadia mines operated full time and increased their output over last month. At Lethbridge, coal mines were working nearly full time, with the prospect of further improvement with the approach of cold weather. At Fernie, also, there was a marked improvement owing to the railroad companies commencing to place orders for their supply of winter fuel. The stocking by dealers of supplies of coal for domestic purposes during winter also assisted in bringing about a general improvement. The demand for coke owing to activity in metal mines continued good. At Nanaimo coal mines were working but not with a full force of men.

Conditions in metal mines also continued fairly active. There were fewer idle men at Cobalt than in any month since the outbreak of war. The mines were running full time and old properties were being reopened, and these activities, with enlistments for active service and the exodus of a number of men for the western harvest fields, left the district with practically no men out of employment. Some encouraging prospects were discovered at points on the Temiscaming and Northern Ontario Railway and on the Grand Trunk Pacific Railway and many prospectors were leaving for the new fields. Increased activity in metal mining was also apparent in British Columbia. In addition to improved conditions among the large mining companies quite a number of small mines which had ceased operations at the beginning of the war resumed work and were sending regular shipments to the smelter at Trail. Both the Granby and Trail smelters were busy.

There was a noticeable improvement in connection with the mining and refining of zinc and a number of companies were incorporated with the object of producing and refining this metal.

The Canadian Smelting and Refining Company at Orillia commenced to treat molybdenum ore brought from the coun-

ty of Renfrew, producing molydenite, a metal used for hardening purposes, which had not formerly been produced in Canada.

Manufacturing.

On the whole an improvement was noticeable in manufacturing as compared with conditions of the previous month. The activity in the steel trade was felt all over the Sydney district and gave a stimulus to nearly all kinds of employment. Large numbers of men were employed at both the Sydney and Sydney Mines steel works. At Halifax, industries, with the exception of car building, were reported well maintained, and clothing, biscuit and confectionery establishments were advertising for help. At Quebec and Montreal manufacturing in many lines was active, though in the case of some shoe factories quiet prevailed. In Ontario the Berlin and Galt districts reported improvement, with many establishments working overtime. Shoe factories in this district were busy. At Woodstock, also, an improvement was noticeable; wagon factories were beginning to feel the effect of western orders and some furniture factories became active again on special work. In many localities manufacturing establishments were making additions to their plants, and there was considerable activity on the part of farm implement manufacturers in the sending out of farm machinery from distributing points in the West.

Railway Construction.

Outside of the progress of work on lines being constructed in Alberta and British Columbia and general maintenance there was no exceptional activity in railway construction. From Sydney it was reported that railway employees continued to find steady employment in connection with improvements on the Intercolonial Railway. Grading was reported to have been completed on the Alberta and Great Waterways Railway to 21 miles beyond Lac

la Biche, and ballasting of the line from Carbondale to Lac la Biche was practically completed. Construction was commenced on several thousand feet of snowsheds on a section of the Kettle Valley lines in British Columbia. Work on the Hudson Bay Railway was proceeding, and a weekly accommodation train was being operated from The Pas, Man., to Armstrong Lake, a distance of 210 miles. The line has been completely ballasted the first 90 miles from The Pas, and ballasting was in progress along the remaining 120 miles. Work was being carried on by the Canadian Northern Railway Company in several districts.

General Transport.

Railway traffic showed some improvement in August. Preparations were being made to handle the large quantities of wheat to be moved from the West, and in a number of localities additional crews were being taken on. The running by the large transcontinental railway companies of harvesters' excursions during the month also increased activity. Tourist and regular passenger traffic, however, continued light. Regular freight business also was not heavy. At St. Thomas regular men in the traffic departments were fairly well employed, but spare men were not active. In some shops there was little change in conditions of the previous month, but in others the preparation of rolling stock for carrying western grain created activity. At some points the railways were taking on men who had been laid off in the spring and putting more engines into service.

Along the water front at Halifax work was not as brisk as during the previous month, and unskilled labour found it difficult to get permanent employment. A fair amount of activity was reported at lake ports.

The annual report of the Canadian Pacific Railway Company, which was issued during the month, showed that while working expenses of the company

were materially reduced, net earnings were \$8,851,000 less than last year. The special income, however, was \$2,381,461 greater than last year, making it possible to leave the rate of dividend unchanged. The report refers to the merging of the company's steamship business with that of the Allan Line Steamship Company under the name of "The Canadian Pacific Ocean Services, Limited," and states that a moderate estimate of the value of the steamship property involved in the transaction is \$23,500,000.

The Trades.

Building.—Building trades showed some improvement in parts of Eastern Canada, but on the whole were quiet.

Metal.—Machinists and brass finishers were actively engaged and there was a demand for more help in some localities.

Printing.—Printing trades continued to be fairly well employed.

Clothing.—Some improvement was noticeable in clothing trades in a few localities, but quiet in others.

Woodworking.—Woodworking trades showed improvement. Furniture factories in some instances were busy, but not on regular work.

Food and Tobacco Preparation.—There was an improvement in the tobacco trades. Confectionery and biscuit workers were fairly active.

Leather Trades.—Leather trades on the whole were fairly active.

Transport.—Longshoremen were fairly well engaged at some ports. Quiet conditions were reported at Halifax. Railway workers on the whole were more actively engaged than in the previous month.

Unskilled.—The demand for harvest help both in the East and West practically absorbed the surplus supply of unskilled labour. Continued recruiting also assisted in this direction.

Canadian Trade and Revenue.

Foreign and Imperial Trade.—During July, 1915, there was a decrease in the total value of imports entered for consumption in the Dominion of Canada, as compared with the corresponding month of 1914, the amounts being \$37,366,309 and \$43,198,366 for 1915 and 1914 respectively. The decrease for the four months ending July 31, 1915, against the same period of 1914 amounted to \$34,880,428. The total value of domestic exports during July amounted to \$45,570,038, an increase of \$3,782,390 as compared with the same month of 1914. The total value of domestic exports during the four months ended July 31, 1915, was \$159,168,259, as compared with \$117,566,554 for the same period of 1914. During July 1915, increases were shown in the fisheries, the forest, animals and their produce, manufactures and miscellaneous merchandise, and decreases in the products of the mine and agriculture. The following table gives the latest official summary of Canadian foreign trade:

Canadian Trade, July, 1915.

TOTAL IMPORTS ENTERED FOR CONSUMPTION IN THE DOMINION OF CANADA.

The July, 1915, bank statement shows the paid-up capital stock of the chartered banks of Canada to be \$113,984,488. Deposits payable on demand amounted to \$340,950,215 during July as compared with \$349,057,351 for the month of June, a decrease of \$8,107,136. Notes in circulation amounted to \$100,412,424 for the month of July as compared with \$99,625,426 for June, an increase of \$786,998. Loans to cities, towns, municipalities and school districts amounted to \$44,029,446 for July as compared with \$46,889,816 for June. Other current loans and discounts amounted to \$758,349,517 as compared with \$759,934,154 for the month of June.

Canadian Revenue.—Canadian reve-

nue for the month of July, 1915, amounted to \$12,655,085.66 as compared with \$12,521,624.27 for the month of July, 1914. For the four months ending July 31, 1915, the total revenue was \$45,848,352.38 as compared with \$32,704,370.28 for the corresponding period of 1914. The expenditure on capital account for July was \$3,920,518.35 as compared with \$4,862,921.93 for July, 1914. The total expenditure for the four months ending July 31, 1915, was \$9,240,662.59 as compared with \$9,023,876.79 for the corresponding period of 1914. The expenditure on capital account for the month of July comprised \$3,808,273.35 for public works, including railways and canals, and \$112,245 on railway subsidies.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

As a whole, labour conditions in Amherst and district generally were better than at any time since the outbreak of the war, due to increased activity in the manufacture of shells and the starting of work on an order of steel box cars for the Intercolonial Railway of Canada. This, together with the fact that a large number of men have found employment in the hay fields, has left very few out of employment.

An increase in the rate of wages in the machinists' department of the Canadian Car and Foundry Company went into effect on August 9, from 25 cents per hour to 30 cents per hour for machinists and from 20 cents per hour to 25 cents per hour for helpers.

Farmers have had poor weather during the greater part of the month, in which to harvest their hay (this being a very large crop and the chief asset of the farmers in the district), and it was expected unless the weather for the next few weeks improved the loss would be considerable.

There were no changes in connection with manufacturing industries, except in the manufacture of shells, which was increasing every day, and new machinery being installed. The Canadian Car and Foundry Company has started a night shift which will increase as the work develops.

Halifax.

Conditions were fair with most of the trades. There was very little improvement with bricklayers and masons, but the construction of a large number of wooden dwellings relieved the situation somewhat with carpenters and other trades.

Along the water fronts work was not as brisk as a month ago and unskilled labour found it difficult to get permanent employment.

An injunction has been granted restraining the contractors on the Government railway from Rockingham to the Ocean Terminals from carrying on heavy blasting operations within the city limits without taking proper precautions, safeguarding property along the right of way. The contractors claim they cannot comply with the restrictions requested and make any progress on the work, consequently about 150 men were discharged August 18 and two steam shovels put out of commission. At the end of the month no adjustment had been reached to permit the company to proceed with the work as it had been doing in the past and the men were still idle.

Recruiting for overseas service was carried on actively and had the effect of reducing the unemployed to a very small number.

Farmers reported crops to be fully up to an average year. The hay crop was very heavy, but bad weather greatly hampered the work of storing it.

Manufacturing, with the exception of car building, has been well maintained. Clothing, biscuit and confectionery establishments have been advertising for female help.

Sydney.

Labour conditions continued active, and labour was fairly well employed over the entire district. Apart from the trades such as the carpenters and related classes most workmen were busy. Indeed there was sufficient employment for all who cared to go out of their class and take up other work. The activity in the steel trade has been felt all over the district and has given a

stimulus to nearly all other kinds of employment. The beautiful weather, which set in during the latter part of the month, was very much needed by farmers who took advantage of it to harvest their hay crops, which were very large.

The coal trade continued active and was very much better than in August of last year. Prospects for this trade were good and likely to be affected only by limited transportation facilities.

The steel trade continued very active and a large number of men were employed both in the Sydney and Sydney Mines steel works. Transportation by water and rail was heavy. The building trades showed slight improvement.

Railway employees continued to find steady employment in connection with improvements on the Intercolonial Railway.

Wholesale and retail business was fairly good.

During the month there was some agitation at some of the collieries in the district against working with alien enemies. Meetings were held at which the matter was discussed, and the miners agreed to continue working with men of all nationalities. At a joint meeting of three Provincial Workmen's Association Lodges held in Sydney Mines, to discuss the foreign labour question, a telegram from the Minister of Labour, through Deputy Minister Acland, was read by the Grand Officers of the association setting forth the desire of the Government that Canadian workmen would do their utmost at present time to work in peace and harmony with all men of other nationalities, and expressing the view that workmen in so doing were rendering a patriotic service to their country. After hearing the telegram the meeting unanimously rescinded a resolution in which they had proposed to discontinue work until workmen of hostile countries were discharged.

The hay crop was heavy and was gathered under good weather conditions.

It is probably the best crop ever gathered in the district. Potatoes were slow in maturing and three weeks later than last year, due to the continued cold rains of the spring after planting time and the heavy rains of summer. Other crops were looking well and with continued good weather there should be an abundant harvest of all kinds.

Fishing continued good. In the early part of the month herring were plentiful, but later there were only sufficient of these caught to supply the necessary bait. Cod fishing was fair. Much attention was given to sword fish, and large catches of these were made. Taken all in all the season has been a good one for fishermen.

Truro.

All kinds of labour were quite satisfactorily employed. Builders and builders' labourers were busy.

Printers, painters, tailors, dress-makers, teamsters, woollen and cotton workers, expressmen, electricians, linemen, and wood workers were all steadily employed.

Stanfield's Ltd. booked a big order for woollen goods.

The Canada Steel Company, Ltd., took over the works of the Truro Engineering Works, Ltd., and were busy putting in \$27,000 worth of new machinery.

The farmers were having much difficulty in getting their hay in. The clover crop was the greatest in years, but the continued damp, muggy weather hindered operations to such an extent that there will be a great loss in that respect, and grain and tubers will suffer unless there is a change in weather conditions in the near future.

The Eastern Shirts were working overtime on big contracts.

Railway operations showed improvement over the previous month.

Business, retail and wholesale, showed signs of improvement.

Lumbering operations were fairly brisk.

Bank clearings were satisfactory, and customs receipts encouraging.

Industries outside the town were working satisfactorily.

Food prices were running steadily, with some fluctuations in farm products.

Westville.

Owing to the fact of so many men enlisting for home and overseas service, as well as engaging in the manufacturing of munitions of war, there was an unprecedented demand for labour during August. The high wages available in the plants making war munitions made it exceedingly difficult for coal operators to secure sufficient labour to operate the mines.

The Eastern Car Company, Nova Scotia Steel & Coal Company and the Cummings and McNeil plants, both in New Glasgow and Stellarton were running three eight-hour shifts per day, and were steadily increasing their output.

Railway traffic continued about the same as last month and was about normal.

Wholesale and retail trades continued active in the district, and showed an increase over both last month and last year.

Lumbering continued active.

The demand for coal increased and the Acadia mine operated full time and increased its output over last month.

July coal shipments from the Acadia Coal Company were 24,950 tons, 3,255 tons more than July, 1914. The Inter-colonial Coal Company shipped 18,500 tons, 1,201 tons over July, 1914.

PRINCE EDWARD ISLAND.

Charlottetown.

Labour conditions have not experienced any very material change during the month. Employment of skilled and unskilled labour was generally good, carpenters, masons and painters being exceedingly busy.

General industrial and commercial operations were fairly active.

Three hundred men left this province for Western Canada on the harvest excursion.

Farmers were favoured with remarkable good weather for saving their hay crop, which is estimated as a full average.

The harvest will be a little on the late side this year, but farmers were looking forward to a record yield.

Local fishermen report fishing fairly good. Sailing craft, except coasting schooners, have disappeared from Prince Edward Island ports, and sails are rapidly disappearing from the fishing fleet also. The gasoline motor has displaced the wind as driving power on the water.

Lumber mills were all busy.

NEW BRUNSWICK.

Fredericton.

The condition of the labour market during August was fully as good as for the previous month and there was comparatively little unemployment. Much activity prevailed among the building trades, and while no great number of new buildings were being erected there appeared to be work enough for all. All local industries were busy.

Agriculture had one of its busiest months in the year, the farmers being engaged in harvest work. The hay crop has been nearly all gathered, and in this district has been above the average.

Representatives of the company which is to operate the antimony mines at Lake George were making active preparations for the commencement of work at the mines, which will give employment to a considerable number of men.

Moncton.

All classes of labour were actively employed during August and commercial conditions were satisfactory. There was virtually no unemployment in evi-

dence; all the local supply being fully absorbed and considerable help from outside sources placed.

Especially active conditions prevailed in all the various manufacturing and mechanical plants, in building circles, and in the special operations of public character in progress.

Preparatory work for the laying of the foundations of the steel bridge over the Petitcodiac river were well advanced. A large amount of public and private building was in progress.

The tenth annual meeting of the Union of New Brunswick municipalities was held at Fredericton, August 26-27. Proposed legislation relating to highways, the establishment of schools for industrial training in connection with the common schools, and of night schools in cities and towns for technical education were advocated and supported by resolutions.

There has been considerable activity in real estate at firm prices, and trade, both retail and wholesale, has been normal.

Farmers have been actively engaged in haying and other seasonable work. Farmers' help, particularly experienced men, was hard to obtain. Hay, especially upland, was heavy; marshes also good. Broken weather has very much retarded the work, and considerable upland and all the marsh hay was still uncut. Grain crops all look promising, though later than usual, and but very little harvesting done.

Newcastle.

The labour market showed little or no change over the previous month. The demand for labour, both skilled and unskilled, continued equal to the supply, and there was no unemployment.

Work on the new water and sewerage system at Bathurst has been commenced by the contractors, Clark & Son, and good progress was reported.

Lumber shipments to the United Kingdom continued heavy, and large

crews of men were employed in loading operations.

Agricultural conditions were very favourable, and there was a good prospect of excellent crops in all branches, especially root crops. At a meeting of the Newcastle Board of Trade, held on August 12, preliminary steps were taken to have a flour mill erected in Newcastle as an inducement for North Shore farmers to grow more wheat.

The fishing industry was rather quiet.

Lumbering operations in the mills and in shipping were very active and gave promise of continuing so as long as the river remains open.

Local industries were all working steadily.

St. John.

Business continued dull in the building trades, but machinists and brass finishers were in demand.

The street car service to East St. John went into operation on August 19.

The city authorities are having a lot of work done in laying new sewers and water mains, giving employment to a number of men; also repairing and renewing several streets and sidewalks.

About 1,400 men left the Maritime Provinces on the harvesters' excursion on August 17, including 150 from St. John, and 650 more left on August 24.

Passenger and freight traffic on the St. John river boats has shown an improvement over that which existed earlier in the season.

The customs revenue for the month of July shows an increase of \$83,507.26. The statement follows: 1915, 227,618.43; 1914, \$144,243.17.

The inland revenue receipts for the month of July were \$18,118.70, and for the corresponding period last year \$14,481.57, an increase of \$3,637.13.

The harbour receipts for the month of July were \$5,168.85, while those for July, 1914, were \$2,827.36, showing an increase of \$2,341.49.

Sardines and other fish were very plentiful all along the Bay of Fundy.

QUEBEC.

Hull.

Labour conditions were improving, especially in lumbering operations. A larger number of men have left for the lumber camps than last year and a much larger cut is expected. Wages offered were lower than in 1913.

Extensive public works will be started at once in this locality, the city council having succeeded in disposing of its debentures to the amount of \$208,000.

The heavy rains have delayed the harvest and crops have been damaged.

Business in general was as good as during the same period last year.

The cost of living has not changed much, except for potatoes which were gradually coming down in price.

Montreal.

During August there were strong indications of business revival due to the expectation of a large crop and the rapidly extending industrial activity based chiefly on war requirements. Every statement by financial companies through men who usually speak for them bears evidence of belief that the tide has begun to turn. It has been stated by Mr. R. D. Bell in the monthly review by Greenshields & Company that conditions in agriculture, industry, trade and finance are immeasurably better than they were a year ago, or than they were immediately before the war started. The bulk of the improvement is attributed to liquidation, economy and determined efforts towards greater production.

Export business in grain, flour and cheese was somewhat hampered in this port for a while by the weakness of sterling exchange, but exports had increased considerably towards the end of the month.

Foundrymen have not been fully employed, and the domestic production of pig iron is being largely turned into steel for the manufacture of shells. The local demand for leather is light, though

the export movement, particularly for sole, is well sustained. An official of the Ames, Holden, McCready Company reported a better demand for boots and shoes from the Western merchants and the Maritime Provinces, and the whole first quarter of their fiscal year showed a fair advance over the corresponding quarter of last year.

Manufacturers of furs reported almost an average business in the Maritime Provinces, Quebec and Ontario. Western business is light, and little effort is made to make sales there. Woolen goods, tweeds, carpets and most imported dry goods show advances in prices.

The hardware business was as quiet as it is usually in August. Bar iron and steel advanced 10 cents a hundred.

Little construction work was proceeding and therefore there was a small demand locally for lumber. Moderate shipments of sawn spruce lumber and square birch timber to Great Britain were reported, but high ocean freights militated against business. The total amount invested in new construction work in Montreal for the first seven months of the year was one-third of what it was for the first seven months of 1914. This year the value of new buildings for which permits were taken only amounted to \$3,851,599, and for July the figures were \$432,490, one-sixth of the same month in 1914. The McGill Stadium will be completed in the early part of September. The burning of the Blue Bonnets' race track grand stand also gave some temporary work to a small army of carpenters at the end of the month.

It is believed that local concerns with unfilled orders on their books are negotiating for additional business. Outside of war business Mr. W. W. Butler, vice-president of the Canadian Car and Foundry Company, has announced an order for 100 box cars valued at \$100,000, and \$10,000 worth of switch and frog material which will be manufactured by the Canadian Steel Foundries, a subsidiary company.

Various companies are assuring their men that their positions will be given back to them when they return from the front if they enlist. The Canada Steamship Lines, Limited, in addition to this, has decided to insure the lives of all married men, and contribute to the support of all dependents of those who enlist from their employ \$10 a month as long as the war lasts. Two thousand men have been furnished to the firing line by the Grand Trunk, Grand Trunk Pacific and their affiliations by rail and lake since the war began, and honour lists are being made up for every department from which these men will come.

The Charity Organization Society reports that the amount of distress in the city increased during August, there being 450 families on the rolls at the end of the month when only 413 were on at the beginning. Of these 128 required material relief in the shape of groceries and coal. About 1,000 children were awaiting suitable clothing to attend school when it re-opens in September.

An Honour League has been formed in Montreal, Mr. Thomas O. Woods, the originator of the idea, having leased a house at 115 Milton street, to give employment to men with criminal records to give them a chance of rehabilitating themselves. It is reporting that in three months out of 36 men taken in only nine have failed to make good.

The first month's work in July of the Central Bureau of the Catholic Social Service Guild and St. Vincent de Paul Society as a clearing house for those out of employment shows that domestic servants are scarce and that most applications for work are by the day. The latter have fared badly for there is little demand for this kind of worker.

Negotiations affecting about 3,000 engineers and firemen of the Grand Trunk Railway System have extended over a period of three months with the result that last month increases for special work and concessions as to rules and conditions were arranged. Fifty-

two delegates from every part of the Grand Trunk service from Chicago to Portland took part in the deliberations with Mr. W. D. Robb, superintendent of motive power. The negotiations were conducted in a pleasant and fair spirit by both sides, and in that spirit the grievances of the men were adjusted satisfactorily. Much of the negotiation concerned rates for special work which were not included in former schedules. For instance, work on the Mikado and Pacific types of engines had to be provided with higher rates of pay. The term of the contract is subject to 60 days' notice on the part of either the men or the company.

Traffic returns from the various railroads showed earnings improving steadily through August. Mr. C. A. Hayes, general traffic manager of the Canadian Government railways, stated that the freight business on the Intercolonial had been good, although the passenger traffic had not come up to expectations.

The greatest event in marine circles here during August was the announcement that on October 15 or November 1 the fleets of the Canadian Pacific Company and the Allan line would be operated under one company known as Canadian Pacific Ocean Services, Limited, with headquarters at Montreal. The Allan line will continue under the same name. Messrs. H. & A. Allan will continue to be the traffic agents of the Allan line.

Work on the addition to No. 1 elevator was progressing rapidly, and the walls were beginning to rise. The business of the port has fallen off, the canal tonnage being greatly decreased and 52 vessels less going to the ocean than in August a year ago when 620 went from this port. More lake ships have gone to the Atlantic in the last week, reducing the lake tonnage still further. The grain is nearly all out of the elevators in port, and everything is in readiness for the new crop. A heavy export business is expected from the port this fall.

The price of flour was reduced 75 cents a barrel on August 29.

On August 7, 10,092 men were employed in the various city departments, 5,791 men in the road department, 2,354 men in the sewers department, 1,300 in the water department, and two or three hundred men in several other departments. The wages for the week ending on that day were \$122,367, not including the wages of policemen, firemen and City Hall employees.

Legal action was taken against the city's imposition of a cent charity tax on all entrances to theatres and places of entertainment generally where an admission fee is charged. The city won. The total receipts for the first month were \$11,609.72.

Paving was in progress on 50 street sections, with more work to follow. Many employees have complained that some of the foremen have extorted money from labourers who wanted work. Such cases are being investigated.

Instead of running behind as had been feared the collection of the water and business taxes this year has surpassed the amount received last year. The total revenue received for the last day on which the 3 per cent discount is allowed amounted to \$443,000, which is \$100,000 more than a year ago. The estimated revenue for 1916 is \$12,000,000 and the expenditure \$1,400,000 more. Verdun intends to do public works, including paving, costing \$121,897.

Directors of the Crown Reserve Mining Company, Limited, decided to discontinue dividends for the time being on account of disappointing results in the draining of Kerr lake and also to the demoralized condition of the silver market. The operation of the mine in the last six months has been almost altogether in low grade ore, and the cost of milling and marketing has left only a small margin of profit. Work on the mines is continuing actively and expenses will be reduced wherever possible. The Hollinger gold mines reported reduced profits, but returns are still considered satisfactory and the mills run most of the possible time.

Bondholders of the Canadian Cereal and Milling Company have decided to organize a new incorporated company with a bond issue of \$300,000 and a common stock issue of \$500,000. The 64th annual report to the shareholders by the directors of the Canadian Pacific Railway Company shows a strong position with dividends paid.

The following statement shows the operations during the month of August, 1915, of the Montreal Free Employment Bureau established by the Government of Quebec:

	Male.	Female	Total.
No. of positions offered	444	29	473
No. of applicants for positions	463	41	504
No. of persons placed	337	21	358

Quebec.

The month was a fairly good one. Building trades were active but the shoe manufacturing industry was dull. What contributed to make the season an active one for the building trades was the large number of houses and stores which were repaired. New buildings going up were comparatively few. A very noticeable feature this year was the falling off in tourist travel which was much below that of last year.

The hay crop was a heavy one and saved in good condition. Another fact worthy of note is that farmers in the Quebec district and east of Quebec have almost all of them a field of wheat. This is unusual and inquiry elicited the information that it was due to the high cost of flour. This and the increased number of calves being raised are very noticeable features.

In the lumbering industry the mills were all working. The season's cut will be a heavy one with a large quantity remaining over in the piling grounds, the demand being light and shipment difficult.

The Ross Rifle Factory has over 2,000 men employed and in the Levis

dock iron ship repairing was giving employment to about 300 men. The construction of motor boats in the wood-working branch was giving employment to a still greater number.

Sherbrooke.

Labour conditions were about the same as last month.

Manufacturing establishments in various lines, were busy and in a number of instances more workmen were taken on.

Building contractors were still busy, and all classes of labour fairly well employed.

The Union Twist Drill Company, which purchased the Butterfield & Company business at Rock Island, have let a contract to Messrs. Loomes & Dakin, Sherbrooke, for a large addition to their works.

Farmers were busy and getting some labourers from Montreal through the Immigration Bureau. Hay was a good crop and oats were looking well.

Lumbering was dull.

Mining conditions showed no change from last month.

Sorel.

The general condition of labour was not as good as in the previous month. Many men,—labourers, carpenters, machinists, boilermakers, etc.—were laid off, and while a number found work in other quarters others were left without employment.

Manufacturing and industrial establishments were not as active as in the previous month, but on the whole did pretty well. Some establishments reduced the number of their employees and others were running just enough to satisfy pressing and occasional demands.

Fishing was poor and lumbering quiet.

Trade was generally satisfactory, comparing favourably with that of last year for the same month.

Farmers had a good month. The hay crop was satisfactory and grain was expected to give a good yield.

St. Hyacinthe.

The general condition of the labour market was better than during the previous month and fully as good as during the corresponding month of last year. Several industries which had been quiet during July have resumed activity. Building operations were more active. The gas and electric company has started considerable work, employing a large number of labourers. Street work was also carried on extensively, giving employment to all men willing to work.

Retail business was fairly active. In the wholesale trade there was some complaint that business was slow, but travellers predict a busy season on account of the excellent crop prospects. Banks reported a good month with fair collections.

The cost of necessities of life has changed but little, and rents were still very high.

The general condition of agriculture was very good. Farm, garden and dairy products sold well. All crops, according to farmers, look better than at any time for fifty years. Farm work was active and the demand for help exceeded the supply.

St. John's and Iberville.

Labour conditions have not differed much from those of July. Unemployment conditions were somewhat improved through the departure of a number of men, who either left for other places or enlisted for the war. The building industry remained quiet. Conditions in the factories have not improved.

Traffic on the Chambly canal since the opening of navigation up to date has been much more active than during the same period last year. 1,325 boats passed through the canal since May, as against 1,168 last year.

Business in general was quiet. The cost of living was about the same as last month.

The general condition of agriculture was very good. Better crops are ex-

pected than last year. The hay crop was very large and the grain crop is plentiful.

Fishing on the Richelieu river was quiet.

Lumber dealers reported a very quiet month.

Three Rivers.

The employment of labour generally throughout this district for the month of August has not improved, remaining comparatively the same as it was during the preceding month.

Steel laying on the street for the Three Rivers Traction Company, which will take a few months more to complete, was progressing favourably. A number of building operations were in progress and the levelling and concreting of several streets was being carried on. Work on the new concrete sidewalks also was rapidly progressing.

Farmers were busy harvesting.

Fishing was rather quiet.

All sawmills were running to their capacity.

Factories in general were working full time.

Outside of a few hundred men employed by the Three Rivers Traction Company there was little done in railroad construction.

ONTARIO.

Belleville.

Labour conditions, considering the times, were fairly good but not equal to those of a month ago, owing to the fact that building operations were not so extensive. In the city many labourers were, however, employed upon a general sewerage system being installed in the western part of the city and upon three blocks which are being rebuilt on Front street. During the month a few permits were issued, being chiefly for improvement to buildings and residences.

The Marsh & Henthorn factory was busily engaged on orders for the Gov-

ernment and a number of men were kept constantly at work.

One of the cement works adjacent to the city, which had been idle for some time, resumed operations during August and employed a number of hands.

The work of laying a roc-mac pavement on a portion of one of the city's main thoroughfares has been commenced.

The two lock works in the city employed a number of hands who were working eight hours per day.

Dry goods merchants reported sales fair and prospects bright.

Rain during the month in considerable quantities retarded farm work and in some districts damage was done to outstanding oat crops. The wheat crop was gathered and was one of the best in this section for some years. Pasture was excellent and in consequence the yield of milk was above the average for the season of the year. Cheese was being made in larger quantities owing to the increased milk supply.

Berlin.

Conditions in the labour market for Berlin and Waterloo were practically the same as last month. The Dominion Tire Factory was working a double shift in some departments; the Buffalo Forge Company was also working a double shift and put on more men during the month. The Berlin Trunk and Bag Company was working overtime in the army halter department and the Regal Motor Company of Berlin reported business very good. The Berlin Furniture Company was again working 10 hours per day and the Hibner Furniture Factory was also busy. Other furniture factories were either working short time or were closed down. The shoe factories were again busy with overtime in some departments.

Foundries, shirt and collar, white-wear, confectionery, cigar, robe and clothing factories were not very busy. Breweries also were slack. One large rubber factory was very busy, the other

fairly so. Butter factories were again working full time. Planing mills were slack.

The building trades were none too brisk. On account of so much wet weather the work has been stretched out for a longer period. There were still quite a number of houses under construction as well as some large jobs. One contractor has cut his bricklayers from 50 to 45 cents per hour though only a few accepted same. Some paving work was in progress.

Customs returns for July were \$70,-384.03 against \$32,371.08 for July 1914, an increase of \$38,012.95.

Farmers in the district were kept busy harvesting. Wet weather damaged hay, wheat and oats. The potato crop was also adversely affected.

Brantford.

Labour conditions improved during the past month, and an optimistic feeling prevailed as to the outlook for employment during the winter. While the manufacture of munitions of war has increased opportunities of employment the staple industries of the locality have slightly improved, and it was anticipated that further improvement would be made. Some of the workmen in a few factories were working extra time, but there were still some factories on short time.

The building trades continued quiet, the number of permits issued and their value being comparatively very small. The Brantford Emery Wheel Company are making small extensions, and a new building for incipient cases has been commenced at the Brant Sanatorium for Tuberculosis. Other minor building operations were also progressing. Work on the new bridge spanning the Grand river is progressing. The numbers of unemployed have decreased among unskilled labour.

Those engaged in agriculture had a trying month on account of the excessive rains. Though some damage has been done to the crops, it is not so great

as was at first expected. The farmers have not experienced so much trouble in securing help, as has been the case in previous years, although a large portion of help secured is inexperienced. Large supplies of vegetables were on hand, but the apple crop is expected to fall below the average. Market gardeners and dairymen were busy, and experiencing fair conditions.

Manufacturing was improving and the outlook was brighter for fall and winter than it was for last year.

Brockville.

Labour conditions showed some improvement over last month. There were not many unemployed. About 150 persons left for the West on the harvest excursion and the opportunities for employment were fair.

The corporation has given the contract for the laying of a new intake pipe 700 feet long. The work has been started and was well under way.

The iron trade was fair, while the manufacture of tools was active. Other lines of activity were the brass and wood working industries on war orders.

Railway traffic was only fair in freight, but fairly active in the passenger line. The past month has been unusually active in steamboat traffic, especially the passenger line.

Agriculturists were unusually busy in harvesting operations. Continued rainy weather seriously interfered with this work.

Chatham.

Labour conditions remained fairly active during August, the building trades being quite busy.

The Gray Campbell Carriage Company, which closed down July 1 for stocktaking, resumed operations the first week in the month with about 200 hands. The Chaplin Wheel Company, which closed down for similar reasons, also resumed operations about the middle of the month, starting with about half the regular staff.

Flour mills were running 18 hours per day and woollen mill double shift, 24 hours per day. Planing mills were quite active.

All railroads reported freight receipts fair and shipments to the West improving.

Owing to the drop in the price of wheat flour took a corresponding drop in price.

On the whole labour conditions look brighter in most of the factories than in the corresponding month of last year.

Farmers were very active throughout the whole month owing to the extreme wet weather which delayed harvesting until late in the month. Wheat, oats and barley will be the largest in years. Sugar beets and tobacco will also be above the average. Apples will be almost a complete failure throughout the entire district.

Cobalt.

There were fewer idle men in Cobalt during August than in any month since the war started. The mines which employ the big percentage of labour in this district were still running full time, and, in addition, other old properties are being re-opened in the outlying silver-bearing areas of Coleman township. These include the Shamrock, the Lumsden, and others. The opening of these ruins and the harvest excursions to the West which took a considerable number from Cobalt, New Liskeard and Haileybury have practically drained the district of men, to say nothing of those who have enlisted for overseas service. The low price of silver, which hangs around 47 cents an ounce, has not to any noticeable degree lessened mining and development in the Cobalt camp.

In the Porcupine gold camp more men were employed than at any time in the history of the camp. Apart from the fact that the various gold mines were working to capacity, operations conducted on the various properties have in some cases resulted in some excel-

lent discoveries being made. Around Sesikinika, in Maisonsville, and also in the Boston Creek district around Mileage 153 on the Temiscaming and Northern Ontario Railway, some excellent gold samples were being obtained. The results have encouraged a considerable amount of capital for development and as a result a large number of men were employed on a number of claims held under option. What claims were not already staked before the war have been staked within the last three weeks of August, and the district was full of prospectors, many of whom were doing assessment work on their claims.

Early predictions of immense grain crops throughout Northern Ontario were being borne out in full. Apart from a record area being under wheat and other grain crops the yield promised to surpass any crop yet harvested in the new district.

Among tradesmen, painters and decorators reported business and work exceedingly slack. Carpenters and other trades incidental to building were also slack, and many tradesmen were working at other jobs around town and at the mines.

Galt.

General conditions were encouraging. There were few unemployed; unskilled labourers who could not get a position either enlisted or went to the western harvest fields.

The large factories were still very busy. Some of these establishments working on war munitions were running three shifts. Cowan & Company, Limited, had room for more machinists and were compelled to work overtime for want of more mechanics. Some metal-working factories purchased new sites for the purpose of erecting new plants and increasing their capacity. Shoe factories, also, were putting up additions to their establishments and were very busy. While masons and carpenters were not so busy as in former seasons, a few private residences were put

up and a fair amount of work given to these trades in consequence.

Crops generally were good, though heavy rains and hail flattened the grain in a number of districts and made cutting difficult. Potatoes were expected to be poor in some localities.

Guelph.

Little change in the local labour situation was evident during August. The building trades were very quiet, no new work being undertaken. The Bricklayers' and Masons' Union reported about 60 per cent of their members out of employment, this being the shortest season's work in many years.

Manufacturing generally continued quiet. The Guelph Rubber Tire Company have started operations with a small staff of men. The Page Hersey Iron and Tube Company will run their plant to full capacity night and day and the Guelph Carriage Top Company have secured a large order for wooden boxes for packing army shells and will run their plant night and day. But for the most part, factory managers reported conditions far from satisfactory.

The Waterworks Commission have awarded the contract for the new pipe line to Brandon & Hollingsworth of Hamilton, the contractors who are building the new reservoir. The contract price is \$3,793.65. The new line will be completed as soon as possible, about 60 labourers being employed thereon. This in connection with street paving, sewerage construction and other civic work, provides steady employment for labourers. Indeed, on the whole they seemed to be better off than the skilled mechanics.

The Toronto Suburban Railway Company had a large gang of men employed laying and ballasting rails on their new line, this work being finished as far as Guelph.

At the regular meeting of the Guelph Trades and Labour Council a strong committee was appointed to act in conjunction with a provincial committee to

deal with the unemployed situation during the coming winter.

Wholesale and retail merchants reported trade quieter than usual at this season.

Customs receipts for the month of July were \$17,495.61, an increase of \$3,943.09 over the corresponding month last year.

Continued stormy, rainy weather has retarded harvesting operations, much of the grain having been levelled to the ground, making cutting very difficult. Pastures were never better though and the second yield of clover is heavy. Some injury to the potato crop from rot was reported and on heavy lands turnips were suffering from excessive rains.

Hamilton.

Labour conditions improved slightly during August, there being a much greater demand for unskilled labour than for several months past. Skilled labour showed some improvement in certain branches, but there were still many skilled mechanics who were unable to find employment at their customary vocations. The building trades were slack.

Several more expert mechanics left Hamilton to work on war munitions in England.

The Steel Company of Canada has been making big improvements to its plant which will materially increase the company's output.

The International Harvester Company, which put on a large staff of men last month, has been gradually increasing the number of employees in its various departments.

Two important contracts in connection with the new T. Eaton Company's factory here have been awarded. The reinforced steel work, comprising 300 tons, has been given to the Steel Company of Canada, and the steel cores to the Hamilton Bridge Works.

The jitneys are blamed for a marked decrease in street railway earnings.

Customs receipts for the port of Hamilton during the month of July amounted to \$399,601.03, as compared with \$179,548.28 for the corresponding period of last year, an increase of \$220,052.75.

The value of building permits taken out since the first of the year to the end of July is about one-third of what the amount was during the same period a year ago. The total this year so far is \$866,343 as compared with \$2,499,100 in 1914.

Work on the Toronto-Hamilton highway has been hampered considerably by the excessive rains.

Farmers and fruit growers had a busy month. The heavy rains did considerable damage to wheat, oats, corn and potatoes. Rot and blight were affecting potatoes to a marked degree, and high prices were looked for as a result. Fall wheat was averaging as high as 50 bushels to the acre on some farms.

Fruit growers reported that peaches were suffering from mildew as a result of the excessive rains of the past month and that the crop will not be nearly as heavy as it would have been had weather conditions been more favourable. Plums and pears were a good crop and were selling at prices considerably below those asked last year. Tomatoes were a big crop and were retailing at 15 cents per 10 quart basket.

Dominion Immigration Agent Sweeney is placing large numbers of men on farms in the surrounding district. During August 150 men were placed in positions on fruit and grain farms. The call for farm help was great, and fully as many more hands could have been placed by the immigration agent were they available.

A large number of harvest hands left Hamilton for the West during the month in spite of the fact that men capable of this class of work were much in demand in the local district.

The crops of the Civic Garden Club suffered considerably during the past few weeks by the heavy rains. Nearly all the potatoes planted on low lying

plots have been rotted, and it is estimated that at least 50 per cent. of the potato crops will be lost.

Manufacturing in many lines continued active, and a number of establishments made extensions to their plants.

A register has been installed in the City Hall so that Hamilton men who have been invalidated home from the front and are without employment can register. Several have already signed and every effort is being made to secure positions for them.

Despite the many cuts in prices made in the cost of power, the local Hydro-Electric department showed a surplus for the first six months this year of \$12,403.54.

Bank clearings for the month of August amounted to \$13,095,120, as compared with \$11,422,751 for the same month a year ago.

A local union of the International Union of Steam and Operating Engineers was formed here during the month. The new organization will be known as Local No. 586.

Kingston.

Labour conditions during August were much the same as in July, no new work being projected and very little prospect of any. As far as building construction was concerned there was very little doing, only one or two residences being under way and these were very near completion. On the new causeway steel work was started and concrete work was being pushed ahead.

Shipping was very dull and things were slack in consequence along the waterfront.

Factories were running under normal conditions excepting the Canadian Locomotive Company which was very active and was putting on additional hands almost every day. This company has also made arrangements with the Baldwin Locomotive Company of Philadelphia whereby the local plant will manufacture all trucks for use in Canada, for-

merly manufactured by the Philadelphia concern, which will mean quite an increase in the turnout of the Kingston plant.

The agricultural outlook for the district was fair, all indications pointing to a good crop. While there appeared to be a good deal of smut among the oats, the rest of the grain promised to be excellent and the majority of it has been garnered in good shape.

Mr. W. J. Driscoll has been appointed to represent the local Trades and Labour Council at the convention of the Dominion Trades and Labour Congress in Vancouver.

London.

Very little change took place in labour conditions in August as compared with July. Building operations were not nearly as extensive as last year and if it was not for four new schools being built bricklayers, stonemasons, etc., would have very little to do. A storm water sewer system, which was commenced last year, was still under way and giving work to a large number of labourers. The city is also carrying out a large programme of asphalt roads, curbs and gutters, sidewalks, etc. About two and one-half miles of new asphalt pavements have already been laid this year and contracts have been let for another one and one-half miles. Several of the brick-yards were working and were burning their first kilns of bricks this year.

The local munitions factories were working night and day forces and adding to the number of their employees.

The cigarmaking industry has improved considerable lately and all cigarmakers were working.

The grain crop has been all harvested and while some wheat suffered after being cut, from growth, owing to wet weather not allowing the farmers to get it into the barns quickly, yet the total yield is the best in years. The fruit crop, with the exception of apples, is of the best and the rains lengthened the season for raspberries and strawberries. Potatoes

suffered through the wet. After completing the harvest in the district, quite a number of the help left for the Western harvest fields.

Niagara Falls.

The average industrial condition during August showed small change from July. In some lines of employment there was improvement, but these gains were offset by dullness in other lines. Like the other summer months, August was abnormally quiet.

Contracts were awarded for some street paving and work was commenced. Only local labour will be employed.

For several weeks the weather was very rainy and some crops suffered in consequence. Late grain was damaged. The peach crop will be heavy.

The Ramapo Iron Works, the Pollard Machine Company and Kinzinger, Bruce & Company, all metal-working concerns, were engaging a few more employees from time to time. The cutlery and silver plating factories and the neckwear and suspender factories were also busier.

The Norton works at Chippawa, where abrasives are manufactured, are being enlarged.

Transportation improved. Steam railways were re-engaging some of the men who were laid off in the spring and putting more engines in service. Passenger traffic during the past three months has been not more than half the normal volume at this season. The general manager of the street railway stated that receipts had fallen off 25 per cent. A number of jitneys were running.

Port Colborne.—The Canada Cement Company was making a million bags for the army.

Welland.—The Canadian Zinc Company was formed, with \$500,000 capital, to establish a zinc smelting plant in the unused factory of the Quality Beds concern. Four thousand electric horsepower will be required. The new company is connected with the Weedon Mining Company of Sherbrooke, Que., and the establishment of the plant is a result

of the newly-declared bounty on zinc. The county fair buildings, which were burned, will be rebuilt at once. The tax rate of the town was fixed at 30 mills on the dollar.

Orillia.

The labour situation has been reasonably good during August, better, on the whole, than it was a year ago, in the month following the outbreak of the war. All the factories have been running steadily.

The number of men who are enlisting is beginning to have an appreciable effect. During August about 75 men left Orillia for the training camp at Niagara. So far, the men come almost entirely from the town, but as soon as the harvest is over it is expected that there will be an influx into the ranks from the country.

People are bearing cheerfully the financial burdens of the war. During August, \$12,000 was raised by voluntary subscriptions for machine guns and motor ambulances, besides which the town council voted \$3,000. Orillia's tax rate for 1915 will be 35 mills, of which nearly four mills, or \$12,000, is required for various expenditures in connection with the war. A campaign is about to be launched to secure subscriptions of \$1,000 a month for the Orillia Patriotic Fund. Orillia is herself undertaking to care for the dependents of all the men who go from this town.

The Tudhope Carriage Company has acquired the stock and materials of the Dominion Carriage Company, Toronto, and has taken over its orders.

The Canada Smelting and Refining Company is treating molybdenum ore, brought from the county of Renfrew, and has turned out a first shipment of molybdenite. This metal is used for hardening purposes in the manufacture of guns and other armament. It has not formerly been treated in Canada.

Ottawa.

A considerable slackening in civic works during August through several projects being completed tended to increase the dullness of a labour situation which showed practically no change of any consequence in any trade during the month.

Leather workers, machinists and iron workers in general were still busy on war contracts but with these exceptions conditions with the various trades were only fair.

The building trades were particularly slack, though plasterers found a temporary increase in employment.

The closing down of several Chaudiere industries which would have meant idleness for several hundred workmen was threatened through low water in the Ottawa river but heavy rains subsequently improved the situation.

Unskilled labour improved slightly through a demand for harvest labour, about 1,200 leaving the Ottawa district to work on farms.

At the end of the month the city was preparing to expend \$200,000 on civic works, to be started at once.

The civic registration bureau for unemployed showed a decrease in registrations and applications for work in August as compared with July.

For operating a steam derrick without holding an engineer's certificate, a workman has been fined twelve dollars in police court.

The Federal Laborers' Union, composed of Italians exclusively, has voted down a proposition to admit labourers of other nationalities on the ground that this action would lead to the admission of alien enemies.

Owen Sound.

Labour conditions were similar to that reported in July. Considerable repair work was being done, and one or two buildings were being constructed, but

building operations were not generally on an extensive scale.

The Northern Boat and Scow Company continued to run its mill department night and day. This company has purchased the Dominion Boat Works of Toronto, which plant will be removed to Owen Sound, and the company's staff increased. The Malleable Iron Works were also working on large orders. Other factories were doing a fair business.

Trade was usually reported quite good. Drygoods houses have done a normal business. The grocery trade, while it has been quite satisfactory, is not up to last year's record. That is accounted for by the rush to purchase goods after the opening of the war.

The automobile business has been good, about 100 machines having been sold in this immediate vicinity this season, principally to farmers.

Farm crops are good. While the weather was rather wet for beet harvesting, yet the ingathering has been very satisfactory.

The fishing industry has given excellent returns.

Peterborough.

Labour conditions during August were similar to those prevailing during last month. The unemployment situation has been relieved by the enlisting of a good number of men for overseas service. There was very little building going on, and as a consequence the building trades were working short time or at other work. In the metal trades very little was being done except in the case of those working in the manufacture of munitions.

Labourers working for the Warren Paving Company have been granted a shorter work day and an increase in wages. They now work nine hours a day and receive 20 cents per hour. They formerly worked ten hours a day and were getting 17½ cents per hour.

The city has constructed 9,540 lineal feet of sidewalk this year up to September 1.

The street railway was extending its line and putting in heavier rails on the streets being paved.

Heavy rains did serious damage to the crops. However, with reasonably fine weather, most of the crops will be saved, but will require a lot more handling.

Lumber mills were working full capacity, and while local trade was quiet, export trade was good. The Peterborough Lumber Company had a big drive of logs in the river, which came 50 miles and required a large force of men. This drive was one of the best for some years.

In manufacturing industries iron workers were quiet; flour mills and textile factories were active.

Beaverton. — The Beaverton Toy Works made its first shipment of goods this month, the consignment going to British Columbia. The company manufactures iron toys, and expects a good season, having orders from all parts of Canada.

Fort William and Port Arthur.

The general condition of labour was much the same as for July, and no new work was started.

During the past twelve months many people have left these cities, leaving many empty houses. This has caused a great reduction in rents, and also no necessity for new buildings, and as a consequence the building trade has suffered most severely.

The transport business has not been busy, but with the harvesting of the Western crops things were becoming more brisk.

Many men have left Port Arthur and Fort William to help in the Western harvest fields. The railway companies have afforded cheap travelling facilities which have been taken advantage of.

The farmers in this district have had, on the whole, fairly good weather. Frosts persisted until very late in the season, and some of the crops were held back; then a very wet spell of weather was experienced, but August has been a very warm, dry and growing month. Root crops have been ripening rapidly, and a good crop is being looked forward to. Many workmen had taken up land in the vicinity of the cities, but while work was plentiful they remained to do it, since work has gradually slackened since the summer of 1912 many of these men have turned their attention to farming, consequently many of these farms were in good shape to put in small root crops this year, and advantage has been taken of this. Much new land also has been cleared.

Many men also have gone along the shore fishing for the market; these have been principally Finlanders.

With the exception of the erection of eight one-storey stores on Victoria avenue, Fort William, which were almost completed, and some little repairing, there was nothing doing in the building trades in the two cities.

The metal, engineering and ship-building trades were all quiet.

The printing and allied trades remained very quiet, also the clothing trades and businesses were feeling the general depression.

The military camp to the north of Port Arthur is a source of business to many in the miscellaneous trades, and the street car service has been accelerated by the number of visitors visiting friends at the camp.

Men are still joining the 52nd Regiment for active service, and others the 96th Regiment for home guard work.

The transport workers have had a quiet time, but this promises to be more active with the moving to these ports of the Western crops.

Unskilled labour was finding it exceedingly difficult to find work.

Sault Ste. Marie.

There was little change in industrial conditions during the month. A number of men out of work and some who had work enlisted for overseas service. The manufacture of war munitions created activity in some establishments, and the promise of a good harvest had a tendency to improve general conditions.

The Government is arranging with pulp mill owners as far as possible to purchase pulpwood from the settlers the coming fall and winter instead of taking it from their own limits. This will help materially to bridge the hardships of the coming winter.

Stratford.

The condition of the labour market remained active during the month as there was steady employment for all classes of labour. Outdoor workers were somewhat delayed owing to the heavy and continuous rains, especially those employed on street paving.

Manufacturing concerns in the city reported business very good. Wholesale and retail merchants did a good month's trade. Customs returns at the port for the month of July showed an increase of \$2,004 over the corresponding month of 1914. The excise returns for the same month amounted to \$5,377.39, being a large increase over July, 1914.

Farmers were having a little difficulty in harvesting their crop owing to it being flattened by the rains. Wheat that has been threshed was reported as running 40 bushels to the acre, oats 45 to 50 to the acre. Corn showed signs of being a heavy crop. Turnips and mangolds also looked good but it was feared the potato crop would not be good in some places.

All the factories were busy with their usual staff of workers; special activity prevailed in the manufacturing of war material.

St. Marys. — The quarries and the cement plant had 300 men employed and

plans were under way for doubling the capacity of the cement plant. The foundries, the Maxwell works and the milling company were all running with a full staff of workers.

St. Catharines.

Labour conditions in August showed but little change from those of July. With the exception of the employment of more men for the making of war munitions very little new work has developed.

Work was started on the pile driving for the false work on the old canal in connection with the St. Paul street bridge. The span across the waterbed was commenced.

Newman Brothers have been awarded the contract for a new three-storey block on James street.

Work on sewer connections and in paving provided employment for a number of unskilled labourers.

The canning factories were all busy.

Thorold.—Labour generally was fairly well employed.

St. Thomas.

The month of August was slightly better from a labour standpoint than July, but did not compare favourably with the corresponding month of last year. The supply of labour was in excess of the demand but the unemployment situation showed an improvement. Regular men in the traffic departments of the railroads were fairly well employed but spare men were not active. In railroad shop circles there was little change in prevailing conditions. Local industries were quiet.

The unemployment situation was considerably relieved when 80 or 90 men left the city and district to work in the western harvest fields. Farmers in the surrounding country need help but there appears to be reluctance on the part of the unemployed to accept farm positions in this locality. Experienced farm labourers were not plentiful and the inex-

perienced men out of employment cannot demand wages sufficiently high to induce them to go to the land.

The building trades continued quiet.

Figures covering recent enlistments from this district total 128.

The heavy rains have wrought considerable damage in this locality, the root crops being seriously affected.

So far fruit has been plentiful and moderate prices prevailed. Local markets have been well attended.

Local industries have been quiet.

Toronto.

Labour conditions during August showed some improvement as compared with July. The number of unemployed has been further decreased by enlistments and migration to other localities. Unemployment was most severely felt in the building trades, in which a large percentage were out of work. Building permits issued during July represented an approximate value of \$580,068, as compared with \$2,320,910 for July last year. The value of permits issued during the first seven months of the year was approximately \$3,794,446, as against \$15,797,000 for the corresponding period of 1914. Outside of the building trades there were comparatively few skilled mechanics out of work, the great majority of the unemployed being general workers of no particular trade, clerks and salesmen.

Work on the Toronto harbour improvements, which was discontinued in July on account of defective work by the sub-contractors, was resumed. The piles which were improperly put down will be taken out and replaced in accordance with the specifications.

The report of Dr. Charles J. Hastings, medical health officer, and R. C. Harris, commissioner of works, who have investigated the main sewage disposal plant near Morley avenue, is to the effect that all experiments for the improvement of the present system were without result. They recommend the installation of Imhoff tanks, which would cost \$6,000,-

000, or if they could be installed without sprinkling filters \$3,287,000. The report also suggests the opening of a channel through to Ashbridge's Bay, which would improve conditions.

The Board of Education has awarded tenders for a new addition to Dovercourt public school, containing 12 rooms, at a total cost of \$53,539.

The Standard Oil Company, represented in Canada by the Imperial Oil Company, will erect an eight-storey office building on the corner of Church and Court streets.

A Canadian company is being organized for the manufacture in Toronto of the Tygard Rotary engine. A demonstration of the operation of this type of engine was made at the Polson Iron Works by the inventor, James W. Tygard, who established the Tygard Rotary Engine Company in the United States.

The first train from Toronto to Vancouver over the Canadian Northern left Toronto on August 22.

The Russell Motor Car Company has secured a large contract for shells from the shell committee, which will keep the plant working to capacity until the end of the year.

George H. Gooderham, chairman of the Toronto-Hamilton Highway Commission, has complained to the Board of Control that he cannot get satisfactory men from the Civic Labour Bureau to work on the highway, and asking to be relieved from his obligation to take men through the bureau. Members of the board stated that the cause of the difficulty was the low wages paid, and asked for a report on the subject from the Civic Labour Bureau.

On August 16 the Ontario Railway and Municipal Board confirmed the right of the Toronto and York Radial Railway to construct a line connecting its Yonge street tracks with a proposed terminal on Farnham avenue.

The new Central Technical School on Harbord street was formally opened on August 31.

A summons has been issued against the Toronto Railway Company on behalf

of the Toronto Street Railway Employees' Union for allowing conductors to use the open running board on street cars for the purpose of collecting fares. It is alleged that this practice may endanger the lives of conductors and exposes them to risks against which the company is bound to take reasonable precautions.

At the meeting of the District Labour Council on August 19 charges of sweating employees were made by several delegates against some of the firms engaged on war contracts. It was stated that in one mill girls were worked from 7 a.m. until 11 p.m. without time for meals, being paid \$4 per week, or \$6.50 with overtime. The executive was instructed to make a full investigation.

The Board of Conciliation appointed under the Industrial Disputes Act to settle the difficulty between the Toronto Hydro-Electric Commission and their employees have reported in favour of an increase of 10 per cent in wages to take effect May 1, 1916. The report is opposed by the members of the Toronto Hydro-Electric Commission but the board deferred action pending a conference with the Ontario Hydro-Electric Commission.

The branches of the metal trades engaged in the manufacture of shells were active. Machinists were in demand and many engaged in allied trades were being employed in this industry. Other lines were generally quiet. Electricians and brass-workers were fairly well employed. Employment in the wood-working and piano-making industries was still below normal, but conditions were improving. Garment workers and custom tailors were fair. Hat and cap workers in some lines were active, in others quiet. Boot and shoe workers were fair. Printers and allied trades were quiet. Leather workers were active. The provision trades were steady. Hotel and restaurant workers had a quiet month, but were busier towards the close. Railway men were generally quiet, passenger traffic being much lighter than usual at this season. Sail-

ors, longshoremen and others engaged in navigation were fairly well employed.

Farmers were busy harvesting, which was greatly retarded by unusually heavy and frequent rains, which did much damage to the grain crops. Much of the standing grain was prostrated, rendering it difficult to cut, and there was considerable loss from sprouting. A large proportion of the potato crop was rotted by excessive wet weather. Other vegetable crops were also much injured.

Windsor.

Labour conditions were not improved and there was little demand for labour of any kind. Factories were not very busy and were just keeping their old hands employed.

The civic works department has been fairly busy on pavements, sewers, etc.

Building trades were not active, there being no large buildings under construction.

Farmers had a very good crop, but owing to so much rain were not able to harvest it and sustained considerable loss.

Woodstock.

There was some improvement to be noted in industrial conditions. Part is to be credited to the demand for war supplies; part to the prospect of a good harvest in the West. The factory of the Bain Wagon Company, for instance, was working full time again on orders chiefly from the West. The piano factories reported a better outlook. The furniture trade was still dull, and foundries, also, as far as normal trade is concerned. Some of the other factories were busy on war orders, and others still, while not busy, were finding something to do. Altogether the situation shows improvement since last month.

The supply of labour was pretty well employed. There were very few idle men, and fewer still who were compelled by lack of work of any kind to be idle. A good many were finding employment

in the country and some have gone to the West to help with the harvest there.

Farmers were busy with their harvest when the weather permitted. There were many complaints of scarcity of competent help, many of the men obtained from towns and cities being not much use in the harvest field.

Crops were good, but suffered more or less from weather conditions. Wheat began to grow before it could be taken in and oats were damaged by being beaten down. Potatoes were rotting on low lands. The loss to grain will probably not be very heavy, but the potato outlook was becoming serious.

MANITOBA.

Brandon.

The general condition of the labour market remained much the same as that of the preceding month. Conditions were such as to cause grave anxiety to workingmen regarding the winter.

There was practically nothing doing in the building trades and no prospects.

Though harvest was in full swing and threshing just commencing large numbers of labourers were unable to obtain work.

A considerable number of men have been employed by the city grading the road between the Experimental Farm and the Indian school. A large number of men were still employed by the Remount Department. The interned aliens also provided work for a considerable number of men as guards.

The majority of the crop has been cut in this district and threshing was commencing. The crop promises to be above the average both in quality and yield. A very sharp frost was recorded on August 23 but no damage to the crop was done owing to its advanced condition.

Winnipeg.

Industrial conditions in Winnipeg showed no improvement. Building trades remained very quiet. Engineer-

ing and metal trades were fairly busy. Woodworking and finishing trades were not busy. Printing and clothing trades were dull. Harvesting provided jobs in plenty for the local unemployed, but there was a large number of men from Eastern Canada who were unable to secure work as harvesters. During the month 101 machinists left Winnipeg for England, to work in the munition factories of that country.

The Free Employment Bureau found employment for over 600 men during the month.

Between 275 and 300 compositors have received an increase in wages from \$21.00 to \$21.50 per week, as a result of an agreement made between the local Typographical Union and master printers in 1912. About 60 firms have become affected by the change noted above.

The Cooks and Waiters Union were negotiating with the proprietors of restaurants and cafés with a view to establishing a minimum wage and a week's work of six days. A large amount of non-union labour is employed in the several city restaurants and cafés.

SASKATCHEWAN.

Moose Jaw.

From the middle of August there was good demand for harvest help and all local labour was absorbed as well as the numbers that arrived from outside points. Wages given were \$2.50 per day. Men who held out for more had difficulty in getting placed. When threshing commences, however, it is expected that from \$3 to \$3.50 per day will be paid.

Owing to the vast quantity of wheat to be moved the railroads have been making great preparations and have taken on a number of additional crews so that all railway men were employed. This applies to round house and machine shops as well as train crews.

Flour was reduced 75 cents a barrel owing to the lower price of wheat.

The West is harvesting the greatest crop in its history and it has been variously estimated at from 300,000,000 to 500,000,000 bushels. Cutting started about August 15 and by September 1 will have been completed in some districts. By September 1, 80 per cent will be cut and in stook. Some threshing outfits have commenced work and the first week in September will see them all at work.

The Saskatchewan Bridge and Iron Works were making good progress with their contracts and there was a demand there for experienced mechanics.

Prince Albert.

Some slight improvement in the general situation was noticeable owing to large numbers of men having gone south to the grain harvest, and to the commencement of shipping labour to the lumber camps. There was, however, a local supply equal to any demand in the locality. A great number of local men returned from Camp Hughes and engaged in harvest operations. No industrial developments took place and there was little demand for skilled labour.

During the month some fifty harvest hands arrived from the East, owing to direction in Winnipeg by railway officials that men were required in the district. Through the energy of the Board of Trade officials and the local officers of the Canadian Northern Railway the men were transferred to a district where they could obtain employment.

Active operations were being resumed in the lumbering industry.

Harvesting operations were in full swing and the exceptionally favourable weather prevailing and the great recovery of the crop from early frosts and cut worms indicate at least an average crop for the district. Several large shipments of cattle were sent East during the month. The growth of mixed farming in the district is evidenced by the small demand for harvest labour, owing to the permanent employment of hands

to manage stock, whose labour can be utilized in harvesting operations.

Regina.

Labour at the end of the month was fully employed. The Provincial Government have had a labour bureau in operation during August and have sent out about 2,100 of the local unemployed and about 1,000 who came in from outside points. Between fifty and sixty carpenters were at work on the Robert Simpson building. About 200 labourers and 30 men of different trades were engaged in unloading cars and similar work and there was no necessity of any men being idle around Regina at the end of the month.

The cost of living remained about the same; soft coal has been reduced fifty cents per ton; Galt, Imperial and Chinoek, which formerly sold at \$8.40 per ton, was being delivered for \$7.90 per ton.

Harvesters' wages ranged from \$2.50 per day to \$3 per day and board.

About 70 per cent of the grain in the district was cut and in the stook. The crop, according to reports, is one of the heaviest ever harvested in Saskatchewan. There has been no frost and the weather has been perfect for harvesting. The harvesting machinery companies have been very busy making shipments to outside points from the distributing warehouses in Regina.

Saskatoon.

There were seasonable opportunities for employment on account of harvest operations, although it was reported that on account of heavy excursions from East and West there was still a large surplus of labour. This surplus, it was expected, would likely grow much smaller when threshing opened up on a general scale.

Some rural telephone lines east of Saskatoon were being built, giving employment to a number of men.

The university residence was still progressing, more labour being taken on.

At the end of the month approximately 50 per cent of the grain had been cut. A light frost towards the end of the month apparently has done no harm locally. The straw is quite heavy as a rule and very often is taking from two to three pounds of twine per acre. There was no shortage of labour in this vicinity for harvesting operations. Weather conditions were good, dry yet heavy smoky atmosphere which will prevent frost.

ALBERTA.

Calgary.

Unemployment still continued although greatly modified owing to the increasing demand for harvest help combined with active recruiting. The Civic Labour Bureau has sent out 250 men for harvest work this month. A large number of harvest workers have been sent to Alberta and other provinces from the East despite the fact that there were many in the cities here who would be glad of the opportunity to work in the harvest fields.

A month's leave of absence has been granted the soldiers here who desire to go harvesting, and many have taken advantage of it. The Canadian Pacific Railway has brought quite a few men from the Coast for its own use as section hands, claiming that it is impossible to get them in the province. The wage paid is around \$2 per day.

All reports on the crops have been of the most favourable nature and a continued spell of good weather eliminated all doubts of the crops not ripening.

The large Government elevator was completed and will be opened on September 1.

The Canadian Northern Railroad Company had a large number of men engaged on the construction of its line south of the city.

The civic authorities have practically closed down all public works with the

exception of the Centre street bridge and a section of paving, there being only a few men employed. The year's programme for civic improvements was small and has been curtailed as much as possible.

The estimated damage by floods to city property was \$55,991.

The Western Canada Flour Mills Company has increased its plant to a daily output of 12,000 barrels.

Recruiting was still going on for drafts for the 50th and 56th Battalions. Recruiting will start for the 82nd Battalion on September 15.

The Associated Charities had relieved 171 families in distress up to August 26.

Edmonton.

The large surplus of labour available during July decreased very rapidly during August owing to recruiting for the army and the demand for men in the country. In addition to the local supply of labour a large number of homesteaders located north and west of the city took advantage of the opportunity to secure work in the harvest fields. The local demand for labour remained about the same as the previous month. Building operations, which furnished a large proportion of the work in former years, showed no improvement.

Freight shipments were light. Wholesale trade was fair; retail trade in the city remained quiet excepting the week of the annual exhibition when merchants reported business active.

The annual exhibition and race meet held during the month was a success in every way considering the dull times. The displays of farm produce and live stock compared very favourably with former years.

Reports on the condition of the crops were very favourable and weather conditions for the month were never better for the same period during the past ten years. Harvesting was well under way at the close of the month. While the supply of labour was much greater than the demand, hundreds of men went to

Saskatchewan where the demand was reported good.

Coal mining was quiet.

Railway construction was very active. It was reported that the main line of the Canadian Northern Railway from this city to Vancouver, B.C., would be turned over to the operating department September 1.

Lethbridge.

Employment conditions improved greatly over what they were in July, although at the end of the month the supply was greater than the demand. The harvest was not yet in full swing. Some severe rainstorms kept work back.

Coal mines were working more steadily, four or five days a week. Some mines were not working at full capacity.

The Canadian Western Natural Gas Company started at the beginning of the month to improve its pipe leading to Calgary and will spend about \$50,000 at a point six miles north of Lethbridge where the line crosses the river.

Freight shipments were reported heavier than in the corresponding month of last year.

The district had at the end of the month the best crop it ever had in all lines. The season has been ideal and it was expected the first week in September would see harvesting all over the district. The supply of help has exceeded the demand. There has been some hail and heavy falls of rain but little damage has resulted. The hay crop was remarkably good although there was considerable damage owing to rain.

Steel laying is to be continued east from the town of Foremost on the Weyburn-Lethbridge railway. Four elevators are being erected at Foremost. The building has been delayed owing to the lumber not being on hand.

Medicine Hat.

Factories were only partially busy with the exception of an odd one or two. Munition factories were working day

and night and employing a few new men from day to day. All idle men could find work in the harvest fields. The Canadian Pacific Railway was taking on additional crews to move the crop.

Rents showed a considerable decrease over one year ago; from 75 to 100 per cent.

Lumber yards reported an increase of business, due to the farmers having a good crop and doing considerable building.

Coal mines were doing little or no business. A small supply was being turned out for the farmers' trade and threshing machines.

Manufacturing showed slight improvement. Flour mills were only fairly busy though greater activity was expected with the arrival of new grain. Munition factories were working day and night. Other factories were fairly busy.

Crops in all parts of the district were reported the best in the history of the country. Calls were being made for men from all points, and at the end of the month the supply had been adequate. Hundreds of men made application to the Board of Trade, which took the matter up, and were sent to different farmers.

BRITISH COLUMBIA.

Fernie.

A very noticeable improvement was reported in general labour conditions during August, and the outlook was more favourable than it has been during the preceding twelve months. Greater activity in the coal mining industry was evidenced, while the demand for the product of the lumber mills has resulted in more of them opening up with a consequent increase in the number employed.

With regard to particular trades the improvement was not so optimistic. A number of minor buildings were under construction throughout the district, but the largest contract in connection with any one of these is that let by the Dominion Department of Public Works for

the construction of certain outbuildings at the St. Eugene Mission, near Cranbrook, B.C. The amount of the contract is in the neighborhood of some \$20,000. In Fernie two places of business suspended operations the beginning of the month. The District Ledger, a weekly publication in the interests of the miners' organization, and in connection with which a job printing department was operated, was indefinitely suspended and the six employees were thrown out of employment. The Calgary Cattle Company, retail butcher shop, and one of the three branches of the P. Burns Company at Fernie, was closed.

An improvement in the local commercial business, however, was reported by the wholesale trade, where the volume of business has been greater than for some considerable time. Railway traffic, however, remains as during the previous month, namely, conditions continued very quiet.

Increases in rates of wages as affecting the lumber industry have been reported throughout the district, these being voluntary concessions granted by the lumber manufacturers, ranging from 25 to 50 cents per day. The class of workpeople affected are unskilled labourers.

As a result of a grievance being brought before the Commissioner of the Western Coal Operators' Association and the President of District No. 18, U. M. W. of A., the rate of wages paid to fan boys at the Hillcrest Collieries, Hillcrest, Alta., in accordance with the terms of the present working agreement, of \$1.35, was increased to \$1.60.

The cost of living throughout this locality during the current month has remained at practically the same level as during the preceding month. The local wholesale and retail meat dealers, however, anticipate a substantial reduction in the prices of fresh meats beginning early in September. The advance of from 10 to 12½ per cent in this commodity which became effective in June still remains in effect.

The agricultural industry while on a limited scale throughout this district,

has been very satisfactory, the yield being considerably above the average.

The lumbering industry which remained in a very inactive condition for the past two or three years has, as a result of the prosperous conditions on the prairie, suddenly become very active, and while the output has not as yet reached the maximum owing to some of the mills not commencing operations, those that are at work were increasing their output continually as several large orders were reported to have been received from the Prairie Provinces.

August is between season in the post and pole business, but dealers expected a brisk demand as a result of the large crop on the prairie being safely harvested.

The coal mining industry also showed a marked improvement, the cause for this being that the railroad companies have commenced placing orders for their supply of winter fuel. In the lignite fields as well, considerable activity was reported, this being the quality of coal used for domestic purposes, and dealers were stocking for winter demand. This improvement in the coal mining industry has not been equally distributed in all the camps of the district. Conditions have not been altered in some of the camps. Other camps, however, were operating to full capacity. The demand for coke, contingent upon activity in the metalliferous mining fields of this province, was still brisk and companies manufacturing this commodity had large orders which were being filled as expeditiously as possible.

Nanaimo.

There was very little change in the labour situation although the number of unemployed decreased slightly owing to men leaving for other places and enlisting in the army. No new work was starting and there was very little prospect of improvement.

Wholesale and retail business was very quiet.

The men employed by the Vancouver-Nanaimo Coal Company, whose agreement expired during August, have accepted a new agreement at a reduction from the old one.

Farmers were about through with their harvest which was exceptionally good as regards grain and hay.

There was not much being done among local fishermen but the cannery in Nanaimo, which has been closed for some months, has started up again. This was expected to help the fishermen out.

The coal mines of the city and district have worked during the month but not with a full force of men.

Sawmills in the district were working steadily but with a reduced force of men, and the same applies to the logging camps on this part of the Island.

Nelson.

There has been little improvement in labour conditions over the past month. There has been some work going on in the city. The British Columbia Telephone Company have been changing their 'phone poles from the principal streets into the alleys, which has made quite an improvement to the city, and has given work to a few men.

A shortage of cars was reported at the Standard mines, Silverton. There was quite a number of men working at the Wakefield mine, near Silverton. The mine was sacking ore ready for shipment. The Grand Forks smelter was running to its full capacity and has been smelting about one hundred thousand tons a month. Since the furnaces in this plant were blown in in January the total ore treatment from the Phoenix mines has aggregated 464,329 tons and the production of copper has been about 700,500 pounds. The company's Amyox plant has been treating about 2,000 tons a day and was expected shortly to increase this to 2,500 tons.

At the present prices of copper the Granby Company is earning net profits of between \$4,000,000 and \$5,000,000 a

year. The company treats about the lowest grade of copper ore handled. Shipments were being made from the Lucky Jim mine of zinc ore and it was considered likely a quantity of concentrating ore would soon be moved to the Ivanhoe concentrator to be treated.

The St. Eugene mine in East Kootenay made its first shipment of the year, consisting of 45 tons of ore, to the Trail smelter. Quite a number of small mines which had ceased operations at the beginning of the war, have resumed work and have been making regular shipment to the smelter at Trail.

The work at Trail smelter continued at high pressure and this month's payroll has been the largest on record, and seldom have more men been employed in the various departments. Alterations are being made to the road from the Consolidated Company into Trail. The construction of a new piece of road gave employment to a large gang of men.

New Westminster.

Labour conditions showed little change since July. The city has been keeping up the usual civic improvement work and was preparing for the paving of another street. Harvesting in the Fraser valley has absorbed a few of the unemployed and during the last two weeks of August nearly 200 men left for the Alberta harvest.

Retail trade was slow although comparing favourably with July.

The weekly market has been well supplied with produce and prices, although somewhat lower than for the same month last year, have been good.

The weather during August has been extremely dry, thus aiding the harvest which was nearly over. Hay and oats have been exceptionally good though wheat would have been better if there had been some rain. The dry weather will also cause the potato and root crops to be lighter than usual.

Fishing has been exceptionally poor in the river, practically no sockeye having been secured. The canners are hav-

ing a very poor season although several of them are putting up large contracts of pinks.

Lumbering was steady but quiet and the mills were having difficulty in getting rid of their output. The shingle business was still good with a fairly brisk demand. Wood factories were still running part time with a poor demand for their products.

Prince Rupert.

Labour conditions remained the same as in June and unemployment prevailed throughout the district. The drydock was almost completed. About 100 employees were discharged from this work during the month, leaving only a few tradesmen to finish the contracts.

The fishing industry was still increasing. The demand for ice was so large that shipments were brought in from outside ports. This was the first occasion when a local supply of ice could not be had.

A large number of American vessels called during the month, also additional Canadian boats.

Vancouver.

General conditions of employment showed no improvement. The supply of workmen was still far in excess of demand. Relief was being continued in the case of resident married men and families. A large number of men have enlisted and recruiting was brisk. The military authorities have erected two tents in central locations, from which an energetic campaign is being directed. Through the city and provincial relief officers some 1,400 unemployed have been shipped to the prairie districts for the harvest season. Arrangements were being made to send 800 more. These men are required to pay their own fares, either at the time they leave or when they receive first wages. The railway companies have made a special rate of one cent per mile on the outward and one and one-half cents on the homeward journey for them.

Building conditions for July were very quiet. For the month 33 permits valued at \$171,065 were issued as against 119 permits valued at \$139,001 for July last year.

The task of financing civic works is causing much anxiety to the City Council. Aldermen have reduced their monthly salaries from \$100 to \$60. This is in keeping with the policy of reducing civic salaries and wages which has prevailed for the past year.

Longshoremen have been for some time negotiating a new wage scale and working conditions with local shipping companies. Much difficulty has arisen from time to time during the course of these efforts and at one stage it was feared open rupture would ensue. At the end of the month, however, advices were to the effect that an agreement was about to be signed by both parties.

Forest fires of exceptional severity have caused great destruction of timber and a number of logging enterprises, consisting of mills and camps, have been burned out, causing some additional unemployment in the lumbering industry.

Bread was increased in price by local bakers at the end of July. Formerly 16 ounce loaves retailed at 5 cents and 20 ounce loaves at 6¼ cents. The new prices are 14 ounce loaves 5 cents, 18 ounce loaves 6¼ cents. This has caused a good deal of criticism especially in view of the fact that the price of flour has come down locally during the past six months.

There was much activity in local labour circles in preparation for the annual convention of the Trades and Labour Congress of Canada, which meets here September 20 next.

As fall and winter approach, a general survey of industrial prospects does not offer any sign of improvement in labour conditions and the coming winter will be a difficult one from that standpoint.

Victoria.

Labour conditions during August were about the same as those of the pre-

ceding months so far as skilled labour was concerned, a large number of tradesmen being unemployed. Conditions among unskilled workers were somewhat improved owing to a number of men leaving the city to work at outside points, some to Great Britain, others have enlisted, and about 400 have gone to the harvest fields of the Northwest. There has also been a slight improvement in local industrial conditions, particularly in Saanich (adjoining Victoria) where a considerable number of men were employed paving roads and on waterworks construction.

The superintendent of the Free Municipal Bureau reports that for the six months ending July 31, there was a total registration of 2,639 men, 346 women and 49 youths under age. The monthly registrations of unemployed were as follows: January, 560; February, 547; March, 696; April, 459; May, 150; June, 262; July, 126; a total of 2,800, but 161 names were struck off the list, leaving the total number registered at the end of July 2,639. In the six months a total of 2,364 positions, casual and otherwise, were found for unemployed persons, and it was a notable fact that but three complaints were received in that time concerning the class of labour supplied. In the women's department, 219 have been placed in permanent positions at an average wage of \$20 per month; 127 day workers were employed on July 31, the average pay being 20 to 25 cents per hour.

The Imperial Oil Company has begun preliminary work for building an oil depot in Victoria. Storage facilities are to be erected and a wharf put up at which the oil tankers of the company will deliver the oil for storage prior to its distribution to Vancouver Island consumers.

Owing to the prevailing depression, a number of the officials at the City Hall have been placed on half-time.

For the first time in many years the price of bread has been reduced to five cents per one pound loaf, the former price being 6¼ cents. The reduction be-

came effective on August 22. The price of milk has also been reduced from nine quarts to ten quarts for one dollar.

Since the establishment of the public market here about a year ago there has been a noticeable decrease in the price of many necessities of life, more particularly in poultry, local grown fruit and vegetables, which were cheaper than for many years past.

For the duration of the war the municipality of Esquimalt will employ on municipal work only married men, or single men on whom there are relatives depending.

The City Council has struck the tax rate for the year at eighteen mills on the dollar net. Last year the rate was 20 mills. Taxes paid before November 30 next will be entitled to a rebate of one-sixth.

About 400 men have been engaged in Victoria and vicinity to work in the harvest fields of Saskatchewan and Alberta. None but competent men were selected. A low rate of one cent per mile going

east and one and one-half cents per mile returning west was made by the railway companies.

Conditions in the lumbering industry showed some improvement, one of the mills on Vancouver Island having enough orders ahead to keep the mill running until the end of the year. The shortage of tonnage during the past months has somewhat hindered shipments.

According to a return just issued by the Forest Branch of the Provincial Government, the total estimated value of the timber sales completed during the month of July was \$9,340.79. This represented a total estimated amount of 5,472,154 feet, board measure, and 1,340 cords of shingle bolts, etc. There were scaled in all districts during the month 68,976,188 feet of saw logs, 413,458 lineal feet of piles and poles and 23,239 cords of railway ties, shingle bolts, fence posts and cordwood. There were exported from all districts 13,413,274 feet of sawlogs and 77,325 lineal feet of piles and poles.

CONDITIONS DURING AUGUST AFFECTING WOMEN WORKERS IN LEADING INDUSTRIAL CENTRES.—REPORTS OF WOMEN CORRESPONDENTS TO THE LABOUR GAZETTE.

Montreal.

The general condition of female labour has remained unchanged during the past month. Although no improvement has occurred since July, the labour market during August of this year was less abnormal than that of the corresponding month of 1914, when the first shock of war conditions was felt.

Women have been busy in restaurants and laundries. Hospital nurses are in great demand for private cases as their numbers have been considerably reduced by so many having left with the various military organizations. Twenty-five more will be required for the staff

of the Laval Stationary Hospital, at present under formation.

Health and Hygiene. — The figures given in the report of the past three years' work done by the "Institut Bruchesi," which, hand in hand with the King Edward Institute, copes with the ravages of tuberculosis, are of great interest.

During the past three years 737 days' clinic were given, and during these, 7,440 patients' names were registered, these making 36,584 subsequent visits; 92,098 prescriptions were filled. The doctors attached to the Institute made 827 visits to the patients' homes, and 6,558 were made by nursing sisters un-

der whose direction the hospital is placed.

In the report particular stress is laid on the poor conditions found in most dwellings by the visiting sisters. They make an appeal to public spirited men and women to have some improvement brought about in the construction of the poorer class of dwellings. They draw attention to the fact that, even where careful housekeepers do their duty, bad ventilation and insalubrious surroundings favour the spread of the disease.

During the latter part of the month the doctors of the civic hygiene department established numerous bureaus throughout the city where school children will be vaccinated according to the regulation before the re-opening of classes in September.

Social Service.—A meeting of a number of influential and philanthropic citizens was held with the view of forming what is to be known as the "Honour League." The idea is to form an association the object of which will be: (1) the protection of society against crime; (2) to reform criminals; (3) to protect those who are unjustly accused; (4) helping those who are under accusation for the first time; (5) prison improvement; (6) looking after those leaving prison and equipping them with tools, etc., to go to work; (7) seeing to the families of prisoners; (8) to watch those who are liberated conditionally or on parole; (9) seeking legislation that would favour the ends mentioned above.

The temporary headquarters of the association are at 101 Viger avenue, where any information may be obtained.

The first monthly report of the Central Bureau of the Catholic Social Service Guild was issued during the month. There had been 60 applicants for work; 20 of these were placed. It was found that the incompetence of the applicants was often the obstacle preventing the bureau from taking advantage of good offers.

The Montreal section of the Canadian Patriotic Fund has accomplished a great deal of work during the past year, out-

side of the monetary aid given regularly to nearly 5,000 soldiers' families. A large field is offered women workers grouped under the name of "women auxiliaries." These have made the investigation necessary before any applicants could be registered on the regular payroll. Each ward has its number of workers and each one continues regular visits to a certain number of families. In case of illness the necessary care is procured. A number of city physicians have given their services free to the Patriotic Fund, and the Victorian Order of Nurses and "Gardes malades de Ville-Marie" have done likewise for the past year. The lady visitors see that the children of families visited attend school regularly, and they distribute pamphlets giving many practical hints such as having a savings account, a life insurance policy, etc.

Women in Trade Unions.—The Bookbinders' Union has of late issued several appeals to women and girls working in this trade to become members of the union. A large number attended the meeting called for the purpose, and gave an attentive hearing to the speakers who pointed out that the women's co-operation would advance the interests of the union.

Toronto.

Conditions affecting female labour have not changed materially during August. Those employed by the knitting mills, harness, horseshoe nail, tent and flag manufactories, and other firms filling orders for the army were busy and working overtime in many cases. Whitewear firms were reported busy, as well as biscuit, confectionery and fruit canning establishments. The work at the laundries has been more regular the past six months and most of the larger firms have been able to keep on the regular staff at full time.

The Morality Department has recently taken steps to prevent mothers leaving their children alone in carts and carriages outside stores while they shop

within. The large departmental stores have nurseries provided, where children are taken care of instead of being neglected on the street, and offenders against this new law have to give an account of themselves in the Juvenile Court.

The Business Women's Club of Toronto has started a movement with the object of raising funds for a motor ambulance, field kitchen or the equipment of field hospitals. There are said to be 50,000 self-supporting women in the city and the club looks for a subscription from each in order that a substantial contribution toward war relief may be made by the working women of Toronto as a body.

Domestics. — There has been a continued strain in the affairs of women working by the day due to the number of houses closed for the month. In the last week a great many charwomen have obtained steady work for a fortnight at the Exhibition buildings. The following facts from the monthly report of the employment bureau of the Toronto Women's Patriotic League reveal the state of affairs among domestics and day-workers:

New registrations (in town)	187
" " (out of town)	62
" " (for day work)	70
Applications for help (in town)	272
" " (out of town)	61
" filled (in town)	33
" " (out of town)	22

Over 100 more applications have been received for domestic help this month than last.

Retail Clerks.—The large departmental stores reported practically no change in the number of women and girls employed. As in previous years the extra help required during the Exhibition fortnight has been obtained from the substitutes taken on during the holiday months. The new market opened recently by the Robert Simpson Company, Limited, has called for 50 new clerks. The factories under the management of these companies were working to their full capacity.

Telephone Girls.—Only a slight decrease in the number of girls employed in the telephone offices has been noted in the past year. There is a waiting list of about 100, on which those who have gained experience while acting as supply during the summer are given preference.

Typists and Stenographers.—Typists and stenographers have been busier in the summer months because of the number of supplies engaged during this holiday season. All thorough ones have been employed and reliable juniors have not been idle. Those of fifth or sixth rate have suffered more from lack of work, but this is not altogether the result of hard times.

Educational.—Last year it was agreed to interchange four Canadian teachers with four from London, England, but in view of the war the Canadians stayed at home, while only two teachers came from England. Arrangements have been made to keep these two another year as their work has proved satisfactory. Six new public schools are to be opened in September.

Department of Public Health. — The Department of Public Health has drafted a set of standard regulations for abattoirs, and has notified the 18 private abattoirs in the city that they must comply with these regulations by the end of September or they will be forced to close. These regulations were necessitated by the condition of buildings and methods of some of the owners.

The Department has passed new regulations forbidding grocers, butchers and dealers from selling milk without a license. It has also been forbidden to sell loose milk in any form, nor are dealers allowed to pour milk from one bottle to another. Milk must be sold in sealed pints and quarts only.

The Public Health nurses of the Department have been organized into five districts, a supervisor being in charge of each.

During the past seven months there were only three deaths from typhoid

fever, as compared with 13 for the same period last year.

The infant mortality has shown an amazing decrease for the summer over the exceptionally low rate for last year:

Deaths of infants under one year—			
July, 1913.	July, 1914.	July, 1915.	Decrease.
176	141	97	31%
Children under supervision—			
746	2,533	4,085	

Winnipeg.

More satisfactory conditions generally prevailed as compared with last month in the majority of women's classes of work. Conditions were very fair for the month, so say the Winnipeg Free Employment Bureau, who add that the demand has been remarkably good for some little time, and that the whole month has been very good. Their report for July is as follows:

	Positions Offered.	Positions Filled.
Chambermaids	3	3
Clerks	8	2
Cooks	11	4
Day workers	227	223
Domestics	168	74
Factory helpers	2	..
Housekeepers	11	6
Housemaids	1
Kitchen women	9	8
Laundresses	3	2
Nurses	1	1
Nurse girls	14	18
Office girls	3	3
Stenographers	1	1
Waitresses	15	10
	476	356

The agencies say they can place all the domestics who apply, and that many applications from the farms for domestic help they are unable to fill.

Garment workers were well employed and garment factories were working full time and full staffs with but one exception.

Bookbinders were still working slack time and short staffs. About 50 girls belonging to the union were not working.

Dressmakers were somewhat slack, but milliners were busy in preparation for fall trade.

Work in the stores improved over July, and the prospect was good for an increasing demand for experienced saleswomen.

Telephone girls were well employed. Telegraphers were not so well employed as previous to the war. Even well experienced telegraphers were finding difficulty in securing positions, though the number seeking situations was small.

There were 160 positions for stenographers filled by one agency during August, and 116 in July. The agencies state that while the great majority of these have been temporary positions, still there was not a large number of competent stenographers out of work.

Some nurses have found permanent positions in the hospitals, replacing others who have gone to the front. Very little change was reported, except that cases were said to be a little longer in duration of late. The waiting list kept in the neighbourhood of 45.

Five hundred and fifty school teachers resumed duties, under the direction of the Winnipeg School Board, on August 23. The Department of Education reports that the supply of teachers seems equal to the demand. The short term normal for teachers holding third-class certificates commences September 1. Graduation for teachers will be at Christmas. The yearly normal classes for second-class certificated teachers opens in Brandon and Winnipeg also on September 1..

The commencement of school presupposes the closing of the playground work, which has been conducted very satisfactorily during the holidays. A splendid report of their summer's work is forecasted.

The stores closed their half holiday with the last Saturday in August. Many granted the holiday for July and August, while more than 3,500 clerks profited by it for the three months.

The figures on relief at the Associated Charities for July are as follows: total number cases relieved, 353, of which 65

were new. Causes assigned for same are as follows:

General sickness	65
Tuberculosis	29
Accidents	9
Cripples	6
Rheumatism	4
Blind	3
Widows	84
Man away	58
Desertion	31
Imprisonment	10
Old age	9
Separation	7
Immorality	6
Non-support	5
Insanity	6
Inadequate wage	5
Previous unemployment	4
Misfortune	3
Intemperance	1
Unemployment	1
Domestic difficulties	1
Under employment	6

Vancouver.

Labour conditions for women during August remained very much the same as during the previous month. The Free Employment Bureau report showed that the supply of woman labour was in excess of the demand, many women seeking work.

Owing to the continued unemployment of heads of families the City Relief Association supported some 2,682 persons during the month. Arrangements were made by the relief department to send some 2,000 unemployed men to the prairie provinces for the harvest work, the wives of 56 of the men accompanying them to be employed as camp cooks.

During the annual exhibition held during the third week of the month the British Columbia Consumers' League carried on an active campaign, urging all visitors to buy "British Columbia products and patronize home industries."

The Local Council of Women have again taken a very active part in the management of the exhibition, taking full charge of needlework and domestic science exhibits, while a tea room was managed by the various societies affiliated with the Council. In addition, another very interesting feature, arranged

and carried out by a committee of the Council, was the "better babies contest," some 700 babies being entered by their parents.

Many of the women's societies devoted their attention exclusively to Red Cross and similar patriotic work, the regular undertakings of the members being laid on one side for the present.

The Women's Patriotic Guild devoted all their attention to caring for the dependents of the ever increasing number of men who have enlisted. The report of the committee in charge of the Patriotic Fund showed that between 13 and 14 families were receiving assistance, both financial and material.

There was very little activity in regard to employment for women, or regulation of working hours or wages; but an effort was made by a few people to take up the matter of state pensions for widows and deserted wives, many of the women seeking "day work" and making but a scanty living being of this class, while many more are dependent on relief for support, being the reason given for urging the reform.

In particular employments, reports show that during the past month the only real demand for female labour was of a domestic nature, chiefly for general help, at a wage of \$12 per month, there being very few calls for cooks, housemaids, housekeepers or chambermaids.

In factory employment garment workers were fully occupied during the earlier part of the month with "fall orders for the retail houses, slackening off, however, towards the end.

Candy and biscuit workers were employed more fully than during the previous months preparing products for the Exhibition. The fruit canning season and the Fraser river salmon fishing season being at its height accounted for the increased demand for tin cans and for the women employed in the making of them working overtime.

An order for boots for the soldiers given to a local firm kept the boot and shoe workers busy for the past few

weeks, but increasing unemployment was reported in the seasonal trades of dressmaking, millinery and tailoring.

Sales clerks were seeking employment during the month, their number being added to by girls laid off from department stores owing to trade being dull.

Laundry workers, waitresses and chambermaids were seeking employment,

and in spite of the number that have left the city, many stenographers, book-keepers and office helpers were seeking regular employment, practically the only demand being a small supply of substitute work to be done.

Conditions for female labour during the month did not indicate any improvement in the near future.

THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—PROCEEDINGS DURING AUGUST, 1915.

DURING the month of August the report and minority report were received of the Board of Conciliation and Investigation which had been appointed to deal with a dispute between the Toronto Hydro-Electric Commission and electrical workers.

Applications Received.

During the month of August two applications for the establishment of Boards of Conciliation and Investigation were received, namely:

An application from the employees of the Intercolonial Coal Mining Company, Limited, at Westville, N.S., to the number of 366, the cause of the dispute being a demand on the part of the employees for an increase in their wages. A Board was established by the Minister on August 25, Messrs. John McKeen, Halifax, N.S., and Simon Lott, Pictou, N.S., being appointed members thereof on the recommendation of the employing company and the employees respectively. The Board was completed on September 1 by the appointment by the Minister of His Honour Judge W. B. Wallace, Halifax, N.S., as chairman, this appointment being made on the recommendation of the other members of the Board.

An application from the employees of the Nova Scotia Steel and Coal Company, Limited, and the Eastern Car Company, Limited, at New Glasgow,

N.S., and Trenton, N.S., being engaged in the manufacture of munitions of war. On August 17 the Department was informed that 2,000 employees of the Nova Scotia Steel and Coal Company, Limited, had gone on strike as the result of a reduction in their wages. The employees of the Eastern Car Company, Limited, also ceased work on August 12, following, it was said, a change from hourly to piecework rates. Through the efforts of the Department of Labour the matters in dispute were referred for adjustment under the terms of the Industrial Disputes Investigation Act, 1907, both employers and employees concurring in this arrangement. The employees returned to work on the morning of August 20, a Board being established on that date. Col. B. A. Weston, Halifax, N.S., was appointed a member thereof on the recommendation of the employers, and Mr. R. H. Murray, Dartmouth, N.S., on the recommendation of the employees. The foregoing members having failed to make any recommendation, the Minister appointed His Honour Judge Emerson Coatsworth, Toronto, Ont., as chairman of the Board.

Other Proceedings under Act.

Reference has been made in the August number of the *Labour Gazette**

*See August, 1915, *Labour Gazette*, p. 175.

to the establishment of a Board of Conciliation and Investigation to deal with a dispute between the British Columbia Electric Railway Company and its electrical workers, members of Local Unions Nos. 213, 230 and 558 of the International Brotherhood of Electrical Workers at Vancouver, Victoria and New Westminster respectively, and to the appointment as a member thereof, on the employees' recommendation, of Mr. Edmund H. Morrison, Vancouver,

B.C. The employing company failed to make any recommendation and the Minister accordingly appointed Mr. Jas. A. Harvey, K.C., Vancouver, B.C., on its behalf. The Board was completed on August 14 by the appointment as chairman of the Honourable Mr. Justice W. A. Macdonald, Vancouver, B.C., this appointment being made by the Minister in the absence of any joint recommendation from the foregoing members of the Board.

Reports of Board in dispute between Toronto Hydro-Electric Commission and electrical workers in its employ.

The Minister of Labour received on August 13 and August 20 the majority and minority reports respectively from the Board of Conciliation and Investigation which had dealt with certain matters in dispute between the Toronto Hydro-Electric Commission and its electrical workers, members of Local No. 353 of the International Brotherhood of Electrical workers. The minority report was submitted by Mr. F. Erichsen Brown, the commissioners' nominee.

Attached to the application was a proposed new schedule of agreement submitted by the employees. The number of employees concerned was given as 175 directly and 25 indirectly.

A Board was established by the Minister on June 7, Messrs. F. Erichsen Brown and Fred. Bancroft, both of Toronto, Ont., being appointed members thereof on the recommendation of the Commission and the employees respectively. On the joint recommendation of the foregoing members, His Honour Judge Emerson Coatsworth, also of Toronto, Ont., was appointed as chairman by the Minister.

The report was signed by the chairman and Mr. Fred. Bancroft, the employees' nominee, and recommended that the first 24 articles of the schedule of 1914 should be continued without

change. It was recommended that the award should be binding for three years from May 1, 1915, to be terminated at the end of that time, if so desired, by one month's notice by either party to the other; if not so terminated, the same is to continue from year to year and be terminable at the end of any year on April 30 by either party giving to the other one month's notice of such termination. On the question of wages, the Board recommended an increase of 10 per cent to commence from May 1, 1916, the rates of pay during the first year of the three year term to be the rates set out in the schedule of the 1914 award, except in the case of those whose wages were by the said award inadvertently reduced.

Mr. F. Erichsen Brown, in his minority report, dissented from the findings of the Board, and recommended that the wages at present in force should continue until the declaration of peace in the war being waged between Great Britain and her allies and the Austro-Germans, and that for one year thereafter a general increase of 5 per cent should be given.

On August 20 the Department was informed on behalf of the employees of their acceptance of the award of Judge Coatsworth and Mr. Bancroft.

Report of Board.

The text of the report of the Board in this matter is as follows:

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Toronto Hydro Electric System, Employer, and its electrical workers, being members of Local No. 353, International Brotherhood of Electrical Workers, Employees.

To the Honourable

T. W. Crothers, K.C., M.P.,

Minister of Labour,

Ottawa, Ont.

The Board of Conciliation and Investigation appointed in relation to the differences between the employers and employees in this case, met by appointment in No. 1 Court Room, City Hall, Toronto, Ont., on Monday, the fifth day of July, A.D., 1915, and continued in session thereafter on the 19th, 20th, 21st, 23rd, 24th, 26th, 27th, 28th, 29th, 30th and 31st days of July, and on the 9th, 10th and 11th days of August, A.D. 1915, all the meetings being held at the same place.

Each member of the Board was present at all the above sittings.

The representatives for the employers, the Toronto Hydro Electric System, before the Board, were Mr. H. H. Couzens, manager for the employer, and Mr. P. E. Hart, managing engineer.

The representatives for the employees were Messrs. James E. Curran and Murray Nicoll.

The Board desires to acknowledge its indebtedness to Mr. Couzens and his staff for their readiness in supplying information and in assisting the Board in performing its duties so far as lay in their power, by giving the Board facilities for inspecting a number of the sub-stations and otherwise.

The same credit is to be given to Mr. Curran, Mr. Nicolls, and all their associates in supplying every information required by the Board and in every way facilitating its work.

The Board endeavoured as far as possible to bring about a friendly and reasonable understanding between the parties in the way of conciliation, but the respective views were so divergent that it was impossible to do so.

The evidence and arguments of both sides, and the exhibits filed by them, were duly heard and considered, and all points in contention between the parties weighed and discussed by the Board.

The Board desires to place on record the fact that apparently very friendly relations exist between the employer and the employees, and that was quite evident throughout all the sittings of the Board, although no agreement could be made.

The disputes seem to have originated in the following manner: About a year ago, in 1914, a Conciliation Board was formed between the same parties, consisting of His Honour Judge Colin G. Snider, of Hamilton, chairman, and Mr. Fred. Bancroft, of Toronto, a representative appointed on the recommendation of the employees, and Mr. F. W. Wegeman, of Toronto, appointed on the recommendation of the commissioners. This Board, after full consideration of the matters then in dispute, made its report, dated at Hamilton June 13, 1914, and signed by C. G. Snider, chairman, and Fred. Bancroft for the employees, and apparently the said report went into effect and was acted upon by the parties for the time being.

The said report provided that the schedule of wages and conditions therein named should go into effect on the first of May, 1914, and continue in force after the expiration of such time until either employer or employee should give 30 days' notice in writing to the other of them of termination thereof.

The schedule of wages and conditions specified in the said report are as follows:

1. Nine (9) hours shall constitute a day's work. From 7 a.m. to 12 noon and 1 p.m. to 5 p.m., except wiremen's and metermen's, whose hours shall be as at present.
2. All employees included in this submission shall have the following holidays: New Year's Day, Good Friday, Twenty-fourth of May, First of July, Labour Day, Civic Holiday, Thanksgiving Day and Christmas, and every alternate Saturday afternoon off with pay unless otherwise set out hereinafter.
3. The first five (5) hours' overtime worked between 5 p.m. and 10 p.m. shall be computed at the rate of time and one half of standard rate, additional overtime or overtime starting at 10 p.m. or later and before 5 a.m. shall be computed at the rate of double time of the standard rate, and shall continue (except for intermission for meals) until employee is relieved from duty, and if commencing at 5 a.m. or later and before 7 a.m. double time up to 7 a.m. All time worked on Sundays or holidays and on Saturday afternoon off to be computed at the rate of double time of the standard rate. All monthly men shall have two weeks' holidays with pay each year.
4. All lines carrying a voltage of over 650 volts shall be classed as high voltage lines.
5. When work is to be done on high voltage lines, not less than two journeymen are to be assigned to the job.
6. In case of trouble on high voltage lines not less than two journeymen must be sent out to repair the trouble with any necessary assistance.
7. That at all times the Commission shall receive a grievance committee from any department. It is also agreed that the business agent of the local or a general officer of the organization may be a member of the men's committee.
8. Any employee who may be suspended for any cause whatever, and who after investigation is found not guilty of the offence for which he was suspended, shall be reinstated to his former position and be paid full wages for all lost time, from date of discharge or suspension to date of reinstatement.
9. A journeyman shall mean an employee who has had three years of experience in one or all branches of the electrical trade.
10. Apprentice shall mean an employee engaged in learning the trade of a lineman, trolleyman, mechanic, wireman, meterman or operator, and who has had less than three years at such trade.
11. Men acting as temporary foreman shall receive foremen rate of pay for the period for which they are so acting.
12. Seniority, other qualifications being equal, shall be the ground of promotion in the service.
13. The Commission shall not discriminate against union men.
14. All men employed in the electrical trade under supervision of the Commission are to be given a thorough instruction in the use of the pulmotor; also instructions in first aid, the instructions to be given in the Commission's time by a competent instructor. A work order will be issued to cover these instructions to line gangs. If the employer desires to give instructions in the evening, the men shall attend on being notified and shall receive standard pay for the time occupied in receiving the instructions.
15. All gangs and departments to be provided with a first aid kit.
16. Where a helper is required on live work an apprentice and not a labourer shall be assigned, unless herein otherwise provided.
17. Patrolmen and repair men shall receive two weeks' holidays once a year with pay.
18. A suitable covering for wagons and automobiles will be arranged for protection in rough weather for all truck drivers and chauffeurs, troublemen, patrol and repair men.
19. One relief operator in addition to the one now employed shall be added in order to give each operator as nearly one shift off per week as can thereby be done.

20. Each relief operator must be in the same class as the operator he relieves.

21. No station operator, electrical mechanic, inside wireman, meter installer or station men shall be expected to work on five hundred volts, or over, live work or heavy dead work without sufficient assistance and proper precautions against danger, and where required to work on voltages of over 650 volts the general terms of this agreement as outlined above in regard to voltages will be maintained.

22. Trouble truck drivers, who have been one year in the service of the employer, will receive two weeks' holidays once a year with pay, and will work in shifts of eight hours, seven days a week.

23. All present conditions not herein provided for shall continue as heretofore.

24. Nothing herein contained shall be construed to reduce the pay of any employee now receiving a higher rate of pay for work classified below.

25. Mr. Frank W. Wegenast, the representative of the employer on the Board, does not agree with the undersigned members of the Board, and does not therefore join in this report.

WAGE SCHEDULE.

	Per hour.	Per month.
Foreman lineman		\$105.00
Foreman trouble department . . .		110.00
Sub-foreman		95.00
Journeyman lineman and trolleyman	40c	
Journeyman mechanic	43c	
Journeyman wireman	41c	
Journeyman cableman	43c	
Cableman's helper	28c	
Journeyman meter installer . . .		75.00
Journeyman troubleman		100.00
Journeyman first operator		90.00
Other operators to receive three per cent. increase.		
Patrolmen and repairmen		83.00
	Per week.	
Trouble truck driver		\$16.00
Drivers		16.00
	Per hour.	
Groundsman	26c	

	1st year per hour.	2nd year per hour.	3rd year per hour.
Apprentices—			
Line and trolley men	30c	31c	36c
Mechanics	27c	32c	35c
Wiremen	20c	25c	28c
	per mth.	per mth.	per mth.
Metermen	\$55	\$60	\$70
Meter readers, minimum rate	\$50.00	per month.	

Towards the end of the year 1914 it was alleged that the employers, without consulting the employees, began to make changes in the working schedule to the disadvantage of the employees, and an uneasy feeling prevailed and continued for some time until the early part of the year 1915, when, after some negotiations in an endeavour to settle the matters in dispute—the employees claiming that the time was running against them and they were under compulsion to do so—gave notice terminating the operation of the award on the 30th of April, 1915. About the same time, the employees submitted to the employer an agreement for consideration, containing, substantially, the terms and conditions of the above award as set out, with some few changes and with an increased scale of wages. This was rejected by the employers, who, on their part, submitted a certain document or notice to the employees, dated the 12th of May, 1915, under which they claimed the employees would have to work hereafter. Apparently it was intended by the employers to recognize the award as still in force, but varied and modified by their notice of the 12th of May which effected very marked and considerable changes in the terms of the award from the way they had been read and interpreted before.

As the parties were unable to agree representatives from each side were appointed and a chairman appointed by the Government, and the sittings began to be held for the purpose of determining the questions in dispute and in an endeavour to conciliate the differences.

Each of the parties claimed that while generally speaking the terms of the award were satisfactory, there should be some important changes made therein before it would be satisfactory to the parties respectively. Evidence was di-

rected towards satisfying the Board that grievances on each side existed as against the above schedule of working conditions, in order to endeavour to satisfy the Board that changes should be made therein.

One of the first questions raised, and an important one by the employers was that the time specified in the award being one year was too short, and after hearing the case made out by the employers for a longer term and what was stated in response thereto by the employees, the Board have concluded that it would be inequitable to both parties to make the award existent merely for one year, and consequently recommend that this award be binding for three (3) years from the 1st of May, A.D. 1915, and may be terminated by either party at the end of three years on giving one clear month's notice in writing, and if not so terminated shall continue from year to year and be terminable at the end of any year on the 30th of April in any year by either party on giving to the other party one month's notice in writing of such termination.

The Board after fully considering the allegations against the award of 1914 on both sides, have arrived at the conclusion that no case has been made out by either party to change any of the working conditions in clauses No. 1 to No. 24 in the said award, and therefore they recommend that the same be adopted accordingly for the term of three years as above specified.

A great deal of evidence was heard by the Board on the question of whether there should be one or two operators in a sub-station: that is to say, an operator and an assistant. This point is not covered by the said award, because at the time the award was made no question had arisen in regard to this, as there were then two operators at each station, consequently it did not become necessary to make any report thereon, and this Board therefore heard the evidence of both sides at very considerable length and examined personally, themselves,

the sub-stations. There were two questions to be considered: First, whether there was or was not too much work at any one of these stations for one man to do, and, secondly, whether, apart entirely from the question of the quantity of work, it was safe to permit a sub-station to be manned by only one operator when he is there. The dangerous character of the machinery and the fact that the sub-stations are kept locked up at all times, and operators are working there on shifts of eight hours each, and a man might therefore be several hours alone without being seen or called upon by any person. There are two or three temporary sub-stations, such as Withrow Park, etc., to which these questions do not refer, as it was agreed no extra operator was required at these places, but as to the main sub-stations, the evidence was very conflicting. There is positive evidence that it is not safe for a man to be there alone for so long a time, and there was equally positive evidence that it was quite safe for him to be there alone all the time, and there was other evidence that it was a matter for decision in each particular case as to whether or not it was safe for a man to be there alone. The Board, after having viewed the sub-stations and realized to some extent the dangers under which the men worked, and realizing that in any event where it is a debatable point the lives and safety of the men ought to take precedence, decided to recommend that there should be an assistant to the operator at each of these sub-stations: this, however, not to apply to the three small temporary sub-stations at Withrow Park, etc.

One of the important questions to be considered was that of a request for an increase in pay to the men. Schedules were presented showing the rates of pay the men were obtaining at the present time, and after an analysis of a number of these schedules it would seem that the average pay is in the neighbourhood of seventeen or eighteen dollars per week, after making an allowance for lost time,

and the question therefore is as to whether that is sufficient compensation for these men.

The Board had to determine as to what elements should enter into their consideration in deciding the question of pay, and they concluded that the cost of living—although not the only matter they looked into—is the primary basis of wages, and that an enterprise of the character of the Toronto Hydro Electric System should have its calculations so made and its estimates so arranged that provision should be made for reasonable and moderate living expenses for all its employees.

The Board received a very considerable amount of evidence both written, printed and verbal, with regard to the cost of living, and with every desire to make it as reasonable as possible, in view of the complex conditions which exist in Toronto at the present time, taking a mechanic with an average family of, say a wife and three children, it would appear that to keep him in a reasonable condition of life, suitable to his position, it would cost probably \$90.00 per month without making any allowance for lost time, etc. This would be an average of about, in round figures, \$22.50 per week. If therefore the Board is right in basing its calculation of the wages which a man ought to get upon the actual cost of living, then the wages should average \$22.50 per week instead of \$17.00 per week as at present.

It was strongly contended on behalf of the Toronto Hydro Electric System that they could not possibly raise the wages, in view of the reduction of business and the keen competition, etc., they would be unable to entertain for one moment the proposition of paying any increased wages.

In this connection, however, the fact must not be overlooked that willingly or unwillingly the Toronto Hydro Electric System has reduced its rates to the people of Toronto, and thereby reduced its

income to the extent of \$250,000.00 a year. This being correct, and it was the statement of the manager himself, then surely if an enterprise is so profitable as to be able to make this enormous reduction it is quite profitable enough to pay living wages to the men who operate the system, and we have no hesitation therefore in stating if these were normal times we would recommend at once an increase of ten per cent (10%) in wages to the men.

The Board feels that they cannot entirely overlook business conditions at the present time, and while they have no hesitation whatever in deciding that the wages of the employees in this work should be increased by at least ten per cent, out of deference to the strained conditions which prevail at the present time and which are likely to continue at least for some time to come, recommend that this increase be made to commence from the 1st day of May, 1916.

There were some inequalities of pay which ought to be remedied. For example: there were two foremen who, under the award of last year, by misunderstanding actually sustained a reduction of pay instead of an increase. This should be remedied, but we are not prepared to recommend that these foremen be kept so much in advance of other foremen all the time, but to be put, when the present increase takes effect, on the same footing as the others, and in the meantime that they shall be paid what they have actually been losing since the last award, up till and including the time that the raise comes into effect, when their wages shall be put on the same basis as the other foremen.

It is recommended that the rates of pay to the men during the first year of the said three year term be the rates set out in the schedule of the said 1914 award as modified herein in the case of those whose wages were by the said award inadvertently reduced.

All of which is respectfully submitted.

Dated at Toronto, Ont., this 12th day of August, A.D. 1915.

(Sgd.) E. COATSWORTH,
Chairman.

(Sgd.) FRED BANCROFT,
For the Employees.

I wholly disagree with the above and shall put in a minority report.

(Sgd.) F. ERICHSEN BROWN,
For the Employer.

Minority Report.

The text of the minority report of Mr. F. Erichsen Brown in this matter is as follows:

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between "The Toronto Electric Commissioners" and their Electrical Workers.

To the Honourable T. W. Crothers, K.C.,
Minister of Labour, and to Emerson
Coatsworth, Esq., Chairman.

The Majority Report.

I cannot agree with the majority report of the Board of Conciliation and Investigation of 1915 because it adopts and perpetuates the award of 1914, grants an increase in rates of wages which is absolutely unwarranted, contains conclusions and findings which in my opinion are contrary to the evidence and weight of evidence and is founded upon false premises as appears later.

Subsequent to the Hydro award of 1914 the men accepted lower wages and worse conditions from the System's commercial competitor, yet the majority report apparently ignores this fact and grants a further increase, thus condoning and intensifying the discrimination against the System.

The wholesale adoption by the majority report of the award of 1914 could only be explained in the face of the evidence adduced before us, upon the hypothesis that the award represented a proper base-line. If it did, then one party to these proceedings would have everything to gain and nothing to lose. Such a theory would be pernicious in the extreme.

The line of least resistance for me would be to adopt the award of 1914 and grant some slight increase in the rates of wages, but in my opinion that would be avoiding the real issues involved in this dispute and ignoring the bulk of evidence upon which I must base my conclusions. To present the matter more clearly, the majority report involves for a period of three years the wholesale adoption of the award of 1914, a general wage increase of 10 per cent after the expiration of one year from the 1st of May, 1915, and the recommendation that there should be assistant operators in all but three of the sub-stations, together with one or two minor recommendations. My reasons for not accepting these stipulations I give in order.

The Award of 1914.

My objections to the 1914 award are as follows:

- (1) It was a compromise, a *modus vivendi*, accepted by the Commissioners in a desire to bring about harmony and in the belief that the concessions which it involves (though recognized in many respects to be objectionable) would lead to a lasting peace between the Commissioners and the employees.
- (2) The working out of the 1914 award during the last year has proved that it was not a satisfactory and lasting settlement on a fair basis of the issues between the Commissioners and the employees and that the Commissioners' objections were well founded.

- (3) It failed to meet abnormal business conditions. When these abnormal business conditions arose as the result of the war and the Commissioners endeavoured to meet them, they were immediately charged with breaking the award, notwithstanding that they were continuing to adhere strictly to the spirit of the award.
- (4) It renders abortive the principle found in all employments that an employee must be actually giving something for holidays with pay and other privileges—the return is usually a reasonable amount of overtime without pay.
- (5) As shown from the evidence, it involved many conditions which could not properly be accepted by the Commissioners except by way of compromise and conditions which savored of downright interference.
- (6) It constituted gross discrimination against the Hydro, a publicly owned institution, as compared with its commercial competitor.

The Wages Increase.

I hold just as strong a view in the matter of the increase in the rates of wages recommended in the majority report.

The information handed in at the investigation and which was not refuted shows that the Commissioners now pay substantially higher wages than their commercial competitor and the increase in rates already effected since 1912 have been vastly greater than the increase in the cost of living since that date as deducted from the reports of the Department of Labour.

While I quite agree that any and every business which is profitable should pay living wages to its employees, that principle has no application to a business which is paying the wages now in force on the Hydro.

In the majority report the statement is made: "If an enterprise is so profitable as to be able to make this enormous reduction, it is quite profitable enough to pay living wages to the men who operate the System." The only inference that can be drawn from this is that the members of the Board who made the majority report are of the opinion that "\$17.00 or \$18.00 per week" or, in other words, upwards of \$900 per year is not a living wage. With this statement I cannot agree. The majority report further finds that the average mechanic's family of five, in the City of Toronto, would require \$22.50 per week as a living wage. A deduction from the statistics of the Department of Labour which has recently been made shows that the typical Toronto family of five would require in June, 1912, about \$14.00 per week and in June, 1915, about \$13.00 to \$14.00 per week and that the weekly average cost of living for the typical family in 1912 was under \$14.00 and in 1913 and 1914 slightly over \$14.00. From these figures we can only come to the one conclusion and that is, that the cost of living to-day for the average typical family is less than it was in 1914 and very considerably less than it was in 1912; whereas the increase in the average wage paid to the men coming within the scope of the awards has been over 11 per cent in the same period. In the case of linemen it was shown that the increase was equal to nearly 30 per cent within the same period.

The majority report states that "The Board . . . concluded that the cost of living . . . is the primary basis of wages," and therefore as the increase in the rates of wages of the Hydro in the past has been out of all proportion with the increase in the cost of living, the conclusion found in the majority report falls hopelessly to the ground.

Let me give but another quotation from the majority report: "If, therefore, the Board is right in basing its calculations of the wages which a man ought to get upon the actual cost of living, then the wages should average \$22.50 per

week instead of \$17.00 per week as at present." In that statement it was not the acceptance of the principle which should have been conditioned, but the finding that \$22.50 represented the actual cost of living.

Amongst all the evidence submitted to the Board was only one isolated statement prepared by the men at the suggestion of the chairman showing that the average cost of living for a family of five should be \$22.50 per week. In my opinion the Board erred in coming to so momentous a decision from one isolated case.

I would ask you to consider the far-reaching effect of the adoption by the commissioners of this majority report containing such a deduction from such premises, the effect not only upon the other branches of the Hydro Electric System but in all other industries.

Can you expect me to agree with a report which sets down the average cost of living for a typical Toronto family of five at \$22.50 when as has been shown the reliable statistics sets it down at about \$14.00?

If the average wage now is \$17.00, and a lineman now receives \$21.60 per week, then with an average rate of \$22.50, a lineman should receive \$28.32 or \$1,400.00 per year, and so on *ad nauseam*.

Nor can I overlook the fact that it was repeatedly urged upon this investigation that the previous award be used as a precedent. The 1915 Board adopts that principle when it accepts as part of its report the 1914 award. I cannot agree with either of those positions.

The application of strict business principles would require the rates of wages on the Toronto Hydro Electric System, a municipally owned undertaking, to be the same as those upon a private enterprise with which it is in competition. If the men are willing to accept the lesser rates of wages paid by the private enterprise, why should they discriminate against the public enterprise? Why should a Board of Investi-

gation support that discrimination. If higher wages are already paid, why should still higher wages be demanded and why should those higher wages be recommended by another Board of Investigation?

Although the rates of wages might logically be reduced, I am prepared to recommend an increase along the lines hereinafter mentioned. I do this coupled with certain compensating alterations in some of the conditions. I do so having in mind the declared intention of the commissioners to adopt a generous rather than close treatment of their employees, and having in mind also that in a publicly owned enterprise the rates of wages and conditions should be as favourable as the circumstances permit, but having in mind most of all the establishment of such a relationship between the commissioners and the employees as will work for a lasting peace and more than a fair settlement.

However, I make this recommendation based upon no false premises and with the express declaration that I do not recognize a dictum that a Board cannot decrease the wages but must always increase them or leave them stationary. If my recommendation is accepted by the Toronto Electric Commissioners, I recommend that the award be for the duration of the war and for a further period of one year, the increase to become effective only from and after the declaration of peace.

The Question of Assistant Operators.

The majority report in recommending that assistant operators be placed at all the sub-stations except three, goes beyond not only the conditions which previously existed upon the system, but goes further than the men asked at the investigation. Evidence as to the necessity of additional operators at the sub-stations was given by three experts, one called by the men and two by the commissioners, and also by two engineers of the Commission. With the exception of the evidence of one of the experts

(whose evidence was in my opinion discredited), the whole of the evidence given by the others showed that there was no necessity for having any increase in operators.

As another instance of the fact that the majority report is founded on false premises the following may be quoted therefrom. After referring to the evidence taken as to whether or not there should be one or two operators at a sub-station the report states: "This point is not covered by the said award because at the time the award was made no question had arisen in regard to this, as *there were then two operators at each station.*"

This is entirely contrary to the fact as up to the date of that award there was an assistant operator at two stations only over and above those at present having assistants. Further, of these two stations one (Withrow Park) is now specifically excluded by the majority report from the obligation of a second operator. I am of the opinion that no recommendation should be made by this Board on this point, but that the matter should be left entirely in the hands of the Toronto Electric Commissioners to determine from time to time absolutely as in their judgment may be best.

The Negotiations Which Led to the Appointment of the Present Board.

The following are the bald facts leading up to the appointment of this Board:

On March 31, 1915, the employees gave notice cancelling the 1914 award as of the 30th April, 1915. This cancellation came out of a clear sky. No negotiations had taken place between the representatives of the men and the employers prior to the notice.

On the 20th and 23rd of April, 1915, respectively, an interview took place between the representatives of the men and the employers at which some minor grievances were discussed. The employers agreed to investigate these grievances and rectify the conditions if the grievances were well founded.

On April 30, 1915,, the cancellation given by the men of the award of 1914 became effective.

On May 12, 1915, a notice confirming the former rates of wages but setting out conditions satisfactory to the employers and designed to meet altered business conditions was posted by the employers. I give this notice in the second schedule. A copy of the notice was sent by the employers to the Department of the Minister of Labour but was neither objected to nor commented upon by that Department.

On May 20, 1915, a further interview took place which ended amicably, leaving the employers with the impression that a basis for settlement by negotiation had been reached.

On May 22 the men applied to the Department of Labour for a Board. In this application for a Board appeared for the first time the proposed agreement by the men, the same not having been previously submitted to the employers.

I do not want to criticize the majority report clause by clause, but it is necessary to point out at least another of the inaccuracies in that report. The report states that "About the same time, (viz. before May 12, 1915) the employees submitted to the employers an agreement for consideration," etc. As stated, this formal document was never actually submitted to the employers but was included in the application submitted to the Minister of Labour when asking for the establishment of this Board.

The majority report contains the words: "The notice of the 12th of May effected very marked and considerable changes in the terms of the award in the way they had been read and interpreted before." In my opinion that statement is not justified by the facts, which are as follows:

The effect of this notice on the former conditions was briefly:

To leave wages where they were;

To make a few minor changes in some of the conditions;

To give compensation by payment for overtime as a substitute for holidays with pay in the case of station operators, patrolmen, metermen, repairmen and foremen, and—

At the request of the men, to provide an extra year for construction apprentices, and to pay for all reasonable time consumed by men in going to and coming from work on emergency calls.

From the above history of the negotiations there is only one conclusion to be drawn: that there was no necessity at this time for an application for a Board of Conciliation and Investigation.

The artificial and strained business conditions resultant from the war should alone have been enough to confine the settlement of any matters in dispute to negotiations between the parties and to discourage any application for a Board. An investigation of this sort not only interferes with the conduct of the business of the undertaking by taking the time of the management and others in the preparation of the case, but it entails an expense upon the country which is inexcusable.

The Commissioners showed that the wages and conditions on the Hydro were excellent and this was not disproved by the other side.

Publicly-owned Enterprises Are Not Run for the Benefit of a Class.

It should be pointed out that the present dispute neither involved all the employees of the System nor did it include the engineering, office and sales staffs, but was confined simply to Local No. 353 of the International Brotherhood of Electrical Workers. While there can be no conceivable objection to the existence of a union in a publicly-owned enterprise, there is no reason why the union should discriminate against that enterprise. The continual and annual demanding of a Board begins to look like the exploitation of a municipal undertaking where the conditions do not require such action. Privileges soon be-

come rights; compromises soon become precedents.

A municipally-owned undertaking under public ownership is run for the benefit of the many and not for the few, and providing the employees are treated fairly and justly and withal generously, it becomes a matter of sentiment and not justice when the fact that the undertaking has a profit or is able to reduce its rates is urged as a reason for an unwarranted increase in the rates of wages paid its employees. The adoption of any such principle by a Board in connection with one branch of the gigantic Hydro-Electric scheme of this province might have disastrous effects upon public ownership which may sooner or later enter into the field of other public utilities. One of the criticisms raised continuously by the opponents of Sir Adam Beck and his associates is public ownership in that municipal undertakings cannot be run on sound business principles, but that they are prone to be exploited for the benefit of some section of the community, political or otherwise.

It was apparent throughout the investigation and also from the evidence that the commissioners and the management were always willing to meet the men fairly and frankly whenever the occasion should require, and that they had zealously with more than ordinary solicitude regarded the safety of the men in all the departments of the undertaking. A very comprehensive Book of Rules of 57 pages had been prepared for the men's use—22 pages of which covered the treatment of accidents.

I have already set out my general objections to the 1914 award being part of my recommendation and my more specific objections thereto will appear from a comparison between the clauses of that award and the recommendations which follow.

RECOMMENDATIONS.

(1) *Wages.*

The wages at present in force as set out in the wage schedule hereto shall

continue until the declaration of peace in the war at present being waged between Great Britain and her allies and the Austro-Germans. From the date of such declaration of peace and for one year thereafter a 5 per cent general increase shall be given.

(2) *Holidays With Pay.*

The men at present enjoying the statutory holidays as follows:

New Year's Day,
Good Friday,
24th of May,
1st of July,
Civic Holiday.
Labour Day,
Thanksgiving Day,
Christmas Day,

and every alternate Saturday afternoon, shall retain these privileges.

These grades are as follows:

Linemen,
Groundsmen,
Cablemen and jointers,
Cablemen's helpers,
Wiremen,
Repairmen,
Metermen,
Mechanics.

(3) *Vacation.*

Two weeks' vacation with pay to be allowed annually to the following grades:

Operators,
Foremen,
Troublemens.

One week's vacation with pay to be allowed annually to the patrolmen.

Metermen are given a compensating increase as from the date of the adoption of this report if the same is adopted, and also overtime rates in view of the special surrounding circumstances of their case. I have already included this increase in the wage schedule recommended.

(4) *Sick Benefits.*

A co-operative scheme of sick benefit is suggested for the consideration of

the commissioners which, if adopted, be made applicable to the whole of the employees, such scheme to be worked out on the lines of contributions by the commissioners and the men.

(5) *Period of Award.*

This award shall in any event continue in force for the duration of the present war and also for one year after the declaration of peace. The same shall continue thereafter annually from year to year unless terminated by 30 days' notice in writing by either party to the other, such notice may only be given as to terminate this award on the first or other anniversary of the declaration of peace.

(6) *Working Hours.*

Nine hours shall constitute a day's work for ordinary construction men and mechanics, commencing 7 a.m. to 12 noon and 1 p.m. to 5 p.m. In the case of wiremen eight hours shall constitute a day's work, commencing 8 a.m. to 12 noon and 1 p.m. to 5 p.m. In the case of metermen nine hours shall constitute a day's work commencing, 8 a.m. to 12 noon and 1 p.m. to 6 p.m. Men working "on shifts" shall work eight hours per day in rotation.

(7) *Overtime and Relief Work.*

Overtime rates where payable will be as follows:

For regular men not on shift duty the first five hours between 5 p.m. (or 6 p.m. for metermen) and 10 p.m. shall be computed at time and one half of the standard time and thereafter at the rate of double time of the standard time and shall continue (except for intermission for meals) until the employee is relieved from duty, and if commencing at 5 a.m. or later and before 7 a.m. double time shall be paid up to 7 a.m. All time worked on Sundays, holidays or alternate Saturday afternoons, where such are entitled to be paid for, to be calculated at the rate of double time and the total amount paid shall be double time. In the case of operators work-

ing overtime, these men shall be paid at the rate of time and one half for the first five hours of overtime worked and double time afterwards.

If a man is temporarily transferred from one department to another he shall receive the rate and work under the conditions both as regards overtime and otherwise as are applicable to the job to which he is transferred; provided always that there shall be no reduction in the ordinary pay-roll rate applicable to the work on which he is normally engaged; provided further that if a man should be called upon after working for one department to immediately follow on with work for another department he shall then receive the wage to which he would otherwise have been entitled provided the work had been done without any change of department or job.

Men called from their homes in order to repair breakdowns shall in the event of a prompt response to the calls be paid for a reasonable length of time sufficient to enable them to go to and return from the job, the wage for this time to be at the rate applicable to the work in question.

(8) *Protection of Men While at Work.*

At all times reasonable precaution so far as possible shall be taken to protect employees while working on live lines. When working on wires carrying over 650 volts special precautions shall be exercised, and wherever the nature of the work or the safety of the employee so requires, two or more qualified workmen shall be engaged on the same together with any other necessary assistance that may be required.

(9) *Assistance on Live Work.*

Where assistance is required on live work a qualified workman or apprentice and not a labourer shall be assigned to the work, but this shall not be taken to mean that a labourer is not to be employed for the ordinary purposes for which such men are usually needed.

(10) *Grievance Committee.*

At all times by appointment the general manager will receive a grievance committee from any department. It is also understood that the business agent of the local or a general officer of the organization may be a member of the men's committee if desired by a majority of the men.

(11) *Suspension of Employees.*

Any employee who may be suspended for any cause whatever, and who after investigation is found not guilty of offence, shall be reinstated in his former position and paid full wages for all lost time from the date of the discharge or suspension to date of reinstatement.

(12) *Temporary Foremen, etc.*

In the case of men acting as temporary foremen or temporarily taking a higher position where such men are required to act for only a few days no change shall be made in their rate of pay but where they are required to act for an entire week or longer they shall receive for such time as they are acting the foremen's or sub-foremen's rate of pay.

(13) *Qualifications for Promotion.*

Seniority, other qualifications being equal, shall be the ground for promotion in the service.

(14) *Discrimination Between Employees.*

There shall be no discrimination between union or non-union employees.

(15) *First Aid Instruction.*

A course of First Aid instruction will be provided under the direction of a competent instructor who will give instruction in First Aid and in the use of the pulmotor. These classes will be scheduled at regular intervals after working hours throughout the year and so arranged that all employees will have an opportunity of receiving thorough instruction. Employees will be required to attend these lectures and will receive

one hour's standard pay for each lecture attended in accordance with the schedule upon which their name will appear. Any employee not so attending when scheduled unless given written permission to absent himself shall be docked for one hour. Employees will have the privilege of attending other lectures up to the capacity of the room in which the lecture is held but will not be entitled to any compensation while attending same.

(16) *First Aid Kits.*

All gangs and departments will be provided with First Aid Kits.

(17) *Covering for Waggon, Automobiles, etc.*

A suitable covering for waggon and automobiles will be furnished for protection in rough weather for all truck drivers, chauffeurs, troublemen, patrolmen and repairmen.

(18) *Definition of "Journeyman."*

A "journeyman" shall mean an employee who has had three years experience in any one or all branches of the electrical trade. In the case of station and garage mechanics the term shall be four years. In all cases, however, length of service must be coupled with efficiency in order to ensure recognition as a "journeyman," or in order to qualify for promotion.

(19) *Definition of "Apprentice."*

An apprentice shall mean an employee engaged in learning the trade of line-man, trolleyman, wireman, meterman, or operator and who has had less than three years experience at such trade. In the case of station or garage mechanics the term of apprenticeship shall be four years.

In connection with apprentices it shall be understood that the System is under no obligation whatsoever to provide continuous employment. Where bona fide breaks occur in the apprenticeship service such time shall be added in

computing the years of employment. It must, of course, be perfectly clear in the case of apprentices that length of service of necessity does not carry with it increased wages but only where this length of service is coupled with efficiency. The management shall be the sole judge as to the suitability or otherwise of an employee for promotion. It shall at all times be optional with the Commissioners whether they will employ apprentices or helpers but where apprentices are employed the rates of wages as set out in the schedule shall apply.

(20) *Periods of Abnormal Conditions Due to Slackness, etc.*

During periods when the conditions on the System, due to slackness of work or other abnormal circumstances, are such as to render it commercially impracticable to keep the regular complement of men or number of gangs going on full time, notwithstanding anything contained herein the System shall be at liberty to change any wages expressed at a weekly rate to an equivalent hourly rate and pay only for the hours worked accordingly. It being understood that whereas a man working on a weekly wage obtains holidays and other benefits in consideration of overtime work, without extra pay, etc., when transferred to an hourly basis he shall then be entitled to overtime rates but forego the other privileges to which he was entitled when on the weekly basis. Provided further that there shall be no change from hourly to weekly rates or the converse for periods of less than one working week. Also provided that if an employee shall work a part of a year at a weekly rate and the remainder at an hourly rate, he shall be entitled to allowance in respect of holidays equivalent to the proportion of the year during which he worked on the weekly basis.

All of which is respectfully submitted.

SECOND SCHEDULE.

May 12, 1915.

To the Employees,

Toronto Hydro Electric System.

Notice of cancellation of the arbitration award having been given to the Toronto Electric Commissioners on behalf of the employees of the system, and also they having considered the representations recently made to their general manager by a deputation of the men, they have decided to put the following into force and are making arrangements accordingly:

Although the conditions at present make it very difficult to maintain the scale of wages which have obtained in the past, apart altogether from the fact that purely commercial considerations would undoubtedly justify a reduction at the present time, the Commissioners are anxious that the wages and condi-

tions on the system shall be so good as to attract the best and most efficient men.

With the foregoing object in view the existing scale of wages will be continued for the present with the exception that the following modification applicable to the apprenticeship period for the mechanics in the station construction department as suggested by the men shall be put into effect. The wages will then become as follows:

1st year	27 cents per hour.
2nd year	32 " "
3rd year	35 " "
4th year	38 " "
5th year	43 " "

In order to clear away any ambiguity that exists in connection with the award of the arbitrators, dated June 20, 1914, and to bring the same into harmony with the conditions as they exist on the system to-day the following are to apply:

Men Going to and Coming from Break-down Jobs.

Men called from their homes in order to repair breakdowns shall in the event of prompt response to the calls be paid for a reasonable length of time, sufficient to enable them to come to and return from the job. The wage for this time to be at the rate applicable to the work in question.

Relief Work.

If a man is temporarily transferred from one department to another he shall receive the rate, and work under the conditions, both as regards overtime and otherwise, as are applicable to the job to which he is transferred; provided always that there shall be no reduction in the ordinary hourly rate applicable to the work on which he is normally engaged.

Provided further that if a man shall be called upon after working for one department to immediately follow on with work for another department he shall then receive the wage to which he would otherwise have been entitled, pro-

vided the work had been done without any change of department or job.

Sick Pay.

The rule of the system is that those men who work overtime without pay and whose duties involve overtime from time to time, or men who regularly work seven days a week are entitled to such sick benefits as are in operation on the system. It must be perfectly clear, however, that in those cases where men are rarely, if ever, called upon to work overtime they shall not be entitled to sick benefit.

Holidays.

The same rule to apply to this case as that applicable to sick pay.

Raise in Salary in Connection with Length of Service.

In the case of employees with less than one year's service, intermittent periods of employment will not be considered when calculating the length of service unless such periods are separated by breaks of less than a week's duration, and provided also that such break or breaks in the period are due to a reason that in the opinion of the management is bona fide. If breaks occur after the completion of the first year of service and are similarly bona fide and are of less than three months' duration they shall not be considered as a cause for recommending the period of employment for the purpose of calculating the wages to be paid. In every case, however, the actual duration of the time lost from any cause shall in all cases be deducted from the period of employment.

It must, of course, be perfectly clear that length of service, of necessity does not carry with it increased wages but only where this length of service is coupled with efficiency.

Men Paid Monthly Wages.

An effort has apparently been made to read into the arbitration award the meaning that because a wage is ex-

pressed as "so much a month," this automatically entitles the recipient to the benefits of "continuous" employment. Such, however, is not the case. The wages expressed as above will be calculated on the basis of the normal average hours of work and the rate will be paid for hours worked only.

As regards the line foremen, where there is rainy weather *during continuous work*, no deduction shall be made for rainy days, provided the foreman reports at the office and gives general assistance to the office staff in connection with his work.

Overtime Rates.

Overtime rates where payable will be as follows:

For the first five hours overtime worked between 5 p.m. and 10 p.m. at time and one-half.

Additional overtime or overtime starting at 10 p.m. or later, and before 5 a.m. at double time, and shall continue until the employee is relieved from duty. All time worked on Sundays, holidays or alternate Saturday afternoons (where such are entitled to be paid for) to be calculated at the rate of double time. That is to say men at present on wages at "so much per month" will be paid for overtime at the above rates and consequently not receive sick pay or holiday pay unless regularly working seven days a week or working overtime from time to time without pay as defined under the readings of sick pay and holidays on page ... This applies to such men as meter installers, meter testers, patrolmen, repairmen, etc., etc., and others who normally work during regular weekly hours terminating at 5 p.m.

The foregoing hours are not applicable to station operators, or other men who work in shifts. In the case of these men overtime shall be at the rate of time and one-half for the first five hours and double time afterwards.

(Signed) F. E. B.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.

Text of draft of amended bill now under consideration of Minister of Labour.

The Minister of Labour has caused the distribution in pamphlet form of copies of a draft Bill, consolidating and amending the Industrial Disputes Investigation Act, 1907, and the Conciliation and Labour Act, with introductory and explanatory notes, the Minister's object being, as the introduction states, to secure consideration and discussion of the suggested amendments. This purpose will be, it is thought, further served by having the text of the draft Bill printed in the Labour Gazette, the mailing list of which includes the names of large numbers of persons believed to be deeply interested in all legislation relating to industrial disputes, including those of secretaries of all local trade union branches in Canada, who are, of course, specially concerned in the subject. The complete text of the draft Bill is contained in these pages.

INTRODUCTORY.

The accompanying draft Bill respecting Industrial Disputes is printed and distributed for consideration and discussion. It is earnestly requested that its provisions be carefully perused, and that the views and suggestions of those interested be sent to the Minister of Labour.

The Bill is a consolidation and revision of the two existing Canadian statutes, namely, The Conciliation and Labour Act (1906) and The Industrial Disputes Investigation Act, 1907, with amendments and additions.

The history of legislation in Canada respecting these matters is briefly as follows. In 1909, The Conciliation Act was passed, based upon the English Act of 1896. It was designed to encourage amicable settlements by conciliation and arbitration, but was purely voluntary in its character. It extended to industries generally.

In 1903 The Railway Labour Disputes Act was passed, providing, in the case of railway disputes, for conciliation and mediation, and, where that failed, for compulsory investigation and report by a Board, under provisions similar in most respects to those afterwards inserted in The Industrial Disputes Investigation Act, 1907; but the requirements respecting applications were less stringent than in the latter Act and the Minister was given power to establish a Board of his own motion.

In 1906, The Conciliation Act and The Railway Labour Disputes Act were consolidated under the title of The Conciliation and Labour Act.

In 1907 The Industrial Disputes Investigation Act was passed. Except where both parties agree to invoke it, this Act applies only to public utilities and mining. It provides for the establishment of a Board on the application of either party to a dispute, and for mediation and compulsory investigation and report by such Board; and it prohibits lockouts and strikes until such investigation and report have been made. It requires employers and employees to give at least thirty days' notice of intended change in wages or hours of employment.

In the Bill now submitted for consideration, endeavour has been made to remove a number of objections to the 1907 Act and to remedy its defects,

and a number of new provisions relating to industrial agreements, false representations, and other matters have been added.

A more complete and satisfactory understanding of the Bill will be had by a perusal of its different sections and the notes following each, but some of its main features are as follows. The unnecessary duplication of procedure in respect of railway disputes is removed, all such disputes being now brought under the one Act. The main provisions respecting the appointment and proceedings of Boards and the prohibition of lockouts and strikes are still as heretofore confined to public utilities and mining; but where both parties agree to the appointment of a Board, such Board may be appointed in respect of a dispute in any industry, whatever its nature. In long-continued or serious disputes in any industry where neither of the parties applies for a Board the Minister is given power to act on the application of any municipality interested or of his own motion and establish a Board, or cause inquiry to be made in some other way.

The definitions and other parts of the 1907 Act which have been found to be defective and inadequate have been re-drafted and added to, much assistance in this respect being obtained from the Australian and New Zealand Acts.

Endeavour has been made to make the procedure respecting applications for Boards more simple and speedy, and it is provided that technical defects shall not invalidate applications and that the establishment or proceedings of Boards shall not be restrained or prohibited by the Courts. It is not hereafter to be necessary to obtain authority for a strike before applying for a Board.

A strike or lockout shall not, nor where application is made for a Board within the time limited, shall any dismissal, cause an employee to cease to be an employee for the purposes of the Act.

Where any question arises as to the meaning or application of any recommendation of a Board the Board may be reconvened to give its opinion or interpretation upon the point.

The provisions respecting notice of a change in wages or hours have been remodelled and made more comprehensive and effective, and the onus is put upon the party seeking to make the change of applying for a Board where the other party does not consent to the change.

A secret vote by ballot is required to be taken before a strike.

Provision is made for registering industrial agreements, and lockouts or strikes in public utility industries are forbidden where such agreements are in force, but either party may be relieved from the agreement by the report of a Board.

Making or publishing any verbal or written false statement as to the opportunities for employment, the state of the labour market, the existence or non-existence of a strike, lockout, or labour dispute, or as to anything else respecting any industry or employment, intended or calculated to encourage or induce any person to come to Canada or to change from one part of Canada to another, to work in any industry, or to prevent any person from so doing, is forbidden under heavy penalty.

After each section in the draft Bill notes are inserted explaining the origin of the section, or, where the section is new, explaining the purpose and reason of it. In the notes also a large number of other suggestions are mentioned, some of which may be worthy of consideration.

A table of corresponding sections is appended to the Bill so that provisions of the existing Acts can be traced into the new Bill or it can be seen what disposition has been made of them.

BILL.

An Act to aid in the Prevention and Settlement of Industrial Disputes and Strikes and Lockouts.

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

SHORT TITLE.

1. This Act may be cited as *The Industrial Disputes Act*.

NOTE.—This Act is intended to take the place of both The Industrial Disputes Investigation Act, 1907, and The Conciliation and Labour Act, (1906). It is given a new title.

INTERPRETATION.

2. In this Act, unless the context otherwise requires—

(a) “Minister” means the Minister of Labour;

(b) “department” means the Department of Labour;

(c) “industry” means any trade, manufacture, undertaking, enterprise, business, calling, occupation, or employment, in which persons are employed for hire or reward, except agriculture, and except any government service or employment other than government railway, telegraph, and telephone service.

(d) “public utility” means and includes mining, agency of transportation or communication, and public service utility of every kind; and, without limiting this general definition, includes railway, whether operated by steam, electricity or other motive power, steamship, telegraph, and telephone, and gas, electric light, water, and power works;

(e) “employer” means any person, firm, company or corporation employing persons for hire or reward in any industry; and in the case of railways, telegraphs and telephones, includes any government or commission or other body owning or operating the same.

(f) “employee” means any person employed by an employer to do any skilled or unskilled manual or clerical work for hire or reward in any industry, but shall not include a person employed as a private confidential clerk; a lockout or strike shall not, nor, where application for a Board is made within thirty days after the dismissal, shall any dismissal, cause any employee to cease to be an employee, or an employer to cease to be an employer, within the meaning and for the purposes of this Act;

(g) “dispute” or “industrial dispute” means any dispute or difference between an employer and one or more of his employees as to terms of employment, or as to any matter or thing affecting or relating to terms of employment;

(h) “terms of employment,” without limiting its ordinary meaning, includes any matter or thing relating to—

(1) the work done or to be done by any employee or employees;

(2) the wages, price, or other remuneration or reward paid or to be paid in respect of employment, or any allowance, bonus, deduction, discount, or other thing affecting such wages, price, remuneration, or reward;

- (3) the hours of employment, sex, age, qualification, or status of employees, or the mode, incidents, or surroundings of employment;
 - (4) the employment of children or of any person or persons or class of persons;
 - (5) the employment or dismissal of any person or class of persons, refusal to employ or to continue to employ any person or class of persons, or discrimination in favor of or against, or preference to, any person or class of persons;
 - (6) materials supplied and alleged to be bad, unfit, or unsuitable, or damage alleged to have been done to work or to materials or property;
 - (7) any custom or usage, or alleged custom or usage, either general or in the particular district affected;
 - (8) the interpretation of an agreement or any part thereof;
 - (9) generally, the privileges, rights, or duties of employers or employees, or the conditions of employment;
- (i) "lockout" without limiting its ordinary meaning, includes a closing in whole or in part of a place of employment, or a suspension of work in whole or in part for any period, by an employer, or a temporary or permanent refusal by an employer to continue to employ any number of his employees,—

- (1) with a view to compelling or inducing his employees or any of them, or to aiding another employer to compel or induce the employees of such other employer or any of them, to accept terms of employment or comply with any demands made upon them or any of them; or
 - (2) as a protest against anything done or not done by any employees; or
 - (3) with intent to cause loss or inconvenience to any employees or to the public; or
 - (4) with intent to procure, incite, instigate, aid, or abet any other lock-out;
- (j) "unlawful lockout" means a lockout contrary to the provisions of this Act;

(k) "strike" or "to go on strike," without limiting its ordinary meaning, includes a temporary or permanent cessation of work by any number of employees acting in combination or under a common understanding, or a concerted refusal or failure, or a refusal or failure under a common understanding, of any number of employees to continue to work, or to resume or return to work, for an employer,—

- (1) with a view to compelling or inducing their employer, or to aiding any other employees to compel or induce the employer of such other employees, to accept terms of employment or comply with any demands made upon him; or
 - (2) as a protest against anything done or not done by any employer; or
 - (3) with intent to cause loss or inconvenience to any employer or to the public; or
 - (4) with intent to procure, incite, instigate, aid, or abet any other strike;
- (l) "unlawful strike" means a strike contrary to the provisions of this Act;

(m) "Board" means a Board of Conciliation and Investigation established under the provisions of this Act;

(n) "application" means an application for the appointment of a Board under the provisions of this Act;

(o) "Registrar" means the Registrar of Boards of Conciliation and Investigation under this Act;

(p) "prescribed" means prescribed by this Act, or by any rules or regulations made thereunder;

(q) "trade union" or "union" means any organization of employees, whether incorporated or unincorporated or registered or unregistered, formed for the purpose of regulating relations between employers and employees;

(r) "lawful trade union" means any trade union not declared unlawful by this Act and the purposes of which are not unlawful under the law of Canada;

(s) "unlawful trade union" means a trade union declared or stated by this Act to be unlawful, or the purposes of which are unlawful under the law of Canada;

(t) "industrial agreement" means an agreement respecting terms of employment entered into or arising as specified in this Act;

(u) "Form" means Form in the schedule to this Act.

NOTES.—Paragraphs (a) and (b) are as in the Act of 1907.

(c) is new.

(d) is new, but covers similar ground to (c) of 1907 Act.

(e) corresponds to (c) of 1907 Act, but is amended in view of what is contained in (c); the limitation requiring not less than 10 employees, contained in sections 2 (c) and 21 of 1907 Act is omitted as it is believed it does not serve any useful purpose.

(f) corresponds to (d) of 1907 Act, but is amended by excepting private confidential clerks and by providing that dismissal or lockout or strike shall not prevent a person from being an employee for the purposes of the Act. This latter amendment covers what was asked for as to this matter by the deputation of the Trades and Labour Congress to the Government, January 6, 1914, and removes doubt. See Montreal Street Railway case, 44 Quebec Reports (Superior Court), page 350, in which it was held (among other things) that dismissed employees could not legally make an application for a Board.

(g) corresponds to (e) of 1907 Act, but is amended in view of the definition of "terms of employment" added by (h). The restriction "not involving any such violation thereof as constitutes an indictable offence" has been removed. In some instances Boards have had to be refused by reason of it, and it is felt that there is no sufficient reason for the restriction.

(h) is new, but when read with (g) corresponds to (e) of 1907 Act. Some parts of it, however, have been revised and added to. Though the expression "terms of employment" was used in the 1907 Act, [e.g., section 2, g)] it was not defined.

(i) corresponds to (f) of 1907 Act, but has been recast and modelled largely after the definition of the New Zealand Bill of 1913.

(j) is new.

(k) corresponds to (g) of 1907 Act, but has been recast and modelled largely after the definition in the New Zealand Bill of 1913. There has been a good deal of misunderstanding and some doubt as to the meaning of the old definition. See, for instance, *Rex v. Holowaskawe*, 24 O.W.R. 397. It has been suggested that in further conformity with the definition in the New Zealand Bill above mentioned and following the principle contained in section 6 of The Industrial Conciliation and Arbitration Act of the Commonwealth of Australia (1904-1910) the following clause should be added to definition (k):

"and the fact that ten or more employees have simultaneously, or at times nearly simultaneously, ceased to work, or refused or failed to continue to work, or to resume or return to work, for an employer, shall, unless the contrary is proved, be conclusive evidence that such employees in such cessation, refusal, or failure were acting in combination and concert and under a common understanding."

(l) is new.

(m), (n), (o) and (p) are the same as (h), (i), (j) and (k) respectively of 1907 Act.

(q) is (l) of 1907 Act amended by inserting the words "whether incorporated or unincorporated, or registered or unregistered." See judgment in Montreal Street Railway Case, 44 Quebec Reports (Superior Court), p. 350, which seems to imply that incorporation or registration may be necessary in order to give status under the Act.

(r), (s), (t) and (u) are new.

ADMINISTRATION.

3. The Minister of Labour shall have the general administration of this Act.

NOTE.—Same as section 3 of 1907 Act.

4. The Governor in Council shall appoint a Registrar of Boards of Conciliation and Investigation, who shall have the powers and perform the duties prescribed.

2. The office of Registrar may be held either separately or in conjunction with any other office in the public service, and in the latter case the Registrar may, if the Governor in Council thinks fit, be appointed not by name but by reference to such other office, whereupon the person who for the time being holds such office, or performs its duties, shall by virtue thereof be the Registrar.

NOTE.—Same as section 4 of 1907 Act.

BOARDS OF CONCILIATION AND INVESTIGATION.

Constitution of Boards.

5. Whenever any dispute exists between an employer and any of his employees in any public utility industry, and the parties thereto are unable to adjust it, either of such parties may make application to the Minister for the appointment, in respect of such dispute, of a Board of Conciliation and Investigation under the provisions of this Act.

NOTE.—Corresponds to sec. 5 of 1907 Act, but the last part of the old section, which referred to alternative procedure in railway cases under the Conciliation and Labour Act, is omitted, the procedure provided by the present Bill being made to apply to all railway cases.

It has been suggested that the words "public utility" might be struck out and the provisions respecting applications for Boards and investigation and report be thus made to apply to all industries. Sections 68 and 69, however, make certain provisions in respect of other industries.

6. The application shall be according to Form 1, or to like effect, and shall contain the statements and information in the said Form indicated.

2. The statements and information contained in the application shall be verified by an affidavit according to Form 2, or to like effect.

3. Any person by law entitled to affirm instead of taking an oath may, instead of such affidavit, make a solemn affirmation which shall have the like force and effect.

NOTE.—Corresponds to sec. 15 of 1907 Act. The order of the sections is considerably changed from that in the old Act, with a view to having the provisions as far as possible in the order in which they will require to be consulted in taking proceedings. A form of application is attached to the Act, and also a form of affidavit verifying the statements in the application, and this section now simply refers to these forms without repeating the particulars of the information and statements required by them. The chief change is the omission of the statement that a lockout or strike will be declared and that the necessary authority for such strike or lockout has been obtained, a statement that the applicants have endeavoured but are unable to settle the dispute being substituted. The old requirement has caused considerable difficulty in connection with applications and seems objectionable, at all events in many cases. Getting authority to declare a lockout or strike is considered more likely to cause or increase bitterness than to promote conciliation. Under the United States Act, known as the Erdman Act, such authority is not required as a condition of obtaining a Board, nor was it required under the Railway Disputes Act, 1903; see section 13 of Conciliation and Labour Act. There seemed also to be an inconsistency in requiring a statement that a strike would take place while as matters stood such a strike would be unlawful.

7. The application shall be signed by the persons and under the authority following, namely,—

(a) where the application is made by an employer—

- (1) if such employer is an incorporated company or a corporation, by one of its duly authorized managers or other principal executive officers;
- (2) if such employer is an individual, by himself;
- (3) if such employer is a partnership firm or an unincorporated company or association, by a majority of its members;

(b) where the application is made by employees—

- (1) if the employees desiring to make the application are members of a trade union, by two of the officers of such union duly authorized by a majority of all the members of the union upon vote taken by ballot, or by a majority vote by ballot of the members of the union present at a meeting called on not less than three days' notice for the purpose, expressly stated in the notice, of voting upon the question, or, where the dispute directly affects employees in more than one Province of Canada and such employees are members of a trade union having a general committee authorized to carry on negotiations in disputes between employers and employees, by the chairman or president and the secretary of such committee;
- (2) if some or all of the employees desiring to make the application are not members of a trade union, by two of their number duly authorized by a majority vote by ballot of the employees affected present at a meeting called on not less than three days' notice for the purpose, expressly stated in the notice, of voting upon the question.

2. The affidavit verifying the application shall be made by the person or persons signing the application, or, where there are more than two, by any two of them.

NOTE.—The same as sec. 16 of 1907 Act as amended in 1910, with a readjustment of form, slight changes in wording, and the addition of subsection 2. In (b) (1) and (b) (2) of subsection 1 the words "expressly stated in the notice" are added.

8. The application and affidavit verifying it shall be transmitted by registered letter addressed to the Registrar of Boards of Conciliation and Investigation, Department of Labour, Ottawa, or delivered personally at the Registrar's office; and the date of the receipt of such registered letter at the Department, or of such delivery at the office of the Registrar, shall be regarded as the date of the receipt of such application.

NOTE.—Same as section 17 of 1907 Act except that words are inserted expressly providing for delivering the application at the Registrar's office, if preferred, instead of transmitting it by mail.

9. The applicant or applicants shall, prior to or at the time of transmitting or delivering the application to the Registrar, also transmit or deliver to or for the other party to the dispute, a copy of the application and affidavit.

2. Such copy shall be transmitted by registered letter or delivered personally to the person believed by the applicant or applicants to have authority to deal with the matters in question in the application, or left at such office or with such person as the applicant or applicants believe will cause it to come most promptly to the knowledge of the proper party or parties.

3. The applicant or applicants shall, in the letter, if any, accompanying the application to the Registrar, or by separate letter, inform the Registrar of the transmission or delivery of such copy to or for the other party giving particulars as to time of such transmission or delivery, and giving the name and address of the person or company to whom the copy has been mailed, or particulars as to whom, how, and where it has been delivered.

NOTE.—Subsection 1 is the same as sec. 18 of 1907 Act except that the words "prior to or" are inserted. Subsection 2 corresponds to sec. 18 of 1907 Act, but is changed by leaving out the details set forth in that section. Subsection 3 is new, corresponding, however, to the practice of the Department in requiring information as to when and how a copy of the application was transmitted or delivered to the other party.

10. The Registrar shall, immediately upon receiving the application, notify the other party, and where not satisfied that a copy of the application and affidavit has been duly transmitted or delivered to such party, or where for any other reason he deems it expedient, shall transmit or deliver a copy of the application and affidavit to or for such party in such way as he deems most speedy and effective.

NOTE.—This section is new, but is in conformity with the practice of the Department. It will tend to prevent delay.

11. Upon receipt by the other party to the dispute of a copy of the application for the appointment of a Board, such party shall, without delay, prepare a statement in answer to the application, and transmit it by registered letter, or deliver it personally to the Registrar, and shall similarly transmit or deliver a copy thereof to the party making the application.

NOTE.—Same as sec. 19 of 1907 Act with slight verbal changes. The word "reply" is changed to "answer."

12. Either party may, if such party sees fit, either in the application or answer or by separate writing, deposited with the Board or the Registrar at any time before or after the Board has made its report and recommendation, agree to accept and abide by the recommendation of the Board, and wherever one party so agrees it shall be the duty of the Registrar or the Board with whom such agreement is filed to communicate the fact, or a copy of the agreement, to the other party, and where both parties agree to accept and abide by the recommendation of the Board such recommendation shall be deemed to be an agreement between the parties.

NOTE.—Corresponds to sec. 62 of 1907 Act, but the words "if such party sees fit, either in the application or answer or by separate writing, deposited with the Board or the Registrar" are new, and the words "be deemed an agreement between the parties" are substituted for the former provision that the recommendation of the Board might be made a rule of Court. As to old section 62, see *Rex v. McGuire*, 16 O.L.R. 522, in which Judge Magee expressed doubt as to the force or effect of making the recommendation a rule of Court; and *U.M.W.A. v. Strathcona Coal Co.*, 8 W.L.R., 649, in which Judge Stuart referred to the section as being a little misleading.

13. Within ten days after the application is received, the Minister, if satisfied that the application is proper and that circumstances warranting the proceedings provided for by this Act exist, shall, under his hand and seal of office, grant a Board.

2. The decision of the Minister as to the granting or refusal of a Board shall be final, and when a Board is granted by the Minister, it shall be conclusively deemed to be authorized by and to be in accordance with the provisions of this Act, and no order shall be made or process or proceeding had or taken in any court to question the granting or refusal of a Board or to review, prohibit, or restrain the establishment of such Board or the proceedings thereof.

NOTES.—Corresponds to sec. 6 of 1907 Act, but the section has been recast and divided into two subsections. The time for granting or refusing a Board is reduced from 15 days to 10 days. The special reference to railway disputes is, in conformity with the change made in sec. 5, omitted, and provision is added excluding the jurisdiction of any Court to question or prohibit the establishment or proceedings of a Board. In the *Montreal Street Railway Case*, 44 Quebec Reports (Superior Court) 350, it was held under the old section that while the Minister's decision as to granting or refusing a Board was final and could not be reviewed, nevertheless the Board being an inferior Court was subject to the supervision of the Superior Courts, even to the extent of inquiring into the validity of the application for the Board and the facts connected with its establishment, and to the extent of prohibiting any investigation by it. In view of the nature and functions of such a Board this state of the law is not considered desirable, and probably was not intended. The Deputation of the Trades and Labour Congress (on 6th January, 1914) asked amendments to meet the objections to this decision and to prevent nullification of the establishment of Boards by reason of technical defects in the application or absence of compliance with the provisions of the Act.

Compare sec. 58 of Industrial Arbitration Act, 1912, of New South Wales. More or less similar provisions are to be found in many modern statutes dealing with bodies such as a Board of Conciliation and Investigation.

Sec. 73 now also gives the Minister authority to establish a Board, in the circumstances therein mentioned, even where there is no application from either party.

The shortening of the time for dealing with applications and the alterations made in sec. 68, old sec. 57, (as to notice of change in terms of employment) will, at least so far as the Act is concerned, lessen the objection that delay occurs in taking proceedings under the Act.

14. The Board shall consist of three members, who shall be British subjects resident in Canada.

2. The party making the application shall, at the time of making the application, and the other party shall not later than five days after being requested so to do by the Minister, each recommend the name of one person who is willing and ready to act as a member of the Board, and the Minister shall appoint such person a member of the Board.

3. In any case where a party fails to duly make a recommendation at or within the time above provided, or within such extension of time as the Minister on cause shown, grants, the Minister shall, as soon after such failure as possible, appoint a fit person to be a member of the Board, and such member shall be deemed to be appointed on the recommendation of such party.

4. The members chosen on the recommendation of the parties may, within five days after their appointment, recommend the name of a person who is willing and ready to act as a third member of the Board, and the Minister shall appoint such person a member of the Board.

5. If the members chosen on the recommendation of the parties fail to duly make a recommendation of a third member within the said period, or such extension thereof as the Minister, on cause shown, grants, the Minister shall as soon thereafter as possible appoint a fit person to be the third member of the Board, and such member shall be deemed to be appointed on the recommendation of the two other members.

6. The third member shall be the chairman of the Board.

NOTE.—This section combines the provisions of sections 7, 8 and 42 of the 1907 Act in more orderly form. The words "resident in Canada" are added in subsection 1. In subsection 2 there is a little change, calculated to further avoid delay, in requiring the applicants to name their member of the Board at the time of making the application. This will, of course, not prevent the Minister granting further time for doing so in accordance with subsection 3.

Sec. 11 of the 1907 Act, providing that members of the Board should have no pecuniary interest in the dispute, is omitted. Compare Erdman Act of the United States, which has no such restriction.

15. As soon as possible after the full Board has been appointed by the Minister, the Registrar shall notify the parties of the names of the members of the Board and the chairman thereof, and such notification shall be final and conclusive for all purposes.

NOTE.—Same as sec. 9 of 1907 Act.

16. Every member of a Board shall hold office from the time of his appointment until the report of the Board is signed and transmitted to the Minister, and thereafter shall be subject to be again called into office for the purposes mentioned in section 28 of this Act.

NOTE.—Section 10 of 1907 Act amended by the addition of all the words after "Minister." See section 28.

17. If a member of a Board dies, or becomes incapacitated, or refuses or neglects to act, the vacancy shall be filled by appointing a successor in the manner provided for the appointment of such member.

NOTE.—This takes the place of sections 12 and 48 (2) of 1907 Act, which were, in part, duplicates.

18. Before entering upon the exercise of the functions of their office the members of a Board, including the chairman, shall make oath or affirmation before a justice of the peace or other person authorized to administer oaths and affirmations that they will faithfully and impartially perform the duties of their office, and also that, except in the discharge of their duties, they will not disclose to any person any of the evidence or other matter brought before the Board.

NOTE.—Same as section 13 of 1907 Act as amended by section 1, Cap. 29 of 1910.

19. The Department may provide the Board with a secretary, stenographer, or such other clerical assistance as to the Minister appears necessary for the efficient carrying out of the provisions of this Act.

NOTE.—Same as section 14 of 1907 Act.

Functions, Powers and Procedure of Boards.

20. Upon the appointment of the Board the Registrar shall forward or deliver to the chairman a copy of the application and affidavit verifying it and of the statement in answer, if any is received, and the dispute shown in such papers shall thereupon be deemed to be referred to the Board, and the Board shall forthwith proceed to deal therewith.

21. Should it at any stage of the proceedings be made to appear to the Minister that it is necessary, in order to deal satisfactorily with the matters in dispute, that some other matter or matters involved in or incidental to those appearing in the application and statement in answer, if any, should also be referred to the Board, the Minister may under his hand and seal of office refer such matters to the Board accordingly.

NOTE.—Subsection 1 is section 22 of 1907 Act, made a little more complete and specific, and subsection 2 is new. The lack of a provision such as subsection 2 has been commented upon. The provision will, among other advantages, tend to prevent delay. Compare section 8 of 1910 Act of Commonwealth of Australia.

22. In every case where a dispute is duly referred to a Board it shall be the duty of the Board to endeavour, in such manner as it deems most expedient, to bring about a settlement of the dispute, and to this end the Board shall, in such manner as it thinks fit, expeditiously and carefully inquire into the dispute and all matters affecting the merits and the right settlement thereof; and the Board may, either before, during, or after the taking of evidence, make all such suggestions and do all such things as it deems right and proper for inducing the parties to come to a fair and amicable settlement of the dispute, and it may at any time adjourn the proceedings for any period it thinks reasonable to allow the parties to agree upon terms of settlement.

NOTE.—Same as 23 of 1907 Act, with some slight verbal changes, and giving a little more emphasis to the conciliatory functions of the Board, which is in accordance with the present practice.

23. If a settlement of the dispute is arrived at by the parties during the course of its reference to the Board, a memorandum of the settlement shall be drawn up by the Board in the form of an agreement between the parties and shall be signed by the parties in triplicate, and the Board shall forward to the Minister one of the triplicate agreements together with a report upon the proceedings.

NOTE.—Corresponds to section 24 of 1907 Act, but provides that the settlement shall be drawn up in the form of an agreement and signed in triplicate so that each party may have a copy and another copy may be filed with the report. The reference to section 62 has been omitted, in accordance with the change made in old section 62; see new section 12.

23. If a settlement of the dispute is not arrived at during the course of its reference to the Board, the Board shall make a full report thereon to the Minister, which report shall set forth the various proceedings and steps taken by the Board for the purpose of fully and carefully ascertaining all the facts and circumstances, and shall also set forth such facts and circumstances, and its findings therefrom, including the cause of the dispute and the Board's recommendation for the settlement thereof according to the merits and substantial justice of the case.

NOTE.—Same as section 25 of 1907 Act with slight verbal change.

24. The Board's recommendation shall deal with each item of the dispute and shall state in plain terms, and avoiding as far as possible all technicalities, what in the Board's opinion ought or ought not to be done by the respective parties concerned.

2. Where the parties have agreed to accept and abide by the recommendation of the Board, and wherever in any other case it appears to the Board expedient so to do, its recommendation shall also state the period during which the proposed settlement should continue in force, and the date from which it should commence.

NOTE.—Corresponds to section 24 of 1907 Act, but the words "where the parties have agreed to accept and abide by the recommendation of the Board" have been inserted, in order that the duration of the agreement or recommended arrangement shall in such case always be definitely fixed and stated.

25. The Board's report and recommendation shall be made to the Minister in writing, and shall be signed by such of the members as concur therein, and shall be transmitted by the chairman by registered letter to the Registrar as soon as practicable after the reference of the dispute to the Board; and in the same manner a minority report may be made by any dissenting member of the Board.

NOTE.—Same as section 27 of 1907 Act.

26. Upon receipt of the Board's report the Minister shall forthwith cause the report to be filed in the office of the Registrar and a copy thereof to be sent free of charge to the parties to the dispute, and to the representative of any newspaper published in Canada who applies therefor, and the Minister may distribute or otherwise publish copies or a digest of the report, and of any minority report, in such manner as to him seems most desirable as a means of securing compliance with the Board's recommendation. The Registrar shall, upon application, supply certified copies, for a prescribed fee, to persons other than those mentioned in this section.

NOTE.—Same as section 28 of 1907 Act, but with more comprehensive provision for publication of the report or a digest of it; the words "or otherwise publish" and "or a digest of" are added.

27. For the information of Parliament and the public, the report and recommendation of the Board, and any minority report, shall, without delay, be published in the *Labour Gazette*, and be included in the annual report of the Department of Labour to the Governor General.

NOTE.—Same as section 29 of 1907 Act.

28. Where any question arises as to the meaning or application of, or as to anything relating to or connected with,—
any recommendation made by the Board, or

any settlement agreement drawn up by the Board under section 22 of this Act,

the Minister, where he deems it expedient, may, on the application of either party or of his own motion, request from the chairman of the Board an expression of the Board's opinion upon such question, and the chairman shall upon receipt of such request reconvene the Board, and the Board shall as soon as practicable report to the Minister its opinion upon such question.

NOTE.—This section is new. The absence of such a provision has been commented upon. See Sir George Askwith's report on Canadian Act, made to Board of Trade of Great Britain, December, 1912, page 13. There is a similar provision in the Erdman Act (1913) of the United States, section 2.

29. For the purpose of its inquiry, the Board shall have all the powers of summoning before it, and enforcing the attendance of witnesses, of administering oaths, and of compelling witnesses to give evidence on oath or on solemn affirmation (if they are persons entitled to affirm in civil matters) and to produce such books, papers, or other documents and things as the Board deems requisite to the full investigation of the matters into which it is inquiring, which are vested in any court of record in civil cases.

2. Any member of the Board may administer an oath, and the Board may accept, admit, and call for such evidence as in equity and good conscience it thinks fit, whether strictly legal evidence or not.

NOTE.—Same as section 30 of 1907 Act, but with the change of the word "requiring" to "compelling" and "as is" to "which are" in the first subsection.

30. The summons shall be according to Form 3, or to like effect.

NOTE.—Corresponds to section 31 of 1907 Act, but the form of summons is now attached to the Act.

31. All books, papers and other documents and things produced before the Board, whether voluntarily or in pursuance to summons, may be inspected by the Board, and also by such parties as the Board allows; but the information obtained therefrom shall not, except in so far as the Board deems it expedient, be made public, and such parts of the books, papers or other documents as in the opinion of the Board do not relate to the matter at issue may be sealed up.

NOTE.—Same as section 32 of the 1907 Act.

32. A party to the proceedings shall be competent and may be compelled to give evidence as a witness.

NOTE.—Section 33 of 1907 Act.

33. Every person who is summoned and duly attends as a witness shall be entitled to an allowance for expenses according to the scale for the time being in force with respect to witnesses in civil suits in the superior courts in the province where the inquiry is being conducted.

NOTE.—Same as section 34 of 1907 Act.

34. Where a reference has been made to the Board of a dispute between a railway company and its employees, any witness summoned by the Board in connection with the dispute shall be entitled to free transportation over any railway en route when proceeding to the place of meeting of the Board and thereafter returning to his home, and the Board shall furnish to such witness a certificate in Form 4, or to like effect, evidencing his right to such free transportation.

NOTE.—Same as section 35 of 1907 Act, but the form of certificate to be used is attached to the Act.

35. If any person who has been duly served with such summons and to whom at the same time payment or tender has been made of his reasonable travelling expenses according to the aforesaid scale, fails to duly attend or to duly produce any book, paper or other document or thing as required by his summons, he shall be guilty of an offence and liable to a penalty not exceeding two hundred dollars, unless he shows that there was good and sufficient cause for such failure; but nothing in this section or done thereunder shall affect the exercise of the powers conferred upon the Board by section 29 of this Act.

NOTE.—Same as section 36 of 1907 Act, except that the penalty is doubled, and all the words after "failure" are added at the end.

36. If, in any proceedings before the Board, any person wilfully insults any member of the Board, or wilfully interrupts the proceedings, or without good cause refuses to give evidence, or is guilty in any other manner of any wilful contempt in the face of the Board, any officer of the Board or any constable may take the person offending into custody and remove him from the precincts of the Board, to be detained in custody until the rising of the Board, and the person so offending shall be liable to a penalty not exceeding two hundred dollars; but nothing in this section or done thereunder shall affect the exercise of the powers conferred upon the Board by section 29 of this Act.

NOTE.—Same as section 37 of 1907 Act, except that penalty is doubled, and all the words after "dollars" are added at the end.

37. The Board, or any member thereof, and, on being authorized in writing by the Board, any other person, may, without any other warrant than this Act, at any time, enter any building, mine, mine workings, ship, vessel, factory, workshop, place or premises of any kind, wherein or in respect of which, any industry is carried on or any work is being or has been done or commenced, or any matter or thing is taking place or has taken place, which is the subject of the Board's inquiry or connected therewith, and inspect and view any work, material, machinery, appliance or article therein, and interrogate any person in or upon any such building, mine, mine workings, ship, vessel, factory, workshop, place, or premises as aforesaid, in respect of or in relation to any matter or thing hereinbefore mentioned, and any person who hinders or obstructs the Board or any such person authorized as aforesaid, in the exercise of any power conferred by this section, shall be guilty of an offence and be liable to a penalty not exceeding two hundred dollars.

NOTE.—Section 38 of 1907 Act slightly altered in phraseology and the words "is connected therewith" are inserted.

38. Any party to a reference may be represented before the Board by three or less than three persons designated for the purpose, or by counsel or solicitor, but no counsel or solicitor shall be entitled to appear or be heard before the Board except with the consent of the parties to the dispute, and notwithstanding such consent the Board may decline to allow counsel or solicitor to appear.

NOTE.—Contains the provisions of sections 39 and 41 of 1907 Act.

39. Every party appearing by a representative shall be bound by the acts of such representative.

NOTE.—Same as section 40 of 1907 Act.

40. If, without good cause shown, any party to proceedings before the Board fails to attend or to be represented, the Board may proceed as if he had duly attended or had been represented.

NOTE.—Same as 43 of 1907 Act.

41. The sittings of the Board shall be held at such time and place as are from time to time fixed by the chairman, after consultation with the other members of the Board, and the parties shall be notified by the chairman as to the time and place at which sittings are to be held; provided that, so far as practicable, the Board shall sit in the locality within which the subject-matter of the proceeding before it arose.

NOTE.—Same as 44 of 1907 Act.

42. The taking of evidence by the Board shall be conducted in public except where the Board, on the application of any of the parties or of its own motion, directs that it shall be conducted in private. In which case only the parties, their representatives, the witness under examination, and the members and officers of the Board shall be entitled to be present.

NOTE.—Corresponds to section 45 of 1907 Act, the words "taking of evidence" being substituted for "proceedings" in the first line and the paraphrase of the last part of the section being altered.

43. The decision of a majority of the members present at a sitting of the Board shall be the decision of the Board, and the findings and recommendations of the majority of its members shall be those of the Board.

NOTE.—Same as 46 of 1907 Act.

44. The presence of the chairman and at least one other member of the Board shall be necessary to constitute a sitting of the Board.

NOTE.—Same as 47 of 1907 Act.

45. In case of the absence of any one member from a meeting of the Board the other two members shall not proceed, unless it is shown that the third member has been notified of the meeting in ample time to admit of his attendance.

NOTE.—Same as 48 of 1907 Act.

46. The signature of the chairman to summonses, certificates, directions, process and proceedings, and other papers or writings of the Board, except its findings and recommendations, shall be sufficient without further signature or authentication, and shall be deemed to be the act of the Board and an exercise of the Board's authority.

NOTE.—This section is new. It makes clear what would probably, for the most part at least, be held to be the law. It is desirable as a matter of convenience that the chairman should be able to do the things mentioned.

47. The Board may at any time dismiss any matter referred to it which it thinks frivolous or trivial.

NOTE.—Same as 49 of 1907 Act.

48. The Board may, with the consent of the Minister, employ competent experts or assessors to examine the books or official reports and records of either

party, and to advise it upon any technical or other matter material to the investigation, but shall not disclose such reports or records or the results of such inspection or examination under this section without the consent of both the parties to the dispute.

NOTE.—Same as 50 of 1907 Act with insertion of the words "and records" in third line and "or records" in fifth line.

REMUNERATION AND EXPENSES OF BOARD.

49. The members of a Board shall be remunerated for their services as follows:

- (a) to members other than the chairman, an allowance of five dollars a day for a time not exceeding three days during which the members may be actually engaged in selecting a third member of the Board;
- (b) to each member of the Board, including the chairman, an allowance at the rate of twenty dollars for each day's sitting of the Board and for each day necessarily engaged in travelling from or to his place of residence to attend or after attending a meeting of the Board.

NOTE.—Same as 51 substituted in the Act of 1907 by amending Act of 1910, Chap. 29, section 4.

50. No member of the Board shall accept in addition to his salary as a member of the Board any perquisite or gratuity of any kind, from any corporation, association, partnership or individual in any way interested in any matter or thing before or about to be brought before the Board in accordance with the provisions of this Act.

2. The accepting of such perquisite or gratuity by any member of the Board shall be an offence and shall render such member liable to a fine not exceeding one thousand dollars.

NOTE.—Same as 52 of 1907 Act.

51. Each member of the Board will be entitled to his actual necessary travelling expenses for each day that he is engaged in travelling from or to his place of residence for the purpose of attending or after having attended a meeting of the Board.

NOTE.—Same as 53 of 1907 Act.

52. All expenses of the Board, including expenses for transportation incurred by the members thereof or by persons under its order in making investigations under this Act, salaries of employees and agents, and fees and mileage to witnesses shall be allowed and paid upon the presentation of itemized vouchers therefor, approved by the chairman of the Board, which vouchers shall be forwarded by the chairman to the Minister. The chairman shall also forward to the Minister a certified and detailed statement of the sittings of the Board, and of the members present at such sittings.

NOTE.—Same as 54 of 1907 Act.

INDUSTRIAL AGREEMENTS.

53. Industrial agreements for any term not exceeding five years entered into respecting terms of employment between an employer and—

- (a) a trade union to which any number of his employees belong, or
- (b) a majority of his employees or the representatives of such majority, or
- (c) a majority of such of his employees as assemble at a meeting called on not less than three days' notice for the purpose, expressly stated in the notice, of dealing with the question of such agreement, or the representatives of such majority.

may be registered with the Registrar without fee by transmitting or delivering to him such agreement or a duplicate thereof.

NOTES.—Sections 53-56, dealing with industrial agreements, are new. Their object, briefly, is to promote the entering into and observance of agreements between employers and unions or other bodies of employees, respecting terms and conditions of employment. The advantage to every one of such agreements is generally admitted. Provisions respecting them are to be found in the Statutes of a number of places; See Industrial Arbitration Act of New South Wales, 1912, sections 11, 12; Commonwealth of Australia, 1904, sections 75, 85; New Zealand Act, 1908, sections 25, 26, 28; and see recommendation in Report of British Columbia Royal Commission on Labour, 1914, page 18. In 1904 a law was passed in Switzerland, Canton of Geneva, dealing rather elaborately with the matter of collective agreements. Provisions respecting such agreements are also to be found in a number of other laws.

It will be observed that under the provisions of the present Bill recommendations of a Board which the parties have agreed to abide by are classed as Industrial Agreements (see sec. 54). Industrial agreements are to be for a term not exceeding five years and may be registered (see sec. 53), and they are in all cases to be binding on the successors of the employers and employees as well as on those who were employer and employees at the time the agreement was made (sec. 55). Any such agreement may be terminated by mutual consent or, if sufficient cause is shown, may be cancelled by a Board on application of either party (secs. 55, 56). While a registered industrial agreement is in force in any public utility industry it is to be unlawful to strike or lockout (sec. 59).

It is considered better that industrial agreements should not be made for too long a term, as expiration and renewal gives an opportunity for any readjustment that change in conditions or other circumstances may make proper or desirable, and this also makes such agreements more likely to be lived up to. The provision for release from any such agreement that in the opinion of a Board has proved unjust will also no doubt tend to the same end, and will make such agreements more likely to be entered into.

It will be observed that there is no attempt in the Bill to prevent anyone ceasing to employ or ceasing to work, for any ordinary cause, when he sees fit; the prohibition is merely that in public utility industries he must not lockout or strike while the agreement is in force.

54. All settlement agreements made in pursuance to section 22 of this Act, and such recommendations of Boards under the provisions of this Act as the parties have agreed to accept and abide by, shall, for the purposes of this Act, be deemed to be industrial agreements, and it shall be the duty of the Registrar to register the same without any application for such registration.

NOTE.—See note to 53.

55. Every industrial agreement shall for the purposes of this Act, until it has expired or has been cancelled by a Board under this Act or by mutual consent of the parties, be and continue in effect not only as to those who were employer and employees in the employment for which it was made at the time it was made, but also as to the successors of such employer and employees.

NOTE.—See note to 53.

56. Upon the application of either party to an industrial agreement the Minister may, if satisfied that the circumstances warrant it, grant a Board to consider such agreement, or any question or difficulty arising thereout.

2. Such Board shall be appointed and constituted in similar manner to, and shall be deemed to be, and shall have all the powers and duties of, a Board of Conciliation and Investigation under this Act, and, except as herein other-

wise provided, all the provisions of this Act, with such adaptation as may be necessary, shall apply to such Board and to the application therefor.

3. In case such Board is unable to procure a settlement of the question or difficulty between the parties, it may, if the agreement has been broken by the other party or if it is clearly satisfied that the agreement is unjust, and if it is satisfied that in all the circumstances the applicant should be relieved therefrom, set aside or cancel the agreement.

4. Nothing contained in or done under this section shall make any strike or lockout lawful, or have any effect on the lawfulness or unlawfulness thereof, except that where the Board sets aside or cancels an agreement, such agreement shall not of itself thereafter be any bar to a strike or lockout.

NOTE.—See note to 53.

REGULATION OF CONDUCT OF EMPLOYERS AND EMPLOYEES.

57. It shall be unlawful in any public utility industry for any employer to declare or cause a lockout or for any employees to go on strike, unless such lockout or strike is on account of a dispute which, after reference and investigation to which such employer or employees have been party, has been reported upon by a Board under the provisions of this Act; provided that nothing in this section shall be deemed to prohibit a lockout or strike on account of any dispute after such report has been made, or to prohibit a lockout or strike by any employer or employees on account of any dispute in respect of which such employer or employees have duly applied for a Board under this Act and been refused such Board by the Minister.

NOTES.—Corresponds to sec. 56 of 1907 Act, but part of the proviso of that section is now transferred to a separate section (sec. 60) and a new part is added to the effect that where a Board has been refused the restriction against lockout or strike shall not apply. Upon this latter point opinion seems to be divided as to what is the meaning of the present Act. The special reference to railway disputes under the Conciliation and Labour Act is omitted, as the procedure under the new Bill is to apply in all cases; the words "to which such employer or employees have been party" are inserted; and by change of wording the meaning of the old section, as interpreted in *Rex v. McGuire*, 16 Ontario Law Reports, 522, is made plain.

As has often been pointed out, the Act does not prohibit strikes or lockouts altogether, but only postpones them until after investigation and report by a Board, and this only in public utility industries, where the public is specially concerned. The chief purpose of the postponement, of course, is that a settlement may, if possible, be brought about in the meantime, and a lockout or strike thus altogether avoided. The objections raised by employees that the delay tends to prevent their obtaining betterment of terms or conditions of employment as soon as they otherwise might, and that if they finally have to strike to obtain what they feel they are entitled to the strike is not likely to be so effective, are endeavoured to be removed as far as possible by shortening the time for dealing with applications for Boards (secs. 13, 1); by distinctly providing that where a Board is refused they can (if no industrial agreement (secs. 56, 59) is in effect and if a strike vote has been taken (sec. 58) strike at once (proviso in new sec. 57); and by changing old sec. 57 to make it clear that they do not have to wait till the expiration of the 30 days mentioned in that section before applying for a Board in respect of an intended change in terms of employment, but may apply at any time after ten days from the time notice is given (sec. 64). And there are also some other changes designed to prevent delay; see secs. 13 (2), 14 (2), 20 (2), 10, and 6, Form 1 (not requiring prior authority for strike before making application).

The principle of prohibiting strikes pending investigation and report was not new. Prior to 1907 it existed in Nova Scotia in the Miners' Arbitration Act passed in 1890, incorporated in Revised Statutes of Nova Scotia 1900, Cap. 21. This statute, however, went further in that it, like most of the Australian and New Zealand legislation, prescribed measures for enforcing the award of the Board, even where the parties did not agree to be bound by it. This latter element is entirely absent in the Canadian Act.

The Transvaal Act, passed in 1909, has adopted the principle of the Canadian Act, but has extended the prohibition for a month following the report, the object of this extension being to give time to have the contents of the report published and fully considered. A suggestion to insert a ten-day period in the Canadian Act was considered but has not been adopted.

58. It shall be unlawful in any public utility industry for any employees to go on strike unless and until the employees affected have, by secret ballot, voted on the question of such strike.

NOTE.—This is a new section which it was thought would likely commend itself to all parties.

59. It shall be unlawful in any public utility industry for any employer to declare or cause a lockout or for any employees to go on strike while a registered industrial agreement is in effect respecting the employment in which such lockout or strike takes place.

NOTE.—This is a new section. See notes to sec. 53.

60. Nothing in this Act shall be deemed to prohibit the suspension or discontinuance of any industry, or of the working of any person therein, for any cause not constituting a lockout or strike, except where expressly forbidden or declared unlawful by this Act.

NOTE.—Corresponds to part of the proviso in sec. 56 of 1907 Act. See notes to sec. 57. The exception at the end of the section is intended to prevent any doubt arising as to the prohibition contained in sec. 64.

61. Any employer declaring or causing a lockout contrary to the provisions of this Act shall be liable to a fine of not less than one hundred dollars nor more than one thousand dollars for each day or part of a day that such lockout exists.

NOTE.—Same as sec. 58 of 1907 Act.

62. Any employee who goes on strike contrary to the provisions of this Act shall be liable to a fine of not less than ten dollars nor more than fifty dollars for each day or part of a day that such employee is on strike.

NOTE.—Same as sec. 59 of 1907 Act.

63. Any person who orders, declares, counsels, incites, encourages, or aids, in any manner, any employer to declare or continue an unlawful lockout, or any employee to go or continue on an unlawful strike, shall, if such person is an employee in the employment in which the strike or lockout takes place, be liable to a fine of not less than fifty dollars nor more than one thousand dollars, and, if such person is not such an employee, shall be liable to a fine of not less than one hundred dollars nor more than two thousand dollars or to imprisonment for any period not exceeding six months.

NOTE.—Corresponds to sec. 60 of 1907 Act, but the words "orders, declares, counsels" are added, and a distinction is made between commission of the offence by an employee and its commission by a person who is not an employee, the fine being doubled in the latter case and the alternative of imprisonment added.

64. It shall be unlawful in any public utility industry for any employer or employees, except with consent of the other party or by leave or recommendation of a Board, to make or demand any change in wages or hours or any other terms of employment, without giving at least thirty days' notice of intention so to do.

2. If willingness to accept such change is not signified by a majority of the employees or the employer, to whom such notice has been given, either party may, at any time after the expiration of ten days from the giving of such notice, apply for a Board under this Act; and until such application has been

made and the matter has been investigated and reported upon by the Board, it shall be unlawful, in the absence of acceptance or consent as aforesaid or of leave or recommendation of a Board, to make any change in the terms of employment between such employer and employees.

3. Any employer contravening any provision of this section shall be liable to the same penalties as for an unlawful lockout, and any employee contravening any such provision shall be liable to the same penalties as for an unlawful strike.

NOTE.—This section takes the place of *sec. 57 of 1907 Act*, with very material alterations. First, the section is not, as heretofore, confined to changes in wages or hours, but extends to all terms of employment (see definition in *sec. 2, h*). It was complained that employers, to avoid committing a lockout or violating this section, but to accomplish the same purpose, sometimes made changes in arrangements or conditions and dealt with their men in ways not expressly forbidden by the Act. This alteration should assist in preventing this.

Secondly, it is now made clear that it is not to be necessary to wait till the expiration of the 30 days before applying for a Board; that is to be permitted to be done at any time after 10 days.

Thirdly, the onus is put upon the employers or employees, as the case may be, who want to make a change, of applying for a Board to investigate and report on the matter (though it is open to either party to apply). Until such application and investigation and report have been made no change can be made except by consent of the other party.

Fourthly, an express penalty is provided for contravention of the section. There was none in the old section (but see *sec. 164 of Criminal Code*).

Other changes are the insertion of an express provision allowing changes by consent, and the omission of the clause referring to lockout of strike and continuance of relationship. In New South Wales, which had a similar section (*sec. 60, Act of 1908*) this clause was omitted in 1912 (see *sec. 69*). See also comments of Judge Magee as to difficulties in interpreting or working out the old section; *Rex v. McGuire*, 16 Ontario Law Reports, 522.

The provision in the latter part of old *sec. 57* is now contained in *sec. 65*.

65. If, in the opinion of the Board, any employer or employee uses the provisions of the next preceding section or any other provision of this Act for the purpose of unjustly maintaining any condition of affairs through delay, and the Board so reports to the Minister, such party shall in the case of an employer be liable to the same penalties as for an unlawful lockout, and in the case of an employee to the same penalties as for an unlawful strike.

NOTE.—Part of *sec. 57 of 1907 Act*.

66. Any employer or employee or other person who—

- (a) hinders or interferes with the free and proper taking of any vote respecting a strike, lockout, or industrial dispute, or respecting the action or conduct, or proposed action or conduct, of any employees in regard to a strike, lockout, or industrial dispute, or in regard to any industrial or trade union matter, or
- (b) hinders or interferes with the voting of any employee entitled to vote in the taking of such vote, or
- (c) intimidates or insults any person in respect of or on account of such voting,

shall be liable to a fine not exceeding two hundred dollars or to imprisonment for any period not exceeding three months.

NOTE.—A new section.

67. The procedure for enforcing penalties imposed or authorized to be imposed by this Act shall be that prescribed by Part XV of the Criminal Code relating to summary convictions.

NOTE.—Same as 61 of 1907 Act.

NOTES.—Other suggestions.

A number of other suggestions have been made respecting the regulation of the conduct of employers and employees, which may be worthy of consideration. Sections embodying these suggestions are given hereunder under numbers showing where they might appropriately be inserted, with a note of explanation after each section.

63a. Any trade union—

- (a) which, or
- (b) any branch or local of which, or
- (c) any duly authorized officer or agent of which,

has taken part in or ordered, declared, counselled, incited, encouraged, or aided any unlawful strike that has taken place in Canada, shall, while such strike continues, be an unlawful trade union.

2. Where—

- (a) the majority of any employees who have gone on an unlawful strike belong to a trade union, or
- (b) any officer or agent of a trade union or of a branch or local thereof takes part in or orders, declares, counsels, incites, encourages, or aids an unlawful strike,

such trade union shall be presumed to be a party to such strike unless it is proved that it is not a party thereto, and that it has not ordered, declared, counselled, incited, encouraged, or aided such strike.

NOTE.—Read, with this, suggested section 66a below. For more or less similar provisions see New South Wales Act, No. 17, 1912, sections 10, 46, 47; New Zealand, 1908; Amending Act, sections 5, 10. The latter is similar to subsection 2 of this section. The object of this and the next three following suggested sections is, by imposing disabilities in the case of unlawful acts, to make breaches of the law less likely.

63b. Where any employer has declared or caused an unlawful lockout, or contravened the provisions of section 64 of this Act, it shall be unlawful for such employer, while any employee in respect of whom such lockout or contravention has taken place is willing to continue or resume employment on the former terms, to employ any other person in the place of such employee; and any employer guilty of so doing shall for each person so employed be liable to the same penalty as for an unlawful lockout, and any person accepting such employment with knowledge of the facts shall be liable to a penalty of not less than ten dollars nor more than fifty dollars a day for each day he continues in such employment.

NOTE.—This section is for the purpose of making more effective the prohibition against an unlawful lockout or an unlawful change of terms of employment by an employer.

63c. It shall be unlawful for any employee who is on an unlawful strike, or for any one who is a party to, or who has ordered, declared, counselled, incited, encouraged, or aided, such unlawful strike, or the continuance thereof, or who is attempting so to do, and it shall be unlawful for any person with intent to aid or forward an unlawful strike, during such strike,—

- (a) anywhere or in any manner, to persuade or prevent, or endeavour to persuade or prevent, any person from working for an employer, or
- (b) to assemble or be with any two or more other persons at or near the place of employment in which such strike has taken place, or
- (c) to be, for the purpose of forwarding or aiding such strike, on any road or highway or in any public place, or
- (d) to do any picketing of any nature.

2. Any one contravening the provisions of this section shall be liable to a penalty not exceeding two hundred dollars for each offence or to imprisonment for any period not exceeding three months.

NOTE.—This section is also for the purpose of making the prohibition against an unlawful strike more effective.

Another provision suggested for the purpose of discouraging unlawful strikes was to suspend the provisions of the Alien Labour Act, during the unlawful strike, to the extent of permitting contracts to be made anywhere with any white persons to fill the places of the employees unlawfully on strike. This might be objectionable.

66a. It shall be unlawful in any industry,—

- (a) for any employer, either directly or indirectly, or by any device or pretense, to dismiss, or to refuse or fail to continue in his employ, or in any way to discriminate against, any employee because of such employee joining, belonging to, or being active in the promotion of, any lawful trade union;
- (b) for any employer to require or request any employee or proposed employee to agree not to join, belong to, or be active in the promotion of, any lawful trade union;
- (c) for any person to use any threat, or abusive or offensive language or epithet, toward an employee because of such employee joining, belonging to, or being active in the promotion of, any lawful trade union;

- (d) for any person to use any threat, or abusive or offensive language or epithet, toward an employee because of such employee not joining, belonging to, or being active in the promotion of, any trade union;
- (e) for any person to use any threat, or abusive or offensive language or epithet toward any person because of such person being in the employ of any employer, or of having been in, or being about to or supposed to be about to enter such employment, or with a view to preventing him from entering such employment; or
- (f) for any person, with a view to forwarding any unlawful strike for the purposes of any unlawful trade union, in any manner to publish the name of any person, or call or in any way refer to him, as a scab or blackleg or the like, or as being unfair to labour, or to hold any person up to contempt or ridicule, to request or to suggest that any person should be shunned or avoided.

2. Any employer or other person contravening any provision of this section shall be liable to a fine not exceeding two hundred dollars or to imprisonment for any period not exceeding three months.

NOTE.—The provisions of this section were recommended (for the most part, however, in a more stringent form) in the Report of the Royal Commission (Chief Justice Hunter and Rev. E. S. Rowe) on Industrial Disputes in British Columbia, 1903 (page 71 et seq.); and by the British Columbia Royal Commission on Labour, 1914, (page 2). It will be observed that paragraph (f) of the section is limited to things done in furtherance of an unlawful strike or unlawful trade union.

SPECIAL PROVISIONS.

68. Where both parties to a dispute, strike, or lockout apply for, or agree to the appointment of, a Board of Conciliation and Investigation under this Act, the Minister may, where he deems it proper, constitute such Board in respect of such dispute, strike, or lockout, notwithstanding that the same is in an industry other than a public utility industry, and all the provisions of this Act, in so far as applicable, shall apply to such Board.

NOTE.—This is a new section corresponding to a great extent to sec. 63 of 1907 Act.

69. Where in any industry any strike or lockout has been long continued, and in the public interest or for any other reason it seems to the Minister expedient, the Minister, on the application of any municipality interested or of the mayor, reeve, or other head officer or acting head officer thereof, or of his own motion, may, without application of either of the parties to the dispute, strike, or lockout, constitute a Board of Conciliation and Investigation under this Act in respect of any dispute, or strike or lockout, or may in any such case, if it seems to him expedient, either with or without an application from any interested party, recommend to the Governor-in-Council the appointment of some person or persons as commissioner or commissioners under the provisions of *The Inquiries Act* to inquire into the dispute, strike or lockout, or into any matters or circumstances connected therewith.

NOTE.—This is a new section, founded largely, however, on secs. 6, 9 and 13 of the Conciliation and Labour Act (1906). The extension of the Minister's power to appoint Boards is also in accordance with the recommendations of the British Columbia Royal Commission on Labour, 1914, (page 3). Under the 1907 Act a Board can be appointed only on the application of one or both parties to the dispute (see secs. 5, 6). Under the Conciliation and Labour Act (1906) Boards can be appointed for railway disputes on the application of any municipality interested or of the Minister's own motion (sec. 13), but for other than railway disputes it requires consent of both parties to have any inquiry under oath (see sec. 9). The new section proposes to give the Minister power in all cases where, by reason of long-continued strike or lockout or other cause, he deems it expedient to appoint a Board and cause an investigation, on the application of any municipality interested or of his own motion, without application by any party to the dispute.

70. The Minister, where he deems it expedient may, either upon or without any application in that behalf, make or cause to be made any inquiries he thinks fit regarding industrial matters, and may cause such steps to be taken by his department and the officers thereof as seem calculated to secure industrial peace and to promote conditions favourable to settlement of disputes.

NOTE.—This is a new section, founded on secs. 11, 9 and 6 of the Conciliation and Labour Act (1906).

CONCILIATION COUNCILS.

71. Conciliation boards registered under *The Conciliation and Labour Act* shall hereafter be known as Conciliation Councils.

NOTE.—This section and sections 72 to 75 are for the purpose of retaining the provisions of *The Conciliation and Labour Act* dealing with voluntary arrangements made between employers and employees for the settlement of their dispute (sections 2 (h), 3, 4, 5 and 10). The name is changed from Conciliation Boards to Conciliation Councils, to avoid confusion with the other Boards provided for by the Act.

72. Any body constituted for the purpose of settling disputes between employers and employees by conciliation or arbitration, or any association or body authorized by an agreement in writing made between employers and employees to deal with such disputes, may apply to the Minister or Registrar for registration, as a Conciliation Council.

2. The application must be accompanied by copies of the constitution, by-laws, and regulations of the Conciliation Council, with such other information as the Minister or Registrar may reasonably require.

NOTE.—Corresponds to 2 (h) and 3 of Conciliation and Labour Act (1906).

73. The Minister or Registrar shall keep a register of Conciliation Councils, and enter therein with respect to each registered Conciliation Council, its name and principal office, and such other particulars as he thinks expedient; and any registered Conciliation Council shall be entitled to have its name removed from the register on sending to the Minister or Registrar a written application to that effect.

2. Every registered Conciliation Council shall furnish such returns, reports of its proceedings, and other documents as the Minister or Registrar may reasonably require.

NOTE.—Corresponds to sec. 4 of Conciliation and Labour Act (1906).

74. The Minister or Registrar may, on being satisfied that a registered Conciliation Council has ceased to exist or to act, remove its name from the register.

NOTE.—Corresponds to sec. 5 of Conciliation and Labour Act (1906).

75. Proceedings before any Conciliation Board shall be conducted in accordance with the regulations of such Conciliation Council, or as is agreed upon by the parties to the dispute.

NOTE.—Corresponds to sec. 10 of Conciliation and Labour Act (1906).

DUTIES OF THE REGISTRAR.

76. It shall be the duty of the Registrar:

- (a) to receive and register, and, subject to the provisions of this Act, to deal with all applications by employers or employees for a reference of any dispute to a Board, and to at once bring to the Minister's attention every such application;

- (b) to conduct such correspondence with the parties and members of Boards as may be necessary to constitute any Board as speedily as possible in accordance with the provisions of this Act;
- (c) to receive and file all reports and recommendations of Boards, and conduct such correspondence and do such things as may assist in rendering effective the recommendations of the Boards, in accordance with the provisions of this Act;
- (d) to keep a register in which shall be entered the particulars of all applications, references, reports and recommendations relating to the appointment of a Board, and its proceedings; and to safely keep all applications, statements, reports, recommendations and other documents relating to proceedings before the Board, and, when so required, transmit all or any of such to the Minister;
- (e) to supply to any parties, on request, information as to this Act, or any regulations or proceedings thereunder, and also to furnish parties to a dispute and members of the Board with necessary blank forms, forms of summons or other papers or documents required in connection with the effective carrying out of the provisions of this Act;
- (f) to file, preserve, and keep a proper index of, all industrial agreements received by him for registration;
- (g) generally, to do all such things and take all such proceedings as may be required in the performance of his duties prescribed under this Act or any regulations thereunder.

NOTE.—Same as sec. 55 of Act of 1907, with the addition of paragraph (f) making provision respecting industrial agreements.

MISCELLANEOUS.

77. No court of the Dominion of Canada, or of any province or territory thereof, shall have power or jurisdiction to recognize or enforce, or to receive in evidence any report of a Board, or any testimony or proceedings before a Board, as against any person or for any purpose, except in the case of the prosecution of such person for perjury.

NOTE.—Sec. 64 of 1907 Act.

78. No proceeding under this Act shall be deemed invalid by reason of any defect of form or any technical irregularity.

NOTE.—Sec. 65 of 1907 Act.

79. The Minister shall determine the allowance or amounts to be paid to all persons other than the members of a Board, employed by the Government or any Board, including the Registrar, secretaries, clerks, experts, stenographers, or other person performing any services under the provisions of this Act.

NOTE.—Sec. 66 of 1907 Act.

80. In case of prosecutions under this Act, whether a conviction is or is not obtained, it shall be the duty of the clerk of the court before which any such prosecution takes place to briefly report the particulars of such prosecution to the Registrar within thirty days after it has been determined, and such clerk shall be entitled to a prescribed fee in payment of his services.

NOTE.—Sec. 67 of 1907 Act.

81. The Governor in Council may make regulations as to the time within which anything hereby authorized shall be done, and also as to any other matter or thing which appears to him necessary or advisable to the effectual working of the several provisions of this Act. All such regulations shall go into force on the day of the publication thereof in *The Canada Gazette*, and they shall be laid before Parliament within fifteen days after such publication, or, if Parliament is not then in session, within fifteen days after the opening of the next session thereof.

NOTE.—Sec. 68 of 1907 Act.

82. All charges and expenses incurred by the Government in connection with the administration of this Act shall be defrayed out of such appropriations as are made by Parliament for that purpose.

NOTE.—Sec. 69 of 1907 Act.

83. An annual report with respect to the matters transacted by him under this Act shall be made by the Minister to the Governor General, and shall be laid before Parliament within the first fifteen days of each session thereof.

NOTE.—Sec. 70 of 1907 Act.

FALSE REPRESENTATION.

84. Every person who,—

- (a) verbally or in writing, or by advertisement or otherwise, publishes or circulates, or causes or procures or assists in causing or procuring to be published or circulated, in Canada, any false representation as to opportunities for employment, or as to the state of the labour market, or as to the existence or non-existence of any strike, lock-out, or other labour dispute, or as to anything respecting any industry or employment, intended or calculated to encourage or induce any person to come into Canada, or to change from one part of Canada to another, or to deter or prevent any person from coming into Canada, or from changing from one part of Canada to another, to work in any industry, or
- (b) does in Canada anything for the purpose of causing or procuring the publication or circulation outside of Canada of any such false representation,

shall be liable to a penalty not exceeding one thousand dollars.

NOTE.—This is a new section, designed to prevent abuses complained of as to false misrepresentations to working men. It covers in part the same ground as Cap. 16 of the Statutes of 1905, but is much more comprehensive.

AMENDMENTS TO LABOUR DEPARTMENT ACT.

85. The Labour Department Act is amended by adding at the end thereof the following section:

STATISTICS.

5. With a view to the dissemination of accurate statistical and other information relating to the conditions of labour, the Department of Labour shall collect, digest and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the *Labour Gazette*, which shall contain information regarding conditions of the labour market and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the Minister.

NOTE.—This section provides for putting what was section 12 of the Conciliation and Labour Act (1906) in the Labour Department Act as being a more appropriate place.

86. Section 4 of The Labour Department Act is amended by striking out from the second and third lines thereof the words "The Conciliation and Labour Act and The Industrial Disputes Investigation Act, 1907," and inserting in lieu thereof the words "The Industrial Disputes Act."

NOTE.—This section merely provides for making in the Labour Department Act the changes of names of Acts made necessary by the repeal of the existing Acts and the substitution for them of a new Act with a different title.

REPEAL.

87. The Conciliation and Labour Act and The Industrial Disputes Investigation Act, 1907, and all amendments thereto, are repealed.

(In the draft as published in pamphlet form copies are printed of Schedules and Forms which may be used in the administration of the Act.)

CONTRACT WORK DISPUTE AT BELLEVUE MINE, ALBERTA.

Award of Permanent Committee under provisions of agreement between Western Coal Operators' Association and District 18, United Mine Workers of America.

IN the May and June, 1915, issues of the *Labour Gazette*, accounts were given of the findings, in regard to wages disputes at coal mines at Bankhead, Alta., by a permanent committee established under the agreement of April 1,

between the Western Coal Operators' Association and District 18, United Mine Workers of America, and by the same committee with the addition of Mr. James Muir, K.C., as independent chairman appointed by the Minister of Labour.

A similar committee to that mentioned above, with the same independent chairman, recently dealt with a dispute at Bellevue Mine, Alta. The following is the text of this committee's findings, given under date of August 3, 1915:

Re Dispute in Bellevue Mine, Alberta.

The question in dispute came before the joint committee and the independent chairman, appointed by the Minister of Labour, the 3rd day of August, A.D. 1915, there being present as a committee for the miners Mr. Phillips, President of District 18 of U. M. W. of A., Mr. A. J. Carter, of Fernie, B.C., and Mr. James Burke, of Bellevue; and on behalf of the mine operators, Mr. McNeill, the commissioner of the W. C. O. A., Mr. R. Green, of Blairmore, and Mr. Arthur Williams, of Bellevue. The dispute is set out in a letter, dated May 8th, 1915, and is made by the miners as follows:

"They claim that breasts 112, 113, 114 and 115 being less than the dimensions specified in the agreement, be classed as 'company work.'"

The clause in the agreement of April 1st, 1915, which appears at page 61, is as follows:

"Breasts 'up the pitch': To be driven 10 feet by 20 feet, including timbering, chute and air tight brattice, \$11.10 per lineal yard. Breasts of greater or less dimensions to be paid for in proportion, down to a width of 13½ feet."

It appears that in doing the work in question, in order to facilitate the removal of the coal when mined, the floor of the chute is made to slope downwards towards the mouth of the breast, and in that part of the work, at any rate, owing to the bottom of the breast being left higher at the back than at the opening the height of the breast is necessarily reduced, and that after that has been

passed the height of the breast is increased to the 10 feet and more.

It further appears that in mining the coal, the work at the top in separating it from the roof is more difficult than the mining of the coal at a lower part of the seam, and by reason of this, where the height of the breast is less, there is a greater proportion of the difficult work than where the breast is of a greater height. It will be noticed that in the clause of the agreement referred to these words are added after mentioning the height and width of the seam: "Breasts of greater or less dimension to be paid for in proportion, down to a width of 13½ feet," and it is contended on behalf of the miners that, although the height may be more than 10 feet, if it should be less, the amount to be paid for the work is not to be governed by the clause referred to, but the same then must be classified as "company work," and the miners under these circumstances should be paid by the "day wage rate" and not by the "contract price." As the height of the breast in the disputed portion averaged about 8 feet 9 inches it was not contended by the miners that this difference in the height was such that abnormal conditions existed and that the miners would be entitled to be paid under what is known as the "minimum rate clause."

It was further contended by the miners that in this case, as in some others, although the height of the breast was less than 10 feet, the miners had been paid on an estimate as if it had been 10 feet, and that this was evidence that the minimum height of the breast should be 10 feet, and that, if it were not of that height, it was not within the contract, and the amount to be paid should not be fixed by the contract price, but would take the work out of the contract altogether and it should be classed as "company work." I do not think that such a custom would go further than that where the breast is less than 10 feet in height, the amount to be paid should be computed as it it were

10 feet in height at the price mentioned in the contract, and such a custom even if it were established, would go no further than that, and would not take it out of the contract altogether and make it "company work."

I find therefore that the words "greater or less dimensions" apply to the height of the breast as well as to the width, and that even if the height is less than 10 feet, the price to be paid for the work is governed by the section of the contract referred to, namely: "\$11.10 per lineal yard." It is possible that a case might arise where the height of the breast was so much below the limit of 10 feet as to bring into operation the "minimum rate clause," but in the case in dispute such conditions do not exist, nor is it contended that they do.

I find therefore that the rate to be paid for the work in question is fixed by the clause in the contract referred to, and that the work is to be paid for as "contract work" and not as "company work."

At the close of the meeting, in order that the other members of the committee might not be required to remain until the award was prepared, it was unanimously agreed that Mr. Phillips, on behalf of the miners, and Mr. McNeill, on behalf of the operators, were authorized to concur in the award, or decline to do so on behalf of their respective committees.

Dated the 4th day of August, A.D. 1915.

(Sgd.) JAMES MUIR,
Independent Chairman.

I do not concur.

(Sgd.) W. L. PHILLIPS,
*President, District 18, United
Mine Workers of America.*

I concur in the above award.

(Sgd.) W. F. MCNEILL,
*Commissioner of the Western
Coal Operators' Association.*

PRICES, RETAIL AND WHOLESALE, CANADA, AUGUST, 1915.

THE general level of prices showed little change during the month as compared with July. Important changes, however, occurred in certain commodities, notably decreases in bread and in flour, following further declines in wheat. Cheese also showed important declines. Potatoes were dearer than in July but lower than in August last year.

In retail prices the cost of a week's supply of thirty-two staple foods in terms of the average prices in some sixty industrial localities throughout the Dominion was \$7.781 as compared with \$7.797 in July and \$7.679 in August, 1914. Prices were lower in milk, cheese, bread and flour, but higher in eggs, butter, and potatoes. Compared with August, 1914, the chief increases appeared in butter, cheese, bread, flour, rolled oats, beans and sugar, but decreases ap-

peared in beef, pork, lard, eggs, milk, evaporated apples and potatoes. In coal, wood, and coal oil the average cost was slightly lower than a year before. Rent averaged \$4.09 per week, as compared with \$4.80 in August, 1914, the chief decreases being in the western provinces.

In wholesale prices the Department's index number stood at 147.6 for August, as compared with 147.1 for July and 136.3 for August, 1914. The chief changes during the month were declines in grains, animals and meats, fruits and vegetables, and in some metals, with advances in miscellaneous groceries, textiles, hides, iron and steel, drugs and chemicals, and raw furs.

Compared with August, 1914, the chief increases appeared in the groups: Grains and Fodder, Dairy Products, Im-

ported Fruits, Miscellaneous Groceries, Woollens, Flax Products; Hides, Leather, Boots and Shoes, Metals and Implements, Paints, Oils and Glass, Miscellaneous Building Materials, Crockery, Drugs and Chemicals, Liquors and Tobacco, and Sundries. The chief decreases appear in Animals and Meats, Fish, Native Fruits, Vegetables, Cottons, Silks, Fuel, Lumber, and Raw Furs.

More detailed information as to the price movement appears in the accompanying tables and in the following notes:

Retail Prices.

Beef.—Sirloin steak was higher at Ottawa, Belleville and Toronto, Ont., and lower at Berlin, Ont., Saskatoon, Sask., and at Edmonton, Alberta. Round steak was also higher at Belleville and Toronto, Ont., and lower at Montreal, Que., Saskatoon, Sask., and at Edmonton, Alberta. The price of rib roast rose at Orillia, Toronto and Stratford, Ont., and was somewhat firmer at Vancouver, B.C. The price declined at Montreal, Que., and at Saskatoon, Sask. Medium shoulder roast also rose at Stratford, Ont., and declined at Montreal, Que., at Saskatoon, Sask., and at New Westminster and Vancouver, B.C. At Toronto, Ont., a rise in the price of best cuts of beef was reported due to the heavy demand for export purposes.

Veal was higher at Sorel, St. John's and Montreal, Que., at Ottawa and Brockville, Ont., and at Vancouver, B.C. The price declined at Berlin, Ont.

Mutton declined at Halifax, N.S., at Belleville and London, Ont., at Edmonton and Lethbridge, Alberta, and at New Westminster, Victoria and Nanaimo, B.C., but advanced at St. John, N.B., at Montreal, Que., at Brockville, Toronto, and Stratford, Ont., at Regina, Sask., and at Vancouver, B.C. At Lethbridge, Alberta, mutton was reported to be plentiful.

Pork.—Fresh roasting pork was higher in price at Halifax, N.S., at

Montreal, Que., and at Ottawa, Belleville and Toronto, Ont., and lower at Saskatoon, Sask., and at New Westminster, Vancouver, and Victoria, B.C. At St. Thomas, Ont., the price declined 1c per lb., but later in the month advanced to the former level. Pork chops were lower at New Westminster, B.C., but were higher at Halifax, N.S., at Montreal, Que., and at Ottawa, Belleville, Toronto and St. Thomas, Ont. The price of salt pork was down at Sorel, Que., and at Edmonton, Alberta, but was up at Montreal, Que., Ottawa, Toronto, and St. Thomas, Ont.

Bacon.—The price of bacon fell at Edmonton, Alberta, and at Vancouver, B.C., but rose at Moncton, N.B., and at Toronto, Stratford, London, and Windsor, Ont.

Fish.—Fresh fish declined at Montreal and Hull, Que., at Chatham and Sault Ste. Marie, Ont., and at Regina, Sask., but advanced at St. John's, Que., at London, Ont., and at Vancouver, B.C. At Montreal it was reported that haddock was very plentiful.

Lard.—The price of pure leaf lard advanced at Sorel, Que., and at Toronto, Ont., but declined at Galt and Cobalt, Ont., and at Vancouver, B.C.

Eggs.—Fresh eggs advanced in twenty-four of the cities and declined in three. It was reported in a number of cities that eggs were becoming scarcer and that hens were not laying so well. Packed eggs similarly advanced in six cities and declined in one, but were on the market in only twenty-four cities.

Milk.—Prices advanced at Orillia, Ont., and declined at Sherbrooke, Que., at Sault Ste. Marie, Ont., at Fernie and Prince Rupert, B.C. At Sherbrooke, Que., it was stated that milk was in good supply and that competition among dealers was keen. At Victoria, B.C., milk was later reduced in price from 9 qts. for \$1.00 to 10 qts. for \$1.00.

Butter.—Dairy butter was higher in twenty-three of the cities and lower in one. At New Westminster, B.C., the

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the month preceding the present issue of the *Labour Gazette*, of the more important staple commodities entering into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a statement is given of the rental of a representative workingman's dwelling of the better class in the quarter of each locality usually occupied by workingmen.

OF CONSUMPTION, CANADA, DURING AUGUST, 1915.

The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison. Such comparisons, however, will reflect conditions better if averages over some time are taken and if the several articles are grouped together as in a family budget.

The quotations contained in the table have been furnished by the correspondents of the *Labour Gazette* in the respective localities, under detailed instruction as to sources of information, quality of goods to be quoted, etc., from the Department.

COMMODITIES, CANADA, AUGUST, 1915.

price declined during the month, but later advanced, regaining the former level. Creamery butter likewise advanced in fifteen cities and declined in six. At Niagara Falls, Ont., it was reported that the increase in production of cheese reduced the available supply of cream for butter-making.

Cheese.—The price of old cheese rose at Halifax, N.S., at Toronto, Guelph and Stratford, Ont., but declined at Sorel and Montreal, Que., and at Brockville, Ont. New cheese was higher at Berlin, Ont., and at Winnipeg, Man., but lower at Westville and Halifax, N.S., at Moncton, N.B., at Sherbrooke, Sorel, St. John's and Montreal, Que., at Ottawa, Brockville, Toronto, Niagara Falls, St. Catharines, Woodstock, Stratford, London and Cobalt, Ont.

Bread.—Plain white bread was somewhat higher at Vancouver, B.C. The increase took the form of a reduction in the weight of the loaf. The loaf which formerly weighed a pound, and sold for 5c was reduced to fourteen ounces, and the loaf weighing twenty ounces and selling at four loaves for 25c was reduced to eighteen ounces. These reductions in weight raised the price per pound between $\frac{1}{2}$ c and $\frac{3}{4}$ c. At Winnipeg, Man., the price of the one lb. loaf was reduced from 6c to 5c, and at Brandon, Man., a reduction was made in the price of the $1\frac{1}{2}$ lb. loaf from 7c to 6c. At Victoria, B.C., bread was reduced in price from 4 one-pound loaves for 25c to 5c per loaf.

Flour.—Ordinary family flour was higher in price in five cities, but was lower in eleven. In a number of localities it was stated that the wholesale price had been reduced, with the result that the retail dealers also made reductions.

Rolled oats were higher at Cobalt, Ont., and at Vancouver, B.C. Prices were lower at St. John, N.B., at St. Thomas, Ont., and at Victoria, B.C.

Rice.—Good medium rice was reported higher at Moncton, N.B., at St. John's, Que., at St. Catharines, Galt, and St. Thomas, Ont., and at Regina, Sask. The price was lower at New Westminster and

at Nanaimo, B.C. Patna rice was higher at Galt, Ont., but lower at London, Ont.

Tapioca.—Medium pearl tapioca declined at Calgary, Alberta, but advanced at St. John, N.B., at Berlin and London, Ont. At St. Thomas, Ont., the price declined during the month but later advanced to the former level. A similar fluctuation occurred at Vancouver, B.C., while at New Westminster, B.C., a rise was reported.

Canned tomatoes, peas and corn.—Canned tomatoes were higher at Vancouver, B.C., and lower at Sault Ste. Marie, Ont. Both corn and peas advanced at Moncton, N.B., and declined at Edmonton, Alberta.

Beans.—Handpicked beans were lower in price at Moncton, N.B., and at Berlin, Ont., but higher at Sydney, N.S., and at New Westminster, B.C.

Evaporated apples were reported higher at Newcastle, N.B., and at Vancouver and Victoria, B.C., but lower at Berlin, Ont.

Prunes declined at Halifax, N.S., but advanced at Vancouver, B.C.

Sugar.—Granulated sugar rose at St. Thomas, Ont., but declined at Montreal, Que., at Berlin and Woodstock, Ont., at Regina and Moose Jaw, Sask., and at Calgary, Alberta. Yellow sugar was also higher at St. Thomas, Ont., and lower at Montreal, Que., at Berlin and Woodstock, Ont., at Moose Jaw, Sask., and at Calgary, Alberta.

Tea.—Black tea was somewhat higher at Sydney and Halifax, N.S., at St. John and Newcastle, N.B., at Woodstock, Ont., and at Brandon, Man., but was reported lower at Nelson and Vancouver, B.C. Green tea was also higher at St. John, N.B., and at Woodstock, Ont., but was lower at Berlin, Ont.

Coffee.—The price of coffee was reported lower at Vancouver, B.C.

Potatoes.—New potatoes came on the market in most of the cities in July and by August had fallen considerably owing to large supplies and favourable crop reports. Old potatoes were practically off the market in a great many districts.

*Medicine Hat omitted.

**Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

Vinegar remained unchanged throughout.

Starch declined at London, Ont.

Coal.—Anthracite coal was lower at Moose Jaw, Sask., and higher at Halifax, N.S., at St. John's, Que., and at Peterborough, Orillia, Brantford, Port Arthur and Fort William, Ont. Dealers at Brantford, Ont., attributed the rise to

increased taxation. Bituminous coal was similarly lower at Moose Jaw, Sask., and higher at Peterborough, Orillia, and Brantford, Ont.

Wood.—Hard wood was reported to be higher in price at Orillia, Ont., and lower at Montreal, Que., and at St. Thomas, Ont. The price of soft wood was down at Peterborough and St.

Thomas, Ont., at New Westminster and Vancouver, B.C. At Peterborough the supply consists mainly of mill wood, and it was reported that the mills having large stocks lowered the price to encourage buying, in order that they might clean out their yards.

Coal oil prices were reported unchanged.

Rent.—Rates for houses with sanitary conveniences were quoted lower at Vancouver and Victoria, B.C., and for houses without conveniences a decline in rates was reported at New Westminster and Vancouver, B.C. At Victoria, B.C., it was reported that a large number of houses were vacant.

Wholesale Prices.

Grains and fodder.—Manitoba wheat had declined to \$1.28½ by the first of August but rose during the next week to \$1.33 per bushel on adverse weather reports. The price then declined to \$1.16 for old wheat and to 94¼c for the new crop. Ontario winter wheat had declined to \$1.10 but rose to \$1.15 for stock from last year's crop while the new crop came on at \$1.02 but declined to 97c-\$1.00. Weather reports were more favourable later in the month and the harvesting of the new crop was followed by a decline in prices. Other grains fell in sympathy with wheat. Western barley was down to 65c early in the month and fell to 47c. Western oats had fallen to 56c and declined further to 45c. Ontario oats declined from 57-58c to 51-52c. American corn rose to 68c, but eased off to 85c at lake ports. Flaxseed was firmer at \$1.41, declined to \$1.37½ and then rose to \$1.43¾. Ontario rye fell to 93-95c. Hay advanced 50c per ton at Montreal and Toronto, but fell later as new hay was marketed. Bran and shorts advanced \$1.00 per ton.

Animals and meats.—Western cattle were steady at \$7.00-7.25 for choice butchers during the last week of the month when the price eased off to \$7.00. Best cattle at Toronto rose from \$8.75 to \$9.00, as receipts were light, but later

in the month eased off on account of better receipts and light demand. Beef was steady but veal was firmer for best quality. Hogs advanced from \$8.40-8.50 to \$8.80-8.90 as receipts were not large. Dressed hogs advanced to \$12.25-13.00. Breakfast bacon rose from \$19.00-21.00 to \$20.00-21.00. Hams were easier at 17-17½c. Lard rose to 12½c but declined slightly. Sheep declined from \$7.00 to \$6.00 for best quality. Dressed lamb dropped to \$16.00-17.00 per cwt.

Dairy products.—Finest creamery butter rose 1c at Montreal in the latter part of the month, to 28½-29c, the same level as a year before. Dairy butter at Toronto rose from 22-25c to 24-27c. Demand for export and for consumption both in cities and at country points was reported better. Cheese declined from 14-14½c to 12½-12¾c, but was firmer afterwards as the export demand improved. Fresh eggs rose to 26-28c at Montreal and at Toronto new-laid eggs rose to 25-27c, but were easier in the last week.

Fish.—Fresh halibut rose 7c to 9c per pound on the Atlantic coast. Salt herring advanced from 2¼ to 2½c. Salmon trout were cheaper at Toronto at 10c per lb. The catch of the Lunenburg fleet was reported to have been curtailed by bad weather. An average catch, however, was still hoped for. The price paid for the spring catch was \$5.50 per quintal and the catch was large. The markets for dried fish showed a slight improvement. The lobster pack was reported to be 5 per cent less than last year. The European demand was reported very good, the prices being better than expected.

Fruits and vegetables.—Peaches came on the market at lower prices than last year, a good crop being reported. White flesh varieties were 10c to 40c per basket, cheaper. Plums came on the market at 25-40c, as compared with 50-60c last year. Raspberries were down to 8-12c per box in August, the quality, however, being lower on account of the wet weather. Bananas were cheaper but Messina lemons and California oranges were

*Six commodities off the market, fruit, vegetables, etc. †Including abnormal rises in the prices of zinc and spelter since May, the index numbers for July and August are 149.7 and 149.9 respectively and for the sub-group Other Metals, 269.4 and 261.2. §Revised.

dearer. Supplies of Sultana raisins were exhausted and Valentia raisins rose 1c per lb. Potatoes came on at Montreal at 65-70c as compared with 70c-75c per bag a year ago. At Toronto potatoes opened at 55-60c as compared with 90-95c last year. Crops were reported very large but a blight had appeared in some districts and was expected to reduce the yield. Onions declined at Toronto to 85c-\$1.00 per bag. Early tomatoes continued high in price on account of the frost. Later prices declined to 20-25c per basket, as compared with 25-30c last year. Canned vegetables advanced and partially recovered the decline early in the summer. Following large packs in 1913 and 1914 and the light demand, large stocks had accumulated and some were thrown on the market. A holding company was formed to market these gradually. Having experienced a comparatively light demand last season, packers contracted for smaller acreages. Some damage by continued wet weather still further reduced the expected production and caused firmness on the market.

Miscellaneous groceries.—The flour market was quiet, buyers being disposed to wait for the harvesting of the wheat crop. Later in the month prices declined in sympathy with wheat. Bread was lower in several cities in sympathy with flour. Rolled oats also declined. Rangoon rice advanced 15c per cwt. Rio coffee declined 1c per lb., but Santos coffee advanced. Barbados molasses rose 4c per gallon as supplies were short. Glucose rose 10c per cwt. Honey was firmer at 12½-13c per lb. Cream of tartar advanced 5c per lb.

Textiles.—Wool, Ontario washed, rose from 36-41c to 39-43c per lb., and unwashed wool rose 2c. Supplies on all markets were reported low and the crop was estimated to be short. Beaver cloth rose 10c. per yard. Raw cotton declined to 9.30c per lb. Coloured cottons, prints and grey cottons averaged slightly lower. Japanese raw silk was slightly higher and Italian raw silk was firmer. Some

crop damage in China was reported. The demand in France and Italy for silk was reported fairly good. Jute was slightly lower in price as larger supplies were available. Hessians, however, advanced following a large purchase by the British Government. Flax sewing twine advanced ½c per lb. Table oilcloth advanced 10c per piece and floor oilcloth 4c per square yard.

Hides, leather, boots and shoes.—The demand for hides was much stronger and the price rose 1c per lb. for No. 1 beef-hides. Green calf-skins also advanced 1c per lb. Men's boots were steady after a recent advance of 10c per pair in heavy lines and 2½ to 5c in box calf and similar lines.

Metals and implements.—The iron and steel market was somewhat firmer. Pig iron was \$1.00 per ton higher. Steel billets advanced to \$29.00-30.00 per ton. Galvanized sheets declined to \$5.40 per cwt., in sympathy with lower prices for spelter. Spelter eased off from the high levels reached in June and was down to 25c per lb. Zinc sheets, however, rose to 30c per lb. Copper declined to 21c per lb. Lead declined to 7¼c per lb. Nickel, however, advanced 5c to 45-50c per lb. Quicksilver averaged higher. Bar silver again declined slightly. Solder bar declined from 28c to 26¾c per lb. Tin declined 2c to 45-46c per lb.

Fuel and light.—Anthracite coal advanced 10c per ton. Furnace coke, after rising at Connellsville, declined to \$1.50 per ton at the ovens. Foundry coke was slightly higher.

Building materials.—The supply of deals at St. John, N.B., for the English market was being rapidly depleted. Freight rates were reported higher and ships were scarce. The demand for shingles was reported light. Water conditions at Ottawa showed improvement as a result of rains. The lumber trade in Ontario was reported quiet, there being a small demand from farmers. There was a lower tendency in hemlock prices but stocks were not heavy. Copper wire declined 1½c per lb. Galvanized wire

fencing advanced to \$3.00 per cwt. Linseed oil averaged slightly lower. Turpentine eased off.

House furnishings.—No changes were reported.

Drugs and chemicals.—Carbolic acid advanced to \$11.90 per lb., on account of the increasing scarcity. Potash products continued high. Quinine advanced 3c per ounce.

Miscellaneous.—The raw fur market was firmer, racoon advancing from 80c to \$1.00 per skin. Hops were slightly higher. News-print paper was easier. The market for sulphite pulp was stronger as stocks were being cleared out. There was a fair demand for ground wood pulp. Raw rubber declined to 52-52½c per lb.

Prices in Other Countries.

In the United Kingdom, wholesale prices were shown higher by the index number of the *Economist*, London, due to a rise in foodstuffs. Some materials, however, were lower. The index number for July was 149.1, as compared with 116.6 in July, 1914, increases having occurred each month except in October, 1914, and in June, 1915. The Sauerbeck index number, continued in the *Statist*, similarly rose from 82.4 in July, 1914, to 106.4 in July, 1915. The *Labour Gazette* of the British Board of Trade for August reports the retail prices of food thirty-four per cent higher at the end of July than a year before, the calculation including beef, mutton, bacon, fish, flour, bread, tea, sugar, milk, butter, cheese, marjarine, eggs and potatoes.

In the United States the *Monthly Bulletin* of the U. S. Bureau of Labour Statistics reports on retail prices of seventeen foods. The level of these prices, as shown by a weighted index number, was 97 for June, 1915, as compared with 97 in June, 1914, the average for the year 1914 being the base. Eleven articles declined from June, 1914, to June, 1915, but the marked advances in flour and

sugar offset these declines. In wholesale prices Bradstreet's index number stood at 9.8113 for August 1, as compared with 9.8598 for July 1 and 8.7087 for August 1, 1914. Grain, livestock, provisions, vegetables, metals, and oils declined but hides and leathers, textiles, drugs and chemicals advanced. The index number of foods of the *Annalist*, New York, stood at 142.12 for August 1, as compared with 155.5 a year before.

Prices of food in Berlin, Germany, as reported in the *Statistische Kerrespondenz*, were little changed in June as compared with May, but were 56.4 per cent above the level of July, 1914. The greatest increases appeared in pork, bacon, split peas, haricot beans, lentils, rice, eggs, lard, beef, mutton, flour, and butter.

Prices of food in Vienna, Austria, as reported in the *Labour Gazette* of the British Board of Trade from official Austrian reports, appeared much higher in June than a year before, the least increase being in sugar, 6.3 per cent, and the greatest in peas, 300 per cent, in rice 218.2 per cent, and beef 202.8 per cent.

The Italian Labour Department's index numbers of retail food prices showed the level 14.1 per cent higher in June than a year before, milk being lower, while wheat bread and flour, and macaroni were twenty to thirty per cent higher. Beef was up 14.6 per cent, bacon 7.9 per cent, and olive oil 2.7 per cent.

The movement in prices in Christiania, as reported by the Norwegian Federation of Trade Unions, from February, 1914, to February, 1915, is shown in the *Labour Gazette* of the United Kingdom Board of Trade. Food appeared 22.3 per cent higher, clothing 5.2 per cent, light and fuel 26.6 per cent, and various expenses 14.6 per cent higher while taxes were calculated to be 4.8 per cent lower and rent was estimated unchanged. The weighted mean increase was 14.6 per cent. The greatest increase in food prices was in rye flour, 115.8 per cent, wheat flour being up 43.8 per cent, and bread 50.7 per cent. Peas advanced 100

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included.

(h.) Index Number for August 15th, \$9.8495.

*Revised figures.

per cent. Coal rose 61.5 per cent. Loaf sugar advanced only 10.2 per cent, and moist sugar 7.5 per cent. Meats advanced only from three to six per cent.

Prices of food in Denmark, as reported by the Danish Statistical Office, showed increases from the end of July, 1914, to June, 1915. The greatest advances occurred in flour, hulled oats, bread, lard, and coal.

A report by the Finnish Board of Industry for March, 1915, shows prices at Helsingfors, the capital, slightly higher

than a year before. The more important increases were in butter, potatoes, flour, hulled oats, bread, coffee, and petroleum, and decreases occurred in smoked mutton and pork and in fish.

The accompanying table, including the latest findings of the most authoritative index number of wholesale prices in Great Britain, the United States and France, will enable a review to be made as to recent movements and tendencies in prices in these countries as compared with Canada.

FAIR WAGES SCHEDULES AND CLAUSES IN GOVERNMENT CONTRACTS AWARDED DURING THE MONTH OF AUGUST, 1915.

DURING the month of August the Department received for insertion in the *Labour Gazette* information relating to 16 contracts awarded by the Department of Public Works and the Department of Railways and Canals. Of these nine were awarded by the former Department and seven by the latter. One of the contracts awarded by the Department of Public Works contained a fair wage schedule. In the 15 other contracts no fair wage schedule was inserted, but the general fair wage clauses providing for the rates generally accepted as current in the locality where the work is being carried on were inserted. A statement is added for supplies given by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System.

Fair Wages Schedules.

DEPARTMENT OF PUBLIC WORKS.

Harbour and river improvements, being the extension of wharfs, Fort William, Ont. (entrance of Mission River). Name of contractor, The Thunder Bay Contracting Company, Limited, Port Arthur, Ont. Date of contract, August 23, 1915. Schedule of prices.

Driver with 2 horses & wagon.	55c. “ 10 “ “

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wages schedule, but contained the following clause providing for the payment of wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom

of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the foregoing clauses were the following:

DEPARTMENT OF PUBLIC WORKS.

Post office fittings, public building, St. John, N.B. Name of contractor, The J. T. Schell Company, Alexandria, Ont. Date of contract, July 27, 1915. Amount, \$13,161.

Supply and erection of six (6) sluice gates and checkered plate walk in connection with works at St. Charles River, Que. Name of contractor, Dominion Bridge Company, Limited, Montreal, Que. Date of contract, August 9, 1915. Amount, \$9,527.

Electric wiring and fittings in Customs House, London, Ont. Name of contractor, Benson-Wilcox Electric Company, London, Ont. Date of contract, August 12, 1915. Amount, \$1,450.

Electric wiring and fittings in Post Office and Carling Block annex, London, Ont. Name of contractor, Benson-Wilcox Electric Company, London, Ont. Date of contract, August 12, 1915. Amount, \$2,825.

Structural changes in public building, Collingwood, Ont. Name of contractor, Herrington, Bryan & Healy, Colling-

wood, Ont. Date of contract, August 13, 1915. Amount, \$1,900.

Post Office interior fittings in public building, Dartmouth, N.S. Name of contractor, Office Specialty Manufacturing Company, Ottawa, Ont. Date of contract, August 14, 1915. Amount, \$1,500.

Fittings in Post Office, Collingwood, Ont. Name of contractor, The Berlin Interior Hardwood Company, Limited, Berlin, Ont. Date of contract, August 27, 1915. Amount, \$2,843.

Dredging channel between piers at Buctouche Beach, N.B. Name of contractor, Felix Michaud, Buctouche, N.B. Date of contract, August 3, 1915. Contract price: Class "B," 36 cents per cubic yard (scow measure).

DEPARTMENT OF RAILWAYS AND CANALS.

Construction, erection and completion of a number three (3) standard station at Humphrey's, N.B., on the line of the Intercolonial Railway. Name of contractor, McLaggan, McBean & Bell, of the Province of New Brunswick. Date of contract, August 7, 1915. Amount, \$1,835.

Construction and completion of a spur line of railway from a point on the main line of the Intercolonial Railway about 1.8 miles east of Bathurst, in the County of Gloucester, N.B., to a point at or near the Bathurst Lumber Company's mills at Bathurst, N.B. Name of contractor, John W. McManus Company, Limited, of Memramcook, County of Westmorland, N.B. Date of contract, August 14, 1915. Schedule rates.

Construction, erection and completion of a freight house at St. Apollinaire, Que., on the line of the Intercolonial Railway. Name of contractor, J. A. Boulay, of Sayabec, County of Rimouski, Que. Date of contract, August 17, 1915. Amount, \$1,890.

Construction, erection and completion of a number two (2) standard station at Trenton, on the line of the Intercolonial Railway. Name of contractor, Rhodes, Curry Company, Limited, of Amherst, N.S. Date of contract, August 24, 1915. Amount, \$4,546.

Construction, erection and completion of a station at Derby Junction, N.B., on the line of the Intercolonial Railway. Name of contractor, McLaggan, McBean & Bell, of New Brunswick. Date of contract, August 27, 1915. Amount, \$5,139.

Manufacture, erection and completion of the steel superstructure of the Main street subway at Moncton, in the County of Westmorland, N.B. Name of contractor, Rhodes, Curry Company, Limited, of Amherst, N.S. Date of contract, August 28, 1915. Schedule rates.

Manufacture, erection and completion of the steel superstructure of the Grand Narrows bridge on the line of the Intercolonial Railway, including the furnishing and installing of gasoline engine and machinery (accessories) for operating swing span; the removal of the old superstructure; the connecting of temporary track on new spans with track and old spans. Name of contractor, Dominion Bridge Company, Limited, of

Montreal, Que. Date of contract, August 28, 1915. Amount, several prices.

POST OFFICE DEPARTMENT.

During the month of July, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.	\$ 654 94
Making and repairing rubber dating stamps and type; also other stamps.	64 95

Making and repairing miscellaneous articles of postal stores.	28 15
Repairing steel portable letter boxes.	20 55
Making and supplying articles of official uniform.	1,368 30

TRADE DISPUTES DURING AUGUST, 1915.

FOUR new disputes were reported to the Department of Labour during August, two more than during the preceding month and four more than during August, 1914.

Analysis of Trade Disputes during August.

Number and Magnitude. — Eleven strikes were reported in existence in Canada during the month of August, two more than during the previous month, and the same number as in the

corresponding month of 1914. Twenty-four firms and 2,571 employees were involved in these eleven disputes, including six firms and 2,435 employees concerned in the new disputes of the month. During August, 1914, twenty-seven firms and 1,371 employees were involved in disputes. No new disputes were reported during August, 1914.

Time Losses.—The loss of time to employees through trade disputes during August was approximately 13,401 working days, as compared with 6,740 working days lost in July, and 24,057 days

lost in August, 1914. The new disputes of the month accounted for a loss of 11,465 working days.

Trades Affected.—The following table shows the trades affected by new disputes of the month and the number of employees in each group:

TRADES.	No. of disputes.	No. of employees
Mining		350
Metal	2	2,065
Food and tobacco preparation.....		20
Total.....	4	2,435

Localities Affected.—Three of the new disputes occurred in Nova Scotia and one in Alberta.

Causes.—The new disputes were for the following causes: (1) demand for an increase in wages; (2) demand for a minimum wage scale; (3) the result of a misunderstanding; (4) against a reduction in wages.

Results.—Six of the 11 disputes in existence during August were settled during the month, two by reference to Boards of Conciliation, two by compromise, and two by strike being declared off.

Disputes beginning before August.

Trade disputes existing August 31, and continued from earlier months were as follows:

- (1) Plumbers and steamfitters, Victoria, B.C.
- (2) Boiler makers, iron workers and helpers, Halifax, N.S.
- (3) Cap makers, Toronto, Ont.
- (4) Brewery workers, Montreal, Que.

(5) Cigar makers, Edmonton, Alta.

The brewery workers' strike was still in progress at the Frontenac Breweries, Ltd., Montreal, eight men receiving strike pay at the end of August. Conditions remained practically the same as in the previous month in regard to the other strikes mentioned above.

Plumbers and steamfitters, Port Arthur and Fort William.—This strike which occurred on June 1, as a result of the refusal on the part of the employers to sign a new agreement on the expiration of the old one, terminated on August 6. On that date the employers agreed to the new schedule drawn up by the union and the men returned to work.

Moulders, Smith's Falls.—The dispute at the Malleable Iron Works, Smith's Falls, which began May 11, 1914, as the result of a reduction of wages by the company, reached a conclusion at the end of July. Most of the former employees are understood to have left the locality and financial support from the international union has ceased.

Iron Moulders, Peterborough. — The strike of ten employees of the Peterborough Lock Works, which occurred on July 12, owing to disagreement in regard to a proposed change from piece work to day work, was terminated August 18. On this date an arrangement was arrived at which was satisfactory to both parties concerned and the men returned to work. Piece work was resumed on a readjusted basis satisfactory to employers and employees. Hereafter thirty days' notice must be given by either side if a change in prices is desired.

Sheet Metal Workers, Toronto. — On June 25, 1914, a strike occurred in the establishment of the A. B. Ormsby Company, Limited, between the carpenters and sheet metal workers as to which class should do certain work. At the time the strike took place, there were about 120 men affected. The strike con-

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for the other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

tinued during the year, the number of men affected varying from time to time as men secured work in other places. During the last few months the number affected was about fifteen. During August all of these men secured work elsewhere and strike pay was discontinued.

Disputes beginning during August.

Four new disputes occurred during August, coal miners at Westville, N.S.; boiler makers, iron workers and helpers, Halifax, N.S.; metal workers, New Glasgow and Trenton, N.S., and cigar makers at Edmonton, Alta.

Coal Miners, Westville.—Friction between the Intercolonial Coal Mining Company, Limited, and a number of its employees in the Drummond Colliery at Westville, N.S., caused a brief interruption to work in the mines during the last week of August. The grievance appears to have related chiefly to the payment of overground men, about 350 being affected. The matter was brought immediately to the attention of the Minister of Labour and a Board of Conciliation established under the Industrial Disputes Investigation Act, the men resuming work pending the enquiry. County Judge Wallace is chairman of the Board.

Boiler Makers, Iron Workers and Helpers, Halifax.—Sixty-five employees of two shipbuilding firms at Halifax struck work, August 2, because the company refused to recognize the union and

also to have a minimum wage scale fixed. Five firms and some 100 employees were affected the first day but three of the firms signed up with their employees. The strikers demanded a minimum wage of 32 cents per hour for mechanics and 23 cents per hour for helpers. At the end of the month the strike remained unsettled.

Metal Workers, New Glasgow and Trenton.—Employees of the New Glasgow Steel and Coal Company at New Glasgow, N.S., and those of the Eastern Car Company at Trenton, N.S., the two concerns being associated companies, ceased work August 16 on account of what appears to have been chiefly a misunderstanding with the management of the respective companies. Both parties brought the dispute to the attention of the Minister of Labour, and it was arranged to have the points of difference referred for adjustment to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, the employees returning to work on August 20. About 2,000 employees were directly affected.

Cigar Makers, Edmonton.—On August 6, a strike took place of 20 cigar makers employed by H. V. Shaw & Company at Edmonton, owing to the company giving notice that the prices for making all grades of cigars would be reduced. The men refused to agree to this reduction and stopped work. At the end of the month the strike remained unsettled.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF AUGUST, 1915.

Under this heading, account is taken of such accidents only as were sustained by workmen in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the country or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Bureau of Mines of Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

ACCORDING to the industrial accident record of the Department of Labour 77 workpeople were killed and 243 seriously injured during the month of August, 1915. The record for the month of July was 58 killed and 254 injured, while that for the month of August, 1914, was 88 killed, 454 injured. Comparing the record for August with that for July of this year it will be seen that there were 19 more killed and 11 fewer injured in August and a comparison of the August record with that for the same month of 1914 shows there

to have been 11 fewer killed and 211 fewer injured during August, 1915.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF AUGUST, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.
Agriculture.....	10	18	28
Lumbering.....	2	4	6
Mining.....	12	22	34
Railway construction.....	3	1	4

Unskilled Labour.....	3	12	15
Total.....	77	243	320

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING AUGUST, 1915

Trade or Industry	Locality.	Date	Number	Cause of Fatality.
Agriculture—				
Farmer.....	Forfar, Ont.	Aug. 6	1	Fell from wagon.
".....	Mooshorn, Man.	" 4	1	Mangled by mowing machine.
".....	St. Claude, Man.	" 3	1	Fell from a wagon.
".....	Glen Smail, Ont.	" 19	1	Mangled by mowing machine.
".....	North Lancaster, Ont.	" 20	1	Buried in cave-in of gravel.
".....	Ancaster, Ont.	" 16	1	Blood poisoning—bitten by a horse.
".....	London, Ont.	" 26	1	Mangled by threshing machine.
".....	Kincardine, Ont.	" 20	1	Struck by a hay fork.
Farmer and farm hand.....	Langley, B. C.	" 24	2	Asphyxiated in a well.

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING AUGUST, 1915.—(Continued.)

Trade or Industry.	Locality	Date	Number.	Cause of Fatality.
<i>Lumbering—</i>				
Sawmill employee.....	Gaspé, Que.....	Aug. 24	1	Crushed by a log.
	Chatham, N. B.....	" 22	1	Cremated in mill burner.
<i>Mining—</i>				
Miner.....	Cobalt, Ont.....	" 4	1	Mangled by machinery.
	Silverton, B. C.....	" 25	1	Suffocated by smoke as the result of fire in mine shaft.
".....	Extension, B. C.....	" 30	1	Fall of rock.
".....	(No. 15 Col.), New Waterford, N.S.....	" 5	1	Fall of rock.
".....	(Dom. No. 1 Col.), Sydney, N. S.....	" 17	1	Fall of coal.
".....	(Dom. No. 2 Col.), Glace Bay, N.S.....	" 21	1	Crushed by loaded mine car.
Cement works employee.....	St. Mary's, Ont.....	" 5	1	Fall.
" " ".....	Hull, Que.....	" 5	2	Electrocuted.
" " ".....	St. Samuel, Que.....	" 18	1	Falling derrick boom.
Quarry workers.....	North Vancouver, B. C.....	" 24	2	Drowned—boat capsized.
<i>Railway and Canal Construction—</i>				
Foreman.....	Halifax, N. S.....	" 23	1	Electrocuted.
Construction hands.....	Bear Creek, B. C.....	" 15	2	Asphyxiated.
<i>Building Trades—</i>				
Carpenter.....	Sydney, N. S.....	" 3	1	Run over by cars.
Carpenter, (Military Camp.).....	Niagara-on-the-Lake, Ont.....	" 3	1	Fell from a building.
Bridge Carpenter.....	St. John's, Que.....	" 5	1	Drowned—fell from a tug.
Painter.....	Kingston, Ont.....	" 9	1	Fell from a scaffold.
<i>Metal Trades—</i>				
Steel plant worker.....	Hamilton, Ont.....	" 29	1	Electrocuted.
" " ".....	Sydney, N. S.....	" 3	1	Run over by cars.
" " ".....	Lachine, Que.....	" 13	1	Crushed by a falling piece of machinery.
" " ".....	".....	" 14	1	Crushed by machine falling upon him.
Boilermaker.....	St. Joseph Que.....	" 10	1	Struck by falling piece of metal.
Power Plant employee.....	Campbellford, Ont.....	" 16	1	Crushed by machinery.
Pump-house engineer.....	Kerr Lake, Ont.....	" 4	1	Mangled by machinery.
Machinist's helper.....	Halifax, N. S.....	" 1	1	Drowned, fell from scow on which he was working.
Bridge worker.....	Quebec, Que.....	" 18	1	Struck by a falling bolt.
Lineman.....	Arnprior, Ont.....	" 9	1	Electrocuted.
".....	Calais, N. B.....	" 14	1	Shocked and fell from pole.
Machinist.....	Penetanguishene, Ont.....	" 26	1	Fell from a ladder.
Rifle factory employee.....	Quebec, Que.....	" 4	1	Accidentally shot.
<i>Woodworking trades—</i>				
Boxmaker.....	Roblin, Ont.....	" 6	1	Mangled by machinery.
<i>Steam Railway Service—</i>				
Engineer.....	Hartland, N. B.....	" 23	1	Fell from and run over by locomotive.
Fireman, (M.P. 188—C.N.R.).....	Port Arthur, Ont.....	" 14	1	Deraiment of locomotive.
Fireman.....	Golden, B. C.....	" 18	1	Deraiment—due to rock slide.
Brakeman.....	Eagle River, Man.....	" 5	1	Fell from and run over by cars.
".....	Greenfield, Ont.....	" 18	1	Fell from moving train.
".....	Montreal, Que.....	" 21	1	Run over by cars.
Sectionman.....	M.P. 191, Hudson Bay Rly.....	" 3	1	Hand car struck by locomotive.
Bridge and building men.....	Calgary, Alta.....	" 20	2	Drowned—precipitated into swollen creek.
Painter.....	Derby Jet, N. B.....	" 13	1	Struck by a train and knocked off bridge.
Station agent.....	Shelburne, N. S.....	" 9	1	Fell on station platform.
<i>Electric Railway Service—</i>				
Conductor.....	Fraser Mills, B. C.....	" 6	1	Run over by a car.
<i>Navigation—</i>				
Deckhand.....	Montreal, Que.....	" 6	1	Drowned—fell into water while painting vessel.
".....	Belleville, Ont.....	" 23	1	Drowned—fell overboard.
".....	Montreal, Que.....	" 23	1	"
Steamer cook.....	Vancouver, B. C.....	" 5	1	Drowned—fell from gang plank.
Longshoreman.....	Westport, Ont.....	" 7	1	Fell into hold of steamer.
Dredgehands.....	Chambly, Que.....	" 16	2	Electrocuted.
<i>Miscellaneous Transport—</i>				
Rural mail driver.....	Port Stanley, Ont.....	" 14	1	Struck by an electric railway train.
<i>Miscellaneous Skilled Trades—</i>				
Explosives factory employee.....	Windsor Mills, Que.....	" 13	1	Explosion of dynamite.
Oil plant employee.....	Sarnia, Ont.....	" 3	1	Fell from an oil still.
Tent factory employee.....	Pt. St. Charles, Que.....	" 3	1	Crushed by an elevator.
Well driller.....	Mimosa, Ont.....	" 10	1	Crushed by a falling derrick.
Match factory employee.....	St. Casimir, Que.....	" 17	3	Explosion of chemicals.
Retail clerk.....	Edmonton, Alta.....	" 24	1	Crushed by a freight elevator.
Domestic servant, (female).....	Ottawa, Ont.....	" 5	1	Burned—explosion of an alcohol lamp.
<i>Unskilled Labour—</i>				
Laborer.....	Winnipeg, Man.....	" 3	1	Electrocuted.
".....	Merriton, Ont.....	" 8	1	Mangled by a stone crushing machine.
".....	Westville, N. S.....	" 28	1	Run over by a car.

IMMIGRATION AND COLONIZATION.

THE official statements given below with regard to British emigration, the number of homestead entries made, land patents issued, etc., are published, except where otherwise indicated, by courtesy of the Department of the Interior.

BRITISH EMIGRATION.

During the month of July, 1915, the number of passengers leaving the United Kingdom for British North America, according to official returns of the British Board of Trade, was as follows:

RECENT INDUSTRIAL AGREEMENTS.

Carpenters at Thorold, Ont.

THE following agreement has been made between the Confederation Construction Company of Thorold, Ont., and the Frontier District Council of the United Brotherhood of Carpenters and Joiners of America.

ARTICLE 1.—*Hours of Labour.* Nine hours shall constitute a day's work, commencing at 7 a.m. to 12 noon, and from 1 p.m. to 5 p.m. Whenever it may be necessary to employ a night shift, nine hours shall constitute same, to be worked between the hours of 7 p.m. and 5 a.m., but no employee shall be allowed to work two consecutive shifts.

ARTICLE 2.—The rate of pay for all carpenters shall be 40 cents per hour. Overtime shall only be worked when necessary as mentioned in the Government Fair Wage Clauses, and shall be paid for at the rate of time and one-half for all hours in excess of those mentioned in Clause 1, excepting any time worked on Sundays, New Year's Day, Victoria Day, Dominion Day, Labour Day and Christmas Day, which shall be paid for at the rate of double time.

ARTICLE 3.—The United Brotherhood agrees through its officers and members to assist in every way possible, to supply the company with a sufficient number of competent carpenters.

ARTICLE 3.—The Confederation Construction Company agrees to employ only carpenters carrying membership card of United Brotherhood whenever available, and if at any time they have men on their work who are not Brotherhood men, these men can be retained in their employ if they are of special value to the company.

ARTICLE 5.—The business agent or agents of the United Brotherhood shall be privileged to visit the job at any time, but not to delay or interfere with the progress of the work, for the purpose

of assisting in the carrying out of Clauses 3 and 4.

ARTICLE 6.—Any grievance arising which cannot be adjusted by the representative of the company and the organization, shall be referred to an Arbitration Board of five, two to be elected by the aforesaid company, two by the Frontier D. C. of the U. B., and they to choose the fifth arbitrator, and the decision of this Board to be binding on both parties to this agreement, and the decision to be dated from the date of filing of the complaint.

This agreement to be in effect from August 1, 1915, to July 31, 1917.

Signed for the Confederation Construction Company,

(Sgd.) HUGH DOHERTY,

Mang. Director.

For the United Brotherhood of Carpenters, Frontier District Council,

(Sgd.) TOM MOORE,

J. F. MARSH.

Thorold, Ont., Aug. 12, 1915.

Agreement between Toronto Typographical Union and Newspaper Publishers.

ON June 30, 1915, an agreement between the Toronto Typographical Union and the publishers of various Toronto newspapers expired, and an attempt was made between the parties to arrange a new agreement. The Typographical Union asked for a one-year agreement, an increase of \$3 per week and a reduction of half an hour in time for morning and evening newspapers. The employers asked for a five-year agreement with no increase in wages. The matter was submitted to an arbitration committee composed of Mr. J. F.

MacKay and Mr. Atwell Fleming as arbitrators for the publishers and Mr. Hugh Stevenson and Mr. Wesley Williams for the printers. Mr. J. E. Atkinson acted as counsel for the publishers and Mr. James Simpson as counsel for the men. Chief Justice Sir William Meredith was chosen as fifth and independent arbitrator.

The settlement arrived at was on a compromise basis. The award of the Board, which was accepted by the parties at the end of July, 1915, but which is to date from the first of that month, provides for a one-year agreement with no increase in wages or reduction in hours, but Sir William Meredith recommended that an arrangement be made between the men and foremen in the six newspaper offices concerned, whereby as many men as possible can get the Saturday afternoon holiday; the men still being required to work 48 hours day work and 45 hours night work, but the Saturday afternoon holiday being brought about by an extension of their time on other days of the week. The hours at the time the agreement was made were eight a day for six days on evening newspapers and seven and a half hours a night for six nights on morning newspapers. The union, for the first time, obtained a scale for apprentices, which grants \$7 a week in the

third year of the apprenticeship, with an increase of 50 cents a week every six months until the end of the apprenticeship. Apprentices were also given the right to appeal to their chapels in the fourth year of their apprenticeship should they feel an injustice was being done them.

Men working during the day on morning newspapers will receive a reduction in their working time on public holidays and in future will receive a full day's pay for five hours work or for six-hours, if necessary to get out the work. Morning newspaper men asked to work during day hours after working during the night will receive wages at the rate of \$23 a week instead of \$21 a week. No member of the union shall be compelled to work more than five hours continuously without time for lunch. The rule in regard to matrices which obliges publishers to have all type reset where matrices, type or blocks of certain specified advertisements are used was left as it has operated under the previous agreement. The appointment of a local committee to settle disputes arising out of the interpretations of the agreement was agreed to by the representatives of the union and the publishers. Minimum wages on evening papers remained at \$21 per week and on morning papers at \$23 per week.

NOTES ON OFFICIAL REPORTS.

Immigrant Aliens.

Massachusetts.—The Commonwealth of Massachusetts. Bureau of Statistics, Labour Bulletin No. 108. Immigrant Aliens Destined for and Emigrant Aliens Departed from Massachusetts, 1914. (Being Part V of the Annual Report on the Statistics of Labour for 1915.)

THE number of immigrant aliens destined for the State of Massachusetts during the year ending June 30, 1914, was 93,200, which was less by over 8,000 than the number so destined in 1913, despite the fact that the number admitted to the United States, 1,218,480,

was greater by over 20,000 than the number admitted in 1913. The percentage of the total destined for Massachusetts was 7.6. the smallest percentage since 1908. In point of numbers, the Italians and Polish rank first and second and the Hebrews third, these three alone comprising more than one-third of the entire immigration to the State. Of the 303,338 emigrants who departed from the United States during the year, 15,983 or 5.3 per cent departed from Massachusetts. The net increase in alien population for the year in the United

States was 915,142, while the net gain for Massachusetts was 77,217.

Idleness of Wage Earners.

New York.—State of New York, Department of Labour Bulletin. Whole No. 73. Idleness of Organized Wage Earners in the first half of 1915. Pages, 14.

According to this report the mean percentage of idle wage earners in representative trade unions for the first six months of 1915 was 30.6, the highest percentage since 1908, when the figures were 34.7. For the corresponding period of the years 1912, 1913 and 1914, the percentages were 19.7, 26.7 and 27.2 respectively. While the mean for the half year was 3.4 points higher in 1915 than in 1914, idleness by the end of June declined to the same percentage—25.5, as at the end of June, 1914.

Practically all this idleness—29.1 per cent—was due to unemployment in which lack of work was the chief factor, idleness caused by labour disputes and disability being quite insignificant.

As to unemployment by industries, the mean percentage of idleness for the first six months of 1915 exceeded that for the corresponding period of 1914 in ten of the thirteen divisions. In building, stone working, etc., the percentage for 1915 was 44.4 as against 42.0 in 1914; in transportation the percentages were 16.3 and 13.0, idleness in this division occurring chiefly in teaming and cab driving; in clothing and textiles, 42.3 and 33.3, idleness here being concentrated in the garment trades, while there was a marked decrease in idleness reported in the hat, cap and fur trades. In metals, machinery and ship building, there was an increase from 16.1 in 1914 to 21.0 in the present year, although decreases were reported in May and June. The membership of these four industries constituted more than three-fourths of the total number represented in all. Only in public employment, woodworking and tobacco, was

there a decrease in the number reported as unemployed.

Idleness due to unemployment in the city of New York at the end of June was 4 per cent (28.3 against 24.0) higher than in the State as a whole. This, however, was largely due to the concentration in New York City of the clothing industry, in which idleness was greatest.

Factory Inspection—Child Labour.

Illinois.—Twentieth and Twenty-first Annual Reports of the Chief State Factory Inspector of Illinois for the years. July 1, 1912, to June 30, 1913; July 1, 1913, to June 30, 1914. Pages, 256.

The Department of Factory Inspection of the State of Illinois is charged with the enforcement of the Child Labour Law, the Women's Ten Hour Law, the Garment Law, regulating the manufacture of clothing, the Structural Law, protecting persons in and about the construction of buildings, the Blower Law, compelling the use of blowers on metal polishing, and other Acts relating to the manufacture of butterine and ice-cream, and to the provision for the health, comfort and safety of employees. In both these reports the text of these statutes is reproduced and a detailed account of the activities of the Department in connection with their enforcement is given.

The child labour section of the report for the year ended June 30th, 1914, states that the percentage of child labour in Illinois is 1.9 per cent, but adds that in view of the number of working permits issued during the year and the inability of the inadequate number of factory inspectors to visit every establishment in the State, this statement must be considered conservative. The affirmation of the constitutionality of the Child Labour Law of the State by the United States Supreme Court is also noted. "The decision of the Supreme Court in substance states that a minor employed contrary to the provisions of the "Child Labour Law," if injured in

the course of such employment, even if the employer acted in good faith, relying upon the representation of the minor that he was over sixteen, has a right of action and may recover damages without any defense on the part of the employer." The decision of the Supreme Court embraces the entire act. This section also has a draft of a new Child Labour Law, the principal features of which are: raising of the minimum working age for all children from fourteen to sixteen years, securing working permits for children between the ages of sixteen and eighteen years, and granting of special summer vacation working permits to children over the age of fourteen years.

There is also included in the report a historical survey of factory legislation in Illinois from the first Factory Act passed in 1877, entitled "An Act to Prevent and Punish Wrongs to Children," to the present time. "Results" of inspections under the various laws are recorded and a plea is made for the amendment of the Compensation Act to include within its scope the occupationally diseased employee. There is a convenient table summarizing the work of the Department since its incep-

tion in 1893, and a number of illustrations of safety devices, improved machinery and sanitary arrangements are given in the concluding pages.

Manufactures—Prices and Wages—Accidents.

New Jersey.—Thirty-seventh Annual Report of the Bureau of Industrial Statistics of New Jersey for the year ending October 31, 1914. Pages, 240.

Part I of this Report, devoted to Statistics of Manufactures, is a record of increased investment of capital and production for 1913 as compared with 1912. In Part II dealing with the Statistics of Steam Railroads, Retail Prices and the Canning Industry, it is noted that while the cost of food increased 28.07 per cent from 1898 to 1914 the average earnings in factory and workshop industries increased 31.5 per cent. Part III, Industrial Chronology of New Jersey, records a total of accidents to workpeople while on duty for the year ending September 30, 1914, of 4,087, of which 2,723 were reported by steam railroads. Of the remainder 45.8 per cent took place in factories and workshops and 23.2 per cent in building and construction. The number of labour disputes for the same year shows a marked decrease as compared with recent years.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Capacity and Earnings.

AN appeal was heard in the Montreal Court of Review to put aside a judgment given in favour of a workman who had been awarded a life pension of \$112.50, because of a permanent par-

tial incapacity brought about as a result of an accident occurring whilst the workman was engaged in the employ of the defendants. The evidence showed that the plaintiff workman had been engaged on a floor in a shed and that it was whilst he was in the act of mounting to another floor that the accident happened. The defendants claimed that since the plaintiff returned to work that he had earned as much, if not more, than he had earned previous to the accident. The Court held that it mattered not what the man earned after the acci-

dent. The fact remained that the injury had brought about a partial and permanent incapacity, which in turn induced a diminution of working capacity and earning capacity. The Judge claimed that it was quite possible that a man suffering from a permanent partial incapacity might put forth more strenuous efforts and might attain just as much success as before, but that the permanent partial incapacity existed just the same. The Court of Review upheld the former judgment given in favour of the plaintiff. (*Dupuis v. Harbour Commissioners of Montreal.*)

A woman car cleaner in the employ of a railway company was walking alongside of a track on which three Pullman cars and an engine were moving. She was walking close to the rails and was struck by a passing locomotive, knocked down and sustained such injuries as necessitated the amputation of a part of her hand.

The company on being sued submitted proof that it had complied with every statutory obligation, but the jury, finding common fault, assessed the damages at \$4,800 and deducted \$1,200 on account of plaintiff's contributory negligence, the verdict thus being for \$3,600 against the company. The trial Judge handed down judgment in accordance with the verdict.

On appealing to the Court of Review, the company submitted that the evidence did not establish fault or negligence on the part of the company, but that the accident was caused by the failure of plaintiff to exercise that reasonable care and prudence required of her by law when about to cross a railway track, and there was absolutely no evidence that the mishap had been due to the combined fault of the plaintiff and the defendant. The jury had found that the company's fault consisted in its failure to have a man on the lookout on the foot board of the locomotive and in not keeping a proper lookout in the cab

of the engine. The company took exception to the charge of the trial Judge, to the effect that whilst it was doubtful whether, under the Railway Act, the defendants were obliged to have a man on the foot board of the locomotive, such a duty might exist at common law.

After hearing all the evidence the decision of the trial Judge was quashed, the plaintiff, however, being given the option of accepting a smaller amount than that which was awarded her by the jury. (*MacGuckin v. Grand Trunk Railway Company.*)

SASKATCHEWAN CASE.

Negligence—New trial where no evidence to support express findings.

Action was brought by a street car conductor for damages for injuries received while in the employ of the Regina Electric Street Railway. That portion of the street over which the plaintiff's car operated passed under the tracks and yards of the Canadian Pacific Railway Company through a subway. On the morning of the accident the plaintiff was informed that instead of using the east track through the subway when going north he was to turn over at a point just about the beginning of the subway and use the west track, the reason being that the engineering department of the city was paving that portion of the street where the east track was located. The cars were run by electric motive power applied through overhead wires, and on the street in question there being a double track, the wire was supported by standards placed in the middle of the street, and at equal distance from the street car tracks. The entrance and steps of the car were at the rear right-hand side, so that as the cars were ordinarily run, this portion of the car would be farthest away from the standards. On the day of the accident, in view of the temporary change in opera-

tion, the entrance and steps of the car going north through the subway were on the side next the standards. On the evening of this day as the car was being operated by the plaintiff, and as it was approaching the grade of the subway going north, the trolley pole left the wire, with the result that the car stopped. The trolley pole was operated by a rope from the rear end or platform of the car, it being part of the work of a conductor, when a car is switching from one line to another, to stand on this platform and by means of the rope guide the trolley pole along the wire upon which it is required to go, and if the pole gets off the wire to guide it on again. On this particular trip the car, including the platform, was crowded to capacity with passengers. The plaintiff, finding it difficult because of the crowded condition of the platform, to adjust the trolley pole, took what was apparently the more convenient method, and got off the car for that purpose. Immediately the pole again came in contact with the wire the car started. The plaintiff ran and jumped on the steps, but before he could get into the car his head came in contact with one of the standards, and he was thrown to the ground and severely injured. Judgment was entered in the plaintiff's favour for the sum of \$2,000 damages assessed by the jury. The city appealed from this judgment and pointed out that it was negligence on the part of the plaintiff which had caused the accident. The appeal was allowed with costs, the judgment for damages set aside and judgment entered in favour of the city with costs. (*Schell v. City of Regina.*)

ALBERTA CASE.

Master and Servant—Common Law Action—Workmen's Compensation Act.

A plasterer while engaged by a sub-contractor on work on an apartment house fell from a temporary stairway

of boards erected for the use of the workmen and had his leg injured. The sub-contractor had requested that the stairway should be removed from its original position to enable him to do certain work, and the plaintiff, in the course of his duty using the stairway while it was being moved by the general contractors sustained injuries and brought action for damages.

The trial Judge held that no action lay at common law against the general or sub-contractor, but awarded compensation under the Workmen's Compensation Act. The plaintiff was a man of about 45 years of age. In his occupation as a plasterer he said he had been earning about \$33 a week, that for a time he had slightly increased this by taking work by contract. His leg had to be amputated just below the knee joint as a consequence of the accident. The hospital bill was \$142, the doctor's bills \$325, and an artificial limb was said by a doctor to cost about \$165. These sums amounted to \$633. He had been unable to work at all up to the time of the trial. He claimed that even then the wound was not healed. The Judge, on appeal, was of opinion that the plaintiff would be unable to do very much, if any, work as a plasterer, or in any ordinary employment involving physical strength and exertion, although he would be able to do work of superintendence and contracting. He was also entitled to something for the pain and suffering. Having taken all these things into consideration the plaintiff's appeal was allowed with costs and damages awarded in the sum of \$5,500. (*Klukas v. Thompson et al.*)

BRITISH COLUMBIA CASE.

Master and Servant—Breach of Con- tract by Servant—Cause—Damages.

The plaintiffs were employed as surveyors by the defendant for their board, the agreed wages per month and their

fares to and from the place they were to work. The plaintiffs refused to continue work after having worked a certain period, on the ground that the food supplied was of an inferior quality and poorly cooked, and that the cook was unclean. The day they quit they refused to go to work unless the cook was dis-

charged. This the defendant refused to do.

In an action for one month's wages and their return fare, it was held on appeal that the complaint as to the food was not borne out by the evidence or the facts and the action was dismissed. (*Pratt v. Idsardi.*)

THE LABOUR GAZETTE

OCTOBER, 1915.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

THE month of September witnessed the amicable adjustment of several difficult industrial disputes, chiefly under the provisions of the Industrial Disputes Investigation Act. Reference was made in this page last month to the critical situation which had developed in the Pacific coast cities with reference to the street railway and longshore industries. It was during the first week in September that in both these cases a peaceful solution was found after long and difficult negotiations. The street railway dispute had gone before a Conciliation Board; the longshore case did not reach this stage. Concurrently almost with the dispute between the British Columbia Electric Company and its street railway employees was a dispute between the same company and its electrical workers, which went also before a Board. The Board, under the chairmanship of Judge W. A. Macdonald, who was chairman also in the case of the street railway dispute, reached a unanimous award, which appears to have been effective in ending the dispute. Two other Conciliation Boards sat in Nova Scotia; one, under the chairmanship of Judge Wallace of Halifax, adjusting a dispute between the Intercolonial Coal Mining Company of Westville and its employees; a second, under the chairmanship of Judge Coatsworth of Toronto, effecting an agreement between the Nova Scotia Steel and Coal Company of New Glasgow and the Eastern Car Company of Trenton and their respective employees, engaged on important munition

contracts. The reports of these several Boards of Conciliation appear in the present issue of the *Labour Gazette*. The only incident of the month causing more than a trifling cessation of work was a coal handlers' dispute at Halifax, an adjustment being, however, effected in the course of a few days.

* * *

THE United States Commission on Industrial Relations completed its work on August 23 and has recently issued its report. The statute creating the Commission was passed by Congress in 1912, and required that three members of the Commission should represent the employers, three the employees, and three the general public. In June, 1913, President Wilson appointed Frank P. Walsh, of Kansas City, an attorney, chairman of the Commission, and to serve with Mr. Walsh as representing the general public, Professor John R. Commons of the University of Wisconsin and Mrs. J. Borden Harriman of New York City; as representing the employers, Frederic A. Delano of Chicago, a railroad president; Harris Weinstock of San Francisco, a merchant, and S. Thurston Ballard of Louisville, a manufacturer; and as representing the employees, John B. Lennon of Bloomington, Illinois, treasurer of the American Federation of Labour; James O'Connell of Washington, representative of the metal trades and third vice-president of the American Federation of Labour, and

Austin B. Garretson of Cedar Rapids, Iowa, president of the Order of Railway Conductors. On March 17, 1915, Richard H. Aishton was appointed to serve the unexpired term of F. A. Delano, who resigned. The Commission organized just before the end of the year 1913 so that its work has occupied less than two years. The expenditure involved was about \$500,000. Accompanying the report of the Commission is a report on The Colorado Strike by George P. West, and another on The National Erectors' Association and the International Association of Bridge and Structural Ironworkers, by Luke Grant. The report of the Commission, in which wide divergence of opinion is indicated, will be the subject of further notice in a subsequent number of the *Labour Gazette*.

* * *

SOME weeks ago negotiations were opened between representatives of unemployed coal miners in the Nanaimo (B.C.) district and various authorities in Great Britain as to the possibility of arranging for the transfer of certain of the unemployed to England, where, at some points, an inadequate supply of coal mine workers was reported. Most of the men concerned were British-born, and in view of the slackness of the coal mine industry in recent months on Vancouver Island, welcomed the proposed transfer. The negotiations resulted in the arrival in Canada towards the end of September of two agents of the British Government, authorized to take definite action in the matter, the agents being Mr. R. Baird, a British colliery proprietor, and Mr. Thomas Richardson, a labour member of the British Parliament, and an officer of the coal miners' union of Durham County. Messrs. Baird and Richardson proceeded immediately to the Pacific coast and placed themselves in touch with the miners. The number of those out of employment is estimated at between two and three

thousand. The conditions under which the British agents will be able to arrange for the transfer of any of the men concerned have not been yet made public.

* * *

ATTORNEY-GENERAL BOWSER of British Columbia has announced the intention of the Government of that province to appoint a Commission to investigate the subject of workmen's compensation with a view to legislation at an early date. As outlined in press reports of Mr. Bowser's statement, the Commission will consist of three members, two representing the respective interests of employers and workmen, with a third who would no doubt be chairman. The Commission will be appointed, it is stated, in time to permit its work to begin early in October. The announcement is of special interest in view of legislation on this subject during recent years in Ontario, Nova Scotia, Manitoba and Quebec.

* * *

IN the last issue of the *Labour Gazette* appeared the text of the draft bill amending and consolidating the Industrial Disputes Investigation Act, 1907, and the Conciliation and Labour Act, together with some explanatory notes. Copies of the draft measure were distributed in pamphlet form in considerable number during the month. The draft bill, it will be understood, is not necessarily in the form in which it will go before Parliament, but is being circulated, by the Minister's instructions, for consideration and discussion by those specially interested. Copies of the draft were freely distributed at the convention of the Trades and Labour Congress at Vancouver. The Minister of Labour, also, in the course of a visit to the Congress, discussed in some detail the features of the proposed legislation.

THE feature of chief public interest perhaps of the proceedings of the Trades and Labour Congress of Canada, the annual convention of which was held during September at Vancouver, B.C., was the decisive defeat of a motion asking for the repeal of the Industrial Disputes Investigation Act, 1907, the vote standing 97 to 55. The election of officers resulted in the reinstatement of Mr. J. C. Watters as president and Mr. P. M. Draper as secretary-treasurer; Mr. Watters has been president for four years, while Mr. Draper has held the office of secretary-treasurer since 1905.

* * *

DURING September continued activity in the manufacture of munitions of war, as well as general improvement in lumbering and coal mining, resulted in an increased demand for labour, although dullness in the building trades continued except at a few points in the Maritime provinces. Eastern cities generally reported conditions steadier and were looking forward to the winter more confidently than at the same period of last year. While the local demand for labour in the Western provinces showed no improvement it was expected that the British Commission which is enlisting miners for employment in the United Kingdom would absorb most of the unemployed coal miners of the West.

* * *

PRICES during September showed a somewhat lower level, and in many commodities which enter largely into the family budget, considerable decreases were noted. Lower prices for grain and

flour were reflected in the price of bread, which was reduced in practically all parts of the Dominion. Meats also in some instances were lower. Rents showed a downward tendency. The cost of a week's supply of the staple foods in the average family budget was slightly lower than in the preceding month. The Department's index number of wholesale prices also showed lower tendencies as compared with the preceding month, though still considerably higher than for the month of September last year.

* * *

THE annual report of the Department of Labour, recently printed and distributed, gives details of the Department's work during the fiscal year ended March 31, 1915, in regard to trade disputes, the administration of the Industrial Disputes Investigation Act, the Combines Act and the Fair Wages Regulations, the collection of statistics respecting Prices, Labour Organizations, etc., and the publication of special reports on these matters. In the introduction to the report attention is directed to the increased disposition on the part of both employers and employees, in view of conditions brought about by the war to amicable arrangement of their differences, as a result of which fewer trade disputes are reported. The report of the proceedings under the Industrial Disputes Investigation Act, 1907, which is published as an appendix to the annual report, shows that with one exception, in all cases dealt with under the Act, working arrangements were effected without recourse to strikes or lockouts. The two volumes contain a total of 478 printed pages.

INDUSTRIAL CONDITIONS DURING SEPTEMBER, 1915.

GENERAL SUMMARY.

IN September the improvement in general labour and industrial conditions noted during August was sustained, and in a number of industries additional progress was shown. As against continued activity in the manufacture of war munitions and military supplies resulting in a demand for metal workers and also for leather workers in some localities, together with a general improvement in lumbering and coal mining, there remained continued dullness in the building trades although improvement in this respect was reported from different points in Quebec and the Maritime Provinces. The larger centres, however, did not share in this improvement; Halifax, St. John and Montreal experienced quietness in building and Montreal reported an increase in the amount of distress. Ontario, the most highly industrialized province, reflected the improvement through the manufacture of munitions of war to the greatest degree, many factories working night and day shifts on these lines and most cities reporting the outlook for the winter better than at the same period of last year. Toronto reported a general improvement in all lines except the building trades although the Civic Employment Bureau was able to place about 400 carpenters outside of the city. There was also improvement in the demand for unskilled labour.

The Western cities reported temporary improvement through harvesting, the threshing operations extending over a longer period than usual. The building trades were very dull but the manufacture of war munitions, while not such an important factor as in the East, had absorbed practically all the labour qualified for such employment. Manitoba and Saskatchewan cities reported that

most of the unskilled labour had been temporarily absorbed in harvesting; the Free Employment Bureau of the City of Winnipeg stated that marked improvement had taken place at that point. Alberta cities had still a number of unemployed despite the demand for farm help, and while all points in British Columbia reported no improvement in the local demand for labour it was expected that the British Commission, which is enlisting miners for employment in the United Kingdom, would absorb a large number of the unemployed coal miners of the West.

By the end of the month harvesting was practically over, except in some late districts. Threshing also was completed in some localities, but in other parts, wet and variable weather delayed operations. Crops on the whole were above the average of other years. Potatoes, however, in Ontario and Quebec were a poor crop on account of too much rain. Fishing on the Atlantic coast showed more activity with the return of the autumn season. On the lakes fishing was quiet. Salmon fishing on the Fraser River continued poor, though this was offset by good catches and packs in northern waters. Prince Rupert showed satisfactory returns. Lumbering showed improvement in British Columbia and continued active in Eastern Canada, though preparations for logging were not so extensive as at the same time last year. Coal mining was active in Nova Scotia and in Alberta and British Columbia fairly so, with considerable improvement in lignite fields, colder weather improving the domestic demand. Metal mining showed activity in practically all metaliferous districts in Canada. Manufacturing was more active than in the previous month, not only in connection with

war orders, but also in staple lines owing to the improved demand from the West. Railway construction on the whole was quiet, a number of smaller undertakings being discontinued pending an easier money market. Railway and steamboat freight traffic showed marked improvement with the commencement of the movement of grain. Passenger traffic also was improved owing to the large attendance at the various fall fairs held throughout the country. Trade and commercial conditions also reflected the general improvement.

The Departmental index number of wholesale prices stood at 147.2 for September as compared with 147.6 for the preceding month and 141.3 for September, 1914. Grain showed the chief decreases while spelter and zinc declined from the abnormal levels of July and August. Cattle and beef were lower; dairy products, fish and some fruits and vegetables were higher. In retail prices the cost of a week's supply of certain foods was \$7.736 as compared with \$7.781 in the preceding month and \$7.826 in September, 1914. Rents averaged slightly lower.

Changes in Wages and Hours of Labour.

There was little in the way of changes in wages and hours of labour. Earnings in some cases were affected by an increase or decrease in the number of hours worked per day or per week owing to increased or diminished activity in some establishments, but only one change in rates was reported to the Department during September, that of freight handlers at Halifax, who as the result of a strike, secured an increase of 3 cents an hour, bringing their rate up to 33 cents on day work and 38 cents an hour on night work. Some 200 men were affected by the change.

Agriculture.

Harvesting and threshing operations continued to give employment to large bodies of unskilled labour in practically

all parts of the Dominion. There was a particularly active demand for men in the West, which in some districts was hardly met. The weather on the whole continued favourable, though in some parts of the East heavy rains interfered with harvesting, and in the West delayed threshing. An indication of successful farming operations in Canada this season was the extent to which the fall fairs in different parts of the country were attended. A great many of these exhibitions were more successful and were more largely attended than those of previous years. Wheat was beginning to move and elevators were busy. Despite the high ocean rates and shortage of tonnage the question of securing adequate facilities for transportation was expected to be satisfactorily arranged.

On Prince Edward Island crops were gathered in good condition, with a fair average yield, though fruit was reported not up to the average. In Nova Scotia harvesting was in progress, with good weather conditions. In New Brunswick farmers were busy harvesting, though a scarcity of help retarded the active progress of work on many farms. In parts of Quebec the grain cut was about over and in the case of all crops the year was expected to be above the average. In Ontario farmers were actively engaged in fruit picking, root gathering and in harvesting and threshing. Heavy rains in some districts interfered with the work and with fall plowing in some localities. Potatoes in nearly all districts were reported seriously affected by rot, and on the whole a light crop was expected. Exceptional activity was reported from the sugar beet districts at Berlin and Chatham, and more employees than in former years were given work. At Niagara Falls orchard labour was in great demand. In this district it is reported that there is more or less fruit lost each year for lack of hands to gather it at the proper time. In the Hamilton district, also, farm help was not as plentiful as last year, and as a result wages for experienced farm hands

were higher. In a few Ontario districts good second clover crops made up to some extent for a shortage in hay.

Harvest and threshing operations in the West were active. Harvesting in some districts was completed about September 20. Inclement weather interfered to some extent with threshing. At Brandon, while crops near the city were early and threshing was done before the rains set in, in the district round about variable weather delayed threshing. In the Moosejaw district it was estimated that at the end of the month nearly 10 per cent of the threshing had been completed. In this district, also, a shortage of hands for threshing outfits was reported and wages continued fairly high. In the Regina district, wet and unfavourable weather delayed threshing. In the Saskatoon district wheat was reported threshing out better than expected. In the district west of the city 38 and 40 bushel crops were common, even averaged over large acreages. East of the city wheat ran between 20 and 25 bushels to the acre. Threshing weather in this district also was wet and variable. No inconvenience was reported from lack of harvest help. At Medicine Hat rain and snow the first two weeks in September delayed harvesting and threshing, but excellent weather in August resulted in most of the grain being cut. At Calgary a good demand for harvest help was reported and the Civic Labour Bureau sent out 600 men during the month. The new Government elevator at this point was tested and taken over. The elevator is accessible to three railways and has a capacity of 2,500,000 bushels. At Edmonton demand for harvesters and threshers continued. Farmers who at first had demanded experienced hands were willing to take on men with little or no experience.

In British Columbia good harvesting weather and good crops were reported. Potatoes in the Fraser Valley were a heavy yield and were selling at low prices. From New Westminster 250 harvest hands went to the prairies. Large

numbers of men for harvesting and threshing were also sent out from Vancouver. A special fare of one cent per mile going and one and a half cents per mile returning was given by the railway companies. At Victoria an association was formed for the purpose of seed culture on a commercial basis, owing to the interruption of the seed industry in Europe on account of the war.

Fishing.

At some points on the Atlantic where fishing is usually carried on in a desultory manner during the summer months, many fishermen dividing their time between fishing and agricultural pursuits or in repairing their boats and gear, the month of September witnessed a revival of activity. At Yarmouth dogfish were reported less troublesome and fishermen had a fair month so far as the quality was concerned, though prices were reported fluctuating and uncertain. Shipments from this port, however, were fairly heavy, large quantities of sword fish and mackerel being among the shipments. Sword fish were also reported plentiful at Sydney, N.S., though otherwise fishing was quiet. At Digby, N.S., the main haddocking fleet was getting in shape for the fall and winter fishing. The demand for fish at this point was reported good, though curers had difficulty in preparing and holding their stocks owing to the prevailing humidity during the season. Lunenburg fishing vessels were arriving from the Newfoundland banks, most of them with full fares. The season on the north shore of the Bay of Fundy side of Nova Scotia was about closed for fishing, few fish coming into the bay after September. Large quantities of hake, however, were caught during the month. From St. John, N.B., it was reported that the storm of September 26 did considerable damage to the fishing weirs along the shore.

On the Lakes fishing was only fair. Along the shores of Lake Erie fishermen were reported to have had a poor season. At Port Arthur fishing was brisk

and considerable whitefish and lake trout were being shipped east. At Selkirk, Man., summer fishing was at an end. The winter season will commence about the second or third week in November, when nearly 1,000 men will be engaged in the industry. About 75 men were employed in the freezers and cold storage plants at this point. Whitefish were reported being shipped in large quantities from the Lesser Slave Lake in Northern Alberta to Chicago, the lake having been rendered accessible by the construction of the Edmonton, Dunvegan and British Columbia Railway running northward from the main line of the Grand Trunk Pacific.

On the British Columbia coast salmon fishing in northern waters was good, and canners put up a large pack. On the Fraser River, however, the season was disappointing. Few sockeye were caught and not enough cohoes or humpbacks to keep busy the canneries which were getting most of their supply from other points. Prince Rupert returns for the month were satisfactory. Large shipments of halibut continued to go forward over the Grand Trunk Pacific for eastern markets. There was also an increase in the number of American vessels shipping their catches from this port. At Nanaimo fishing was reported quiet. Owing to the dense smoke caused by forest fires off the coast of Queen Charlotte Islands, the whale fishing season in that district was not as successful as in other years. On the west coast better catches were made, with indications of fair returns for the season.

At the Canadian National Exhibition, Toronto, an address was delivered by the Minister of Naval Service in which attention was directed to the extent and value of Canada's fishing resources and to the need for a greater extension of home and imperial markets. In connection with other steps taken to advertise Canada's fishing resources, the Department of the Naval Service conducted a fish restaurant at the Exhibition, at which different kinds of fish were served and booklets distributed describing the

various kinds of fish caught in Canada and the proper methods of preparing the same for food.

Lumbering.

Lumbering continued fairly active in the Maritime Provinces and in Quebec and Ontario. Operations in British Columbia, also, showed continued improvement, particularly in the manufacture of shingles. In Ontario and Quebec there was an active demand for box material, to be used in the manufacture of shell boxes, and many inquiries for the lumber required for this work—mostly birch and spruce—were being received from the United States and from various parts of the Dominion.

Reports from Pictou, N.S., stated that more lumber was being shipped this season than ever before in the history of the port. At St. John, N.B., very little stock was moving and trade was expected to remain in this condition until winter sailings. While business was said to be fair in the United Kingdom, freight rates were high and transportation facilities limited. Unless a change for the better took place it was considered likely that logging operations this winter would not be extensive. Up to the middle of September little had been done in this connection, while in previous years work was well under way at that time. Logs, it was reported, would cost more to cut this winter owing to the price of supplies being higher, though labour, it was expected, could be procured somewhat cheaper than last year. Seven mills were sawing at St. John, two for the United States market and two for the British market. At Newcastle, lumber mills were all working steadily with full crews, and it was considered likely they would continue to operate for at least another month. Men were being engaged for the woods, and in this district it was expected the cut would be quite as good as in former years. On September 22 the Bathurst Lumber Company of Bathurst, N.B., suffered a severe loss by fire, the company's dock and lumber yards, including about 15,000,000 feet of

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

lumber valued at \$250,000, being destroyed. The loss, however, was well covered by insurance.

In Quebec most of the mills were still cutting. At Three Rivers sawing was active, with prospects for a good logging season. Mills in the vicinity of Quebec City were still cutting, and likely to continue until frost set in. At Montreal it was reported that the only section of the lumber market showing activity was that concerned with the supply of material for making shell boxes. Shipments to the United Kingdom were reported satisfactory, though exporters were in a position to use more tonnage than was available.

In Ontario the demand for box lumber was active, but little demand was apparent for lumber used in building operations, outside of a slight demand for material for alterations and repairs. Along the north shore of Georgian Bay successful operations were carried on. Sawmills in the district had a good demand from the United States. Preparations for the logging season were well under way in this district, and while it was not expected that operations would be on an extensive scale, most manufacturers were counting on fairly good cuts. At Ottawa a considerable increase in the demand for box lumber and spruce was reported. There was also an improvement in shipments to the United States and to Great Britain. Supplies for camps in the bush were reported, in this district, cheaper than at the same time a year ago. Oats were cheaper by 25 cents a bushel, and hay by \$3 per ton. Prices for pork, flour and sugar were also lower than in the fall of 1914. The Booth mills closed at the end of the month, about 500 men being affected, but most of these it was expected would be used in the shanties and in making repairs to the mills.

In the West the demand for lumber was somewhat stimulated by the result of the harvest, and at Regina more lumber was sold during the month of Sep-

tember than during the previous eight months of the year. An increased demand was also reported at Prince Albert. At Calgary the Eau Claire lumber mills were compelled to shut down owing to floods having changed the channel of the river.

On the Pacific coast improvement continued, particularly in shingle mills, for which there was a lively demand from the United States. Lack of transportation facilities hampered the lumber output. At New Westminster a large shingle mills was in partial operation with orders for months ahead, which were expected to keep the mill running for some time at full capacity. In the Nelson district, also, improvement was reported, and a number of mills were working on orders from the Prairie Provinces. Sawmills in the Nanaimo district worked steadily, but not at full capacity, and the same applies to logging camps in this district. It was reported at a Board of Trade meeting in New Westminster that large orders for lumber had been placed by British authorities in British Columbia, of which 40 per cent would go to Fraser Valley mills.

Under the direction of the British Columbia Minister of Lands a booklet has been prepared by the British Columbia Department of Lands entitled "British Columbia Timber," for distribution among buyers in foreign markets. It is intended to draw the attention of importers overseas to the various products of the province, and especially to the facilities for exporting British Columbia lumber.

Mining.

Coal mining in the Sydney district continued active. A large amount of coal was shipped from the heaps, and it was expected that long before the banking season returned coal would be shipped away. The large number of young men leaving the collieries for active service was beginning to tell on the

output, which dropped 4,000 to 5,000 tons per day. At Westville the demand for coal continued, and all the mines in the district worked full time. The output of the Acadia Coal Company was about the same as the previous month, but the Interecolonial Coal Mining Company increased its output about 25 per cent.

In the Edmonton lignite fields, coal mining was active on account of domestic demand due to colder weather. There was a shortage of experienced men owing to the demand for farm labour. In the Fernie field the improvement noted during August was not general. Manufacturers of coke continued to find a ready market for their product. At Lethbridge coal mining was active, some of the mines working to full capacity. Lignite fields, which supply coal for domestic purposes, were active, and as in the Edmonton district, the supply of labour was not equal to the demand, though this condition was expected to right itself when the harvest was over. At Coalhurst the mine was running to almost full capacity, and a large number of miners were hired on. Coal mines at Nanaimo were working steadily, and mines in the district from half to three-quarters time. A number of additional men also found employment at the Extension Mines and at South Wellington. Some additional men were also given work at the old and new Cumberland Mines.

Metal mining showed continued activity. In the Sherbrooke, Que., district considerable mining of chrome iron was being carried on in Black Lake, about 150 to 200 men being employed. Mining at Cobalt showed practically no change from the satisfactory conditions of last month, though an advance of about three cents an ounce in silver about the middle of the month gave promise of an increase in the monthly output. Considerable work was being done in a new camp about 120 miles west of Cochrane on

the Grand Trunk Pacific. About thirty outfits with approximately 100 men in all were doing prospecting work at this place. At Kowkash, also a new camp on the Grand Trunk Pacific, there were about 250 men doing assessment work and prospecting. Gold mining in the Porcupine district was being carried on with increased activity. The monthly output was larger than for the same month last year, while several of the leading gold companies were expected to increase their milling capacity, necessitating the employment of a greater number of men. The Buffalo mine at Cobalt Lake was closed down, but most of the men, it was expected, would be taken to Kirkland Lake and given employment there by the same company.

In British Columbia reports from various metaliferous districts of the province continued to indicate progress, with production being well kept up. Shipments of ore from the Consolidated Mining & Smelting Company of Rossland, which was reported to be employing more men than in recent years, to the Trail smelter, continued to increase. Several small mines that had not been on the list of producers for some time, made shipments of ore to Trail. At the last mentioned point, activity continued. Quite a number of carpenters and labourers were working on the construction of houses and additions to the smelter. The question of the production and refining of zinc continued to occupy public attention. The British Columbia Government decided to extend some financial assistance to the French Complex Ore Reduction Company of Victoria in order to permit the company to establish a demonstration plant at Nelson. The Granby Consolidated Company's plants were running at full capacity, the smelter at Grand Forks having eight furnaces in operation and that at Anyox, four furnaces. The working forces at the latter place numbered between 850 and 900 men.

Manufacturing.

From practically all manufacturing districts in Canada an improvement over the previous month was reported, and while the bulk of this activity was due to war orders other industries also showed improvement. The effect of the harvest was being felt in many industries. The opening up of two large beet sugar companies at Berlin and Chatham, Ont., gave employment to a number of men. Manufacturing in the West and in British Columbia also felt the effect of the general improvement, but not to the extent noticeable in the East, except in the case of flour mills, which were becoming active in the milling of new wheat.

The steel trade at Sydney and Sydney Mines continued brisk, most of the departments running to almost full capacity. At Westville various plants engaged in the making of war munitions were very brisk and worked three shifts per day. Large woollen mills at the same place were busy on a contract from the Italian government for woollen goods. At Halifax some lines of manufacturing were reported very active. A large clothing establishment was advertising for female help, and bread and biscuit manufacturers wanted more bakers.

At Fredericton, N.B., most of the manufacturing establishments experienced a busy month, particularly foundry, machine shops and shoe factories.

At Montreal, continued improvement was shown. Cotton mills were working to within 85 per cent of capacity as compared with 60 and 70 per cent at the same time last year. Knitting and woollen mills were busy on military supplies, including an order from the Italian government. The Canadian Car and Foundry Company was busy on large orders for freight cars and other articles. Shoe factories were not busy, except in the case of those working on military orders. Outside of firms engaged in the making of munitions, foundrymen were quiet, a few working at two-thirds capacity. At Three Rivers and Quebec most establishments were busy. At Sorel during the early part of the month, some industrial establishments were obliged to reduce the number of their employees and others ran very moderately. Towards the end of the month, however, an improvement was noticeable.

Most of the Ontario industrial districts were active. At Toronto overall and blanket factories and knitting mills were particularly busy on work for soldiers. Knitting mills were working overtime, and blanket factories were expected to be busy to their full capacity for the winter on orders from the Italian and Russian governments, in addition to Canadian orders. Candy factories, also, were commencing work on Christmas orders, which in turn meant improvement in box factories. At Berlin factory conditions were excellent, and practically all industries with the exception of furniture factories and a few shirt factories were busily engaged. Many large factories were working overtime, and in some cases running two or three shifts. At Galt in the same industrial district manufacturing establishments were for the most part busy. At Hamilton manufacturing was reported fairly brisk and showing considerable improvement over the corresponding period of a year ago. Factories on war orders continued busy, with the exception of those working on leather goods. One leather manufacturing company laid off 75 hands as the result of a falling off in orders. At Niagara Falls an improvement was also reported. Cutlery and silver-plating establishments—an important factor in manufacturing at this place—reported business stimulated by good orders from Western Canada. At Peterborough, Belleville, Brockville, Owen Sound and St. Thomas, manufacturing continued to be fair, with activity in establishments working on war orders. At Brantford manufacturing generally was reported quiet, although

some factories which had been closed down resumed work. Woollen mills at this place were fairly busy and had vacancies for learners in some departments. At Kingston the works of the Canada Locomotive Company were busy; also textile mills. At Stratford busy conditions were reported, particularly in the manufacture of clothing and woollen goods. At Woodstock, where conditions in wood-working establishments had been dull, an improvement was reported. In wagon and sleigh factories, and in piano and organ factories also conditions were fairly good. Furniture factories, however, continued decidedly dull. Foundries also were slack. At London the McClary Manufacturing Company laid off a number of moulders and was working only four days a week in the stove and furnace plants. Hours per shift in the tinware department were also reduced. At Chatham a considerable improvement in manufacturing conditions was noted, a number of large establishments working overtime.

Railway Construction.

Railway construction in Canada on the whole continued quiet, a number of smaller constructions being delayed on account of the state of the money market. In addition to several large constructions being carried on in Alberta and British Columbia, maintenance and repair work on various lines throughout the Dominion furnished employment to a considerable number of men. The Civic Relief Department of Vancouver sent out about 400 men to do track work on sections of the Canadian Pacific Railway Company in British Columbia.

Work on the Alberta and Great Waterways Railway was progressing, and it was expected that track-laying on the section from Lac la Biche to Fort McMurray would be completed by December 31. The line from Carbondale, the junction with the Edmonton, Dunvegan and British Columbia Railway, to Lac la Biche was reported practically

ready for traffic. Grading work on the Central Canada Railway was also continued, and on the Edmonton, Dunvegan and British Columbia Railway track was laid on the temporary bridge across Big Smoky river at mileage 290 from Edmonton, and was being continued to Spirit river, a further distance of 67 miles. The permanent bridge over the Big Smoky river was in course of erection. On the Kettle Valley lines in British Columbia track was being laid and work on snow sheds was well advanced. On the Pacific Great Eastern Railway operations were carried on, and it was expected to have track laid and the line completed from Squamish, the seacoast terminal, as far as Clinton, B.C., this autumn. From Fort George about 50 miles of grading had been completed southerly, though it was reported early in the month that work on this section had come to a standstill.

Ballasting and improvement work was continued on portions of the Intercolonial Railway in Cape Breton between Point Tupper and Sydney, and bridges were overhauled and repaired. Work was progressing rapidly on the new bridge at Grand Narrows. This and other bridge work on the Intercolonial Railway furnished considerable employment.

At Montreal it was reported that the Southern Counties Railways was expected to be completed to Granby by the winter, but that further work would be delayed, pending better arrangements in regard to finances.

Work on the Lake Erie and Northern roadbed within the corporation limits of Galt, Ont., was nearly completed, and at Brantford good progress was reported on the electrification, ballasting and straightening of the same line. Plans were completed for a station at Brantford. After considerable delay, due to financial reasons, work was started on September 28 on the new union railway station at Toronto. It was expected that a force of several hundred

men would be employed, and that foundation laying would be carried on during the winter. At the end of the month 11 miles of the Toronto-Hamilton highway had been graded and were ready for use.

Under the Act passed at the last session of the New Brunswick legislature, the charter of the Quebec and St. John Railway has been taken over by the Provincial Government and a new board of directors appointed to complete the construction. The uncompleted section of the line extends from Centreville to Grand Falls, and from Gagetown south-erly to St. John. On this latter section three large bridges will be required.

General Transport.

General transport conditions, both in railway and steamship lines, showed considerable improvement, owing largely to the movement of wheat from the West. At many points railway services were augmented and additional crews put on. The general improvement in manufacturing and the large attendance which characterized the holding of the various fall fairs throughout the country, also had an influence upon both passenger and freight traffic.

At Montreal conditions on the water front were brisk and a great many steamships were in the harbour during the month—greater than at any time previous to the beginning of the war. Plenty of vessels were reported for the amount of grain offering at the end of the month and despite the shortage of tonnage, it was expected that when the heavy movement of new wheat set in, arrangements could be made to transport the grain. Inward cargoes were comparatively small, but outward cargoes were large enough to give considerable work to longshoremen. Passenger steamers of the Canada Steamship Lines between Montreal and Toronto were put into winter quarters, and east-

ward the same company reduced its service.

At St. Thomas employment on railways showed improvement. A number of men who were laid off earlier in the year were returned to service. Conditions in the shops were also better, and Pere Marquette shop men were working 55 hours per week. Conditions on the railways and in shops were also reported better at Port Arthur.

At Winnipeg and Moose Jaw railways were reported busy getting ready for handling the wheat and taking on a great many new crews. Reports from other points also indicated greater activity in railway circles.

Trade and Commercial Conditions.

Trade and commercial conditions in the Dominion showed an improvement. Increases were shown in exports and in the revenue of the country. Bank clearings for August also were greater in Eastern Canada than in the same month last year. Wholesale and retail trade also showed improvement.

Canada's foreign trade during August showed a decrease in total imports entered for consumption as compared with the corresponding month in 1914, the amounts being \$41,645,713 and \$55,843,322 for 1915 and 1914 respectively. Exports, however, showed an increase of \$9,583,422 as compared with the same month in 1914. During August increases were shown in the products of the mines, the fisheries, the forests, animals and their produce, manufactures and miscellaneous merchandise, though a decrease was shown under agricultural products.

The following table gives the latest official summary of Canadian foreign trade:

Canadian Trade, August, 1915.

TOTAL IMPORTS ENTERED FOR CONSUMPTION IN THE DOMINION OF CANADA

	ENTERED FOR CONSUMPTION.			
	Month of August.		5 months ending August.

Total.....	\$566,042,056	\$583,943,112	— \$17,901,056

Canadian revenue for August, 1915, amounted to \$14,240,844 as compared with \$14,196,104.31 in August, 1914. The expenditure on capital account for August, 1915, was \$4,657,996.96 compared with \$4,964,249.35 in August, 1914. The expenditure on capital account for August, 1915, comprised \$4,

447,305.47 for public works, including railways and canals, and \$210,691.49 on railway subsidies.

The August, 1915, bank statement shows the paid-up capital of the chartered banks of Canada to be \$113,984,747, an increase of \$259 compared with the figures for the previous month. De-

posits payable on demand amounted to \$334,022,174 in August compared with \$340,950,215 in the previous month, a decrease of \$6,928,041. Notes in circulation amounted to \$99,610,962 in August as against \$100,412,424 in July, a decrease of \$1,801,462. Loans to cities, towns, municipalities and school districts and other current loans amounted to \$804,368,465 as against \$802,378,963 in July, an increase of \$1,984,502.

Canadian bank clearings for August, 1915, showed a total decrease of \$17,901,056 as compared with the same month in the previous year. In some cities, however, noticeable increases were shown. Montreal, for example, showed an increase of \$34,018,495, Toronto, \$3,300,741, and Hamilton, \$1,672,369. St. John, N.B., Quebec, London and Peterborough also showed increases. Western

cities showed the largest decreases, Winnipeg heading the list with a falling off of \$20,979,657 from the figures of the same month in 1914. Vancouver also showed a large decrease—\$9,351,470. Calgary, Edmonton, Regina and Victoria also showed large decreases. In every city west of Winnipeg for which figures are reported decreases were shown. With the exception of Halifax, Brantford and Fort William, increases were shown in all eastern cities.

Domestic trade on the whole showed some improvement. The harvesting of the crops, increase in transportation and better conditions in mining and manufacturing had the effect of stimulating wholesale and retail trade in many districts. Collections also were reported better in rural districts though slow in some of the cities.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

The labour market remained the same as last month and there were very few unemployed men as compared with the same month last year.

Something in the vicinity of \$3,000 is being spent on improvements in the barns at the Experimental Farm at Nappan. A number of German prisoners were being used to good advantage at the Experimental Farm at Nappan, preparing the land for next year. Some 150 men were employed at the work.

The month has been an ideal one for the farmers, allowing them to harvest their grain crop, which is considerably better than last year, and a little better than the average.

In the town of Amherst the piano factory has again resumed operations after being closed for over a month. Other industries were about the same as in the previous month, except in shell manufacturing which has increased materially.

Halifax.

During September conditions were fair with men employed in the building trades. Work on the new public school building, of brick and stone construction, has made things a little better for bricklayers and masons and there was plenty of house construction under way, but not sufficient to give employment to the number of carpenters resident in Halifax. Plumbers, pipe-fitters, electricians, lathers and plasterers were all well employed.

In waterfront work other than coal handling conditions have been quiet, as is usual at this time of the year.

Some branches of manufacturing have been very active. A large clothing establishment has been advertising for female help and bread and biscuit manufacturers for bakers.

Sydney.

Labour conditions were active during September, and employment of some

kind could be obtained by classes that were not busy in their own trade. The basic industries such as coal and steel were active, all workmen being well employed, and prospects for a fair winter's work were good. The large numbers of young men who have left the collieries for active service was beginning to tell on the coal output which has dropped 4,000 to 5,000 tons per day. The fever for enlistment was still on and if continued it was expected a further drop of coal output would take place.

Weather conditions were favourable to all classes of outdoor work, and labour generally had the best month of the year.

The steel trade at Sydney and Sydney Mines continued brisk, as most of the departments were running almost up to capacity.

The coal trade both in Cape Breton and Inverness county continued active. A large amount of coal was shipped from the coal heaps and long before the banking season returns all coal will have been sent away. The wood factories were not busy and carpenters with other tradesmen failed to find full employment in their trades. There was, however, sufficient of other classes of work to keep all men employed. Unskilled labour was in demand.

Transportation by rail and by water was fairly heavy and a fair volume of trade was done by the wholesale and retail traders.

The annual convention of the Provincial Workmen's Association was held in Halifax. The report of the secretary showed that over 500 of the English-speaking members had enlisted for active service, while many of different nationalities had gone home to fight with the Allied forces. Resolutions were passed asking the members of the organization to work in peace and harmony with workmen of alien nations, and asking the Government to give soldiers free transportation while going home to see their friends before leaving for Britain. A resolution was also passed asking that soldiers be permitted to send and receive

all parcels from their friends free of postage. Other business of a local nature was transacted.

Sword fishing was carried on successfully throughout the month, but otherwise fishing was quiet.

Work was progressing rapidly on the new bridge at Grand Narrows. When this and other bridge work is completed the Cape Breton end of the Intercolonial Railway will be in fairly good condition.

Truro.

All branches of labour were well employed during the month, skilled and unskilled, but quite a few were seeking work toward the end of the month, mostly lumbermen.

The outlook for the lumbering industry was not as encouraging as a year previous, yet quite a few firms were making ready.

All the local industries were running full time, with bright outlook for continuance.

Westville.

The demand for labour still continued, and was probably greater than at any other time in the history of the locality. Eureka Woollen Mills have closed a contract with the Italian government for the supplying of 12,500 dozen suits of underwear which, along with their other contracts, will tax their capacity for several months.

Railway traffic was very heavy and showed a decided increase over last month and the corresponding period last year.

The unusually large number of men employed in the district and the remunerative wages being received make the wholesale and retail trades particularly busy and the volume of business was much greater than for the corresponding period last year.

The demand for coal continued and all the mines in the district worked full time. The September output from the Acadia Coal Company was about the

same as in August, while the Inter-colonial Coal Mining Company working full time increased their output about 25 per cent.

PRINCE EDWARD ISLAND.

Charlottetown.

The month was a busy one for all classes. Extensive building operations have been carried on and carpenters, stonemasons and artisans of all classes have been well employed.

Lumbering was active, all mills doing a brisk trade.

NEW BRUNSWICK.

Fredericton.

The industrial situation in this district was little changed from August. Conditions on the whole were fairly satisfactory. Employment in the building trades was rather better than during August, but hardly as good as in August of the preceding year. Most of the manufacturing industries experienced a busy month, this being particularly noticeable in the foundry, machine shops and at the shoe factory, where large orders were being filled.

Moncton.

Practically all the various classes of labour have been actively and extensively employed during September and the volume and output were considerably in excess of the corresponding period of last year.

Steady active conditions were reported in all the manufacturing circles with the exception of the Record Foundry which has closed its moulding department.

Lumber operators reported that the prospects of a large cut during the coming winter were not encouraging and preparations usually under way were not yet commenced.

Newcastle.

The labour market remained unchanged during September, all branches of labour being well employed. Special activity was noted in the building trades. There was a scarcity of carpenters and advertisements for this class of labour were appearing in the local papers.

At a meeting of the Newcastle Board of Trade, held September 21, it was decided to erect a flour mill at a cost of about \$10,000 and a committee was appointed to organize a company and issue shares at \$10 per share. It is proposed to run the mill on a co-operative basis. A similar project is also under consideration by the citizens of Campbellton.

Lumber mills were all working steadily with full crews and it was considered likely they would continue to saw for at least a month yet. Men were being engaged for the lumber woods and it was expected the cut this year would be as large as in former years.

St. John.

The labour market remained inactive, but in some trades business was reported brisk, especially with machinists.

The storm of September 26 did considerable damage to the fishing weirs along the shore.

Harbour revenues for the month of August were \$5,784.32; August, 1914, \$3,936.17, an increase of \$1,848.15. Customs revenue for the month of August amounted to \$241,597.27, and for the corresponding period last year \$149,907.88, an increase of \$91,689.39. The inland revenue receipts for August were \$18,234.52, and for the corresponding period last year \$24,870.70, a decrease of \$6,636.18.

A number of members of the New Brunswick Lumbermen's Association had a conference at the Royal Hotel, St. John, September 15. It is expected that the cut next winter will be small owing to the limited facilities for transportation.

QUEBEC.**Hull.**

Labour conditions in this locality showed some further improvement, due to the large number of men leaving for the lumber camps. The lumber mills worked full time and were likely to continue. Recruiting for active service showed considerable decrease. Business in general was fair.

The city has awarded contracts for the construction of sewers and cement sidewalks which will give employment to a number of men. The city also received from the Provincial Securities Company of Quebec an offer to take up its debentures to the amount of \$251,000.

Montreal.

September reports from various companies show a better business than there was at the same time last year. War orders still played a large part in the work being done, but outside these the demand throughout the country seemed greater. Collections were reported good although there are still complaints of city collections.

Both the Dominion Textile Company and Canadian Cottons, Limited, report their mills working within 85 per cent of capacity as compared with 60 and 70 per cent at the same time last year. The higher price of raw cotton and the scarcity of dyes has brought an advance in the price of cotton goods, but at present prices there is an excellent inquiry from all over Canada, prompt remittances being made even from Pacific Coast buyers. The complete cessation of Austrian and German imports is believed to have operated in favor of Canadian-made articles. The prices for certain dyes have risen as much as 1,500 per cent over the pre-war value, and the Dominion Textile Company has had to restrict its range of colored goods. The company has had British and Canadian Government orders, but none of these are being worked on at present. Local cotton mills making a specialty of dyed

goods, linings, foulards, silesias, etc., have advanced prices $7\frac{1}{2}$ per cent. Orders for spring prints were being booked in goodly volume.

Wholesale dry goods firms do not have the same volume of business although there is a steady demand, but the reason given is that it has been very difficult to get imported goods from the usual sources abroad of the kind demanded by buyers.

Owing to the shutting-off of supplies of woollen dress goods formerly obtained from France the demand is greatly stimulated for velveteens and corduroys. Knitting and woollen mills were busy on military supplies, including a large order from the Italian government for blankets.

Fall orders for boots and shoes are comparatively light although the western demand has improved, and local manufacturers are not busy except those working on military orders.

Construction work was still far below normal, and demand for builders' material and tools and hardware used in building was slack in sympathy. Country business in these materials and in hardware was, however, much nearer the normal.

Foundrymen were only fairly employed. Some few were working at two-thirds capacity, but these were the exception.

At the annual meeting of the Southern Counties Railway it was indicated that their line would extend to Granby before winter, but further extensions will await a better money market. The Dominion Railway Commission has permitted the Grand Trunk Railway to delay the raising of its tracks in the city for a similar reason.

A large staff of men have received employment in making repairs to the Princess Theatre, which was badly damaged by fire.

The Charity Organization Society reports that during the summer the number of families receiving relief each month ran from 467 to 492 whereas in

other years 100 has been the highest figure. These high figures have been reached in spite of the fact that the society has not been giving assistance in cases where the man of the family was fit to enlist and thus serve the empire while earning money for his family at the same time. One visitor alone stated that she had influenced 70 men to join the colors in this manner. Of the 492 cases on the books in August, 13 were in destitute condition on account of intemperance, 115 because of loss of employment and 72 because of reduction to partial employment. Sickness was the determining cause in other cases. The society expects that many skilled artisans who have been living on savings carefully husbanded will have to apply to them during the winter.

The Trades and Labour Council are considering the establishment of a workingman's club at the Building Trades headquarters at 417 Ontario street east, after November 1. The idea is that all sections of the labour movement should have a common centre for meeting and recreation, reading and hearing lectures to help develop the solidarity of the movement. The council has expressed regret at the civil actions against the city of Montreal which have had the effect of holding up paving and other municipal work, and passed a resolution asking the civic authorities to see that contracts for municipal work and for the supply of asphalt should be placed earlier in the season to avoid a recurrence of such delays as have been caused this year.

At the water-front more ocean ships congregated than for any time in the history of the port previous to the beginning of the war. Thirty-three steamships were here at one time, and up to the end of the month there have been enough vessels for the grain offering. The lake steamers have not brought the new crop down quite as quickly as ocean steamships arrived for it. Other vessels are quitting the lake trade shortly but the railways were bringing down more than usual. Congestion of grain space in Great Britain is also interfering with

the usual orders from there, but the situation was expected to adjust itself before long. Inward cargoes have been comparatively small, but outward cargoes have been large enough to give considerable work to longshoremen although not so much as in years when cargo was coming as well as going. The wheat received in September through the Lachine canal was less than half of the same month in 1914. The passenger steamers of the Canada Steamship Lines, Limited, between here and Toronto have been sent into winter quarters, and eastward the same company has reduced the service. Work on the addition to Elevator No. 1 was proceeding quickly.

The city's revenue for the coming year will be affected by a decrease in the assessments and by a falling-off in the receipts from the water and business taxes. It is estimated by Controller Hebert that 30,000 shops and houses are vacant, and by others that the decrease in the revenue will be anywhere from \$1,000,000 to \$2,000,000. An increase in the property tax is proposed to meet the expected deficit. The amusement tax returns for hospitals and charities indicate that \$60,000 will be received by the end of 1915. It costs ten per cent to collect the tax.

Mr. E. O. Champagne, city boiler inspector, advocates the passing of a law for the inspection of all hot water furnaces in the city when commenting on the injury to five persons when a hot water furnace boiler burst on September 28 in the premises of the St. Henry syndicate, Notre Dame street west. His department only looks after steam boilers.

Quebec.

The month has been a fairly good one. In the building trades conditions were active, the Provincial Exhibition helping materially. In the first week the attendance exceeded that of past years and the surplus of receipts over expenditures exceeded \$20,000.

In the lumbering industry the outside sawmills were still cutting and were ex-

pected to continue until stopped by frost.

Sherbrooke.

Labour conditions were about the same as during last month. The Sherbrooke High School was nearing completion, but it was expected some other building would be started. There was also a demand for men on the construction of the new Roman Catholic cathedral which is to be a very large building. Work on the Bell Telephone building, as well as repairs to private houses also gave employment to a number of men. Quite a few men from Sherbrooke have gone to Rock Island to work on the large addition to the Butterfield Company plant lately purchased by the Union Twist Drill Company for their products in Canada.

The Government road built by the Quebec Government from Sherbrooke to Stanstead was expected to be finished this fall.

Manufacturing establishments, especially those working on munitions of war were busy.

The asbestos mines at Thetford Mines were all busy. Considerable mining of chrome iron was being done at Black Lake, from 150 to 200 men being employed.

Sorel.

There has been no important change or modification in the condition of labour and the labouring classes since last month. Some industrial establishments have been obliged to reduce the number of their employees, others have been running very moderately, especially at the beginning of the month. In the latter part of the month some establishments took back a number of their old employees but a good many men, between 150 and 200, have been left without work, thus increasing the number of unemployed, which was already about 200.

Farmers had an exceptionally good month.

Trade was about as active as in the previous month and the cost of living remained about the same.

St. Hyacinthe.

The general condition of the labour market was fair. There was an improvement in some industries, but no demand for additional hands. Building operations were quiet. The city had considerable work going on, employing a large number of men. A majority of the taxpayers have approved the construction of gravitation filters for the water works at a cost of \$75,000, which will give employment to a number of men during a part of next winter. A new modern theatre with a seating capacity of about 1,200 has been started and is to be ready for occupation about the first of the year.

The annual county fair was held on September 14 and was visited by large crowds.

Wholesale business was normal, with excellent prospects for the next season. The retail trade was much better than during the previous month.

The cost of living underwent but little change. The price of bread was lowered one cent for a 6-pound loaf, and a new decrease is expected. Eggs and butter were a little higher. Rents continued high, with hardly any vacant houses in the locality.

The general condition of agriculture was excellent. The grain crop was plentiful and of a good quality. Farm and dairy products sold at good prices. Work on the farm was plentiful and wages good.

St. John's and Iberville.

There was little change in labour conditions during September as compared with the previous month. Building operations were practically at a standstill. Manufacturing generally was fair.

The returns of operations on the Chambly canal from the opening of navigation to August showed a fair amount of activity in the harbour of St. John's,

the total tonnage of goods carried by boats being 54,559 tons above that of last year.

Business, wholesale and retail, was rather quiet. The cost of living was about the same; eggs and milk increased in price, while flour, bread and potatoes were cheaper.

The condition of agriculture was fair. Farmers were busy threshing grain and pressing hay. Fishing was quiet. Lumber dealers reported a quiet month.

Three Rivers.

The general condition of the labour market during September was very satisfactory. Manufacturing was everywhere active, railway men fairly busy and general traffic good.

The lumbering industry was very active with prospects for a good season.

ONTARIO.

Belleville.

There were no perceptible changes in the condition of the labour market as compared with the previous month. Many labourers were still employed on a general sewerage system being installed in the western part of the city.

Manufacturing establishments were fairly well engaged, with pronounced activity noticeable in factories executing war orders.

Berlin.

Labour conditions in Berlin for September were away ahead of last month and in certain lines better than the same month of last year. The two large rubber factories were working overtime two and three shifts and Sundays on hip boots for the army. The Buffalo Forge Company was working day and night on shells. The Dominion Tire Company was working double shifts and were contemplating putting on three shifts of eight hours each. The Robe and Clothing Company has started on an order for

3,400 army greatcoats and was working overtime. The trunk and bag factories were busy, as well as all the shoe factories. Button factories were working full time as well as some foundries. The interior hardwood factories were busy, one working overtime. Wholesale meat and sausage factories were busy. Some shirt factories were slack while others were very busy.

The \$85,000 contract on the sewage disposal plant has been awarded to G. Mogk of Brampton and work commenced, a large number of teams and men being employed. The union scale of wages must be paid and local men employed, according to the contract.

The Dominion Sugar Company's factory started on September 29, between 200 and 300 men being employed, two shifts of 12 hours each.

The furniture factories were slack, some working 40 hours per week; one closed down and two working full time.

The building trades seem to be hit the hardest, quite a number of bricklayers and carpenters being out of work. There were still a number of houses to be finished and some were being only started. However, work along these lines did not compare favourably with last season.

Wholesale and retail trade was fair during the month and the cost of living remained about the same. Flour and bread dropped during the month, while butter, eggs and potatoes went up. The latter sold at \$1.30 per bag last Saturday, an increase of 30 cents per bag, due to rot.

Custom returns for the month of August were \$43,237.09, compared with \$32,494.07 the same month last year, an increase of \$10,743.02.

Farmers in this district were busy with fall ploughing and cutting corn for silage, as well as taking up and hauling sugar beets to the factory. The beets are testing about the same percentage as last year and are a good crop. Other root crops looked good and a number of farmers have taken off the second crop of clover hay. This will make up for the

bad crop earlier in the season, which was spoiled by the continuous rains.

Brantford.

Labour conditions remained about the same as last month. The supply of labour was more than equal to the demand, but the numbers of unemployed remained low considering the times. The usual fall repairs to buildings and homes have found work for a considerable number of men, and some of the factories have been able to employ more men. Two factories resumed work.

The woollen mills are fairly busy and had vacancies for learners in some departments.

During the month the Trades and Labour Council have issued a weekly paper, in which it is intended to publish and advocate the principles for which organized labour stands, and also discuss current questions from the workers' point of view.

Brockville.

There was no particular change in the general condition of labour during September. There were a number of unemployed among the building trades, also among unskilled labour.

The brass and steel trades were exceptionally active, working day and night on war munitions.

Manufacturing was fair in some lines and active in others.

Chatham.

There was considerable improvement in labour conditions so far as manufacturing was concerned. Woollen mills were working night and day on war orders and flour mills were running eighteen hours per day. Planing mills were on full time with the usual number of mechanics.

Corporation work was plentiful up to the end of the month.

Wallaceburg.—Conditions were quiet in the building line, but the sugar com-

pany was busy preparing for the season's sugar beet crop, which will require the largest number of employees in the history of the company.

Thamesville.—Business was fairly active. The Canning Company was unable to secure sufficient help for picking and canning.

Cobalt.

Labour conditions in the district showed practically no change from the satisfactory conditions prevailing during the past month throughout the northern part of Ontario. Although the Buffalo mill at Cobalt closed down the men employed there have practically all been given positions at the Teek-Hughes mine at Swastika, in the Kirkland Lake district. Considerable work was also being done in a new camp about 120 miles west of Cochrane on the Transcontinental railway. About thirty outfits, approximately about one hundred men in all, were doing prospecting work at this place. No sensational finds have been made as yet but the formation is good and the district was being well trenched and prospected. At Kowkash there were about 250 men doing assessment work and prospecting and at Sesikinika and Boston Creek, on the Temiscaming and Northern Ontario Railway, much activity prevailed. Many prospectors were on their claims doing assessment work and encouraged by new finds prospectors were staking more claims in the vicinity.

There were practically no idle men in the camp. Tradesmen, especially carpenters, reported conditions in their line somewhat improved over last month but in no case has there been any change in the scale of wages in any line.

Gold mining in the Porcupine camp was being carried on with increasing activity. The output monthly was very much greater, taking the mines collectively, than the average monthly output last year, while several of the leading gold mining companies were expected soon to increase their milling capacities,

necessitating the employment of a greater number of men. The Schumacher mine was employing a large number of tradesmen in the erection of mine buildings, which include a compressor and a refinery. The capacity of the Hollinger mill, it is understood, is also to be considerably increased.

The Buffalo mill at Cobalt has closed down but most of the men will be taken up to Kirkland Lake to the recently purchased Teck-Hughes property which the Buffalo Mining Company is operating.

The price of silver having advanced around three cents an ounce within the last two weeks of the month, the situation improved greatly for the Cobalt silver mines and tended towards an increase in the monthly output.

Heavy rains at intervals, with almost daily showers which have fallen between, have done considerable damage to crops throughout Northern Ontario. At the end of the month there was still a small percentage of grain in the fields which had been cut for over a month. Reports too have come in from various places around Englehart and northward of frost having caused some damage to late oat and wheat crops. Taking the harvest on the whole, however, the yield has been heavy and the percentage of loss will not be at most over 15 per cent. Threshing commenced about the middle of the month and the outfits had enough grain to keep them working for six weeks or longer.

Galt.

Looking at the situation from all sides, the prospects for a busy winter were very promising. Of course, there will no doubt be some workmen out of employment, but nothing in comparison with last winter. The fact that Galt has sent over 600 to the front and that quite a few families have returned to the Old Country, will diminish the number usually unemployed during winter. The building trades were pretty busy during the season. The big machine shops were still working day and night.

After a lull of about two weeks the two large knitting mills were again running full force and working overtime on Government orders. The same is true of the Galt Robe Works, which was employing day and night shifts, and of Newlands & Company, who were also working overtime.

The union printers of Galt were still working short hours, losing about three hours a week.

The Getty & Scott shoe firm has purchased a plant in London, Ont., and contemplate in the near future to erect a large addition to their factory here, when they will move the London plant to Galt. This will enable the firm to employ 150 more hands.

The new Hurlbut shoe factory in Preston was under roof and nearing completion. In fact the building trades in Preston have been doing better than in Galt, several large buildings having been erected in Preston recently.

Saw mills and lumber yards were pretty active.

Manufacturing establishments were very busy. Work on the Lake Erie Northern was almost completed near Galt.

Guelph.

Conditions in the labour market were practically the same as last month. The number of unemployed has been relieved somewhat by enlistments for overseas service. The building trades continued very quiet, but re-shingling and repairs gave work to quite a number of men. With the exception of the employment of more men for the making of war munitions, no new work has developed.

Little change was apparent in manufacturing industries.

A large force of labourers were still employed on the construction of the new reservoir and in laying the new pipe line. Street paving and sewer construction also provides work for many more.

At the half-yearly meeting of the Guelph Co-operative Association, the directors presented their balance sheet

which showed total business done amounted to \$58,513.97, with a net profit of \$1,475.24. A dividend of three per cent was declared to shareholders.

Hamilton.

Labour conditions generally during September showed an improvement over the previous month, due largely to a great number of men from the city and the surrounding neighbourhood having enlisted for active service abroad, many of them giving up good jobs. It is estimated that at least 350 Italians will return to their native land from here to participate in the European struggle.

The civic works department had enough work on hand to continue the employment of a considerable number of men until the end of the regular construction season, which ends about the middle of November.

Under the stimulus of the active demand for shell operatives, an unusually large number of pupils have enrolled for the evening class in machine shop practice at the Technical School. A number of pupils who took this course last winter were engaged at shell-making.

Owing to the continued wet weather and the consequent delay in securing sand and stone, the completion of the Toronto-Hamilton highway will be considerably delayed.

Work on the large \$35,000 addition to Arcade Limited store on James street was well under way and was giving employment to a large number of men. Work on the immense manufacturing building of the T. Eaton Company, Limited, on John street, which is to cost \$110,000, was progressing rapidly and it was expected that the building would be completed before the end of the year.

The Hamilton City Planning Commission has taken up the question of providing a practically inexhaustible supply of factory sites in order that manufacturers may be offered cheap sites, in addition to cheap power, water, etc., and good shipping facilities.

At a meeting of the shareholders of the Toronto, Hamilton & Buffalo Railway, held here on September 8, the directors were authorized to issue bonds to the extent of \$1,000,000. The money raised by the sale of bonds, it is understood, is for the proposed ferry service across Lake Erie and for extensions.

Custom receipts at the Port of Hamilton for the month of August amounted to \$411,982.40, an increase of \$238,405.33 over the corresponding month of last year. The increase for the first eight months of the calendar year 1915 over 1914 was \$1,052,670.67.

Manufacturing was fairly brisk and showed considerable improvement over the corresponding period of a year ago. Factories working on war munitions continued busy with the exception of those working on leather goods. One large manufacturer of leather goods reported having laid off seventy-five hands as a result of the falling off of war orders.

Kingston.

Labour conditions during September changed very little as compared with those of the previous month. Building operations were confined to the erecting of a few residential houses and more or less jobbing work was going on, but on the whole building was practically at a standstill.

All factories with war munitions contracts were active and liable to be so for the winter at least.

Retail business, owing to trade with the Barriefield military camp, was good.

London.

Conditions among the workers continued very much the same as during last month. The supply of labour was equal to the demand and it was expected that as soon as the winter weather sets in there would be a lot of men idle. The city was continuing its programme of sewers, sidewalks, curbs, gutters, asphalt roads, etc., and was giving work to a large number of men.

The Western Fair held during the month was the largest from the point of attendance ever held here and gave work to a large number of people for ten days.

The four new schools under construction were far enough advanced to give work to a considerable number of bricklayers, carpenters, building labourers, etc., and will continue to do so for some time.

The Canada Carton Company, a local folding box concern, assigned towards the end of the month, throwing about 25 hands out of employment.

* The Grand Trunk Railway have put on some large 500 class engines for hauling freight and now carry 125 cars from here to Windsor with them.

The McClary Manufacturing Company have laid off a number of moulders and were working only four days per week at the stove and furnace plant. At their tin shop, in the enamel department, they have shut off some of their fires and instead of laying off the men, have reduced the shifts from three of 8 hours each per day to four of 6 hours each.

Over 4,000 soldiers were encamped in the city and the enlistment of these has relieved the unemployed condition to some extent. The feeding and clothing of the men also was making a lot of extra work.

Bread was reduced from 7 cents to 6 cents for a 24 oz. loaf, owing to reduction in price of flour.

Niagara Falls.

There was a visible improvement in labour conditions in September as compared with August. The activity, however, did not approach that of the same month in other years and it was, partly at least, a temporary improvement.

The harvesting of heavy crops of all sorts, activity in public works and increased employment in certain lines of manufacture were all important factors in this improvement. Also, labour is adjusting itself to new conditions, particu-

larly in the building trades, which remained dull. Mechanics who had been long idle and who see no prospect of improvement in their own trades, were seeking other employment.

Paving, sewer, water-main and sidewalk construction continued. A small planing mill was erected. A considerable number of dwellings were under erection. A number of men were engaged in building the aerial railway across the whirlpool. On September 20, sixty were working, in day and night shifts.

The Ontario Hydro-Electric Commission have completed a survey for a Government power-house on the Smeaton farm between Queenston Heights and Niagara Falls, and plans for this power station were being prepared. It is planned to use the surplus waters of the Welland canal to develop 300,000 horsepower, carrying the water to the generating station through a canal running from the Chippawa creek.

Manufacturing improved. The cutlery and silver-plating business, which is important here, was stimulated by good orders from Western Canada. Two large factories here were busy. Activity prevailed in all metal trades. Woodworking trades were quiet.

Chippawa. — The Norton Company (abrasives) is spending \$50,000 on improvements to its plant.

Fort Erie.—Paving was commenced.

Dunnville. — A paving contract was awarded and work begun.

Port Colborne. — The flour mill was busy on new wheat. A contract was let for a new rink.

Welland.—The Canadian Steel Foundries plant was about to reopen. Seven months' work on shell steel was secured. The plant will run night and day and employ a hundred men at the beginning. The car-coupler plant of the same company will also reopen at once and will engage 150 men. The rolling mill may also be placed in operation. Bakers reduced the price of bread a cent a loaf.

Orillia.

Labour conditions continued reasonably satisfactory. There was very little unemployment. Unskilled labour has been in demand and difficult to get.

The Canada Smelting and Refining Company has gone into liquidation. The smelter is, however, being carried on by the Orillia Smelting Company.

The National Hardware Company has begun the manufacture of iron toys, to help replace the German product, which has been cut off.

Some machinists have been thrown out of work in one of the establishments engaged in the manufacture of war munitions by failure to get repeat orders.

Ottawa.

Civic works, several more of which will be started at once; a better demand for bushmen in the woods; the need of farm help at harvest time and the lessening of unemployment through the enlistment of a comparatively large number of foreigners, combined to improve the labour situation in the Capital during September. A number of civic works—pavements, sewers and sidewalk construction—which had been planned or inaugurated in the previous month, supplied employment to at least several hundred men. The western harvest, too, claimed its share of workers.

As in the previous month, machinists, moulders and leather workers were busy on war contracts, though the latter were not as busy as in August. A number of plasterers and plasterers' labourers found employment on the new Customs building, and with the exception of the building trades and the printing trades, conditions were described as fair.

The Booth saw mills closed at the end of the month, about 500 men being affected, but most of these will be used in the shanties or in making repairs to the mills.

An interesting development in the effect of the war on trades unionism is shown in an incident affecting the local

Journeymen Barbers' Union. This organization, several members of which have enlisted, is in favour of maintaining the death benefit dues of these members and pay the death benefit should they die on active service. But the United States unions, with which the local is affiliated, while prepared to support the death benefit should a member die while in the barbering trade, object to the payment of the death benefit if the member dies as a result of the war. The matter will likely be submitted to a referendum of the affiliated barbers' unions.

Retail merchants pronounce business good during September and financial brokers declare there was no scarcity of money to loan for commercial purposes at slightly increased interest rates.

Owen Sound.

Labour conditions have improved somewhat since last report. A cement mill which had been closed opened up again, thus giving regular employment to those in Owen Sound north who were thrown out of work by its closing.

Building was still quiet. Factory employment was little changed since last report.

Farmers had good weather during the last part of the month and fruit-picking and root-gathering was progressing.

Retail business generally was reported satisfactory.

Peterborough.

Labour conditions during September showed some improvement as compared with last month. There has been a good demand for unskilled labour and all trades with the exception of the building trades were well employed. Some manufacturing establishments were busy. There was considerable civic work going on, a number of streets being paved and sidewalks constructed.

There was a heavy movement of grain from Midland passing through this city over the Grand Trunk for the seaports.

Merchants reported business better than it has been for some months.

Fort William and Port Arthur.

General employment improved in September on account of the movement of grain from the West. Elevator employees have been set to work and railway employees in the construction shops. This work has absorbed many of the unemployed and compared with the previous month the situation was improved.

Work has become brisk in the railway repair shops, owing to the grain movement and also to the fact that the railways have economized to a perilous state as far as their rolling stock is concerned.

Fishing continued brisk and much white fish and lake trout were being exported east.

Sault Ste. Marie.

Labour conditions during September were about the same as the previous month; in fact, the entire summer through there has been but little change. There was some improvement during the last few months in the iron and steel manufacturing industry, but outside of this industrial conditions remained quiet. There was comparatively nothing being done in building and the prospects were not hopeful for lumbering, though it was expected there would be some activity a little later in the getting out of pulpwood.

The cost of living was slightly lowered owing to the marketing of the new crops.

Stratford.

The condition of the labour market during September showed considerable improvement over the previous month. Owing to the vacancies left by men enlisting for war there were very few idle men in the city. Orders for gloves and woollen coats for soldiers will keep three knitting factories busy for several weeks. The factories will increase their staff of workers and run night and day shifts.

The machine shops were busily engaged in the manufacture of shells, some of them with day and night workers.

A number of men and teams were engaged in the paving of streets, laying of cement walks and other civic work.

A good business was reported by the wholesale and retail merchants, especially the wholesale fruit dealers.

Customs returns for the month of August showed a decrease of \$4,000 as compared with the same month of last year. The returns were \$16,585.03.

All manufacturing industries were active.

Milverton.—The Hydro-Electric Commission were getting material on the ground for the construction of the line from Sebringville to Harriston, via Milverton, Listowel and Harriston. Workmen's camps have been erected at Wattburg and a carload of poles has arrived at Milverton. It is expected that the work will be completed as far as Palmerston by January 1.

St. Catharines.

The condition of the labour market for September showed very little improvement from that prevailing during the previous month, though a number of the factories were working two shifts on war munitions.

Work on the canal was going on steadily. Pt. Weller was the scene of great activity, and operations here were going on to a great extent.

The new forge shop of the Whitman-Barnes factory was almost completed. Mechanics were busily engaged installing some of the new machinery, which includes two thirty drop hammers.

The new storage house adjacent to McKinnon's chain factory is progressing towards completion. The steel frame work has all been erected, and work on the reinforced concrete roof has been commenced.

Merritton.—Labour generally was fair during the month.

Pt. Dalhousie. — Labour conditions continued fair.

Thorold.—Work on the new Grand Trunk station has been started. The new building will be 64 feet by 22 feet, and will have all modern conveniences.

St. Thomas.

The general condition of the labour market during September was better than during the previous month. It was the first month that the supply of labour appeared to be short of the demand, although the demand for labour was not great.

There was a steady demand for machinists. The large number of enlistments from the city and district was responsible for the betterment in the unemployment situation. The building trades were not busy, but the railroads showed an improvement over the previous month. A number of men who were laid off earlier in the year were returned to service.

Local industries showed an improvement. The Monarch knitting plant was busy on a large war order; the Just Wright Shoe Company reported a normal month with good prospects; local mills were well employed; the munition plant was busy and showed a decided improvement in equipment and in output. Railroad shop conditions were better; Pere Marquette shopmen were working 55 hours a week.

Local markets were well attended. There was a large supply of peaches and plums. The price of flour was reduced. Potatoes showed the effect of the heavy rains and will be scarce in this district.

Manufacturing showed an increase over the previous month.

Toronto.

Labour conditions during September showed little change as compared with the previous month. The building trade continued very quiet and the manufacturing industry was generally inactive,

excepting as regards war orders. Unemployment will, however, be a much less serious problem during the coming winter than last year, on account of the large number of enlistments and departures for other localities.

Ore metal and engineering trades continued generally quiet. The wood working and piano making trades had also a quiet month. Leather and harness workers were active. The printing, book-binding, electrotyping and stereotyping trades were quiet. The clothing trades were actively engaged on war orders, but otherwise quiet. Boot and shoe workers were fairly well employed. The provision trades were steady. Brewers were fair and cigar makers quiet. Hotel and restaurant help, barbers, and laundry workers were active during the earlier part of the month, but quiet later on. Railway and street railway men, expressmen and others engaged in transportation were fair.

The new Technical School has a registered attendance of 1,300. Registration for night classes has been very heavy and a night class attendance of over 4,000 is anticipated.

Windsor.

Labour conditions have not been better than last month; in fact in many lines conditions were not so good, especially in building, most of which has been confined to alterations and houses, there being only two large buildings under construction at the end of the month. Tenders, however, have been called for the construction of numerous other buildings upon which work was expected to start in October. Two store and apartment buildings, to cost \$11,000 and \$12,00 each, have started excavating.

The manufacturers of munitions, etc., were busy, but other industries did not have a very good month. Planing mills were busier in September than in any month this year.

Farmers had a fair year. Fruit growers had a heavy crop with good market

demand. Tobacco growers also reported a good crop. Apples and grapes are only fair this year.

The Ontario bricklayers and masons held a convention at Windsor during the month, receiving reports from every locality in Ontario. Windsor and Ottawa were reported to be practically the only two cities to keep up under the strain of depression. Other cities reported conditions fair while the most inland and smaller places have been very quiet.

Woodstock.

There was not much change in industrial conditions. Manufacturers of wagons and sleighs reported conditions fairly good, and the same applies to pianos and organs. The furniture business was still decidedly dull. The foundry business was also slack. There was not a good deal being done in the building line. Nevertheless there was little evidence of unemployed labour, and it was still true that there was work of some kind for nearly everybody. This was due in part to special war orders, to enlistments, to municipal work and to the demands for farm help. There was a good deal of complaint of short time and irregular employment, but there were very few idle men.

Shopkeepers reported business fairly good, and very nearly, if not quite, up to the standard of a year ago. There was evidence, however, of a shortage of money, but the trade in staples was not far from normal.

MANITOBA.

Brandon.

During the past month labour generally was fairly well employed. The demand for harvesters was barely met and wages were about normal.

There has been little change in the cost of living. Flour has decreased in price and eggs and butter have increased slightly.

Harvest and threshing operations have been delayed considerably in the district

owing to excessive rains. In the immediate vicinity of Brandon the crop was early and threshed before the rains commenced and a good yield of excellent quality is the result. The surrounding district has not been so fortunate and much grain is still on the stook.

Winnipeg.

Labour generally was employed to about the same extent as in August. Not more than forty per cent of the entire building trades were working at any period during the month. The engineering trades were not as busy as expected and machinists engaged in making shells were not fully employed. The printing trades did not experience a busy month. Clothing trades were fairly well employed, as were miscellaneous trades. Those engaged in transportation work were fully employed.

There was little unemployment among the unskilled, harvesting having provided ample work for this class of labour. In spite of much inclement weather the movement of grain was very satisfactory, and the grain was of a high standard. The amount of grain that passed through Winnipeg during September was as follows: Wheat, 22,050,400 bushels; oats, 825,400 bushels; barley, 1,041,300 bushels; flax, 125 bushels.

Some time ago the provincial fair wage schedule was, for a considerable period, violated by the contractor for the erection of the new Parliament Buildings. Labourers were the ones mostly affected and, through the efforts of Mr. F. J. Dixon, the contractor has been obliged to pay the shortages due the men and the total amount runs into hundreds of dollars. The fair wage schedule is now being adhered to on all Government work.

The City Free Employment Bureau filled 761 applications for help in the city and 160 for out of the city.

Selkirk.—The summer fishing is at an end and the winter fishing does not start until the second or third week in November when nearly 1,000 men will be

engaged in the industry. Seventy-five men are employed in the freezers and cold storage plants at this point.

SASKATCHEWAN.

Moose Jaw.

Harvest operations gave employment to all surplus labour during September. Cutting was completed about the twentieth, but owing to inclement weather during the latter part of the month very little threshing was done. It has been estimated that only ten per cent. of the threshing has been completed. There appeared to be a shortage of hands for threshing outfits and wages continued fairly high.

The railroads were getting very busy with the handling of the wheat crop and were taking on a great many new crews.

Prince Albert.

Labour was fairly well employed during the past month owing to an increased demand for men during threshing operations, but this was only a temporary relief from the quiet which has marked the labour market during the year. There was a slight improvement in the building trades owing to the erection of two new stores.

There has been no marked change in the cost of living except a drop in flour, which however has not at present caused a corresponding decrease in the price of bread.

Lumbering was fairly active, points outside of the city demanding an increased supply.

Regina.

Labour was fully employed during September. Harvesting took up all the idle men that were around, and the Provincial Bureau of Labour at the end of the month could have placed several hundred more men had it been able to secure them.

The building trades were fairly busy, especially carpenters, who were all employed.

Implement firms have been very busy this fall. Harvesting and threshing machinery has been in great demand.

Wholesale firms in general have had a fairly good fall. Lumber companies reported more material sold during the past month than during the previous eight months of the year.

Saskatoon.

Labour conditions were decidedly better on account of the demand for men on the farms. There was a revival of the lumber trade to some extent on account of rural demand. City work of course was quiet, except in lines which supply rural districts.

There was no great shortage of labour, and where a shortage appeared it was only of a temporary nature.

Freight business was increasing steadily.

Some rural telephone lines were in course of erection.

A great deal of the crop was threshing out better than expected and high averages per acre were reported. No car shortage was reported and little inconvenience from lack of harvest help.

ALBERTA.

Calgary.

The number of unemployed in the city has been reduced considerably owing to the continued recruiting and demand for harvest help. Labour conditions showed a decided improvement over the preceding month. Soldiers who were granted permission to go harvesting were gradually returning to the camp, but there was still a demand for men to complete the threshing in the district. There was practically no building. Mechanics in the building trades, however, have either enlisted or were at work harvesting, or in other employment.

The city is confronted with a large amount of delinquent taxes which will undoubtedly result in a further reduction of civic employees. A special committee of the city council has been appointed to investigate and report on a retrenchment scheme proposed by the city comptroller. In spite of the financial situation the city was carrying out quite a large amount of street repairing, etc., and was still proceeding with the construction of the Centre Street bridge.

Improvement was shown in wholesale and retail trade and in business generally as the result of the harvest. It was expected the bulk of the threshing would be completed before winter set in.

Owing to the state of the finances the evening technical classes will be discontinued and will be supplemented by a course of lectures.

The Eau Claire lumber mills, which usually employ quite a number of men, have been compelled to close down owing to the recent floods having diverted the channel of the river.

The Civic Labour Bureau reports sending out 600 men this month to various jobs, there still being a demand for more men.

The Associated Charities have relieved 119 families in distress to the 24th of this month, which shows a decided decrease from previous months.

The official test of the Government terminal elevator was made by the members of the Grain Commission September 9. The tests were found satisfactory and the elevator accepted as complete. It is accessible to three railways and has a capacity of 2,500,000 bushels, with three loading and three unloading tracks.

Edmonton.

The condition of the labour market during September showed considerable improvement over the previous month, due to the heavy demand for harvesters and threshers. When harvest operations first started, farmers were asking for men who were experienced in this class of work, but during the latter part of

the month they were quite willing to engage men regardless of previous experience. The demand for extra teams in the country also provided work for a large number of team owners who found it difficult to procure steady employment in the early part of the summer.

A few cold days the first part of the month created a demand for miners which remained greater than the supply throughout the month. While there was a good demand for domestic help wages remained low, \$18 to \$20 per month being the highest offers for experienced help with the average price much less. The demand for labour in the city remained quiet and with the exception of a sewer disposal plant and a small paving contract no new work was started.

Lethbridge.

Labour was well employed and there was a great improvement over last month. Owing to the harvest being on and the coal mines getting active the unemployment situation was relieved and opportunities for labour were fully equal to those of the corresponding month of last year. Lines other than harvesting and coal mining, however, were dull. Transport conditions were improving. Wholesale trade was increasing in the neighbouring districts, but retail trade in the city remained about the same as last month.

The cost of living remained the same as last month with the exception of bread which stands at the 1-lb. loaf for five cents or 20 loaves for a dollar, the former price being 10 cents single or 16 loaves for a dollar.

Farmers were reaping the heaviest crop ever raised in the district. Garden crops were equally good, better than any former crop. Fruit growing has shown success and home-grown fruit was being retailed in the stores.

Coal mining was getting very active and some of the mines were working at full capacity.

Medicine Hat.

Labour conditions showed some improvement over last month on account of the harvest fields taking a large number of the unemployed. Munition factories were still working day and night. The Pottery Works which had been closed for the past year were getting ready for business again under new management.

Cost of living remained about the same as last month, with the exception of flour which dropped to \$3.20 a hundred, about where it was before the war.

Excellent weather for harvesting prevailed during August, resulting in an early grain cut. Threshing was well advanced and wheat on the move to the flour mills. Rain and snow storms delayed harvesting the first two weeks in September. There has been considerable fruit growing this year in Medicine Hat, with good success.

The Ornamental Iron Works of Redcliff had prospects of a busy fall and winter and were figuring on the iron work on huge buildings in several western cities. If successful in securing this work a full outfit of men will be required to run it out.

The Redcliff Brick and Coal plant has been overhauled and put in shape to start operations at short notice. A gang of men will start work in the coal mine shortly.

BRITISH COLUMBIA.**Fernie.**

The general extent of the employment of labour in this district remained practically the same as during the previous month.

Owing to the exceptionally large yield in the prairie provinces there has been a considerable demand for labour which has taken a portion of the surplus labour from this district, the class particularly affected being teamsters, although other classes have accepted this opportunity for at least temporary employment.

Commercial activity in both the wholesale and retail trade for the current month has shown a slight improvement over August. This had the effect of slightly improving transportation traffic.

The improvement in the coal mining industry which was noticeable during the month of August has not been general. There was, however, in the lignite fields, which supply domestic demand, quite an improvement. In some of these fields the supply of labour has not been equal to the demand, but this feature will undoubtedly right itself after the harvest has been reaped. Manufacturers of coke continue to find a ready market for this commodity.

Nanaimo.

The past month has shown a slight improvement over last August as regards the number of idle men in the district. A number of men obtained work towards the end of the month at different collieries, and a good many left the Island for other countries. There were, however, still a large number of destitute men in the city and district.

Coal mines in the city worked steadily and the other mines in the district worked from half to three-quarter time. During the latter part of the month some men were started at the Extension mines and at South Wellington. A number also started at the old and new mines at Cumberland.

Nelson.

Labour conditions during September were somewhat improved. The city was doing considerable street grading, which gave employment to quite a number in need of work. The majority of labourers and carpenters have gone to Trail where considerable building operations were in progress.

The Consolidated Mining and Smelting Company of Rossland had more men employed than ever before.

The Provincial Government has decided to extend financial assistance to a

smelter prospect which promises to exert an important influence upon the problem of zinc production in British Columbia, and which will as an immediate development have the effect of placing in operation at Nelson a demonstration plant.

The mines at Sandon were active, from 500 to 600 men being employed. The old Eureka mine at Nelson has opened again and was expected to ship ore soon.

New Westminster.

There was little if any improvement in labour conditions during September, although about 250 harvest hands went to the prairies. The city furnished employment for over 100 men on sewer, reservoir and street work.

The Shull shingle mill a few miles down the north arm of the Fraser from the city was in partial operation. When all the 24 saws are running the output is estimated to be a million shingles a day and the firm had orders for months ahead.

Fishing in the river has been poor, very few sockeye being caught and not enough cohoes or humpback to keep the canneries busy, they for the most part getting their supply from outside points.

The lumbering industry was in the same condition as during last month, a lively demand, principally in the United States, for shingles, while lack of transportation facilities hampered the lumber output.

Prince Rupert.

The fishing industry showed another increase over last month. Many American boats have landed fish and a demand has been made by some of the fishing companies for sites for wharfage, but no agreement has been reached. Negotiations were on foot with the Grand Trunk and the Provincial Government, also the City Council.

The mining industry is improving considerably in this vicinity. The Granby Company is increasing its capacity and development work was underway at dif-

ferent points along the Skeena river on a much larger scale than before.

Trades in practically all lines were very quiet.

Vancouver.

The general labour situation was still a very unsatisfactory one from the standpoint of employment. Although recruiting was brisk and some men left the city, there was still far more labour available than there was demand for.

Through the civic relief department, 2,500 men, of whom 400 were married, have been sent to harvest work on the prairies. They were drawn from Vancouver, North Vancouver, South Vancouver and Burnaby. The portion which went from Vancouver city was 1,500. By special arrangement with the railway company they were granted a fare of one cent per mile going and one and one-half cents return. Besides these, the relief department has sent 400 men out to do track work on the Canadian Pacific Railway sections in British Columbia.

The actual relief being given out by the city was to 449 families and 135 single men. At the end of August the number of families was 501. The single men referred to are chiefly old age and hospital cases. The fathers of the families receiving relief are required to work on relief work twelve days each month. The total sum being spent by the city in relief was \$1,000 per month.

In the building trades employment was practically at a standstill. During August, 50 building permits were issued, valued at \$55,320, as compared with 78 valued at \$229,381 for August last year.

Bread was reduced in price September 4. It is now 16 ounces for 5 cents and 20 ounces for 6¼ cents, as against 14 ounces for 5 cents and 18 ounces for 6¼ cents. The reason given by the bakers for the change is that flour has fallen in price.

The Trades and Labour Congress of Canada met in annual session here September 20.

Victoria.

There has been little or no change in labour conditions during September. Owing to the fact that about 475 men have gone to the prairie harvest fields and a considerable number have enlisted, there were fewer unemployed than there were a month or two ago. The opportunities for work in the city have not improved during the month, and among some of the skilled trades employment has been unsteady.

Between 200 and 300 men, labourers and mechanics, were employed at the new plant of the Canadian Explosives, Ltd., on James Island. Labourers were being paid 20 cents per hour; mechanics 35 cents, the day's work consisting of 11 or 12 hours, and board 90 cents per day.

After giving the matter due consideration the Provincial Government has notified the Citizens' Unemployment Committee that they find themselves unable to give the financial assistance asked for by the committee as they did not consider the scheme practical at the present time. The Citizens' Unemployment Committee has been dissolved owing to inability to secure financial assistance for the scheme of vacant lot cultivation for the relief of the unemployed, both the City Council and the Government having declined to give financial assistance.

A short-lived strike of 'longshoremen took place on the fifteenth, which was settled to the satisfaction of all parties on the following day. The trouble arose from conflicting orders from two different foremen, the members of the union contending there was discrimination against one of their workers, and ceased work until the matter was settled next day.

As a result of a complaint made by a delegation of the Trades and Labour Council, instructions have been issued to the superintendent of the Municipal Labour Bureau not to interfere by secur-

ing labour to take the places of men who may have gone on strike.

Beginning on October 1, all outside employees of the city (wherever practicable) will be employed alternately 15 days on and 15 days off in each month, in order that the work may be divided among as many men as possible.

The Provincial Attorney-General has announced that the new Workmen's Compensation Act would be delayed until a Commission consisting of one representative each from the Government, labour unions and employers, could visit the chief cities of the United States and Canada to gather information which would help to make the measure more perfect.

The British Columbia lumber manufacturers have united in one central association for the purpose of mutual marketing of the output of British Columbia mills.

Owing to the large amount of money sent out of the country annually to purchase field and garden seeds, an association has been formed for the purpose of seed culture in this locality on a commercial basis. Owing to the cutting off of the seed industry in Europe, owing to the war, it is claimed the scheme will prove to be a profitable one from the start.

The grain crops in this district have been harvested in good condition; the yield being good. Roots, vegetables and fruit gave a fair average yield. Second crop Vancouver Island strawberries were on sale at 10 cents per box. Considering the season the yield was fair and the fruit of good quality.

Owing to the dense smoke caused by forest fires off the coast of Queen Charlotte Islands, the whale-hunting season in that locality has not been as successful as in other years, one of the vessels having already returned to her home port. On the west coast of Vancouver Island better catches have been made, with indications of fair returns for the season.

REPORTS OF WOMEN CORRESPONDENTS.

Montreal.

Conditions affecting the employment of women may be said to have improved when compared with those of September, 1914, a time at which industrial establishments in particular were much disorganized.

The Montreal Housewives' League is continuing its investigation into the supply and delivery of food in Montreal. The first part of the league's winter programme was spoken of at the meeting held on September 17; it will deal with an exhaustive enquiry into the manufacture of bread in Montreal and the methods used in putting up flour in the mills. The league hopes to obtain a regulation similar to the law that has been passed in the United States and which requires flour bags to be either made of or lined with paper in order to prevent the waste that invariably occurs through cotton.

La Fédération Nationale-St-Jean-Baptiste.—The various working women's associations affiliated to "la Fédération" resumed their monthly meetings since the beginning of September. The Factory Employees' Association has arranged for an extensive programme of lectures to be given during the coming year. The first was delivered at the meeting of the association on September 19. Such subjects as: the duties of working girls as employees; Canadian legislation *re* accidents occurring during working hours; advantages of association; labour organization, and other subjects. The same series of classes as last year will be held at different centres where the members of the association can avail themselves of these advantages free of charge.

Public assistance.—The Charity Organization Society was approached by an unusual number of persons in need of assistance during the past summer. As

a rule the society has no more than 100 families each month on its registers, the contrast with the present year is alarming. During July 476 families applied, in August 472, and 467 in September. Expenses amounted to between \$400 and \$700 each month, as against \$100 in previous years.

In order to make its work as effective as possible during the coming winter the Charity Organization Society will open a branch in the north end of the city. This office at 473 Mount Royal avenue east will look after cases in the north end of Montreal. Trained workers will be connected with the office.

A new free dispensary has been opened in the southern part of Montreal and is intended for the sick poor of St. Ann's, St. Gabriel's and Verdun wards. The Sisters of Providence are in charge of the dispensary and some 25 of Montreal's best doctors have volunteered their services.

This new medical centre is greeted with great satisfaction in this district, none of the city hospitals being in the vicinity.

Toronto.

The general condition of female labour in September was more normal than that of the corresponding month last year. Greater activity than last month was noted in factories engaged on war contracts. Some firms were employing more women, especially experienced operators, and many girls who went to their homes in neighbouring towns last winter have returned to positions, and others who have come for the first time have been able to get work.

The overall and blanket factories and knitting mills were particularly active on work for the soldiers. The knitting mills were working overtime every day and the blanket factories will be busy to

their full capacity for the winter on orders from the Italian and Russian Governments in addition to their Canadian orders.

Whitewear firms were still busy, working three nights a week, and candy factories were commencing their Christmas work, which means new orders for the box factories. Milliners have had a busy month and in the larger firms were working overtime.

Business in the bag factories, each of which employs 30 girls, has been much the same as at the same time last year. The ill effects from depression in ordinary trade has been largely counterbalanced by extra work on war orders. The lack of building makes small demand for cement bags, but large numbers of ham bags, etc., have been required by the William Davies Company and the Harris Company for their supplies for the soldiers. The increase in the price of jute has affected the firms, but not the employees, as the work must be done.

There was still a great demand for trained domestics and less than 25 per cent of the number could be supplied. Knox College and Burwash Hall are opening with a new staff of maids, about 15 each. A number of maids have gone to England lately to work on munitions. Classes arranged for the special benefit of domestics were commencing for the winter at the Y.M.C.A.

Among the garment workers and tailoresses the month has been a busy one because of military work which was expected to last for the first three weeks in October. In spite of this fact, conditions were reported bad because of a reduction in wages, which made overtime work necessary to average in many cases \$4.50 a week on piece work. A large number in this trade were out of work and no improvement for the future was evident.

The Executive of the District Labour Council is investigating the matter of firms engaged on war contracts violating

the law to the extent of having the girls work 12 hours a day on less than a living wage.

Winnipeg.

Very little change was apparent in the situation as compared with a month ago. A small increase in store help and better openings in office help were noted, however. The demand for domestic help was far in excess of the supply.

Work in the factories has kept up fairly well. Contracts for army commodities have kept garment makers and tent and awning makers busy. Laundries were busy. The number of girls in cigar factories was not very large. While there was not a great demand for factory helpers, neither was there much slackness in this class of work. Bookbinders were the exception, as they continued to work short handed, and in many cases were working short time as well.

Dressmakers and milliners were well employed, as were also telephone girls.

The Nurses' Registry waiting list numbered 50, and cases were reported as being somewhat longer. There was an adequate supply of teachers.

The August report of the Winnipeg Free Employment Bureau showed that 729 positions were offered, of which 530 were filled.

The Associated Charities gave relief in 332 cases during August, 41 of which were new. General sickness, death of husband, men away, desertion and old age were the chief causes. Only one case was given relief on account of unemployment.

Vancouver.

Labour conditions for women remained unchanged during the past month, increased activity in one branch of work being balanced by a falling off in another. The demand for female help of any kind was less than the supply, the

seasonal trades of dressmaking, tailoring and millinery not having commenced for the fall trade, while the demand for domestic help was less than during the previous month.

The annual convention of the Trades and Labour Congress of Canada convened during September in the Labour Temple, 180 delegates being seated. Matters concerning the interests of women dealt with by the Congress were the amending of the section of the platform of principles which stood for exclusion of women from factories, workshops and mines to read:

“Abolition of child labour by children under sixteen years of age and the establishing of the principle of equal pay for equal work for men and women.”

Also resolutions unanimously passed urging:

- (1) The enfranchisement of women throughout the Dominion of Canada.
- (2) That all provinces which have not already done so prohibit the employment of white women or girls in Chinese restaurants, laundries or other places of business, nor even permit women to lodge in them.
- (3) That the Executive of the Congress press the question of Mother's Pensions upon the members of the Dominion Parliament asking that a pension system be inaugurated as soon as possible.
- (4) That legislation be passed compelling employers in factories and workshops to furnish suitable rooms for the use of their employees as lunch rooms.
- (5) The passage of federal legislation making the publishing of spurious advertising for workmen or women a punishable offence.

- (6) The establishment by the various Provincial Governments throughout the Dominion of free labour bureaux.

In particular employments reports showed that the demand for domestic help had fallen below that of the previous month. The report of the Free Civic Employment Bureau shows that some 104 women had been placed in positions during the past month, leaving on the books over a hundred names of those seeking positions as domestic help unable to find positions.

In addition between 80 and 100 women registered as seeking “day work,” but the demand for this kind of help was very small indeed.

Garment workers were fully employed during the earlier part of the month; trade falling off a little towards the end, however, resulted in short time in some cases. Tailoresses, dressmakers and milliners were either out of employment or working short time.

Waitresses and chambermaids were also seeking employment. Some of the waitresses had been employed in tea rooms and ice cream parlors for the summer months, the closing of which had thrown them out of employment.

In department stores the sales clerks continued to work three weeks out of four, each one taking her turn for a week off. Telephone girls also have a similar arrangement, and although voluntary vacancies have not been filled, which leaves the staff somewhat reduced as compared with a year ago, there have been no dismissals and no reduction in wages for the girls.

The women employed in the only boot and shoe factory in Vancouver were fully employed during the month owing to the firm having received an army contract for shoes.

The demand for stenographers and office help of any kind remained, as dur-

ing the previous month, much less than the supply, and reports show that the women and girls following those occupations have been more severely hurt by the prevailing financial depression than those engaged in any other kind of business.

While teachers in public schools have not been thrown out of employment owing

to dull time, those teaching music, languages, etc., privately, find it very difficult to get pupils.

Nurses also found it difficult to get engagements. Nurses of the Victorian Order, however, reported an increase in the number of patients under their care and from whom no payment was received.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—REPORTS OF CONCILIATION BOARDS IN IMPORTANT DISPUTES IN BRITISH COLUMBIA, NOVA SCOTIA AND ALBERTA.

DURING the month of September four reports were received of Boards of Conciliation and Investigation appointed to deal with certain disputes, namely:

- (1) Report and minority report of Board in dispute between the British Columbia Electric Railway Company and street railway employees, members of Local Divisions No. 101 Vancouver, No. 109 Victoria, and No. 134 New Westminster, of the Amalgamated Association of Street and Electric Railway Employees of America.
- (2) Report of Board in dispute between the British Columbia Electric Railway Company and electrical workers, members of Local Unions No. 213 Vancouver, No. 230 Victoria, and No. 558 New Westminster, of the International Brotherhood of Electrical Workers.
- (3) Report of Board in dispute between the Intercolonial Coal Mining Company, Limited, Westville, N.S., and employees.
- (4) Report of Board in dispute between the Nova Scotia Steel and Coal Company, Limited, New Glasgow, N.S., and the Eastern Car Company, Limited, Trenton, N.S., and employees engaged in the manufacture of munitions of war.

In addition to the foregoing, two other reports are also presented in this issue of the *Labour Gazette*, having been overlooked at the time of their receipt in the Department, namely:

Report of Board in dispute between the Corporation of Calgary and electrical workers, members of Local Union No. 348 of the International Brotherhood of Electrical Workers.

Report of Board in dispute between J. D. McArthur and Company, Limited, and employees in the Edmonton, Dunvegan and British Columbia Railway shops at West Edmonton, Alberta.

Application Received.

An application was received on August 30 from the street railway employees of the Corporation of Edmonton, being members of Local Division No. 569 of the Amalgamated Association of Street and Electric Railway Employees of America, to the number of 250. It was stated in the application that the dispute grew out of a notice by the Corporation of Edmonton to the effect that the existing agreement would be terminated on August 31. Whilst steps were being taken looking to the establishment of a Board to deal with this matter, the Department was informed that the differences had been amicably adjusted, an agreement having been drawn up and executed between the parties concerned. No further action was therefore taken.

**BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY AND EMPLOYEES
AT VANCOUVER, VICTORIA AND NEW WESTMINSTER, B.C.**

Early in September the Minister received the report of the Board to which had been referred for adjustment the differences between the B. C. Electric Railway Company and its employees at Vancouver, Victoria and New Westminster, being members of the Amalgamated Association of Street and Electric Railway Employees of America. The report was accompanied by a minority report from Mr. J. H. McVety.

The employees had requested of the Minister of Labour that the Board's award might be handed out in Vancouver, thus avoiding delay incident to the distance of Vancouver from the Capital, and the Minister had agreed to this course subject to the Board regarding the same as being in the public interest. The report was accordingly issued by the Board and the question of its acceptance was immediately taken up by the respective parties. The company had called for a reduction of fifteen per cent on its total wage roll, as also for relief with respect to certain working conditions. The award conceded a reduction of about eight per cent, with little change in working conditions. Neither party seems at first to have regarded the award favourably, but after consideration the company expressed its willingness to accept the recommendations made. The employees stated their inability to accept the award and for a few days it was not certain that a strike would not follow. Direct negotiations, however, followed, Mr. H. H. Stevens, M.P., and Mr. J. D. McNiven, the Vancouver resident officer of the Department of Labour, using their good offices for conciliation. It appears also that the international officers of the union used their influence in favour of further efforts at settlement. As a result of the negotiations during the few following days, the Board's award became a basis of a working agreement effective until

six months after the close of the war, the award being modified at one or two points.

The text of the Board's report and of the minority report appears in the following pages, and appended to these statements will be found particulars of the modifications in the award whereby a working agreement became possible.

Text of Board's Report.

Following is the text of the Board's findings:

IN THE MATTER of "Industrial Disputes Investigation Act, 1907," and in the matter of differences between the British Columbia Electric Railway Company, Limited, and the Amalgamated Association of Street and Electric Railway Employees of Canada, represented by Local Division No. 101 of Vancouver, British Columbia, Local Division No. 109 of Victoria, British Columbia, and Local Division No. 134 of New Westminster, British Columbia, comprising employees of various departments of the British Columbia Electric Railway Company, Limited.

To the Honourable T. W. Crothers, K.C.,
Minister of Labour,
Ottawa, Canada.

The Board of Conciliation and Investigation, constituted in this matter, and consisting of the Honourable Mr. Justice W. A. Macdonald, chairman, appointed by the Minister of Labour; Mr. A. G. McCandless, the representative of the company, and Mr. J. H. McVety, the representative of the employees, begs to report as follows:

The company was represented before the Board by J. G. Murrin and William

Saville, and the employees were represented by F. A. Hoover and William Yates.

In 1913 a Board of Conciliation dealt with differences between the company and its employees as to wages and working conditions. While the report of such Board was not unanimous upon the question of wages, it resulted in an agreement, covering all points in dispute, being entered into between the parties for a period of two years, and thereafter from year to year. It was provided that either of the parties desiring to change the agreement should notify the other party in writing of the desired changes, giving 30 days' notice. The company, on May 27, 1915, availed itself of this provision and gave notice to the employees of its desire to change the agreement by cancelling it altogether. The company at the same time expressed its willingness to enter into a new agreement, subject to a reduction in the wage schedule and certain changes in the working conditions. Negotiations for settlement took place, but without result, and eventually the company applied for the appointment of a Board of Conciliation.

As soon as the Board entered upon its duties, the members felt that, in addition to furthering the intent of the legislation under which they were acting, at this period in the history of the country, an extra effort should be made to secure an amicable settlement. It immediately became apparent that the great bone of contention between the parties was the question of wages. Every effort was made to settle this matter, in the hope that if it could be adjusted, then there would be little difficulty in making necessary changes in the working conditions, acceptable to both parties.

The company sought a reduction of 15 per cent. in the wages, while the employees submitted that there should not be any reduction. They were thus very far apart, and it was found impossible to bring them together, or to reach any solution of the matter by way

of compromise. Each side was determined to adhere to its position, so it was decided to proceed with the enquiry. We should add that subsequent efforts along the line of settlement were made, but they also proved fruitless.

Before proceeding with the evidence it was shown that the conductors, motor-men and trainmen on the Lulu Island Branch of the railway, and the Fraser River Valley Line had withdrawn from the Street Railway Employees' Association and joined another association, so it was fully understood that their rights were not considered nor dealt with upon the enquiry.

Contentions of Company in Support of Reduction in Wages.

The company shortly contended that it was entitled to the proposed reduction in wages on the following grounds:

1. That a general depression in business exists in the districts in which the company is operating; that this condition has led to almost universal reduction of wages in such locality;
2. That the financial position of the company and continued falling off in business showed an inability to longer continue the current rate of wages;
3. That if the rate of wages is to be affected by the cost of living, then that such cost has decreased since wages were fixed in 1913;
4. That the wages paid by the company were in excess of wages generally paid by other street railway companies;
5. That the wages paid to the employees had, by virtue of the sliding scale, risen 8 per cent. since 1913, and thus increased the outlay in the face of decreased business.

The company also generally, in support of its position, submitted that the wages paid should depend upon the demand and supply of labour.

'Employees' Defence.

The employees outlined their defence opposing the reduction, broadly on the ground that the wages now paid were already too low, and would not be designated as a "living" wage. They submitted that the wages should have been higher in previous years when the districts affected were enjoying an era of prosperity in which the company received its full share, and also that the cost of living had increased since 1913, which would render it unfair to now make a reduction in wages.

The evidence adduced was lengthy, and was supported by carefully prepared and exhaustive statements. At the close of the evidence, after due consideration, the Board found it impossible to come to a unanimous decision as to the wage question. A majority of the Board were, however, satisfied that a reduction in the rate of wages was warranted and should in justice and fairness be recommended. They submit the following reasons for arriving at such conclusion:

It is almost needless to say that it was our duty in recommending a wage scale not to be swayed by sympathy, but to consider the matter, bearing in mind that we were dealing with a question involving business interests. At the same time, we should not overlook the fact that the onus rested upon the company of satisfying us by proper evidence that there were good reasons to support a reduction.

It was argued on behalf of the employees that the company was operating under franchises conferred by the people, and in the fixing of the rate of wages it should be dealt with on a different principle from that which would be adopted with respect to a company carrying on its business without such franchises. This argument appears to us as quite untenable. While it is true that the company has limited franchises to use, to a certain extent, public property in the districts affected, still such privi-

leges have not attached to them the condition that the company should pay its employees on a different basis from the rate that would prevail with respect to other companies carrying on business without similar franchises; in other words, the undertaking in which millions has been invested, was not subject to the condition that the determination of the rate of wages to be paid should be beyond the control of the company and be fixed by a third party. We were convinced that our conclusion on this point was correct, and that this company should be dealt with on the same basis as any other company coming within the purview of the legislation creating the Board. At the same time, we felt that our recommendation should be what might be termed "conciliatory." We should endeavour, if possible, not to favour any such radical change as would lower materially the present standard of living of the parties affected, beyond the curtailment prevalent generally in the community.

Speaking generally, wages are dependent upon the universal law of supply and demand, but this definition is elliptical. It has only a limited application to the employees of this company. It may be true that there is an over-supply of labour outside the association that might be utilized for the operations of the company. The company is, however, apparently willing on a fair basis to curtail the limits of the source from which it will obtain its employees. It proposes to agree for such supply not with workmen generally, but with a particular union or association as representing the employees necessary for its purposes. Under these circumstances, the question of supply and demand to a great extent loses its force in determining the rate of wages. We were well aware, also, that there is no fixed standard for determining wages. The best directed efforts in this direction would not produce an accurate result. All that can be done is with proper information and conscientious application to approach as near as possible to a reasonable conclusion.

As to the grounds taken by the company in support of its contention for a reduction:

Dealing first with the question as to whether there is a depression in the locality affected. There is no doubt that such depression has existed, and we fear may continue for some considerable time. The labour market has become congested and resulted in the reduction of wages generally. Aside from our own knowledge in this respect we were afforded evidence that wages in mercantile and industrial establishments had been reduced from 10 to 25 per cent. In some instances employers anxious to retain the services of their employees, have outlined the condition of affairs and a reduction has been readily accepted under the circumstances. We do not think it necessary to give details as to such reductions, but refer, as an important example, to the action of the City Council of Vancouver, in recently lowering the standard rate of wage 25 per cent, viz., from \$3.00 to \$2.25. Another instance of the recognition of the lowering of wages occurred in the wage scale attached to the new drill hall in Vancouver. These wages are based upon the current rate of wages in the locality in which the work is being performed. It appears that the previously stipulated carpenters' wages had been reduced from \$4.25 to \$3.60; painters from \$4.50 to \$3.60; plumbers from \$5.00 to \$4.50; bricklayers' labourers from \$3.50 to \$3.00; labourers from \$3.00 to \$2.40. It was urged that temporary changes of this kind would not have been recognized, and would only have taken place if a settled condition existed in the city, involving such reduction of wages.

Present Cost of Living.

As to the present cost of living, as compared with 1913:

A large amount of oral and documentary evidence was adduced. In determining this question we cannot overlook the personal equation that is bound to occur. In order to obtain fairly ac-

curate information from time to time as to the increase or decrease of the cost of living in Canada, the *Labour Gazette* has, for years, by means of correspondents throughout Canada, obtained information upon a uniform basis from which statistics are prepared and issued to the public. In our opinion they form as reliable a guide as can be obtained. It appears from statement based on this source of information, that with respect to a typical family of five, the cost of living in Vancouver, including all foods, fuel, light and rent, per week, in the month of March, 1913, was \$16.28 $\frac{1}{4}$, and that it fell to \$13.22 $\frac{1}{4}$ in March, 1915. It also appears that this latter cost was lower than in the cities of Calgary, Edmonton, Regina, Winnipeg and Toronto. We suggested that there should be a more extensive comparison, as the month indicated might not be a fair test. A statement was prepared based upon the retail prices tabulated in the *Labour Gazette* for the months of January, March and May of 1913, as compared with similar months of 1915. It covered such prices in the cities of Vancouver, Victoria and New Westminster, and thus minimized the risk of error that might attach to accepting the indicated prices for one city alone. This statement showed that for the typical family referred to, during the months mentioned, the cost per week in 1913 for Vancouver was \$16.48 $\frac{3}{4}$ as compared with \$13.36 $\frac{3}{4}$ in 1915; in Victoria it was \$17.87 $\frac{1}{4}$ in 1913 as compared with \$14.31 $\frac{3}{4}$ in 1915; while in New Westminster it was \$16.89 $\frac{3}{4}$ in 1913 as compared with \$14.56 $\frac{1}{4}$ in 1915, thus showing decreases in each of these cities. The statement also contained the compounded averages, according to the number of the company's employees in the respective cities, and this showed a decrease in cost between these two periods of 18.92 per cent for Vancouver, 19.89 per cent for Victoria and 13.80 per cent for New Westminster, or making a compounded average decrease for all the cities of 18.17 per cent. We think the mode thus adopted by the company to

show a decrease during the period mentioned is as accurate as possible in a matter of this kind. We then sought particular evidence outside the *Labour Gazette*, as to the increase or otherwise of the cost of food stuffs. Retail grocers supplied from their books valuable information and also gave general evidence on the point. We became satisfied that as between 1913, when the wage scale was last fixed, and the present time, the cost of living had on the whole slightly decreased in the community affected by the enquiry, and this decrease is fairly reflected in the above short excerpts from the statements filed. This result has been brought about by the fact that while the cost of food stuffs has risen to some extent, this has been offset by a considerable reduction in rent and an appreciable decrease in the cost of fuel. As to clothing, the cost of cotton goods has fallen, and the present retail cost of woollen goods is less than it was two years ago. This may be due to depression and because the community has not yet felt the effect of the increased wholesale cost of articles manufactured from wool, due to the war. In this connection, the opinion of merchants was that in the near future the cost to the consumer of all woollen goods was bound to increase.

Wages Paid by Other Street Railway Companies.

The company contended that its employees were receiving a higher rate of wages than was paid by any other company carrying on a like business under similar conditions. It sought to support its contention by a mass of evidence dealing with all the trades affected by the enquiry, and showing the rate of wages paid in a large number of cities on the continent. It was stated that, with reference to motormen and conductors, amongst over one thousand street railway companies, only a small number could be found paying a higher rate of wages, and that these exceptions could, in most cases, be accounted

for by peculiar local conditions. We found that this statement was substantially proved. At the same time, the conditions prevailing in one city are not likely to be the same in another, especially when you compare our local conditions with those pertaining at distant points. It was also contended that the wages thus paid should not form any criterion as being fair and proper wages, but might be accepted as proof that they were too low in those cities. We think, however, that it can be presumed these wages are generally fair and based on the usual rules governing the rates paid. In Canada, it appears that in the cities of the Prairie Provinces, except Winnipeg, Moose Jaw and Brandon, the street railways are almost entirely operated under municipal management. They do not, therefore, form a fair test as to the rate of wages to be paid by the company. Should a deficit occur upon the lines operated in Calgary, Edmonton, Regina or Saskatoon, it would be borne by the municipality. Recently a reduction of wages has taken place in these cities with a view of decreasing the expenditure. In the city of Winnipeg the maximum rate paid to motormen and conductors is 34 cents per hour. There the cost of living is higher, the climatic conditions unfavourable, and the concessions to the employees far less than those received by the employees of the company. There are only a limited number of agreements between street railway companies and their employees in Canada. A statement filed showing the maximum rate paid in some of the cities gave the following information: Peterborough, 20 cents per hour; Hull, 23 cents; Hamilton, 25 cents; Montreal, 25 cents; Ottawa, 27 cents; Toronto, 27½ cents, as compared with the existing rate paid by the B. C. Electric Railway Company of 35 cents in the cities and 36½ cents per hour on the interurban lines. Without referring to the information affecting a large number of cities throughout the United States, we considered particularly the rates paid in the neighbouring coast cities. In

most cases the length of service, in order to reach the maximum rate of pay, is greater than in this province. The rates supplied were as follows: Tacoma, 21 cents per hour; Stockton, 27½ cents; Everett, 28 cents; Los Angeles, 30 cents; San Francisco, 33 cents; San Francisco (Municipal), 37½ cents; and Oakland, 40 cents per hour. We were not afforded evidence showing the different agreements with their employees under which the railways in these cities were operated, nor whether the employees had the benefit of privileges and concessions as liberal as those granted by the B. C. Electric Railway Company. The nearest city to which we might look for comparison was Seattle. There, however, the 32 cents maximum rate is only reached after 6 years' service. It was contended that the cost of living in Seattle was less than in Vancouver, and that this should militate against adopting the Seattle rate for the cities affected in our province. Considerable evidence was given upon this point by both sides. It was contradictory, and different prices had apparently been quoted by the same store for the same kind of goods. The error probably arose from their carrying different grades of the same commodity, and the quotations not being applied to the same grade in each instance. Rents appeared higher in Seattle than in Vancouver. From the evidence we were satisfied that on the whole there was no appreciable difference in the cost of living between the two cities. The climatic and general conditions of operation would be practically the same for the employees, but those working for the company in British Columbia have not only the benefit of an agreement guaranteeing permanent employment with reasonable working conditions, but also receive valuable concessions, in the form of half rates for electric lighting, reduced charges for gas, free installation of meters, free transportation for themselves at all times, and also for their families to a limited extent.

Rates of Wages Increased by Eight Per Cent Since 1913.

The company then sought to support its position by claiming that the rate of wages paid its employees, especially motormen and conductors, had risen eight per cent since 1913. This was not controverted, and was due to the sliding scale by which length of service entitled an employee to a higher rate of wages. During the time the agreement was in force the company, as in duty bound, adhered to this provision, but it is now invoked as an argument to support the lower rate, sought to be established. We do not think it should be so considered. We believe in the principle of advance in wages through length of service. The point might be worthy of consideration to this extent,—these employees were presumably satisfied to work for the company in 1913 at the then rate of wages and cost of living, and it would not now be unjust under the changed conditions to have them revert to the rate of wages then being paid. In other words, if the rate of wages to motormen and conductors be decreased by eight per cent, they would, in these times of depression, receive the same wages as in the period of prosperity.

Company's Financial Position.

The company presented statements in detail showing its financial position and inability to pay the present rate of wages. The extent of its business is judged from the fact that it operates 334.02 miles of track, as compared with 119.07 in Toronto and 212 miles in Montreal, though it serves a population less in extent than either of these cities. The company in addition to operating a street railway, also, through its franchises, held in its own right or possessed by subsidiary companies, supplies electric light and gas throughout the cities of Vancouver, Victoria and New Westminster, and adjoining districts, and also furnishes power in the same territory. In exhibiting its financial position it did

not separate its street railway operations from those of a profitable nature, such as electric lighting and the supply of gas. Even on the entire business of the company there would appear to be only a small surplus of gross earnings over operating expenses.

For example, the total gross earnings of the company for the month of June 1915 were \$498,093.00, and working expenses and maintenance, \$494,315.00, leaving a surplus of \$3,778.00.

A statement was also submitted exhibiting a falling off in the net profit of 1915 as compared with 1914. An extract shows that while such profit for May 1914 was \$162,674.00, it had fallen to \$23,745 in May of 1915, and other months showed a corresponding decrease. It was shown that the whole capital investment in all undertakings of the company, on June 30, 1914, amounted to \$45,935,669 and that the net profit for the year was \$2,156,585, giving a net profit of 4.69 per cent on the capital invested, while with the same amount invested, the net profit up to June 30, 1915, was \$1,273,603, representing 2.67 per cent profit.

Dealing separately with the gross revenue received from the street railway, it showed a great falling off between 1912 and the present year.

The total receipts for the entire system for the year 1912 were	\$4,008,644
For Vancouver City alone	2,007,953
For the year 1913 for the entire system they were	4,158,025
For Vancouver City alone	2,021,681
For 1914, over the entire system	3,620,736
For Vancouver City alone	1,848,591
For the 6 months ending June 30, 1915, the receipts were for the entire system	1,173,924
For Vancouver City alone	549,513

Another comparative statement showed the proportion of the gross earnings absorbed by wages of motormen and conductors had increased from 1913 to 1915. For example, the earnings in the city of Vancouver in June, 1914, were \$161,589 and the wages to motormen and conductors amounted to \$48,402.00, being 29.95 per cent of the gross earnings, while in

June, 1915, the gross earnings were \$84,023.00 and the wages of motormen and conductors were \$41,488, being 49.37 per cent of the gross earnings. As to the entire system for the same period, it did not show disproportion to the same extent, viz., in June, 1913, the gross earnings were \$315,205, and the wages of motormen and conductors were \$81,638, being 25.89 per cent; while in June, 1915, the gross earnings were \$186,586 and the wages were \$71,707, being 38.43 per cent of the gross earnings. In a statement showing the "operating expenses ratio" it appeared that it was 81.03 per cent in the city of Vancouver and 94.75 per cent on the entire system in January, 1914, while in May, 1915, it had risen to 140.94 per cent on Vancouver city and 135.21 per cent on the entire system; the latter figures represented approximately a 40 per cent loss in the city of Vancouver and a 35 per cent loss on the entire system. Inquiry was made as to the cause of this falling off in business, and it was stated to be due to decreased population, depression and jitney competition. There is no doubt that the latter has contributed materially to the result, but that on some portions of the line not affected by this competition the same marked decrease in business existed.

We do not think it advisable to deal further with the financial aspect of the question, as in our opinion it should not be a governing or controlling factor in our recommendation as to the rate of wages. Whatever course a company might see fit to pursue of its own accord, we do not think it should be "recommended" to carry on its operations by paying its employees less than a fair wage, based on proper conditions. We, however, thought it well to outline the financial position to show that the company is not in a position to deal liberally with its employees. The presentation of the financial position of the company is also important as a strong argument in favour of our using extreme care in making our recommendations.

Recommendation.

The majority of the Board feel satisfied that for the reasons thus stated we are warranted in recommending the adoption by the parties interested, of the agreement enclosed herewith containing reductions as shown by the wage schedule. After due consideration we trust that it will be deemed satisfactory to both sides. In the working conditions, the seniority clause remains intact. This protection, when coupled with efficiency, creates permanency of employment, more especially to those who, by length of service, have secured to themselves an advantageous position under this privilege. It appeared to us of even greater benefit at this time, when so many men are waiting to fill any vacancies that might exist in the service of the company.

In fixing a rate of wages, we have not attempted to capitalize in dollars and cents the concessions above referred to, but have not overlooked their consideration. They have in the past, and doubtless will in the future weigh considerably with the employees, especially those having families dependent upon them. We have also, in making our recommendations, borne in mind the permanency of employment that will be guaranteed to the employees by the execution of an agreement covering a definite period.

In fixing the time during which we recommend the agreement to exist, we thought it well that it should expire within the same period of time as the current agreement.

Various changes in the working conditions of the existing agreement were advocated by both sides. The "seniority clause" already referred to, was vigorously attacked by the company, and it was strongly contended that its operation interfered with the proper carrying on of the work, especially in the shop and barn department. This point was fully considered before the last Board, and we see no reason to interfere with the decision then arrived at. The company then, as now, submitted that the

practice infringed upon the principle of control that should be usually exercised, untrammelled, by the employer. What the company doubtless desired was good results from the workmen. For that purpose, in order to safeguard the company, a clause was inserted and still remains, providing that the company had the absolute right of dismissal in case of inefficiency. The other matters in the working conditions considered were not of vital importance. We suggest some changes, but in the main we deemed it advisable not to interfere to any extent with the arrangements that had already been in force between the parties for a lengthy period, with little apparent friction. The Board unanimously recommends the adoption of the working conditions as changed.

Dated at Vancouver, British Columbia, this 25th day of August, A.D. 1915.

W. A. MACDONALD,
Chairman of Board.

A. G. McCANDLESS,
Representing the Company.

Agreement Recommended.

AGREEMENT entered into (in duplicate) this day of, One Thousand Nine Hundred and Fifteen, between the British Columbia Electric Railway Company, Limited, hereinafter called "The Company," and the Amalgamated Association of Street and Electric Railway Employees of America, representing the employees of said company affected by this agreement, hereinafter called "The Association."

Witnesseth, that the following wage schedule and working conditions shall take effect and be binding upon the parties hereto and shall govern all employees of the company referred to therein except the conductors, motormen and trainmen employed on Districts 2 and 3 (Lulu Island Branch and Fraser River Valley Line).

Clause 1. This wage schedule and the working conditions submitted herewith shall be binding on the company and its employees for at least 22 months from the first day of September, 1915, and thereafter from year to year, unless changed by the parties hereto. Either of the parties desiring to change the same or open up the agreement or wage schedule shall notify the other party in writing of the desired changes at least 30 days before the expiry of same.

Clause 2. The following rates of wages shall be paid during the continuation of this schedule:

(a) On city and suburban lines, motor-men and conductors shall receive:

First year	26	cents per hour.
Second year	27½	" " "
Third year	29	" " "
Fourth year	30½	" " "
After fourth year	32	" " "

(b) Motormen and conductors in work train service shall receive 1½ cents per hour in addition to the above rates.

(c) On interurban lines, being District 1, New Westminster (Central Park) Line, District 4, New Westminster (Burnaby Lake) Line, and also on Saanich Line:

First year	27½	cents per hour.
Second year	29	" " "
Third year	30½	" " "
Fourth year	32	" " "
After fourth year	33½	" " "

(d) Brakemen, trolley-men and bag-gagemen on those lines shall receive:

For the first six months	25	cents per hour.
For the second six months	26	" " "
For the second year	26½	" " "
For the third year	27½	" " "
For the fourth year and after	28½	" " "

(e) Shop and barn wages:

Car cleaners	25	cents per hour.
--------------	----	-----------------

Motor car repairers, armature winders' helpers, blacksmiths' helpers, carpenters' helpers, machinists' helpers and sawyers—

First year	26	" " "
Second year	27½	" " "
Third year	29	" " "
Fourth year	30½	" " "
After fourth year	32	" " "

Freight car repairers	28	cents per hour.
Freight car repairers' helpers	25	" " "
Freight car inspectors	30	" " "
Painters	39	" " "
Freight car and rough painters	29½	" " "
Brush hands	26	" " "
Carpenters	39	" " "
Freight car carpenters	33	" " "
Machinists	42½	" " "
Babbiter	33½	" " "
Trolley retriever repairer	35	" " "
Blacksmiths	42½	" " "
Car wire men	38	" " "
Air brake fitters	34	" " "
Armature winders, first class	42	" " "
Armature winders, second class	40	" " "
Armature winders, third class	38	cents per hour.
Leading hands, while so acting, to receive beyond regular pay, 3 cents extra, per hour.		

Apprentices—

First year	15	cents per hour.
Second year	18	" " "
Third year	22	" " "
Fourth year	27	" " "

(f) Freight shed department:

Checkers	28	cents per hour.
Truckers	26	" " "

(g) Maintenance of way men:

Track maintenance men—		
First nine months	24	cents per hour.
After nine months	25	" " "
Track groovers	25	" " "
Blacksmiths, same rate as shop blacksmiths.		

(h) Meter men:

First year	28½	cents per hour.
Second year	30	" " "
Third year and after	31½	" " "

(i) Employees paid monthly:

House light troublemen	\$87.50	per month.
Assistant house light troublemen	60.00	"
Baggageroom men (Vancouver)	78.00	"
" (New Westminster)	65.00	"
Teamsters	62.50	"
Interlocking tower men	60.00	"

Working Conditions.

Recognition of Association.

1. The company recognizes the Employees' Union or Association and will not discriminate against any employee because of his connection with same. The company agrees that employees affected by this agreement should become members of the association in order that all

questions and grievances may be dealt with by one head.

Interference by Association.

2. The association agrees that it will not in any way interfere with or limit the right of the company to discharge or discipline its employees for sufficient cause except for membership of the association.

Dismissal for Inefficiency.

3. The company shall have the absolute right to dismiss any employee for inefficiency provided an employee so dismissed shall have an appeal to the general manager whose decision shall be final. On the hearing of such appeal the employee shall have the right, if he so desires, to have present one official of the association.

Names of Employees: Advising Association.

4. The company shall forward the names of all men entering their employ affected by this agreement to the secretaries of the divisions.

Grievances.

5. (a) Properly qualified officers of the association divisions shall be recognized by the company in discussing any grievance of any employee. Grievances will first be presented to the local manager or superintendent, and, if a satisfactory adjustment cannot be obtained, an appeal will be made to the general manager.

(b) Any employee suspended or dismissed for cause, and upon investigation not being proved guilty, shall be reinstated and paid for all time lost through such suspension or dismissal. Investigation of a charge in cases of suspension or dismissal shall be held as soon as possible thereafter. The suspended or dismissed employee shall be notified at least 24 hours in advance when and where to attend, and also be notified of the nature

of the charge laid against him. He shall have the right to produce witnesses and evidence thereat, and also the privilege of having an officer of the association present, if he so desires. Final decision in all cases of suspension or dismissal shall be given as soon as possible after the hearing of the charge is closed.

(c) In the event of a decision given by the company under the foregoing section not being considered just and equitable by the association, the company agrees to refer same to a Board of Arbitration, which Board shall consist of one officer of the company and one officer of the association. These two shall select a third arbitrator or umpire, and in the event of disagreement, such umpire shall be appointed by a judge of the Supreme Court. The decision of the Board shall be final and binding on all parties. Each party shall bear the expenses of its own arbitrator, and the expenses of the umpire shall be borne equally by the parties hereto.

(d) If an employee has been suspended or dismissed for any violation of duty constituting in the opinion of the company an indictable offence, then the company shall immediately inform such an employee to that effect, designating such violation, without being required to furnish the evidence in support thereof. If the association is not satisfied with such suspension or dismissal, it shall within seven (7) days notify the company in writing to that effect, and, if within seven (7) days after receiving such notice the company does not criminally prosecute the employee for such alleged violation, then such suspension or dismissal shall be subject to arbitration and dealt with under the foregoing sub-section.

It is understood that the provisions of this sub-section are not in any way to impair, affect or delay criminal proceedings being taken at any time against any employee.

6. In the event of an employee affected by this agreement being suspended by the association from membership of the association for just cause affecting

his character or the performance of his duties towards the company or his fellow employees, the association shall have the right to report the fact of such suspension and the cause thereof to the company for such action as the company deems proper to take thereon, the association to have the right to be represented at the hearing. General manager to decide.

Leave of Absence.

7. Should the business of the division so increase that it becomes necessary to have a business agent, and an employee is appointed, then the company shall recognize the employee so appointed as such business agent, and he shall retain his seniority in the company's service and have access to the company's premises at all reasonable times.

8. Officers of the association shall be granted leave of absence on association business in so far as the regular operation of the service will permit, and shall be given precedence over any other applications for leave on the same day.

9. Any employee elected to office in the association which requires his absence from the company's employ shall retain his seniority rights, and shall upon his retirement from such office return to the company's employ.

Rules and Regulations.

10. All employees shall be governed by the rules and regulations established from time to time by the company, and shall also strictly observe all special orders bulletined or verbally conveyed by the officers of the company.

Complaints to be in Writing.

11. All complaints brought before the company must be in writing and the papers shall be open to inspection.

Lost Property.

12. Employees who turn into office of the company lost articles found on the cars or on the company's property,

shall attach to same a tag provided for the purpose. The tag shall bear a brief description of the article, with the time and place of finding.

Promotion.

13. In accordance with the past policy of the company promotion will, as far as possible, and having due regard to the needs of the service, be governed by seniority and proficiency, but in all matters of promotion and appointments the company reserves the right of absolute freedom in selection. When vacancies occur, notice of same will be given on the bulletin boards so that employees may make application for position.

Holidays.

14. Monthly men shall be given ten days' holidays each year after one year's service, and shall be paid for same. Public holidays not included in the ten days.

Payment of Wages.

15. Payment of wages shall be made semi-monthly on the 8th and 23rd of each month or as near thereto as practicable having regard to Sundays and holidays. Shortages and omissions caused by the fault of the office staff shall be paid by special cheque if requested by the employee. A clerk shall be employed in the New Westminster office to deal with adjustments of wages of employees in interurban lines, Westminster city lines, and Westminster car shops.

Concessions.

16. (a) Any employee covered by this agreement will be entitled on becoming a consumer, to gas concessions as heretofore, and to purchase electric light from the company for the use of himself and his family only at four cents per kilowatt hour as measured by meter, and subject to such regulations for the use of same as the company may issue from time to time,—the company to install meters free and charge no rent for same.

(b) Free transportation shall be granted to all employees at all times over all lines within the city in which they are employed or over the interurban district in which they are employed. Under special circumstances the company may grant, upon request, a pass to an employee covering transportation between the nearest interurban station to his home and the place where he is employed, should he be living in a district where city car accommodation will not adequately cover his needs.

(c) Each employee shall be granted one round trip pass per week for himself, wife and members of his family wholly dependent on him, over Districts One, Two and Four, good on any day of such week, and four round trip passes per year over District Three or Saanich Line, good on any day except Saturday, Sunday or public holiday, or day preceding a public holiday.

(d) Any employee residing on the interurban lines shall be entitled to purchase settlers' tickets not exceeding thirty per month at half rate for his wife and the members of his family wholly dependent on him, unless this provision is contrary to law.

(e) Motorman and conductors' badges will cover transportation at all times over all lines.

(f) Any employee making wrongful use of any of the concessions granted by this clause or transferring them to persons not authorized to receive them, shall be dismissed from the service.

Present Working Conditions.

17. Any working condition at present in force which is not specifically mentioned in this agreement and is not contrary to its intention shall continue in effect; provided that should any dispute arise as to the existence of any such working condition then the general manager shall decide the matter. If the decision is not satisfactory to the association then it shall have a right of appeal to a Board of Arbitration, to be

constituted under and having all the powers outlined in Subsection (c) of Section 5 of this agreement.

PART TWO—CITY AND SUBURBAN LINES.

Motormen and Conductors—Overtime.

18. (a) When a man is compelled to work over schedule running time, time and a half will be allowed up to 12 midnight, and double time after 12 midnight until he is relieved from duty. (This to apply to men working day runs.)

(b) Men working night runs, after finishing their run, shall be allowed time and a half up to 2 a.m., and double time thereafter until relieved from duty.

(c) When an extra man is required to work over 9½ hours, he shall receive time and a half up to 12 hours, and double time thereafter until relieved from duty.

19. Men working owl runs shall be allowed time and a half after running time up to twelve (12) hours, and double time after twelve (12) hours until relieved from duty.

Nine Hour Day.

20. Nine hours to constitute a day's work and shall be observed as far as operating conditions permit. When operating conditions necessitate a longer schedule time than nine hours and thirty minutes on some runs, no overtime is to be allowed for such additional thirty minutes, but beyond 9 hours and 30 minutes overtime shall be paid.

Breaking in New Men.

21. The company shall pay extra to conductors and motormen for breaking in new men at the rate of 25 cents per day. Men breaking in new men shall have served at least one year in the service, and will be selected by the company in accordance with their efficiency.

Reporting Time.

22. Conductors and motormen booked out on runs before 8 o'clock in the morning, who are required to report for duty ten minutes before the time shown on the running sheet, will be paid for this additional ten minutes' time. If they are booked out for first run of the day after 8 o'clock and in like manner requested to report ten minutes beforehand they shall be paid for five minutes' additional.

Box Time.

23. Conductors shall be paid box time according to schedule running time from place where box is received to relief point and from relief point to place where box is delivered up.

Uniforms.

24. Each regular conductor and motorman, if required by the company, shall wear uniform and cap while on duty, and the company shall provide such employee with one full uniform including cap each year. The cost of said uniform and cap to be in so far as contributions by the company are concerned based upon a fixed price that shall be agreed upon by the company and the association. The company's contribution shall be one-half of said fixed price.

Union scale of wages for making the uniforms will prevail.

In the event of any employee damaging or destroying his uniform in the execution of his duty the company will make good the damage or supply free an extra uniform if the case warrants. Any employee who has been in the employ of the company for six months and has had a uniform for three months shall upon leaving the company's service not be required to pay more than one-half the cost of such uniform. (This section shall also apply to interurban lines.)

25. Conductors' changers to be furnished by the company and to remain the property of the company.

Minimum Age.

26. No new men shall be employed as conductors or motormen who are under the age of 21 years.

Extra List.

27. The company shall endeavour to maintain at all times an adequate and proper extra list, up to 20 per cent of the regular men if the obtaining of them is practicable. No motorman or conductor after finishing a run shall be required to do extra work if there are any competent men available, and the company will endeavour at all times to provide a sufficient number of extra men, so that any motorman or conductor will not be required to work over schedule running time.

Change Money.

28. All conductors on passenger runs shall be supplied with up to \$30.00 change money according to the necessities of their run.

Work Trains and Line Cars.

29. All regular work trains shall be operated by a fully qualified crew, and each line car shall be operated by a fully qualified motorman. Such crews shall sign on a special sheet for a period of six months, from July 1 to December 31, and from January 1 to June 30. Provided, however, the company reserves the right to withdraw any car or cars referred to in this clause, whereupon the crews signed for any car so withdrawn shall be assigned to duty in their proper position in the passenger service and a new running sheet posted if necessary. And further provided, that crews signed as above if not required for work train or line car service on any day, may be assigned to duty in the passenger service by the superintendent for the day or days said work train or line car is temporarily out of service. The company to put on a pilot when necessary on interurban lines. Superintendent to decide.

Limits of Day Runs.

30. As far as practicable all day runs starting before 7 a.m. shall finish not later than 6.30 p.m.

Temporary Change of Work.

31. Men compulsorily taken from their runs and put into temporary positions shall be paid the same rate as they would be paid on their respective runs, and shall not have their wages reduced owing to shortage of hours.

Running Sheets.

32. A new running sheet for Vancouver city and suburban cars, also for Victoria, New Westminster and North Vancouver shall be posted every two months, and shall be signed up within five days of posting. Each new running sheet shall take effect on first day of the month. Provided, however, the company reserves the right to extend the time for bringing a new running schedule into effect if foggy weather or other exceptional conditions prevail.

The company is to have the right to change the running sheet during Exhibition week or on holidays or in the event of an unforeseen occurrence happening, which so interferes with traffic as to require a change. If the change at any time exceeds one week then the company shall post a new running sheet.

Leave of Absence.

33. Leave of absence to motormen and conductors shall be granted by the traffic superintendent on application in so far as the proper operation and conduct of the service will permit. Men absent on account of sickness shall notify their superintendent when desirous of returning to duty, not later than one o'clock p.m. of the preceding day, and shall be restored to the former run held by them when taken ill, unless there has been a change in the run list. Men on leave of absence shall be booked for their

run without this requirement at expiration of leave, if leave is not more than seven days.

Limit of Night Runs.

34. As far as practicable no night runs to extend over a period of 13 hours.

Travelling Time.

35. Any motorman not signing up on regular running sheet shall be paid travelling time to and from any run where relief is made ten minutes or more from car barn.

Heating Front Vestibule.

36. The system of heating front vestibule to be as at present unless the company decides to improve thereon.

Lavatories.

37. Lavatories shall be provided at the most suitable terminal of each line as far as practicable. Such lavatories shall be kept in a sanitary condition and be equipped with a serviceable lock and key.

Lockers.

38. Lockers to be provided where this arrangement is not already in effect as far as practicable.

PART THREE — INTERURBAN LINES.

DISTRICTS 1 AND 4, AND SAANICH DISTRICT.

Regular Runs, Sign-Up.

39. Regular runs will be signed up as follows:

Passenger service 90 days, freight service six months. In the event of a trainman refusing to accept any particular run to which he is entitled he will lose his rights to the run until it again becomes vacant, or change of time table.

Regular Men, Sign-Up.

40. A regular man will hold rights entitling him to sign-up as per paragraph "39."

Road Crew.

41. A road crew consists in each instance of the number hereafter designated.

Work Train Crew.

42. Work train crews to consist of conductor, motorman, and at least one brakeman and trolleyman.

Line Car Crew.

43. Line car will be classed under work train basis. Line car crew consists of conductor and motorman.

Road Crew, Freight Service.

44. Road crews in freight service when handling from one to five cars in addition to the locomotive will consist of conductor, motorman, one brakeman and trolleyman.

When handling more than five cars in addition to the locomotive the road crew will consist of conductor, motorman, two brakemen and trolleyman.

Freight and Work Trains, Minimum Pay.

45. Freight and work trains regularly set up, not less than 26 calendar working days to constitute a month at any service, and must be paid a proportionate rate for number of days held in service.

Sunday Leave, Work Train Crews.

46. Sundays. Trainmen assigned to work train service will not be considered absent from duty from time work is through on Saturday night until usual starting time Monday morning, unless notified in writing before they are laid up on Saturday night that they will be

required. If so notified and not used they will be paid five hours, at work train rates. Trainmen will be allowed to go home for Sunday if train service will permit and will not interfere with the train service.

Way Freight, Etc., Crews.

47. A way freight, express or baggage motor crew to consist of at least one motorman, one conductor and one brakeman, except where business is light when crew may if consistent with safety, be composed of a conductor and a motorman. Superintendent to decide.

Way Freight or Milk, Unduly Heavy.

48. If the work on any freight or milk train is unduly heavy it will be lightened by employing additional men. Superintendent to decide.

PASSENGER SERVICE.

Passenger Crews, One Car.

49. A passenger crew for one car consists of at least one motorman and one conductor.

50. A passenger crew for more than one car consists of at least one motorman, one conductor and one brakeman. The company to put on extra men when needed. Superintendent to decide.

Passenger Crews, Two Cars.

51. Passenger trains of two cars, one brakeman in addition to conductor and motorman. All other passenger trains to be manned as safety and traffic demand. Superintendent to decide.

Trainman, Definition of.

52. The term "trainman" means a man employed by the company exclusively for service as a conductor, motorman, brakeman or trolleyman and shown on its lists and records as having been assigned to either the passenger service or the freight service, permanently as such.

Home Terminal, District Two.

53. Vancouver shall be known as the home terminal on District Two, whilst present conditions remain unchanged.

Overtime.

54. (a) When a man holding a regular passenger run is compelled to work over ten (10) hours, he will receive time and one-half up to sixteen (16) hours and double time after sixteen (16) hours until relieved from duty.

(b) Men holding freight, work train or extra runs if compelled to work over ten (10) hours shall receive time and one-half up to sixteen (16) hours and double time after sixteen (16) hours until relieved from duty.

Night Men, Extra Allowance.

(c) All nightmen engaged in freight service in District One (1) shall be allowed 2 cents per hour extra over and above wages paid to day men. Night is defined to be from 6 p.m. to 6 a.m.

10-Hour Day.

55. (a) The rate of wages shall be based on a day's work of ten (10) hours.

Reporting Time.

(b) Fifteen minutes shall be allowed for reporting time for all service in Districts 1 and 4, also on Saanich District at present.

Runs Less Than Ten Hours.

(c) When schedule runs do not consume ten (10) working hours except as herein otherwise provided, company reserved the right to assign crews holding such runs further duties as required to complete full day's work, it being provided, however, that such further duties shall be specified when runs are advertised. No freight work to be included.

Relief for Trainmen.

56. In the event of a trainman requiring relief the company will furnish such relief so long as there are extra, competent trainmen not working, and company will be advised at 4 p.m. of day previous such relief is required, in order to arrange such reliefs, except in cases of emergency.

Reliefs will be granted in the order in which applications are received; all things being equal, regular men will have preference.

Rest for Trainmen.

57. After sixteen (16) hours duty a trainman may claim eight (8) hours rest.

Regular Runs, Period Of.

58. In so far as service demands and working conditions will permit, all regular runs shall be completed within thirteen (13) hours of commencement of first shift.

In the event of a run not being completed within thirteen (13) hours all such time over thirteen (13) hours shall be computed as working time at straight time, and shall be paid for as such.

Extra Men, Minimum Pay.

59. Extra trainmen called for duty which entails switching movements in and about any terminal yard, shop, station or other point on the system, shall receive pay for actual time on duty, provided they shall be allowed for any such duty not less than two (2) such full hours.

Extra trainmen called for duty involving road movements shall receive pay for actual time on duty provided that allowance for such extra duty shall not be paid less than two (2) hours.

Extra Men, First In, First Out.

60. (a) Extra men to be arranged as follows: First in, first out, unless a run be known to be open for six days or

longer, then senior spare men will be entitled to such run. If run around avoidably men will be allowed quarter of a day and stand first out. When the run is known to be open for thirty (30) days or longer regular men will take it, if desired.

Day Men, Lay-off.

(b) If senior day man lays off for six days or longer, senior night man will be entitled to take run, and if he does not desire it, next senior night man will be entitled to take such run, and senior spare man will take night man's run.

Day Run, Definition.

(c) Day run to be classed as any run ending at 6.30 p.m.

Extra Crews, Calling for Duty.

(d) All extra men to be called at places of residence for duty if place of residence is within one mile from terminal. Extra board to be placed in the trainmaster's office.

Students' Pay.

61. Students whilst breaking in as trainmen shall be paid at least one dollar per day during probation provided that they qualify within fourteen days.

Freight Crews, Sign-up.

62. All road crews in freight service shall sign-up for runs as follows:

- A conductor in charge of train.
- A motorman in charge of motor.
- A rear brakeman.
- A trolleyman.
- A head brakeman according to seniority.

Meals, Allowance Time.

63. Trainmen on duty shall be allowed time not to exceed thirty (30) minutes for meals, when detained from home terminal in any capacity, and shall

be paid for time so consumed. Dispatcher's permission must be obtained.

Pilots.

64. (a) When a train is being operated over any district other than that over which the crew operating the train is acquainted with the physical characteristics or running rules of such district, qualified trainmen will be supplied as pilot. Pilots will be paid same rate as their seniority entitles them to as conductor.

Trains Running Over Two Districts.

(b) Where trains are operated over two or more districts or lines such runs shall be pro-rated among such districts, on a mileage basis as deemed fair by the superintendent, who will hear claims of such districts in connection with such distribution. Trainmen of each district will be tendered the through runs assigned to such districts in accordance with seniority, and the judgment of said superintendent as to competence, as above set forth.

Qualified Trainmen to Operate Trains.

65. No employee not a qualified trainman shall be allowed to operate a train on any district, unless absolutely necessary.

Change Money.

66. Conductors shall be provided with fifteen dollars (\$15.00) change money for passenger work.

Trip Reports.

67. Where trip reports detain conductors after day's work they will be paid reasonable time for same.

Dead-heading.

68. Trainmen dead-heading will be paid actual time to and from home terminal.

Trains Annulled.

69. When trainmen appear for duty and train is annulled they will be allowed two and one-half hours and stand first out. When train is annulled, conductor will be notified in writing.

Men Taken Off Regular Run.

70. A trainman taken from his regular run to other duty shall receive not less than the same compensation as on his regular run.

Seniority.

71. Runs shall be awarded to qualified trainmen in accordance with their seniority on the district on which they are employed.

Shortages in Pay.

72. Trainmen will be notified when time is not allowed as per time slips with reasons therefor, and shortages and omissions in pay will be paid by time card if requested by trainmen.

Seniority.

73. Trainmen's seniority shall commence from time application is accepted, and same shall be furnished to association if desired.

Leave of Absence.

74. (a) Leave of absence to trainmen shall be granted by the superintendent or trainmaster on application in so far as the proper operation and conduct of the service will permit.

Reporting After Lay-off.

(b) Trainmen after laying off shall report for duty at 2 p.m. the day before he desires to resume duty; otherwise, shall not be entered on the board for his regular run.

Sickness, Etc.

(c) Trainmen sick or unfit for duty will register in proper book, and when

they book O.K. for duty again they will take their regular run.

Competent Brakemen.

75. One brakeman on each train or car must be competent and have at least four (4) months' experience as such, and the same or other brakeman must be acquainted with the road. A conductor will not be required to take out a brakeman who is found to be incompetent more than one round trip unless his alleged incompetency on investigation is disproved.

Bad Order Cars.

76. Trainmen will not be compelled to handle "bad order" cars in train, draft gear of which is defective, and requires to be changed, further than to take care of perishable freight or live stock that may become disabled en route to the first terminal. Under no circumstances will trainmen be compelled to handle cars behind van other than official cars.

Expenses.

77. Trainmen held off on company's business by order of the company's officials will be paid schedule rates for time lost, and will be reimbursed reasonable expenses when away from home.

Like rates and expenses shall be paid to trainmen when compelled to attend inquests or courts on subpoena requested or procured by the company's officers, the company to receive and retain any witness fees payable.

Discharge or Resignation.

78. When a trainman is discharged, or resigns, he will as soon as practicable be paid and given a certificate stating the term of service and in what capacity he was employed, three days to be considered sufficient, if held longer he will be paid ten (10) hours per day at the rate he was receiving.

Exchange of Runs.

79. In the event of a trainman signing up on freight or shunters becoming incapacitated through accident or sickness to work on freight service, he shall be allowed to exchange places with senior man, who has signed freight list, and the respective runs for length of sign up, subject to the approval of the company.

Extra Work and Extra Men.

80. Regular crews after finishing their run will not be required to do extra work if there are extra men available.

The company will endeavour at all times to provide sufficient number of extra men so that regular men will not be required to do such extra work.

Seniority List.

81. Seniority list of trainmen will be posted up every six months.

Double-heading Freight Trains.

83. It is not the intention of the company to adopt the plan of double-heading freight trains.

Vans. Abandoning.

84. When vans are used trainmen will not be compelled to abandon their vans between terminals. This refers to freight service only.

Baggage Cars.

86. Manning of baggage cars will be made from the ranks of brakemen in their seniority.

Brakemen, Examinations.

87. Senior brakemen will be required to pass their examination for conductor in turn. Brakemen refusing their promotion to conductor or failing to qualify for same will in failing rate junior to the man who had qualified ahead of

him. This clause will apply to trolley-men also.

Lay Away From Home Terminal.

88. Twelve (12) hours will be considered long enough to keep crews lying at terminals other than their home terminal, and the company will make every effort to prevent this time being exceeded.

Ice Houses.

89. At all points where company's ice houses are located train crew will be allowed ice for their van.

Way Freight, Extra Help.

90. For way freights beyond the reasonable capacity of the train crew to handle, the company shall furnish such necessary extra help, and in such manner as the superintendent shall decide.

Switching Trains With Van Attached.

91. Switchmen must not switch trains with van attached.

PART FOUR — SHOP AND BARN DEPARTMENTS.

Night Men.

92. (a) All mechanics and mechanics' helpers in mechanical department to receive 5 cents per hour additional to regular rate received by them on regular day work.

(b) All vacancies for day work to be recruited from night men, seniority to govern, except that the superintendent may, on account of a man being more proficient for a particular work, be entitled to ignore this right of seniority.

Overtime.

93. Painters, carpenters, machinists, blacksmiths, armature winders, car repairers and all other shop employees employed on day shift except car clean-

ers, to receive time and a half after 5 p.m., and from 12 noon until 5 p.m., on Saturdays, and double time from 10 p.m. until 7 a.m. or longer if compulsorily employed, and after 5 p.m. Saturdays, also double time on Sundays and holidays. Extra duty involving overtime to be taken by employees in rotation as far as it may be convenient.

Holidays shall be as follows: Sundays, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. Provided, that the foregoing shall not debar the company from calling on any employee to work at any time or times, to enable the company to operate any emergencies which may arise, and that such employee called upon to work on Sunday or statutory holidays or for emergency night calls shall not be paid less than four hours and a half straight time. Notice of emergency calls to be given as early as possible.

Six-day Week.

94. Car maintenance men to work six days per week on night shift at the discretion of the company, for nine hours per day at straight time. Any time worked in excess of the nine hours to be paid for at the rate of time and a half for first five hours and double time for any further period until relieved from duty. Double time also will be paid on the seventh day should an employee be required to work more than six days in the week. The company shall arrange for the day off per week to be taken at the time or times most convenient to the running of its business. As large a proportion as possible of the employees shall have their day off at week-ends, and provision will be made that employees shall have their leave at week-ends in turns.

For the purpose of this clause, the expression "car maintenance men" includes all mechanics and other employees, including car cleaners, necessary in the car barns, who are engaged

in those routine duties necessitated by the running of a car service.

Travelling Time.

95. Any man called to work in outside places from his own shop shall receive time for going to and coming from such places, also free transportation, except in the case of a man being transferred from one shop or barn to another for a period exceeding seven days.

96. When men are called to places where food is not readily obtainable, they shall not be required to work more than seven hours without meals being supplied by the company.

97. When men engaged in car barns at New Westminster are required to move interurban cars from such barns to the depot, there shall not be less than two men in service on a car or cars.

Reduction of Staff.

98. On reduction of staff through slackness of work, last on, first off; last off, first on, and a man shall not be considered a new man in restarting. Men on being laid off under this clause shall leave an address with the company. Not less than forty-eight (48) hours' notice of resumption of work shall be given by the company to the men by mailing advice to such addresses. If men do not appear to resume their positions, same shall be deemed to be vacated.

In the event of slackness of work in car shops and barns, the hours shall be reduced proportionately, in preference to the laying off of men.

Blacksmiths' Helpers.

99. Blacksmiths to have own regular helpers as far as circumstances will allow.

Leave of Absence.

100. Employees in mechanical department shall be granted leave of absence on application to their respective foremen or superintendents, where such

leave of absence does not exceed one week, in so far as the proper operation of the shops will permit. Three months' leave of absence shall be granted, if desired, after one year's service. After three years' service the leave shall extend to one month per year, if not previously taken. Leave granted for the business of the association shall not be included in the foregoing.

Tools.

101. Car repairers to be supplied with all tools. Carpenters to be supplied with machinists' hammer and monkey wrench and bits for repair work when required.

Lateness in Reporting.

102. All employees in mechanical staff who are unable to report for work at specified time for good and valid reasons shall be allowed to start half an hour or one hour later. Superintendent to decide.

Lavatory Accommodation, Etc.

103. Suitable toilet and lavatory accommodation to be provided. Mess-room accommodation so far as practicable.

First Aid Men.

104. The company shall name and appoint competent first aid men to take charge of first aid work and boxes at each barn and department.

Employment Application Form.

105. All candidates making application shall only be required to state their last three employers on application employment form.

Apprentices, Transference or Dismissal.

106. Any apprentice who, having served one year, in the opinion of the shop foreman shows no aptitude for acquiring the trade, will be transferred or

dismissed, and all obligations accepted by the company will of necessity be forfeited.

Definition of Trades Mechanics.

107. Men who have served an apprenticeship or had four years or over varied experience in the separate trades or callings as described in the next four succeeding paragraphs shall be termed mechanics, and any men doing work which generally is accepted in Vancouver, New Westminster and Victoria as mechanics' work, shall be paid at the minimum rate of pay, and the company will not employ semi-skilled men for mechanics' work or have helpers do mechanics' work or any part thereof.

Machinists.

108. Men who have served an apprenticeship or had four years or over varied experience in the operating of lathes, planing, slotting, milling, shaping and tyre-boring machines or other machine tools, and fitters who are capable of fitting up, assembling and repairing the various parts or details of engines or locomotives, stationary, marine, or any kind of machine or machine tools, and vise work generally, shall be designated as machinists.

Blacksmiths.

109. Any man who has served an apprenticeship of four years or who has had four years' varied experience at the blacksmith trade, and who, by his skill and experience, is qualified and capable of taking a piece of work, and, with the use of drawings and blue prints or from instructions, can transmit work to successful completion within a reasonable length of time, shall be considered a blacksmith.

Apprentices.

110. Boys serving an apprenticeship to learn the trade shall be designated apprentices. Any boy hereafter engag-

ing himself to learn any mechanical trade shall be over 16 and under 21 years of age, must serve not less than four years, must be able to read and write English and know the first four rules of arithmetic.

Machinists' Helpers.

111. The number of apprentices in the case of machinists shall be one for the shop and one for every four machinists employed. Helpers will not be advanced to the work of machinists, and when used in connection with machinists' work will work under the direction of a machinist.

Carpenters.

112. Any man who has served an apprenticeship of four years or who has had four years' varied experience at the carpenter trade, and who by his skill and experience is qualified and capable of taking a piece of work and, with the use of drawings and blue prints or from instructions, can transmit such work to successful completion within a reasonable time, shall be considered a carpenter.

Freight Carpenters.

113. Any man who shall prove qualified to make satisfactory carpenter repairs to freight car bodies of any class, steel frame work excepted, wherein skill required for joiner or cabinet work is not necessary, and who can perform same within reasonable time shall be considered a freight carpenter.

Painters.

114. Any man who has served an apprenticeship of four years, or who has had four years' varied experience at the painter's trade, and who by his skill and experience is qualified to mix and blend paints to the colors required by specifications, or otherwise, and who can perform successfully within a reasonable time the work usually performed

by a skilled painter, shall be considered a painter.

Freight Car and Rough Painters.

115. Any man who can prove his qualifications to satisfactorily apply paint to freight car bodies and work of this class, and who can perform same within reasonable time shall be considered a freight car or rough painter.

Brush Hands.

116. Any man who by his qualifications can satisfactorily clean work preparatory to being painted, and also apply paint in a satisfactory manner to parts of car not requiring high-grade or varnish finish such as floors, outside roof, bottom of car, window guards, fenders and piping, shall be considered a brush hand.

Air-brake Fitters.

117. Any man who has full knowledge of all pertaining to the mechanical side of air-brake equipment, and capable of repairing any part of same, shall be considered an air-brake fitter.

Armature Winders.

118. Any man who is qualified by his skill and experience to satisfactorily repair motor armatures and re-wind same shall be considered an armature winder of one of the classes mentioned below, depending upon the number of years' service he may have given in any armature room of recognized standing:

First-class—One who has served four years or more in an armature room.

Second-class—One who has served three years or more in an armature room.

Third-class—One who has served less than three years in an armature room.

Blacksmiths' Helpers.

119. Blacksmith's helper shall be permitted to have a fire after he has worked

two years continuously in the shop where he is employed, provided there is a vacancy; seniority and competency to govern such advancement. An advanced helper shall agree to work for a term of three years, and each year shall receive an advance of 3 cents per hour, but not to exceed the minimum rate paid to blacksmiths. After three months' trial, should he prove incompetent, he may be reduced to helper. It will be the duty of the foreman to advance apprentices and advanced helpers in all branches of their respective trades. The number of advanced blacksmiths' helpers or blacksmiths' apprentices shall not exceed the ratio of one to five blacksmiths.

PART FIVE. — TRACK MAINTENANCE MEN.

Definition.

120. The term "Track Maintenance Men" means employees who take their orders from the roadmaster or track foreman, and whose duties are to maintain the track in safe condition for operation.

Number of Working Hours.

121. Nine hours shall constitute a day's work.

Overtime.

122. If the men are required to work in excess of the above decided time they shall be paid time and a half for overtime up to 12 midnight and double time from 12 midnight until relieved from duty, also double time on Sundays and statutory holidays.

Emergency Work—Minimum Pay.

123. If called out on emergency work, men shall be paid not less than four and one-half hours' straight time; no man to be required to work for longer period than seven hours without meals to be provided by the company.

Payment From Assembling Points.

124. Men to be paid time from assembling points to and from work.

Section Houses.

125. Section houses to be provided when circumstances warrant as soon as practicable.

Reduction of Staff.

126. List of maintenance of way men to be kept by the company. If through slackness of work a lay-off becomes necessary, men shall be laid off in the following order: Last on, first off; last off, first on. When men are needed, the fact to be bulletined. Clause "98" to apply in so far as it relates to notices being sent for resumption of work. Provided that in moving men from one gang to another gang preference shall be given to married men, so that they shall not be moved further from their home. In addition to the separate seniority lists at present in effect with respect to different districts there shall be a separate seniority list for District 2.

Bulletining Vacancies.

127. All vacancies for promotion amongst track maintenance men to be bulletined.

128. If men are taken from shops to do blacksmiths' work or blacksmiths' helpers' work on maintenance of way, they shall receive regular shop schedule wages.

PART SIX.—FREIGHT SHED DEPARTMENT.

Freight Shed Department.

129. Ten (10) hours shall constitute a day's work; hours to be from 7 a.m. to 12 noon, and 1 p.m. to 6 p.m.

130. Lay-offs to be governed by Clause "126."

131. Three months' employment to constitute a regular man.

132. All overtime to be paid at the rate of time and one-half till midnight and double time thereafter till relieved. Any time worked on Sundays or statutory holidays to be paid double time, each man to work in turn.

133. Concessions allowed to monthly employees (in addition to holidays) as provided in Section 16 and for free transportation to all employees in this department as provided in Section 16.

PART SEVEN.—METER DEPARTMENT.

134. (a) Nine hours to constitute a day's work. This to apply to auto drivers in meter department also.

(b) Overtime rates to be same as in shop and barn departments.

(c) As to meter men the principle of seniority shall apply in this department as in shop and barn departments.

Text of Minority Report.

IN THE MATTER of "Industrial Disputes Investigation Act, 1907," and in the matter of differences between the British Columbia Electric Railway Company, Limited, and the Amalgamated Association of Street and Electric Railway Employees of Canada.

To the Honourable T. W. Crothers, K.C.,
Minister of Labour,
Ottawa, Canada.

Dear Sir,—

With regret I report that I have been unable to agree with my colleagues on the Board of Conciliation appointed to investigate the differences between the British Columbia Electric Railway and that portion of its employees who are members of the Amalgamated Association of Street and Electric Railway Em-

ployees on the question of wages. As neither side has agreed to accept the decision, the proceedings cannot be dignified as an arbitration, but merely as a Board appointed by the Government at the request of the company in compliance with the provisions of the Industrial Disputes and Conciliation Act.

The company applied for a reduction of wages of all employees covered by the agreement amounting to 15 per cent and based its claim on three principal grounds, as follows:

(1) "Because of the general depression in the country and district and universal reduction of wages."

(2) "The company's inability to pay the present rates."

(3) "Because the cost of living is less than it was in 1913."

While I am not aware of the precise reasons for the decision, my colleagues have decided to recommend a general reduction of wages amounting, in the case of the motormen and conductors, who comprise 75 per cent of the employees, to 8.57 per cent on the fifth year rating of 35 cents per hour and a slightly lower rate for those below the maximum pay. The shop and barn employees and miscellaneous classifications, with a few exceptions, are to receive reductions ranging from 5 to 26 per cent.

Taking the reasons given by the company in the order of their value, from the company's viewpoint, the first to be considered is the "general depression and universal reduction of wages." That there is a depression is admitted, but before asking for a reduction of wages on that ground, should not the company, which has a monopoly of gas, light, power, and until the jitney entered the field, of electric transportation, reduce its charges to the consumer? It may be argued that the company has already reduced its fares, but this is due to competition and a reference to the back of the new tickets will show that there is no guarantee of permanency to the reduction. On the other

hand, it will be remembered that the company increased its fares during 1913 and maintained the higher rate until the competition of the jitney compelled a reduction or loss of traffic. During the investigation it was brought out that the company does not manufacture electrical energy itself, but purchases from one of its subsidiary companies, the Vancouver Power Company, at the rate of 1 cent per K.W.H. It also developed, in response to questions by myself, that the company purchases power from its alleged competitor, the Western Canada Power Company, at a rate of three-tenths of 1 cent per K.W.H., and from the 1913 report of the company I learn that the agreement with the Western Canada Power Company covers a period of 20 years. As the company purchases for less than one-third from its competitor what it pays its own subsidiary company, and it is extremely unlikely that the Western Canada Power Company would make an agreement to sell for a period of 20 years at a loss, it is an indication that the subsidiary company is receiving the full value of its produce. Buying for three-tenths of one cent and selling for eleven cents, I cannot see why the company should be permitted to take advantage of depression conditions until it gives its customers the privilege of doing so, particularly as in some of the cities quoted by the company as paying lower rates of wages, namely Winnipeg and Seattle, the rates for light are 3 and 5½ cents respectively.

On its claim that wages have been universally reduced in this district, the company has not, in my opinion, made out a case. Wholesale and retail merchants and lumber mills have reduced, also the building trades, but these trades have all received increases since 1910, the date of the last increase to the employees of the British Columbia Electric Railway. Then, of course, there is no building going on and it is easy to reduce wages when there are no employees. The company produced Mr.

Tinney, who confirmed the cut in the wages of building trades workmen, but admitted that since he had cut wages he had not had a single job. On the other hand, wages have not been reduced by the Canadian Pacific Railway, or in the tailoring, printing, engineering, brewing, and a number of other miscellaneous trades in the city and district.

Speaking of street railways, wages have been reduced in Saskatoon, Edmonton, Regina and Calgary, but after the reductions are taken into consideration, the average rates still remain higher than those paid by the B. C. Electric Railway for similar occupations.

"The company's inability to pay" is the second reason the company advances for requiring a reduction. Because the electric lines are operating at a loss is urged as a reason why the men should work for less wages. Carrying that argument to its obvious conclusion, if the operating loss amounted to as much as the wage bill, the men would then be required to work for nothing! The company has charged approximately \$45,000,000 to capital account and of this amount some \$21,000,000 has been invested in electric railway track and equipment. A considerable portion of this amount has been expended in the construction of new lines into sparsely settled districts, with franchises extending over a period of forty years and because these lines are now unproductive cannot be charged to the employees who are in no way responsible for the finances, policies, or expenditures of the company and should not now be asked to bear the shareholders' burden when they were not permitted to partake of the benefits accruing to the company through the exceptionally busy period the district has gone through during the past ten years. According to the representatives of the employees, the company has always pleaded poverty and to such good purpose that the Board which sat in 1913, when the men were asking for increases, after setting forth

other reasons for refusing to accede, used the following language:

"If ability to pay is to be taken into consideration, it need only be pointed out that the British Columbia Electric Railway Company Limited is paying $4\frac{1}{2}$ per cent on its common stock, which is surely not an exorbitant return on the investment.

"For these reasons, the undersigned feel compelled to refuse to increase the maximum."

The company denies that it pleaded poverty in 1913 and insists that the Hon. Mr. Justice Murphy and Mr. H. O. Alexander were in error in using the foregoing language in their report, a statement I find difficulty in accepting, as both are men of legal training and skilled, through judicial experience, in making accurate notes of evidence.

As a matter of fact, the company, according to the evidence of its comptroller, has for many years paid 8 per cent on its common stock; has paid all debenture charges to date; paid its London Board of Directors \$29,023.38 in fees during the fiscal year ending June, 1914; expended \$35,722.46 on London office expenses for the same period, and in addition accumulated a reserve fund of \$5,314,258.60.

If ability to pay is a factor to-day, then it was just as much a factor in 1913 and as Mr. Justice Murphy accepted it as such it is reasonable to assume that he would have given an increase if proper information regarding the company's finances had been available.

The final argument of the company is that the cost of living has decreased 18.17 per cent since 1913, due to a heavy reduction of rent and that the men, because they can now live for less, should accept lower wages. The cost of living argument, if it is to be considered in fixing wages, should not be limited to the past two years, but should cover the period from 1910, the date the men received their last increase by arrangement with the company and without the intervention of a Board. It is, I think,

a fair assumption that the rates fixed at that time, by mutual agreement, should be a satisfactory basis from which to start, because the representatives of the employees offered, during the proceedings before the present Board, to accept the 1910 agreement, contending that as the 1913 Board had found that the cost of living had increased approximately 16 per cent, that any reduction at the present time in the cost of living, due to reductions in rent, merely served to equalize, for that portion of the men affected who were able to take advantage of it, the handicap the men had been under since 1910 through a continual increase from 1910 to 1914 without a corresponding increase in earnings.

During the hearing much evidence was heard on the cost of living but it was not contended that the cost is lower now than in 1910 and I do not agree that the company has made out a case that entitles it to a decrease on the grounds of decreased cost of living.

The Board heard considerable evidence and argument on the question of concessions, meaning lower rates for gas and lighting and passes given the employees and their families over the company's system, it being alleged by the company that these concessions to the employees were worth $2\frac{1}{2}$ cents per hour. Without consulting the employees, I offered to exchange the concessions for the sum of $2\frac{1}{2}$ cents per hour, the valuation the company had placed upon them, but my offer was not accepted by my colleagues.

The employees' representatives stated during the hearings that the company had greatly increased the speed of the cars, to such an extent that they are now running in excess of the speed allowed by either the company's Vancouver City franchise or the Provincial Tramways Act. In fact, if the cars covered the routes without a single stop, they would still be compelled to exceed the legal rate of speed. Asked what was the maximum speed allowed, the company's representative stated "There is

no maximum." The men claim that by increasing the speed the nervous strain on the carmen is increased and that they are placed in a bad position legally in the case of fatal accidents. If they are required to take the physical risks, the company should be prepared to at least pay the same rates of wages as heretofore.

The supply and demand argument is one that I do not think the Board has any right to consider, first, for the reason that no evidence was heard on that point, and second, that the award of the majority of the Board is not necessarily to be accepted by either party and that the company and the employees should alone consider that point when endeavouring to arrive at an amicable solution of the dispute.

For the reasons stated I dissent from the award recommending a reduction of wages for the employees and would recommend a continuance of the wage scale at present in force.

Dated at Vancouver, August 23rd, A.D. 1915.

JAS. H. McVETY,

Board Member appointed on recommendation of the Employees.

WORKING AGREEMENT EFFECTED.

As mentioned in the introductory paragraphs of this article, negotiations followed the issuance of the Board's report, as a result of which a working agreement was effected. Modifications in the terms of the report were effected on three points: (1) the terms of union recognition; (2) date of termination of working agreement; (3) minor wage concessions.

The clause relating to union recognition as appearing in the draft working agreement contained in the Board's findings was as follows:

"The company recognizes the employees' union or association, and will not discriminate against any employee

because of his connection with the same. The company agrees that employees affected by this agreement should become members of the association in order that all questions and grievances may be dealt with by one head."

The clause as amended and included in the working agreement reads as follows:

"The company recognizes the employees' union or association, and will not discriminate against any employee because of his connection with the same. The company agrees that all employees affected by this agreement shall become and remain members of the association in order that all questions and grievances may be dealt with by one head.

"The mere fact, however, that an employee has ceased to be a member of the employees' union or association shall not entitle the said employees' union or association to demand such employees' dismissal from the company's service, but the question of whether such employee should be dismissed from the company's service shall be referred to the general manager for decision, and in the event of his decision not being considered just and equitable by the employees' union or association the company agrees to refer such question to arbitration."

With respect to the question of the period during which the working agreement should remain effective, the Board had recommended a period of twenty-two months, the men urging a shorter period. It was finally agreed that "the term of the agreement shall be until six months after the close of the war; to be not less than twelve months nor more than twenty-two months, dating from September 1st, 1915."

A wage modification was made on one point, the trackmen's rate being advanced from twenty-five cents to twenty-six cents per hour. About twenty-seven men are affected by the change.

**BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY AND ELECTRICAL
RAILWAY COMPANY AND ELECTRICAL WORKERS AT VANCOUVER,
VICTORIA AND NEW WESTMINSTER, B.C.**

The Minister received on September 15 the unanimous report of the Board of Conciliation and Investigation which had been appointed to deal with a dispute between the British Columbia Electric Railway Company and the electrical workers in its employ, being members of Local Unions Nos. 213, 230 and 558 of the International Brotherhood of Electrical Workers at Vancouver, Victoria and New Westminster, B.C., respectively. The application stated that the dispute affected 150 employees and grew out of the alleged reduction of wages and increased hours, also adverse changes in working conditions and the discharge of certain employees without regard to seniority.

A Board was established by the Minister on July 31 and was constituted as follows: Honourable Mr. Justice W. A. Macdonald, Vancouver, B.C., chairman, appointed by the Minister in the absence of any joint recommendation from the other members of the Board; Mr. Jas. A. Harvey, K.C., Vancouver, B.C., appointed by the Minister in the absence of any recommendation from the employing company; and Mr. Edmund H. Morrison, Vancouver, B.C., appointed by the Minister on the recommendation of the employees concerned.

The report of the Board was unanimous and made certain recommendations for the settlement of the dispute which were embodied in a proposed agreement, including a schedule of wages and working conditions. It was recommended that this agreement should remain in force for a period of two years from September 15, 1915, and thereafter unless terminated by ninety days' notice in writing by either party to the other. At the close of the month the Department had not been informed of the acceptance or non-acceptance of the award.

Report of Board.

The text of the report of the Board in this matter is as follows:

IN THE MATTER of "Industrial Disputes Investigation Act, 1907," and in the matter of differences between the British Columbia Electric Railway Company Limited and Local Unions Nos. 213, 230 and 558 of Vancouver, Victoria and New Westminster, respectively, of the International Brotherhood of Electrical Workers.

To the Honourable T. W. Crothers, K.C.,
Minister of Labour,
Ottawa, Canada.

The Board of Conciliation and Investigation constituted in this matter and consisting of the Honourable Mr. Justice W. A. Macdonald, chairman, appointed by the Minister of Labour, Mr. E. H. Morrison, representative of the employees, and Mr. J. A. Harvey, K.C., the representative of the company, appointed by the Minister of Labour (in default of the company recommending a member of the Board), begs to report as follows:

The employees were represented before the Board by Mr. J. H. McVety and Mr. W. F. Dunn, and the company was not represented, though duly notified of the sittings of the Board.

The company in answer to the application for a Board of Conciliation objected that out of the 150 electrical workers alleged to be affected by the dispute, some 112 were working for the company under an agreement which had nearly two years to run, and that there was no dispute existing between such employees and the company. It declined to deal with the application or to appoint a representative to the Board,

or to take any part in any enquiry or to be governed by the findings of the Board.

Shortly after the enquiry was entered upon, it became apparent that only some 16 employees of the company would be affected by any recommendations that might be made. There had been an agreement in force between the parties which the company refused to renew, and the contention of the employees who sought the assistance of the Board in arriving at a settlement was such that the agreement, both as to wages and working conditions, was fair and should become effective for a further definite period.

Evidence was adduced by the employees as to the rate of wages paid to other electrical workers in British Columbia, and at Coast cities in the United States. It was felt advisable to obtain the attendance of officials of the company for the purpose of determining not only the number of employees who would be affected by any recommendations that might be made, but also to obtain any information the company might possess as to the rate of wages paid to similar workmen, and the working conditions that prevailed, at other points. This was done by requiring the attendance of proper officials and enabling them also to state the reasons that actuated the company in proposing a reduction of wages and change in working conditions.

A copy of a subsisting agreement between the Western Canada Power and Light Company and the International Brotherhood of Electrical Workers was produced, as well as the working rules and schedule of wages of the British Columbia Telephone Company and agreements between other companies and their electrical workers. It appeared that the first mentioned company paid its journeymen linemen \$4.55 per day as compared with the B. C. Electric payment of \$4.35 per day, while the British Columbia Telephone Company paid similar workmen \$4.25 per day. While the wages paid in Central and Eastern Can-

ada were lower than those paid by the B. C. Electric, still the rate in the neighbouring state of Washington was almost similar. Wages paid for linemen in Tacoma were \$4.00, Seattle \$4.40, Everett \$4.00, Bellingham \$3.50 to \$3.75, Spokane \$3.60 to \$4.50. We had to bear in mind, however, that in many cases these wages were paid to electrical workers who were employed by telephone companies. It was quite evident to us that the work of these employees of the B. C. Electric was much more hazardous than that of similar workmen employed by a telephone company. This was proved to our satisfaction by independent evidence and was well worthy of consideration in fixing the rate of wages, especially when comparing the amount paid by the B. C. Telephone Company with that paid by the B. C. Electric. We felt that the depression existing in British Columbia and the general reduction of wages should not, under the special circumstances attendant upon the employment of such electrical workers, to any appreciable extent affect their rate of wages. It is skilled and dangerous work, requiring years of experience. It should only be pursued by competent men, not only for their own protection, but as a safeguard to the public, especially on frequented streets.

We were not assisted by argument on behalf of the company, but having regard to the wages paid locally and in the adjoining state of Washington, to this class of workmen, we think we have dealt fairly in the matter.

After lengthy discussion and consideration we are enabled to unanimously recommend the schedule and rate of wages outlined in the documents enclosed herewith. If such recommendation be accepted, it means a reduction of wages and variation in the working conditions. In arriving at the amount of wages we deemed proper to recommend, we have taken into account the advisability of altering the privilege possessed by the workmen as to going to and from their work on the company's time, and limiting it to a considerable extent. We

also thought that the conditions as to the number of men engaged in certain work might be relaxed without endangering the safety of the men, but benefiting the company through a saving of expense.

Dated at Vancouver, B.C., this 11th day of September; A.D. 1915.

(Sgd.) W. A. MACDONALD,
Chairman.

(Sgd.) J. A. HARVEY,
Representing the Company.

(Sgd.) E. H. MORRISON,
Representing the Employees.

Recommended Agreement.

THIS AGREEMENT made and entered into this day of September, 1915, by and between the British Columbia Electric Railway Company, Limited, (which shall include any subordinate company, directly or indirectly under their control) and The International Brotherhood of Electrical Workers through the Pacific District Council No. 1 of the Third District of International Brotherhood of Electrical Workers as parties of the second part.

First, that for and in consideration of harmonious relations and settled conditions of employment with financial and personal relations mutually beneficial and the covenants and agreements herein mentioned, the parties hereto do hereby enter into, ordain, establish and agree that the following wage schedule and working rules shall be binding upon the parties hereto for a period of two (2) years, commencing fifteenth of September, 1915, and shall continue in full force and effect thereafter unless terminated by ninety (90) days' notice in writing from either of the parties hereto to the other, whereupon the same may be amended, cancelled or substituted as may be mutually agreed upon by the parties hereto.

The company recognizes the International Brotherhood of Electrical Workers and will not discriminate against any employee because of his connection with same. And the International Brotherhood of Electrical Workers will not in any way interfere with or limit the right of the company to discharge or discipline its employees where sufficient cause can be shown, except for being a member of the International Brotherhood of Electrical Workers. All committees appointed to interview the management in connection with any matter affecting this schedule shall be regular employees of the company.

Working Rules and Schedule of Wages.

These rules shall apply to employees listed in Section 26 and shall be posted for their information and government.

Article 1. Eight hours shall constitute a day's work. Ordinary working hours 8 a.m. to 12 noon, and 1 p.m. to 5 p.m.

Article 2. Employees to go to and from work on their own time. Unless previously notified to the contrary they shall report each morning for work at the store room. If required to work outside of the city limits they are to go to such work from the city limits and return thereto on the company's time. When workmen are employed outside of the city and living in camp then they are to go from camp to their work and return to camp on the company's time. Additional time will be allowed at the discretion of the foreman at the dinner hour where the location of the work and the working conditions warrant same.

Article 3. Any employee being called on duty between the hours of 5 p.m. and 10 p.m. shall receive payment of the rate of one and a half time the standard rate; additional overtime or overtime starting at 10 p.m. or later, shall be computed at double time of the standard rate up to the hour of 8 a.m., or until being relieved of duty. Employees reporting for work between 4 a.m. and 8 a.m. such

time shall be computed at double time of the standard rate, and where such overtime does not equal eight regular working hours employees will be allowed to work the following eight hours at straight time.

Article 4. Holidays shall be as follows: Sundays, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, and Christmas Day, and such other days as are generally observed in the province in which the company operated. Bank holidays are not included. Men entitled to vote will be allowed time off to vote on election day with pay. Saturday afternoon to be computed at time and one-half, the standard rate between the hours of 1 p.m. and 6 p.m. and twice the standard rate from 6 p.m. until being relieved from duty.

In case men are requested to work through until 5 o'clock p.m. without the option of noon hour, the noon hour to be computed at the rate of two times the standard rate.

Article 5. Expenses of board and lodging will be allowed all foremen when sent away from headquarters.

Article 6. Expenses of board and lodging will be allowed all lead cable splicers and helpers when sent away from headquarters.

Article 7. (a) All other employees detailed for work away from headquarters, upon a temporary job, will be allowed expenses of board and lodging. Twenty days will be considered a temporary job; more than twenty days will be considered a permanent job, for which no board and lodging expenses will be allowed. All employees shall be notified before being sent away whether the work shall be classified as a temporary or permanent job. If classified as a temporary job and the work exceeds twenty days, board and lodging will be provided until the return to headquarters. If classified as a permanent job and a return to headquarters (except in case of dismissal or resignation) is made in less than twenty calendar days, board and

lodging will be allowed. Headquarters will be considered where men are actually engaged for work.

(b) The company will furnish to any employee affected by this agreement, on becoming a consumer of gas, such gas at the rate of \$1.00 per thousand cubic feet, and he will be entitled to purchase electric light from the company for the use of himself and his family only, at 4 cents per kilowatt hour as measured by meter and subject to such regulations for the use of same as the company may issue from time to time. The company to instal meters free and charge no rent for same. Until such meters are installed, the present flat rate paid shall continue.

(c) Free transportation shall be granted to all such employees at all times over all lines within the city in which they are employed or over the Interurban district in which they are employed. Under special circumstances the company may grant upon request a pass to an employee covering transportation between the nearest Interurban station to his home and the place where he is employed, should the party live in a district where the city car accommodation will not adequately cover his needs.

(d) Each employee shall be granted one round trip pass per week for himself, his wife and members of his family wholly dependent upon him, over Districts 1, 2 and 4, good on any day of such week, and four (4) round trip passes per year over District 3 or Saanich District good on any day except Saturday, Sunday or public holiday, or day preceding a public holiday.

(e) Any employee residing on an Interurban line shall be entitled to purchase settlers' tickets not exceeding thirty (30) per month, at half rate for his wife and the members of his family wholly dependent upon him, unless this provision is contrary to law.

(f) Any employee making wrongful use of any of the concessions granted by this clause, or transferring them to persons not authorized to receive them, shall be dismissed from the service.

Article 8. Employees affected by this schedule resigning from work while away from headquarters will not be allowed transportation to headquarters. Should the completion of the work render the services of the employee no longer necessary, transportation to headquarters, or an amount equivalent to the cost of such transportation, will be allowed.

Article 9. Employees shall be paid semi-monthly, payment to be made on the 24th of the month for wages due up to and including the 15th of the current month and on the 9th of the month for wages due up to and including the last day of the preceding month. Employees away from headquarters to be paid semi-monthly, not later than two days after those at headquarters. For the purpose of cashing cheques received from the paymaster's office, the cashier's office in Vancouver, New Westminster and Victoria will be open until 8 p.m. on the 9th, 10th, 24th and 25th days of each month except when such days fall on a Sunday or recognized holiday.

Article 10. Employees dismissed while away from headquarters must be paid in full all wages due them. Should lack of sufficient funds prevent this, transportation must be allowed to the point where payment will be made.

Article 11. Where employees affected by the schedule decide that their board and lodging be paid by the company, or where working conditions compel the company to provide board and lodging, the rate will be \$1.00 less per day than the schedule below, except in the case of foremen and temporary jobs.

Article 12. At least three journeymen linemen will be used in all and every gang pulling in underground cable and in erecting poles and fixtures.

Article 13. An employee giving orders or having charge of men shall be considered as a foreman. All foremen shall have had at least three years' experience in one or more branches of the trade.

(b) Men acting as foremen or in charge of what is known as short order

work are to be allowed to assist in such work, but they are not to do the work required of a journeyman, except in emergency cases.

Article 14. *Journeymen.* An employee having three or more years' experience in one or all branches of the trade as listed herein.

Article 15. During the last twelve months of their apprenticeship apprentices shall be expected to do same class of work as a journeyman. All apprentices must serve three years' actual work in the business before they can be rated as journeymen, except where journeymen cannot be obtained and the ratio of apprentices to journeymen shall not exceed one to four journeymen to a gang. Apprentices shall not be allowed to work on high voltage wire, except during the last six months of their apprenticeship.

Article 16. All wires carrying a voltage of 650 volts or over shall be classed as high voltage wires.

Article 17. When work is being done on high voltage wires, two journeymen must be assigned to the job, and are not allowed to work on two different wires at the same time. In station work two journeymen are required to work on wire carrying a voltage of 500 or more.

Article 18. In case of trouble on high voltage wires or where work is hazardous, two or more journeymen must be sent out to repair trouble, one man to be sent out to watch until another can be obtained.

Article 19. Working on poles, timbers, bridges, towers or fixtures of an elevation of 95 feet or over, time to be computed at two times the standard rate as per schedule. Linemen to have jurisdiction over assembling and erecting of towers, framing and setting poles.

Article 20. Two men in each of the company districts to work Saturday afternoons on straight time for trouble only, men to work in turn. Trouble men on trolley and electric light work, working shift work, will be paid at straight

time for any eight consecutive hours out of the 24 hours for trouble only.

Article 21. Emergency crews to work on trouble only.

Article 22. All monthly men affected by this schedule shall have two weeks off each year at full pay.

Article 23. Cable splicers' helpers shall be journeymen linemen. Cable splicers shall at no time be allowed to work unless attended by a helper. All joining, splicing and terminating of lead covered cable shall be under the jurisdiction of cable splicers.

Article 24. Regular patrolmen shall work on the monthly basis. All extra patrolmen shall work on a daily basis.

Article 25. Employees called out on emergency work or trouble shall receive not less than four hours' pay computed at straight rate.

Article 26.

Wage Schedule.

Foremen (linemen)	\$ 4.90 per day.
Journeymen	4.20 per day.
Repairmen	4.20 per day.
Cable splicers	5.10 per day.
Foremen patrolmen	128.00 per month.
Patrolmen	107.50 per month.
Apprentices, begin	2.95 per day.
" after 6 months	3.10 per day.
" after 12 months	3.35 per day.
" after 18 months	3.70 per day.
" after 24 months	3.95 per day.
" after 36 months	4.20 per day.

Foremen patrolmen to be provided with horse and rig.

Patrolmen to be provided with proper transportation.

In witness whereof the parties hereto have hereunto affixed their hands and seals through their respective officials in quadruplicate, the date and year first above written.

INTERCOLONIAL COAL MINING COMPANY, LIMITED, WESTVILLE, N.S., AND EMPLOYEES.

The Minister received on September 17 the unanimous report of the Board of Conciliation and Investigation which had been appointed to deal with a dispute between the Intercolonial Coal Mining Company, Limited, Westville, N.S., and its employees. The application stated that the dispute affected 366 employees and resulted from a demand for increased wages.

A Board was established by the Minister on August 25, and was constituted as follows: His Honour Judge W. B. Wallace, Halifax, N.S., chairman, appointed by the Minister on the recommendation of the other members of the Board; Mr. John McKeen, Halifax, N.S., company's nominee, and Mr. Simon Lott, Pictou, N.S., employees' nominee.

The report was unanimous and recommended certain increases to take effect on the first day of September, 1915. At the close of the month the Department had not been informed by the parties concerned of their acceptance or non-acceptance of the award.

Report of Board.

The text of the report of the Board in this matter is as follows:

To the Honourable
the Minister of Labour,
Ottawa, Canada.

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute or difference between the Intercolonial Coal Mining Company and certain of its employees.

The Board of Conciliation appointed in relation to the differences between the above parties met on Tuesday, September 7, 1915, at Westville, in the County of Pictou, where each member of the Board took the oath prescribed by statute. An informal discussion took place regarding the feasibility of a prompt settlement of the differences in question without taking any evidence. It was finally decided to be advisable to take evidence, and, accordingly, the Board met again on the same evening at seven o'clock, in a hall at Westville, the meeting being open to the public. A number of witnesses were examined on behalf of the employees of the company. On the morning of the following day the Board visited various portions of the colliery and saw the nature of the work done by some of the men, and in the afternoon the Board met again publicly and heard evidence presented on behalf of the company, and also some supplementary evidence presented on behalf of its employees. The Board then adjourned to meet in Halifax and consider the evidence submitted, and prepare its report.

The Board accordingly met at Halifax on Monday afternoon, September 13, and finally on Tuesday, September 14.

Careful consideration was given by the Board to the evidence and representations on behalf of the employees seeking to justify an increase of wages, and also to the evidence and representations on behalf of the company in relation to the financial side of the question. Many phases of the matter were given consideration, including abnormal conditions brought about as a result of the war.

The Board eventually decided to make the following recommendations:

1. That the minimum wage for boys in the employ of the company should be 80 cents per day.

2. That all boys receiving a daily wage between that minimum and \$1.48 should receive an increase of 10 cents each per day.

3. That the daily wage of the employees now paid \$1.48 or in some cases \$1.50 should be increased to \$1.60 in each case.

4. That the daily wage of employees now paid \$1.59 or from that sum to \$1.65 should be increased in each case to \$1.70.

5. That all the said increases should become effective from the first day of September, 1915.

The Board desires to express its genuine admiration for the attractive appearance of the great majority of the houses occupied by the employees of the company. It was particularly gratifying to know that in a very large proportion of cases these comfortable homes are owned by the employees themselves. It was also a pleasure to note the cordial relations that exist between the officers of the company and its employees. All parties to this investigation seemed to be animated by a desire for a settlement that would be just and fair to all concerned, and the Board wishes to express its appreciation of the aid received from the representatives of the employees and the company during the proceedings before the Board.

All of which is respectfully submitted.

(Sgd.) W. B. WALLACE,
Chairman

(Sgd.) SIMON LETT.

(Sgd.) J. McKEEN.

**NOVA SCOTIA STEEL & COAL COMPANY, LIMITED, NEW GLASGOW,
N.S., AND EASTERN CAR COMPANY, LIMITED, TRENTON, N.S.,
AND EMPLOYEES.**

On September 27 the Minister received the unanimous report of the Board of Conciliation and Investigation which had been appointed to deal with certain differences between the Nova Scotia Steel and Coal Company, Limited, New Glasgow, N.S., and the Eastern Car Company, Limited, Trenton, N.S., and their employees engaged in the manufacture of munitions of war. The dispute in both cases involved the question of wages. Prior to the application the employees had gone out on strike. The Department of Labour was, however, successful in inducing both parties to the dispute to refer their differences under the terms of the Industrial Disputes Investigation Act; and on August 19 an agreement was signed by the president and a committee of the men to the effect that the decision of the Board should be "binding upon both parties until the end of the war or so long and so far as the companies are engaged on munition work." The employees accordingly returned to work on the morning of August 20, on which date a Board was established by the Minister, the personnel of the Board being as follows: His Honour Judge E. Coatsworth, Toronto, Ont., chairman, appointed by the Minister in the absence of any joint recommendation from the other members of the Board; Col. B. A. Weston, Halifax, N.S., the companies' nominee, and Mr. R. H. Murray, Dartmouth, N.S., the employees' nominee.

The report of the Board was unanimous and made certain recommendations for the settlement of the dispute. In the light of the agreement above referred to, it is understood that these recommendations will be carried out, the differences being thus amicably adjusted.

Report of Board.

The text of the report of the Board in this matter is as follows:

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and in the matter of the Nova Scotia Steel and Coal Company, Limited, and the Eastern Car Company, Limited, employers, and the workmen of the said companies, employees.

To the Hon. T. W. Crothers, K.C., M.P.,
Minister of Labour,
Ottawa.

Dear Sir,—

The undersigned, members of the Board of Conciliation appointed in this matter, beg respectfully to submit the following as their report.

The Board held its first meeting in New Glasgow, Nova Scotia, on Monday, the twentieth day of September, 1915, and sat continuously from day to day each day until the twenty-fifth day of September, 1915.

The Board has considered all matters brought before it and heard all the evidence adduced and the contentions of the various parties, and is pleased to announce that it has come to a unanimous conclusion, and its recommendations are set out in the following sections.

It might be well to note the fact that this Board is constituted under an agreement between the parties dated at New Glasgow on the nineteenth day of August, 1915, the said agreement being as follows:

1. All matters and disputes shall be referred to a Board of Conciliation appointed under the provisions of the Industrial Disputes Investigation Act, 1907.

2. When both parties have agreed to such a reference the men will return to work under the conditions prevailing on August 15, 1915.

3. It is agreed that the decision of such Board of Conciliation and Investigation shall be binding upon both parties until the end of the war or so long and so far as the companies are engaged on munition work.

The Board is further pleased to testify that they have received the greatest courtesy from all persons attending on both sides and every opportunity has been afforded both the Board and the representatives to thoroughly investigate the matters brought before the Board.

At the first meeting the Board made an effort to induce the parties to come together and reconcile their differences in an amicable manner, but owing to certain circumstances and disputes existing between them it was found impossible to do so, and the Board then proceeded to take evidence and dispose of the matters referred to them.

It is gratifying to note that while these companies, or at least the Nova Scotia Steel Company, has been in operation under one name or another for over thirty years, this is the first dispute that has arisen between them and their employees, and it is hoped there will be no further cause of dispute.

Generally speaking, there were two matters to be disposed of by the Board: (1) the claims made by the men for an advance in the amounts allowed to them in rates or hourly wage, and (2) a claim made by the company for a reduction on certain rates being allowed.

The Board has gone very fully into all the items and arrived at the conclusions herein set out with regard to each of the items.

1.. Water boys.—The claim made by them is that water boys ask for a rate of 14 cents per hour. All water boys to work eight hour shifts. The Board recommend a rate of 9 cents with eight hour shifts.

2. Mill men.—The men on No. 1 and 2 mills are to receive the rates in tonnage following:

RATES FOR NO. 1 MILL.

	No. 1 Bars.	Tonnage rate.
Roller27
Heater14
Heater helper		8.1
Engineer		11
Rougher		14
Catcher		11
Sticker in		9¾
Hooker		8.1
Extra front		9
Straightener		7½
Shearman		10.2
Shearman helper		7½
Finisher		13.4

RATES ON MILLS AND SHEARS.

	No. 2 Bars.	Tonnage rate.
Roller15
Rougher		8.5
Heater		8.5
Heater helper		5.2
Engineer		7
Finisher		6.5
Front		6
9 in. roughers		6
Back		6
Catcher		6.5
Straightener		5.5
Straightener helpers		5
Shearman		5.75
Shearman helpers		5

All these men who are making less than 18 cents check time now are to be increased to 18 cents, also that the shifts be changed to be from 7 a.m. to 5.30 p.m., and from 6 p.m. to 6.30 a.m. The men also to be paid check time for rolling samples.

3. Repair department.—No recommendation made by the Board.

4. Firemen.—The head fireman to receive 23½ cents per hour and the others 21 cents per hour with time and a half for Sundays.

5. Ash wheelers.—These men to receive 17½ cents per hour.

6. Shell men.—The proposed reduction on the shell men is not to go into effect and they are to continue as heretofore.

7. Shippers.—It is recommended that the shippers get 22 cents per hour.

8. Axle department.—This claim was withdrawn.

9. Axle cutters and turners.—To receive 20 cents an hour while on repairs.

10. Firemen's helpers.—This is included in shell men, No. 6.

11. Coolers.—This is included in shell men, No. 6.

12. Disc heaters.—To receive \$1.75 per day up to 1,500.

13. Pit spike department.—Runners to get 28½ cents and the helpers 17½ cents check time.

14. Tie plate department.—No recommendation.

15. Men on cogging mill.—To be increased to 18 cents check time from 15 cents.

16. Mill engineers.—This claim was withdrawn.

17. Common labourers.—16½ cents an hour for first fortnight and 17½ cents per hour thereafter.

It is also recommended that proper additional wash room accommodation be provided throughout the works.

The workmen of the car company put in two claims with regard to the planing mills, and evidence was given only on behalf of the gainer, and as this affects only one man and the company intend to adjust this matter, the Board give no recommendation.

In regard to the erection department, the claim was withdrawn, as the men are satisfied at the present time.

A copy of the schedule of claims as presented by the men is attached hereto for the information of the Department.

Respectfully submitted at New Glasgow, Nova Scotia, this twenty-fifth day of September, 1915.

(Sgd.) E. COATSWORTH,
Chairman.

(Sgd.) B. A. WESTON,
For the Companies.

(Sgd.) R. H. MURRAY,
For the Employees.

It is taken for granted that the companies will not discriminate against any man because he is a member of a union.

(Sgd.) E. COATSWORTH,
Chairman.

(Sgd.) B. A. WESTON,
For the Companies.

(Sgd.) R. H. MURRAY,
For the Employees.

*Industrial Disputes Investigation Act,
1907.*

MEMORANDUM of claims of employees of the Nova Scotia Steel and Coal Company, Limited, to be referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907.

Water boys.—Water boys ask for a rate of 14 cents per hour.

Mill men.—The men on No. 1 and No. 2 mills ask for rates in tonnage which existed immediately previous to April 1, 1908, and the hours in effect two years ago. Copies of the said tonnage rates are annexed hereto. These men also ask for an investigation into the amount deducted for scrap. At present on shell stock, ten per cent is deducted. It is

contended that five per cent would be more than enough. On plate, fifteen per cent is taken off for scrap. About one-half of this would be ample. The men also ask to be paid check time while rolling samples whether or not tonnage has been made on the day that samples are rolled. When working on check time, they ask to be paid 20 cents per hour for the low paid men and the others in proportion. Men on mills ask to be supplied with well water.

Repair department.—The men ask to be supplied with well water.

Firemen.—Firemen to be paid 25 cents per hour and double time for Sundays.

Ash wheelers.—Ash wheelers ask to be paid 20 cents per hour and double time for Sundays.

Shell men.—The men working on shells ask that the old rates effective previous to August 15, 1915, be restored.

Shipping room employees.—The number of men in the shipping room has been increased from 15 to 18 men. These men ask that the rates be increased accordingly, that the amount of money divided among them be proportionately increased, and also if more men are put in the shipping room that the money be increased accordingly.

Axle department.—Heaters and helpers ask for 2 cents per axle increase on all sizes.

Cutters.—Cutting on axles $5\frac{1}{2} \times 10$ an increase of 2 cents; on axles 5×9 , old rate of 10.7; on axles $4\frac{1}{2} \times 8$, an increase of 1 cent; on axles $5\frac{1}{2} \times 10$, C.P.R. order $12\frac{1}{2}$ cents. All these men are at present receiving $16\frac{1}{2}$ cents and ask for a rate of 20 cents per hour while on repairs.

Firemen's helpers.—On big shells ask for old rate of $16\frac{1}{4}$ cents per hour equal to 200 shells and 40 cents per hundred for additional over that number.

Coolers on second operation.—Ask 18.8 cents per hour equal to 200 shells and 20 cents per hundred after.

Disc heaters.—Ask 20 cents per hour, check time, same to apply to every two hundred over 1,500.

Pit spike department.—Ask the following: runner, 30 cents per hour check time and 20 cents off machine; helper, old rate 20 cents per hour.

Tie plate department.—Ask that men receive 25 cents per hour.

Men on cogging mill.—Low paid men only ask 20 cents per hour check time and an increase in tonnage rates.

Mill engineers.—Ask increase in check time from 20 cents to 30 cents per hour, with no change in tonnage system.

All common labour in and around the plant to be paid a minimum rate of $17\frac{1}{2}$ cents per hour.

There shall be no discrimination at any time against any workman because he is a member of a union.

The company shall not hereafter employ any alien enemies.

(Sgd.) JOHN DOULL,
Solicitor of Employees.

*Industrial Disputes Investigation Act,
1907.*

MEMORANDUM of claims of employees of the Eastern Car Company, Limited, to be referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907.

Planing mills.—Machine men ask increase in wages of 25 cents per day. Machine helpers ask a rate of 20 cents per hour.

Erection department.—The men in this department ask that the following rates be effective:

<i>Piece work—</i>	Per hour.
Riveters	35c
Buckers	33c
Reamers	28c
Fitters	28c
Stickers	17c
Heaters	17c

<i>Check time—</i>	
Riveters	30c
Buckers	27½c
Reamers	25c
Fitters	25c
Stickers	12½c
Heaters	12½c

The above prices on check time were offered by the company and are accepted by the men.

There shall be no discrimination at any time against any workman because he is a member of a union.

The company shall not hereafter employ any alien enemies.

(Sgd.) JOHN DOULL,
Solicitor of Employees.

CORPORATION OF CALGARY AND ITS ELECTRICAL WORKERS.— WORKING AGREEMENT EFFECTED.

The Minister of Labour received on May 14 the unanimous report of the Board of Conciliation and Investigation which had been appointed to deal with a dispute between the Corporation of Calgary and its electrical employees, members of Local No. 348 of the International Brotherhood of Electric Workers. Through an oversight the report in question was not printed at the time of its receipt and is accordingly presented herewith.

In the application it was stated that the dispute affected 30 employees directly and resulted from a reduction in the wages of the employees concerned and the termination by the Corporation of Calgary of the existing agreement.

A Board was established by the Minister on March 29, being constituted as follows: Col. G. E. Sanders, Calgary, Alberta, chairman, appointed by the Minister on the recommendation of the other members of the Board; Mr. R. A. Brown, Calgary, Alberta, appointed on the recommendation of the Corporation of Calgary; and Mr. John B. Pegg, Winnipeg, Man., appointed on the recommendation of the employees concerned.

As a result of the investigation the Board drew up an agreement governing working conditions and rates of wages, which formed part of the report. This agreement is to remain in force for one year from May 1, 1915, and thereafter,

unless terminated by 60 days' notice from either party to the other. During the investigation both parties to the dispute agreed to abide by the award, and all differences were thus satisfactorily adjusted.

Report of Board.

The text of the report of the Board in this matter is as follows:

The Honourable,
The Minister of Labour,
Ottawa.

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and in the matter of a dispute between the electrical workers of the City of Calgary and the Corporation of the City of Calgary.

SIR,—

We, the undersigned members of the Board of Conciliation and Investigation, duly appointed by yourself to investigate the dispute between the above parties, have the honour to submit the following report:

The number of men affected by this dispute is, as far as the Board can ascertain, apparently 75 directly, and 200 indirectly.

The chairman received his appointment together with the other documents constituting the Board on April 6. The two members, together with the parties to the reference, were then notified by letter to attend a meeting of the Board to be held at 2 p.m. of Tuesday, April 8. This meeting was duly held, but as it was then found that Mr. Pegg, one of the members, was absent from the city, the Board adjourned until such time as the chairman could get in touch with him and ensure his attendance. A discussion, however, took place with a view, if possible, of settling the dispute without further inquiry. It was unsuccessful. Each party to the reference were then asked to state in writing whether they would abide by the findings of the Board, and we are glad to say that both parties at the next meeting furnished an understanding (letters attached) to be bound by whatever decision the Board might come to. The representatives were also instructed to furnish proper credentials from those appointing them.

On April 9, in response to the chairman's wire to Winnipeg, Mr. Pegg replied that he would reach Calgary on April 12; accordingly a meeting was called for April 13, and further sessions were held on April 14, 15, 16, 17, 19, 20, 21, 22, 23, 24, 26, 27, 28 and 29.

The first subject in the dispute was that the city arbitrarily terminated the agreement between themselves and the electrical workers. The contention of the men that their old agreement stipulated that both parties should have met to decide as to their future relations appears to the Board correct. The city, however, having decided on economic grounds, to reduce the wages of all employees, and the reduction having been accepted by all except the electricians, were not disposed to discuss with these men any terms unless they first agreed to the proposed reductions.

On the evidence adduced the Board found that had the two parties thoroughly gone into the matter the probabilities are no dispute would have arisen.

The second subject in the dispute was the consideration of a new agreement or the continuation of the old.

On this point the city was very insistent that there should be no agreement. The mayor and commissioners were called and gave evidence, their main contention being:

- (1) That entering into an agreement with any class of labour was not advisable for a municipality.
- (2) That it was unnecessary as the city was quite willing to make proper rules and working conditions.
- (3) That the citizens did not want their utilities unionized.
- (4) That they had no agreements with any other class of labour.

On the part of the electrical workers the principal arguments were:

- (1) That the city had already recognized them by their previous agreements.
- (2) The class of work they were performing was particularly hazardous and required carefully drawn up working conditions both in the interests of the employer as well as the employee.
- (3) That the city had agreements with other classes of labour.
- (4) That the old agreement had been terminated because they would not agree to the reduction of their wages, whereas they had always been willing to submit to a reduction provided they had been permitted a hearing on the subject before it was put into force.

After hearing much evidence and a full discussion on the part of the representatives of both sides, the Board decided that an agreement should be entered into and that it should not be with the union, but between the city and the electrical employees of the City of Calgary.

The Board, having thus decided, proceeded next to the consideration of a new agreement. A proposal by the

chairman that the old agreement should remain in force was objected to by both parties and they each submitted drafts of agreements which they considered fair. The result was that an agreement had to be drawn up clause by clause, and hardly one clause passed without considerable discussion and much evidence being taken, as a consequence the sessions of the Board were prolonged to a much greater length than any of its members anticipated.

The attached agreement and wage scale the Board considers fair and just to both parties.

The third subject in the dispute reads as follows: "We protest against the reduction in salary of the electrical workers. We claim that the operation of this reduction discriminates against our members. We claim that the City of Calgary has locked out the electrical workers, and that such lockout is at present in force."

The representatives agreed to leave out that portion of their complaint referring to a lockout, consequently the matter was not referred to.

On Jan. 18, 1915, a special salaries committee, appointed by the City Council, brought in the following resolution:

"That the percentage of reduction of salaries be $7\frac{1}{2}\%$ from \$60.00 up to and including \$85.00; 10% from \$90.00 to \$100.00 inclusive, and $12\frac{1}{2}\%$ from \$105.00 up to and including \$125.00.

"That there be a reduction of 15% on the monthly salaries from \$130.00 to \$175.00 inclusive; 17% from \$180.00 to \$205.00 inclusive; 18% from \$210.00 to \$225.00; and 20% from \$230.00 and above. This reduction to take effect from the first of the year, and that the commissioners are instructed in making the adjustments on the percentage basis herein named to see that this percentage basis does not effect any inequalities in regard to salaries."

It worked out as follows:

PRESENT SALARY.		REDUCED SALARY.	
Per month.	Per year.	Per month.	Per year.
\$ 50.00....	\$ 600.00	\$ 50.00....	\$ 600.00

250.00....	3,000.00	200.00....	2,400.00
and over.		Adjusted by Commissioners.	

This was adopted by the Council and put into force on Jan. 18.

The electrical workers opposed this scale of reduction on the following grounds:

- (1) Because there was no necessity to economize in their department. It being a city utility competing with a private company. This department has accumulated large surpluses and lately has reduced the price of light to the consumers.
- (2) By having a graduated cut in the wages it discriminated amongst themselves. For example, a man who was worth \$1.00 more than another under normal conditions might appear worth only 75c more under the cut. They would prefer, therefore, the same percentage of cut in all wages.
- (3) That the city has not made the reduction apply to all its employees, notably the steam engineers.
- (4) The reduction is excessive as compared with reductions made by Provincial Governments and other cities and towns on similar grounds.

On behalf of the city it was stated:

- (1) That all the city departments had to be considered as one and the employees of each had to be dealt with alike whether the department was revenue-producing or not.
- (2) That present conditions due to the war and other causes made it imperative for the city to make the reductions.
- (3) That all other employees had accepted the reductions.

- (4) That they had done what they could to keep the men employed and they expected them to acquiesce in the matter which they consider unavoidable.

This matter of the reduction of wages gave the Board much trouble to decide mainly because they felt that all employees of the City of Calgary should receive the same treatment. The reduction in the salaries of the employees of the City of Calgary are undoubtedly greater than elsewhere, but the necessity of their being so we do not question as we received no evidence on that point. The Board decided, however, on the evidence adduced to make an alteration in the manner of reducing the wages of the electrical workers. This reduction follows closely the reductions to other city employees, and at the same time meets some of the reasonable objections advanced.

The finding of the Board in this matter is embodied in the wage scale which forms part of the attached agreement.

The above covers all the points in dispute, and in concluding this report the Board desires to state their appreciation of the manner in which both city officials and employees throughout the investigation evinced the greatest cordiality towards each other. In no instance were improper motives imputed by one side or the other.

We have the honour to be,

Sir,

Your obedient servants,

(Sgd.) G. E. SANDERS,

Chairman, Board of Conciliation.

Members:

(Sgd.) R. A. BROWN,

Representing City.

(Sgd.) JOHN B. PEGG,

Representing the Employees.

Schedule of Rules and Conditions Governing Electrical Employees of the City of Calgary.

THIS AGREEMENT made and entered into this first day of May, A.D. 1915, by and between the City Commissioners, together with the Electrical Department directly under their control, they to be known as the Party of the First Part, and hereinafter called the Commission, and the Electrical Employees of the City of Calgary, they to be known as the Party of the Second Part.

Witnesseth:

First. That, and in consideration of harmonious relations and settled conditions of employment with financial and personal relations mutually beneficial and the covenants and agreements hereinafter contained; the parties hereto do enter into and establish and agree to the following wage schedule and conditions of employment for a period of one year commencing May 1, A.D. 1915. and continuing in full force and effect after such period of time unless terminated by 60 days' notice in writing from either of the parties heretofore to the other, upon which the same shall be amended, cancelled or substituted as may be agreed upon by the parties heretofore.

Second. It is hereby agreed and understood that the electrical employees in the employ of the city are to receive the following wage conditions and terms of employment, and in return therefor are to render to the city honest and diligent service.

1. The following rules shall govern all employees in the City of Calgary engaged in the electrical trade, and all electrical work done by the city must be done by qualified electrical workers.

2. The city commissioners shall at all times receive a Grievance Committee from any department, provided they cannot get satisfaction from the departmental head.

3. The city agrees not to discriminate against any of its employees because of his connection with a trades organization.

4. (a) In these rules a foreman shall be an employee having the charge of four or more journeymen or twelve or more labourers.

(b) A sub-foreman shall be an employee having charge of less than four journeymen or twelve labourers.

(c) An employee having charge of a pole setting machine which takes the place of four or more linemen or twelve or more labourers shall be classed as a foreman.

(d) An employee shall not be classed or employed as a foreman or sub-foreman unless and until he shall have been engaged for at least four years in one or more branches of the electrical trade.

(e) A journeyman shall be an employee who shall have had at least four years' experience in one or more branches of the electrical trade.

(f) An apprentice shall be one who has worked at least three months' actual work at some branch of the electrical trade.

(g) Linemen shall have jurisdiction over all digging of holes, framing and erecting of poles, all stringing of overhead wires, hanging of all transformers, all arc lamps and fixtures, stringing of all aerial cable, wiring of all ornamental street lighting (except the lighting of subways and bridges), all temporary decorative streamers, all placing of fire alarm and police patrol boxes, and all overhead trolley work.

(h) All wires carrying a voltage of 650 volts or over shall be known and classified as high voltage wires.

5. Eight hours' work, from 8 a.m. till 12 noon and from 1 p.m. to 5 p.m. shall constitute a day's work.

6. (a) Work during any period of hours other than those mentioned in the preceding clause shall be considered as overtime, provided that maintenance men may work any nine consecutive hours out of 24 with one hour for lunch.

(b) Trouble men shall perform maintenance work and not be expected to do construction work. Trouble men working in excess of nine hours out of 24 hours shall be paid at the schedule rate of overtime.

(c) When it is desired to define what is meant by maintenance and construction in the preceding clause, reference shall be made to the distribution of accounts attached hereto. This will govern all electrical work done by the City of Calgary.

7. (a) The first five hours after the ordinary working hours, viz., between 5 p.m. and 10 p.m., shall be considered as being equivalent to one and one-half times the corresponding period of the ordinary working hours, and payment therefor shall be computed in that proportion on the basis of the wage schedule mentioned below.

(b) Maintenance men shall not be permitted to do construction work unless paid the regular wages for that class of work, and in the event of their being called upon to do construction work during hours that under this agreement would necessitate paying construction men overtime, they shall be paid overtime rates of construction men.

8. (a) Overtime other than that mentioned in the preceding sub-clause, viz., work commencing at or at any time after 10 p.m. up to 8 a.m., shall be considered as double time of the ordinary working hours, and payment therefor shall be computed in that proportion on the basis of the wage schedule mentioned below, with the omission of the time necessary for meals.

(b) In no case shall men receive payment for less than two hours' overtime (whatever be the actual period of work) for emergency calls between the hours of 5 p.m. and 8 a.m.

(c) All time worked on Sundays and Dominion holidays shall be considered as equivalent to double time of ordinary working hours and payment therefor shall be made accordingly.

(d) All men employed by the month shall be subject to reduction of wages for time lost.

9. All apprentices shall serve four years' actual work at the trade before they can be rated as journeymen. During the last twelve months of apprenticeship, apprentices shall be expected to do, if required, the same class of work as journeymen, provided, however, that they shall not be required to work on high voltage wires, except under supervision of journeymen linemen. The ratio of apprentices to journeymen in the electrical employ of the city shall be one apprentice to three journeymen, except in the case of inside wiremen and operators, when the ratio shall be one to one. The number of apprentices in any gang shall not exceed two unless warranted by a sufficient number of journeymen in that particular gang.

10. The journeymen in charge of service wagons shall receive sub-foreman's wages.

11. There shall be at least two journeymen working together when cutting through or making taps on high voltage wires, except on or in connection with a thawing or sanding machine.

12. In case of trouble on high voltage wires, at least two journeymen shall be sent out together to repair the trouble; provided, however, that one may be sent out alone to watch until another can be obtained.

13. Time of work on poles, timbers, bridges, towers or fixtures of an elevation of 90 feet or more from the point where such pole, timber, bridge, tower or fixture rests upon, is affixed to, or inserted into the ground, shall be considered equivalent to double the corresponding period of ordinary working hours, and payment therefor shall be made accordingly.

14. (a) All joining, splicing and connecting of lead covered cables shall be considered as belonging to and shall be done only by cable splicers, and all such work shall be done by cable splicers who are journeymen.

(b) The placing of flame proofing on cables shall be done under the supervision of a cable splicer, and in each case a cable splicer or his apprentice shall be present in the man-hole where the work is being done.

(c) A cable splicer shall not be required to work on cables where the difference in potential is over 300 volts between any conductor and the ground, unless assisted by another journeyman splicer.

(d) No cable splicer shall at any time be required or expected to work unless attended by another cable splicer or a helper, except on service connection work, when he shall be permitted to work alone.

(e) All cable splicers' helpers on hole work shall be journeymen linemen, and those on other works shall have worked at least two years as apprentice.

15. (a) At least one journeyman lineman and one journeyman cable splicer shall be present and the journeyman cable splicer shall be in charge of all gangs hauling in or laying underground cables on all pole work and on all pot-head work on poles or buildings.

(b) Cable splicers' work shall terminate at pot-head either on or in buildings or on poles.

16. (a) All station, sub-station and transformer room wiring and installing of electrical apparatus therein shall be done by journeymen.

(b) Sub-station wiremen working in excess of eight hours out of 24 hours shall be paid at the schedule rate of overtime.

17. Inside wiremen shall do all wiring and installing of conduit for lights in all buildings including power houses and sub-stations, on or in all subways and bridges and in all recreation and playgrounds, either temporary or permanent, and repairs for same, wiring for all motors and erecting of same (except in power houses and sub-stations), wiring and repairs for all branch telephone exchange work, all wiring for

lights, heating, bells and all repairs for same, and all channeling and cutting made necessary by the introduction of the foregoing.

18. All meters shall be installed by journeymen.

19. (a) In power houses and sub-stations, where there are three shifts, they shall be worked by what is known as a revolving watch, and in those stations where there is only one operator on a shift he shall not be permitted to do other than operating duties. Where there are only one or two shifts worked, any eight consecutive hours will constitute a day's work.

(b) No apprentice operator shall be allowed to take charge of any shift unless he has served at least three years at the trade.

(c) Any operator working over eight hours out of the twenty-four shall be paid for overtime at the schedule rates.

(d) Each relief operator shall have the same qualifications as the operator he relieves.

(e) The power house and sub-stations shall be classified as below:

Power house station (Victoria

Park) Class A.
7th St. sub-station (No. 1) ... Class B.
Nos. 2, 3 and 4 sub-stations.. Class C.

20. All monthly men shall receive one day off duty each week, and all monthly men having served continuously for one year shall receive two weeks' vacation on full pay of the ordinary time.

21. All line inspectors must be journeymen linemen.

22. All employees must be paid semi-monthly. Payment shall be made on or before the twenty-second day of each month for wages up to and including the fifteenth day of the current month, and shall be made on or before the seventh day of each month for wages due up to and including the last day of the preceding month, except monthly men who shall be paid not later than the second day of each month.

23. Nothing contained herein shall be construed as reducing or as an agreement to reduce the payment of an employee of the city now getting a higher rate of pay.

Wage Schedule.

The wage schedule as set forth below shall govern the payment of all men working under this agreement. This scale of wages, however, shall be subject to a reduction of $7\frac{1}{2}\%$ on all whose full monthly salaries are \$90.00 or less and 10% of all salaries in excess of \$90.00 per month. The reduction to remain in force one year from the date of this agreement unless in the meantime the city remove the reduction imposed on other city employees, in which case this reduction shall also cease.

Superintendent of construction	.. \$150.00 per month.
Superintendent of maintenance	.. 150.00 per month.
Line foreman	... 5.25 per day.
Sub-foreman	... 5.00 per day.
Line inspector	... 5.00 per day.
Journeyman lineman	... 4.50 per day.
Apprentice lineman—1st year	... 3.00 per day.
2nd year	... 3.50 per day.
3rd year	... 4.00 per day.
Maintenance foreman	... 125.00 per month.
Maintenance sub-foreman	... 115.00 per month.
Journeyman, Light, Power and Traction Department maintenance (nine hour shift)	... 105.00 per month.
Arc light trimmers	... 75.00 per month.
Foreman, Meter Repair Department	... 125.00 per month.
Apprentice meter repairmen—	
1st year	... 75.00 per month.
2nd year	... 80.00 per month.
3rd year	... 90.00 per month.
Journeyman meter installer	... 105.00 per month.
Cable foreman	... 6.00 per day.
Cableman	... 5.50 per day.
Station wireman	... 4.50 per day.
or	... 115.00 per month.
Apprentice station wireman—	
1st year	... 75.00 per month.
2nd year	... 85.00 per month.
3rd year	... 95.00 per month.
Inside wireman60 per hour.
Inside wireman, apprentice—	
1st year25 per hour.
2nd year35 per hour.
3rd year45 per hour.
Chief wiring inspector	... 135.00 per month.
Wiring inspector	... 110.00 per month.
Groundmen working with line gangs40 per hour.
Operators (working in Class A station)	... 100.00 per month.
Operators (working in Class B station)	... 90.00 per month.
Operators (working in Class C station)	... 80.00 per month.

station)	... 80.00 per month.
Men in charge of police patrol and fire alarm	... 125.00 per month.
Fire alarm maintenance	... 100.00 per month.

Distribution of Accounts, Materials and Labour Chargeable to Construction and Maintenance Accounts.

CONSTRUCTION.

No. 1—Poles.

Charge to this account all poles, cross-arms, cross-arm braces, lag screws and pins, when used in new construction; all labour in digging and setting poles; cost of the required tools; conveyance charge.

No. 2—Overhead Lines.

Charge to this account all insulators, tape, and all wire used on all running primaries and secondaries; also guy wire, guy clamps, anchor rods, slugs and other material, when used in new construction; all labour in connection therewith; cost of the required tools; conveyance charge.

No. 3—Service.

Charge to this account transformers, cut-outs, cut-out plugs, fuse wire, transformer oil, tape, solder, past required, wire and other material used in installing transformers; also all labour in connection therewith hanging transformers and half the cost of the necessary blocks and tackle, and required tools; conveyance charge.

No. 4—House Connections.

All wire run as light service, tape, knobs and screws, side blocks and insulators, nails, loom, tubes, meter screws, ladders and other necessary tools.

No. 5—Power Connections.

All wire run as power service, including the required material in making power connections, except meters and current transformers.

No. 6—Meter Account, Lighting.

All meters for lighting purposes, including current transformers.

No. 7—*Meter Account, Power.*

All meters for power purposes, including current transformers.

No. 8—*Meter Account.*

Flat rate limit meters.

No. 9—*Street Lighting.*

All wire run as street lighting circuits, pins, insulators, side blocks, nails, screws, are lamps, are lamp cut-outs, are lamp hangers, chain and locks, eye bolts, hooks, strain bolts, tungsten lamp hangers, etc., incandescent standards, fixtures and wiring, including globes, carbons, etc., to make complete installation.

No. 10—*Underground Construction.*

Charge all labour and material in laying ducts, man-holes, catch boxes, man-hole covers and other materials used in constructing underground conduit.

No. 11—*Underground Conductors.*

All underground wire run as primary or secondary; required tools for drawing in cable, wiping and insulating compounds, etc.; also labour pulling cable in.

No. 12—*Underground New Service.*

Charge to this account all transformers, cut-outs, fuse wire, wiping and insulating compounds, transformer oil, required wire and other material used in installing underground transformers; also all labour in connection therewith.

No. 13—*Underground Light Connections.*

All material required in laying duct or pipe wire.

No. 14—*Underground Power Connections.*

All material required in laying duct or pipe wire and all other material used in making power connections, not including transformers and meters.

No. 15—*Sub-stations.*

All material and labour in completing sub-stations as a building; heating and plumbing.

No. 16—*Sub-station Equipment.*

Transformers, switch-boards and controlling devices to complete sub-station equipment.

MAINTENANCE.

No. 20—*Maintenance to Poles.*

Charge to this account all labour and material used in changing and re-setting poles, replacing or repairing cross-arms, cross-arm braces, lag screws and pins, when used in repairing or altering construction lines; also cost of the required tools; conveyance charge.

No. 21—*Maintenance to Overhead Lines.*

Charge to this account all labour and material used in replacing wire, guy wire, guy clamps, anchor rods, slugs and other material used in repairing or altering construction lines; also cost of the required tools; conveyance charge.

No. 22—*Maintenance to New Services.*

Charge to this account the cost of transformers replacing others burned out, defective or removed for want of repairs, or for other reasons; replacing cut-outs, cut-out plugs, fuse wire, tape, transformer oil, and other or any material used in replacing transformers; also of the cost of troublemen's salary and conveyance charge; also labour in hanging transformers.

No. 23—*Maintenance to House Connections.*

All labour in connection with making light connections and installing meters and cutting out and removing meters, and conveyance, removing services, etc.; also cost of the troublemen's salary and conveyance charges; fuse plugs.

No. 24—*Maintenance Power Connections.*

All labour in making and cutting out power connections and power meters;

conveyance charges; also of the cost of troublemen's salary and conveyance charges; fuse plugs.

No. 25—*Maintenance Meter Account, Lighting.*

Testing meters; Government.

No. 26—*Maintenance Meter Account, Power.*

Testing meters; Government.

No. 27—*Repairs to meters.*

Meter repair parts; other material; labour; adjusting limit meters; instruments; calibrating meters; labour.

No. 28—*Maintenance to Arc Lamps.*

Replacing arc lamps; arc lamp repairs; arc lamp carbons; arc lamp globes; renewals to chains and locks; renewals to fixtures; rubber gloves, rope, hooks, etc.; painting lamps and fixtures; also charges of the cost of arc trimmers' salary and conveyance charges.

No. 29—*Maintenance to Ornamental Magnatite Street Lighting.*

Replacing arc lamps; replacing arc lamp repairs; replacing arc lamp carbons; replacing arc lamp globes; renewals to standards, brackets and fixtures; painting standards, brackets and fixtures; rubber gloves, etc.; also charges of the cost of arc trimmers' salary and conveyance charges.

No. 30—*Maintenance to Tungstens.*

Lamp renewals, mica tips, lamp repairs, repairs to fixtures, painting standards and fixtures, etc.; also charges of the cost of arc trimmers' salary and conveyance charge.

No. 31—*Maintenance to Ornamental Tungsten Street Lighting.*

Lamp renewals, mica tips, lamp repairs, repairs to fixtures, standards, brackets, etc.; painting standards, etc.; also charge of the cost of arc trimmers' salary and conveyance charges.

No. 32—*Maintenance to Incandescent Street Lighting, Subways and Bridges, etc., etc.*

Lamp renewals, globes, cages, repairs to fixtures, painting fixtures, etc.; also

charges of the cost of arc trimmers' salary and conveyance charge.

No. 33—*Maintenance to Underground Construction.*

All labour and material repairing underground construction.

No. 34—*Maintenance to Underground Conductors.*

All material and labour required in replacing and repairing underground conductors.

No. 35—*Maintenance to Underground New Services.*

All transformers replacing burned out transformers, or for other reasons; required material and labour.

No. 36—*Underground Light Connections.*

All labour in installing and cutting out meters and connections.

No. 37—*Underground Power Connections.*

All labour installing and cutting out meters and connections.

No. 38—*Maintenance to Sub-station Equipment.*

All material and labour in repairing sub-station equipment, unless otherwise provided for.

No. 39—*Maintenance to Sub-stations.*

All labour and material in repairing sub-stations.

INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS.

Local 348, Calgary, Alberta.

Sec. 348.

Labour Temple, Calgary,
Monday, April 12, 1915.

To the members of the
Arbitration Board.

DEAR SIRS,—

We, the Local Union 348 I. B. E. W.,

hereby bind ourselves to accept the decision of your Board.

(Sgd.) F. A. DUNN,
President.
(Sgd.) J. C. ELLENDER,
Secretary.

CITY CLERK'S OFFICE,

Calgary, Can.,
April 13, 1915.

Col. Sanders,
Police Headquarters,
City.

DEAR SIR,—

I beg to advise you that the City Council last evening, in considering the communication of E. G. Guinn and R.

D. Wagner, representing the International Brotherhood of Electrical Workers, Local No. 348, in which it was requested that the city agree to be bound by the decision of the Board to arbitrate the difficulties which have arisen between the International Brotherhood of Electrical Workers, Local No. 348, and the City of Calgary, concurred in the request of Messrs. Guinn and Wagner, and instructed that I be authorized to forward the Council's action in this respect to the Local Committee.

I trust that the above action of Council, and as communicated in this letter, will meet with your approval.

Yours truly,

(Sgd.) J. M. MILLER,
City Clerk.

(JMM/EBS)

**J. D. McARTHUR & CO., LTD., AND SHOP EMPLOYEES OF THE
EDMONTON, DUNVEGAN AND BRITISH COLUMBIA RAILWAY AT
WEST EDMONTON, ALTA.**

The report of the Board of Conciliation and Investigation in the above matter was received by the Minister on May 20, but through an oversight was not published in the ensuing issue of the *Labour Gazette*, and is therefore presented herewith.

In the application it was stated that the dispute grew out of a proposed reduction by the company of 25 per cent in the wages of the employees concerned without the customary notice having been given. It was stated also that this reduction affected 127 workmen. Prior to the establishment of a Board the consent of both parties concerned was obtained, the dispute coming under section 63 of the Act. The personnel of the Board appointed to deal with this matter was as follows: Honourable Mr. Justice J. D. Hyndman, Edmonton, Alberta, chairman, appointed on the recommendation of the other members of the Board; Mr. O. M. Biggar, K.C., Edmon-

ton, Alberta, the company's nominee; and Mr. Wm. MacAdams, Edmonton, Alberta, the employees' nominee.

The report of the Board was unanimous and embodied a scale of wages which the Board considered fair to both sides. Early in the Board proceedings both sides had agreed to accept the award, and the matters in dispute were thus amicably settled.

Report of Board.

The text of the report of the Board in this matter is as follows:

IN THE MATTER of the Lemieux Act and in the matter of the dispute between the J. D. McArthur Company Limited and its employees, being shop employees.

The Board appointed under the above Act for the purpose of determining this

dispute met on the 15th, 16th, 19th and 27th of February and on the 6th and 10th of March, 1915, and a discussion proceeded between the members of the Board and the representatives of the parties with a view to reaching an agreement with regard to the question of wages. Progress was made in the direction of making such an agreement, and at the hearing on the 13th of March, 1915, the parties agreed in writing that they would abide by the findings of the Board. It was also agreed that two questions, namely:

1. The question of whether or not the scale of pay awarded by the Board should refer back to the 2nd of November; and
2. The question of whether or not overtime should be paid;

should be determined by the Board according as they should decide whether there had been a strike or a lock-out with respect to the first question, and with regard to the second question whether it was the usual practice for shop employees in the employ of railway construction companies to be paid overtime. The Board then held further hearings on the 18th and 19th of March and hearings were concluded on the 22nd of March, 1915.

On the question of whether or not the men voluntarily quitted work and walked out the evidence clearly establishes the fact that they did so. The minutes of their meeting held on the 8th day of November shows this conclusively, otherwise they would not have placed themselves on record by the motion they adopted of having committed an infraction of the provisions of the Lemieux Act. Hence it follows that the claim of the men that the rate of wages to be fixed by the Board should relate back to the 1st of November cannot very well be sustained.

As to the claim for overtime the evidence seems to us to be strongly in favour of the company's contention, viz: that overtime is not as a rule paid on

railways in course of construction. The only evidence in favour of the men was that of the witness Hawker who worked in Mackenzie & Mann's shops at North Battleford during construction of the Canadian Northern Railway. But he appears to have been the only workman in the shops at the time and we think this must be regarded in the light of a special case. The rest of the evidence seems to be entirely the other way. Then what in our opinion is a very important point is the fact that the men themselves have all along been working without any arrangement as to payment of overtime. If it had been the usual practice, would the men have overlooked the absence of it in their case for so long a period? We do not see, therefore, upon what grounds the Board would be justified in awarding overtime in the case before us.

There remains to be decided, therefore, only the fixing by the Board of what would be fair wages for the employees under all the circumstances. Both parties having submitted to the decision of the Board, we are of the opinion that the following schedule would be fair and reasonable to both sides to the dispute under all the circumstances, namely:

	Old rate per hour.	Deduct %	New rate fixed by Board.
Boilermakers	48.5	10	43.5
Machinists	47.	10	42.5
Tinsmiths	30.	10	27.
Blacksmiths	47.	10	42.5
Painters	38.	10	34.
Carpenters	30.	10	27.
Pipe fitters	38.	10	34.5
Car repairers	27.	10	25.
Handymen	32.	10	28.5
Boilermaker's helper . .	30.	10	27.
Machinist's helper . . .	25.	..	25.
Blacksmith's helper . .	30.	16	25.
Pipe fitter's helper . . .	20.	..	20.
Stationary firemen . .	\$65 per mo.		\$65

The Board, therefore, awards the rates of wages in the third column mentioned above, this scale to be taken to have been in effect and payment to be made according to it from the 1st day of February, 1915. This award is made on the understanding that when a final operating order has been obtained in respect of the line of railway in question the rail-

way will concede a standard agreement covering the employees in question similar to the agreements in force on other operating railways in Edmonton at the time in question.

The Board has been particularly pleased to observe the good feeling that exists between W. R. Smith, the general manager of the company, and the employees and places full reliance upon Mr. Smith's assurance that as a result of the dispute in question no discrimination

will be exercised against the men who have been active in connection with this dispute.

(Sgd.) J. D. HYNDMAN,
Chairman.

(Sgd.) O. M. BIGGAR,

(Sgd.) WILLIAM MACADAMS.

To the Honourable,
The Minister of Labour,
Ottawa.

ANNUAL CONVENTION OF THE TRADES AND LABOUR CONGRESS OF CANADA.

THE thirty-first annual convention of the Trades and Labour Congress of Canada was held in Labour Temple, in the City of Vancouver, B.C., from September 20 to 25. The opening exercises were presided over by Mr. J. H. McVety, president of Vancouver Trades and Labour Council, who welcomed the delegates on behalf of organized labour of the city. Mr. Alex. Watchman, president of the B. C. Federation of Labour, extended a welcome on behalf of the organized labour movement of the province. Mayor Taylor welcomed the delegates on behalf of the city. Others who took part in the opening proceedings were Hon. T. W. Crothers, Minister of Labour; Hon. W. J. Bowser, Attorney-General of the province of British Columbia; Mr. H. J. Conway, of Lafayette, Ind., fraternal delegate from the American Federation of Labour, and Mr. Andrew Furuseth, of San Francisco, Cal., president of the International Seamen's Union of America. Mr. J. C. Watters, president of the Congress, replied to the addresses of welcome.

Hon. W. J. Bowser, Attorney-General of British Columbia, stated during the course of his address that the Government had decided to delay the passage of the new Workmen's Compensation Act until such time as a commission had visited the principal centres in the United States and Eastern Canada and

gathered information on which to base an Act, which he hoped would be the best of its kind. The commission would consist of one representative of the Government, one of the employers and one of the working class. He suggested that the labour representative should be selected by Congress, and in case that was done the Government would accept the nominee as a member of the commission, provided only that he was a British Columbia man.

The first report of the credentials committee showed 179 delegates entitled to seats at the convention. Later three additional were presented and accepted. Of these one was fraternal delegate, one represented a provincial federation of labour, 25 international organizations, 16 trades and labour councils, and 139 local unions. Mr. James Simpson, of Toronto, was appointed assistant secretary.

Report of Executive Council.

Following is a summary of the principal subjects dealt with in the report:

Interview With Dominion Government.

On January 15, 1915, the Executive Council, accompanied by other representatives of organized labour, met the Government and presented the desires of labour as set out by the convention held

at St. John last year. The matters brought to the attention of the Government were as follows: Industrial Disputes Investigation Act and amendments thereto; unemployment; technical education; old age pensions; the institution of a system of national banks by the Dominion Government, with the sole right to issue money; immigration; eight-hour day on Government works; extension of the Fair Wages Resolution to all trades and to include steamship companies subsidized by the Government; registration of union labels; amendments to Shipping Act that will secure a greater measure of safety to men employed as longshoremen; bi-weekly payment of wages on railways.

The War.

Reference is made to the pronouncement of Congress on this question at the convention held last year, and while reaffirming the stand taken at that time, goes on to state: "The entire situation as affecting the labour interests of all nations to-day must be considered in the light of what has since transpired. . . . Three facts stare us in the face and challenge our attention at this very critical time. The first is that this war cannot be stopped, according to the pronounced determination of leading statesmen in the various Governments of the Allies, until constitutional freedom and democracy are triumphant over military autocracy. The second is that when this war ends there will be a general congress of the nations summoned to fix the conditions of a permanent peace. The third is that while the war lasts it behooves the labour organizations in all lands to continue, uninterrupted, their efforts to preserve that mutual understanding and constant co-operation by means of which they will be prepared to resume their heretofore onward and upward course under the sway of peace for all years to come. . . . Under existing conditions it becomes the duty of the labour world to lend every assistance possible to the Allies of Great Britain, and for us in Canada more especially to the empire of

which we form part, in a mighty endeavour to secure early and final victory for the cause of freedom and democracy." Attention is drawn to the action taken by the American Federation of Labour and the General Confederation of Labour of France declaring in favour of an international congress of labour at the close of the war, Congress to take steps to co-operate with all labour organizations, both American and European, in furtherance of this object.

Conscription.

Disapproval of the system is urged. The report states in part: "It is the duty of Labour to lend every possible assistance in the strife; but that help must be free, not forced; it must be dictated by duty and not by coercion; it must be the outcome of loyal affection for the Mother Country, for this Dominion, and for those whose fates hang in the balance, and not the product of the lash, hunger or the legalized enforcement of a people." Congress is asked to register its unchangeable opposition to all that savours of conscription, either here or within the Empire.

Workmen's Compensation.

The measures recently passed by the Legislatures of the provinces of Nova Scotia and Ontario were commended and the Executive Committees of each of the other provinces were urged to give this question careful study and put forth their best efforts to secure the passage of equally favourable legislation. It was also recommended that in all workmen's compensation, legislative provision should be made for placing the medical expenses of injured workers either on the State Insurance Fund, or in the case of individual liability on the employer direct.

Unemployment.

It was suggested that a special committee be appointed on the first day of the convention to get views on this mat-

ter from every province, the committee to outline a policy to be adopted from a national, provincial and municipal standpoint.

Disposal of Interned Aliens.

The Executive Council views with alarm the release, at the conclusion of the war, of the large number of men now held in the various detention camps, and states: "The labour of thousands now employed in Canada in the manufacture of war munitions and supplies will be dispensed with; thousands more will return from Great Britain who are now employed at similar work, and thousands will return from active service, to each of whom the right to work and live in comfort should be guaranteed. Many more thousands will be unemployed and great suffering is likely to result therefrom."

Old Age Pensions and Pensions for Mothers With Children.

The Council recommends a continuance of previous efforts to secure suitable legislation along these lines.

Care of Disabled Soldiers and Dependents of Those Killed.

It was recommended that the incoming Executive Council be instructed by the convention to urge upon the Government the adoption of a better pension system for the private soldier disabled, and his dependents when killed, and the establishment of a National Pensions Board to administer the pensions system, and to urge that every provision possible be made to have the State recognize its proper obligation to the rank and file.

Other matters dealt with were: Wages paid on the manufacture of war munitions in Canada, free municipal employment bureaus, and technical education.

Report of Provincial Executive Committee.

The various matters engaging the attention of Provincial Executive Committees is summarized from the reports as follows:

Saskatchewan.

On April 25, 1915, the Executive Committee interviewed the Provincial Government and submitted the following questions for consideration:

(1) Casualty Insurance under Government control for employees entitled to compensation under the Saskatchewan Compensation Act to be administered by a commission appointed by Government.

(2) Minimum wage for females to be at least \$8.00 per week.

(3) An Act to promote the health of working girls and women (or an amendment to the Factories Act).

An Act to provide for weekly half holiday for all shop employees.

(4) Amendment to Railway Act—to provide shelters for carmen.

That all switches leading to repair tracks be equipped with derailing device.

That Section 237 of the Railway Act be left intact.

(5) Abolition of election deposit and election day to be declared a public holiday.

(6) That the regulations asked for by the electrical workers for their protection, previous to last session, be enforced under the Order in Council passed at the last session of the Provincial Legislature.

(7) That Government enact a law providing for an eight-hour day on all Government work.

(8) Amendments to "Cities Act."—Strike out all of Sec. 112, Clause 4, page 26, Revised Statutes.

(a) If a voter does not vote for full number of candidates for an office that he is entitled to, his ballot will be void, in so far as it relates to that office, and will not be counted for any of the candidates for that office.

(b) Sec. 312. Payment of poll tax to register the person of whom such tax is paid on voters' list automatically.

(c) Exemption of income tax to be raised from \$1,000 to \$2,000.

(d) That in cities of 20,000 or over the remuneration for aldermen to be at least \$500 per year.

(9) Re provision to assist those taking up land.

(10) Equal suffrage.

(11) That the Government publish a pamphlet explaining the laws and regulations surrounding the employment of farm help, to be distributed through the labour bureaus.

(12) That the Saskatchewan executive, on behalf of the working class in this province, impress upon the Provincial Government the necessity of immediate action to cope with the unemployed situation.

Reference is made to the enactment of a law granting women the franchise in municipal elections, and to the law "Abolishing the Bar." Assistance to those taking up land is urged upon the Government in the way of providing machinery, seed, etc. Congress is requested to endeavour to find some solution for the unemployment problem.

Manitoba.

A deputation representative of the Executive Committee and Winnipeg Trades and Labour Council waited on the Provincial Government on February 6, 1915, and submitted the following legislative demands:

(1) The enactment of legislation similar to the Ontario Workmen's Compensation Act.

(2) The creation of labour bureau.

(3) To provide machinery for the enforcement of the Shops Regulation Act, or that the Act be incorporated with the Factory Act.

(4) For the enforcement of the Act prohibiting the employment of white females in certain capacities by Orientals.

(5) Abolition of the election deposit and the substitution therefor of petitions signed by a given number of bona fide electors.

(6) That a day's work for all motormen and conductors employed by or on behalf of an electric railway corporation shall not exceed nine hours; that the work schedule shall be so arranged by the employer that these hours of work shall be performed within 12 consecutive hours; and that all electric cars shall be in charge of two men—a motorman and a conductor.

(7) Requiring the licensing of all persons employed as barbers in the province; to appoint a Board of Commissioners to determine fitness of applicants, and to regulate the operation of barber shops in the interest of public health.

Regrets were expressed that the Government had failed to carry out its promise in regard to a better enforcement of the fair wages regulations.

Ontario.

On December 22, 1914, the Executive Committee waited on the members of the Provincial Government and laid before them the following legislative demands:

(1) Appointment of foundry inspector, to be selected from the membership of the Moulders' Union.

(2) Amendment to The Factory Act providing for more efficient exhaust system in the metal polishing industry.

(3) Better protection of employees and the public in theatres, through a better system of fire escapes, operation of switch boards controlling electrical effects, sanitary conveniences, and a proper counter-weight system.

(4) Abolition of the home work system in the making of clothing.

(5) Fixing of an age under which the employment of messenger boys shall be unlawful.

Regulation of hours, work, and weight of parcels to be carried, etc.

(6) Improvement in the means of protecting the health of employees in printing offices and other places where linotype and type-casting machinery may be used.

(7) An Act respecting the protection of electrical workers.

(8) Respecting the inspection and repairing of buildings, authorizing inspectors to order repairs and improvements.

(9) Abolition of private detective agencies.

(10) Establishing of lunch rooms in factories, workshops, etc.

(11) Adequate heating of vestibules on street cars, etc.

(12) Operation of electric railways. Two men in charge of each car.

(13) Thirty days' training for motormen and conductors on electric railways.

(14) Regulating the number of hours constituting a day's work for motormen and conductors.

(15) Granting of local autonomy to municipalities in system of taxation.

(16) Sanitary plumbing.

(17) System of determining age of children in factories, shops, etc.

(18) Moratorium for relief of wage-earners in meeting payments on mortgages in purchase of homes.

(19) The interpretation of Fair Wages Clause in Government contracts.

(20) Unemployment and the necessity of the Government dealing with the problem.

(21) The superimposing of wallpaper upon old and unsanitary paper.

(22) Providing for the disinfection of workmen and their clothing when engaged in cleaning and renovating hospitals and similar institutions.

Congratulations were extended to Hamilton Trades and Labour Council for the agitation created in favour of the abolition of property qualification in municipal elections. Reference was made to the appointment by the Provincial Government of a commission to enquire into unemployment matters and to report on methods of relief.

Quebec.

On January 23, 1915, met the Prime Minister and other members of the Government and presented the following resolutions for consideration:

(1) A resolution seeking to limit the weight a boy might transport by hand or push cart through the city streets, and further limiting the hour to which a messenger boy under the age of 18 years may legally remain at work to six o'clock in the evening.

(2) A measure seeking to better regulate conditions in factories and establishments where products dangerous to the health of the workers are either manufactured or handled.

(3) A similar resolution as No. 2, having its objective the same purpose as applied to the dangerous fumes arising from linotype machines, type-casting machines, cauldrons and other forms of melting pots.

(4) A resolution aiming to extend the field of operation of the department supervising rigging and scaffolding, to embrace efficiently the rural as well as the city districts.

(5) A resolution aimed at closing the bakery as an institution from doing business from midnight Saturday to midnight Sunday.

(6) A resolution asking for the standardization of the weight of a loaf of bread to insure fair measure.

(7) A resolution demanding uniformity in school books, and that these be sold at cost price, pending the day when they may be distributed free of cost.

(8) A resolution demanding that all citizens, irrespective as to whether they may be property owners or not, be entitled to vote on the selection of school commissioners.

(9) A resolution asking the Government to establish a system of agricultural credit to stimulate agriculture.

(10) A resolution demanding the abolition of the practice of making of clothes in the homes of wage-earners.

(11) A resolution seeking to guard the rights of those workers who have been property buyers by the institution of the moratorium to remain in force during the period of the war.

(12) A resolution seeking the abolition of all private detective agencies.

(13) A resolution making it illegal for any institution whatsoever to force private compulsory insurance upon their employees.

In addition to the above an important memorandum was presented asking for the appointment of a commission to study the all-important question of providing an adequate Workmen's Compensation Act for the province. The result of the efforts of the committee during the year were reviewed and described as satisfactory under the extraordinary conditions prevailing.

Nova Scotia.

The report of the committee is given over chiefly to a review of the Workmen's Compensation Act passed at the last session of the Legislature of the Province of Nova Scotia. The Act is described as being based on modern principles. Other labour measures secured at the session were an amendment to the Factories Act, providing for sanitary and safety regulations in and about moulding shops, etc.; consolidation of the various mechanics' lien laws; the adoption of a fair wages resolution to apply to all work carried on by or on behalf of the province; an Act to establish a bureau for the purpose of supplying school books at the lowest possible cost. In connection with this Act it is claimed that a set of text books now costing \$1.89 will be supplied by the Government Bureau, under the new system, for 49 cents.

New Brunswick.

The lobbyist attending the sessions of the Provincial Legislature reported that the following matters had been brought to the attention of the Government:

Amendments to Factories Act, providing for more sanitary conditions and shortening work day.

Providing for more adequate plumbing inspection in the city of St. John by the appointment of a practical man as inspector.

Asking for entire change in the principle of the present Compensation Act.

Training of new men as motormen or conductors on street cars to be not less than 14 days.

Request that the union label be placed on all supplies purchased by the Government.

Providing for Government control over the operation of detective agencies.

Opposing compulsory insurance system by employers in any industry.

Asking for amendment to the Workmen's Lien Act to provide lien of insurance on buildings covered by present Act.

Asking that present Fair Wages Act be amended and a clause covering wages be inserted in contracts.

Legislation providing for medical and dental examination of school children periodically.

Legislation secured during the session was: An amendment to the Workmen's Lien Act along the lines suggested

above; a law to provide better safeguards around hotel fire escapes and the lighting of these at night; the right to married women owning property in the city of St. John to vote at civic elections. At the convention of the New Brunswick Federation of Labour held at Moncton on the first and second of July last it was decided to meet annually in future at Fredericton during the session of the Legislature.

British Columbia.

The executive officers of the British Columbia Federation of Labour met the Government during the session of the Legislature and presented the following matters for consideration:

Workmen's Compensation legislation.

Amendments to the Coal Mines Regulation Act to provide for the payment of mines inspection by the Government and election of same by miners in locality; to provide for first aid corps and for ambulance boxes in all working places; to provide for the competency of gas committees.

An amendment to the Truck Act to provide against men being compelled to live in company houses and to purchase from company stores.

Examination of plumbers and to provide for registration of same and the enforcement of sanitary conditions.

The enactment of a law covering the inspection of all construction and installation of all electrical work, power stations, pole lines, etc.

To make it illegal for Orientals to employ Caucasian women.

To have all text books, etc., printed at the Government printing plant.

To amend Municipal Clauses Act to give cities and municipalities power to regulate the hours of opening and closing of barber shops; to give cities and municipalities power to invest their sinking funds in short time debentures of their own.

To bring all factories under the Factories Act, irrespective of the number of employees.

The protection of the workers under the proposed moratorium.

The enforcement of a minimum wage of three dollars per day on all Government work and on work subsidized or assisted by the Government.

The question of the inspection of winches, derricks, etc., in places where longshoremen are employed, and the organization of the timber workers of the province were taken up with the Executive Council of Congress. The measures enacted at the last session of the Legislature of interest to labour were:

Amendment to Masters and Servants Act giving men the right to elect their medical practitioner, the employer to collect any sum decided upon for medical attendance and to pay such sums to medical practitioners.

Amendment to Municipal Clauses Act giving cities and municipalities power to inspect the sanitary condition of barber shops and to regulate the opening and closing hours.

An Act for the protection of workmen engaged in industrial occupations.

Making provision for first aid corps and for ambulance boxes in places where more than 30 are employed when over six miles from a medical practitioner.

Alberta.

The executive officers of the Alberta Federation of Labour submitted a list of the matters brought to the attention of the Government of that province in the month of October last year.

(1) Amendments to the Theatres Act to provide for the examination of applicants for licenses as operators as to their competency; also measures of public safety.

(2) New Factories Inspection Act, covering sanitation and ventilation of workshops and factories.

(3) An Act governing electrical construction for public safety.

(4) Legislation providing for the administration of the marriage contract by civic officials.

(5) Fair wages clause in all Government contracts.

(6) Bi-weekly payment of wages in cash or certified cheque.

(7) New Compensation Act, as outlined in petition already submitted to the Government.

(8) Adult franchise in school district and municipal elections.

(9) Legislation making it compulsory to place the union label on all Government printing.

(10) That medical, optical and dental treatment be made free to all school children; that compulsory vaccination of school children be dispensed with.

(11) The prohibition of employment of children under 16 years of age in all industries.

(12) Prohibition of employment of white girls by Orientals.

(13) Amendments to the Building Trades Protection Act.

(14) Legislation covering all men engaged in rescue work in the mines of the province by the Workmen's Compensation Act, and to provide for the payment of rescue teams during the course of training.

(15) Amendment regarding the appointment of check measures and mine inspection committee.

(16) *Re* the matter of the present distressing conditions of unemployment and necessary measures of relief.

(17) Amendments to the Masters and Servants Act.

Unemployment conditions and methods adopted to relieve distress were set out very fully. An amendment to Edmonton City charter gave the franchise to women over 21 years. It was stated that the free municipal employment bureaux established in the cities of Alberta has had the effect of practically eliminating private bureaux.

Other Reports.

Parliamentary Representative.

Mr. J. C. Watters, president of the Congress, presented a report covering a summary of the matters dealt with during the year, the principal subjects being: Occupational diseases; theoretical and practical training of apprentices in the shops of the I. C. R.; workmen's compensation in cases of injury or death on the I. C. R.; working conditions on Welland canal; wages paid on shell contracts for the British Government; transfer of mechanics to Great Britain; deportation of immigrants; unemployment; peaceful picketing; semi-monthly payment of wages on railways to apply to commercial telegraphers; compulsory insurance; employment of Asiatics underground; registration of union labels. Considerable space is devoted to a resume of various matters of interest to labour that came before Parliament at the last session.

Fraternal Delegate to the American Federation of Labour.

Mr. R. A. Rigg, of Winnipeg, Man., presented a report of the work of the convention held at Philadelphia, Pa., from November 9 to 22, 1914. The matter most prominently brought to the attention of Congress was the resolution presented by President Gompers on the war, conveying fraternal greetings and sympathy with their great suffering and distress to the organized labour movement of Europe, and suggesting that an international labour congress be convened when peace is declared. The secretary's report showed the member-

ship of the Federation to be 2,020,671. The receipts for the year amounted to \$263,166.97, and the expenditure to \$265,737.21, leaving a balance in the treasury of \$102,492.81.

Immigration.

Mr. W. R. Trotter, of Vancouver, B.C., reported that migration affecting Canada during the past year had been mainly outward. British returns for 1914 showed a decrease of immigration to Canada of 59 per cent. The head tax on Chinese was declared to be ineffective as a check on immigration and that exclusion was the only effective measure. It also advocated the adoption of a literacy test for all immigrants, stating that too large a proportion were of the illiterate class.

Secretary-Treasurer.

The financial statement of Mr. P. M. Draper showed the total receipts from all sources to be \$13,557.05, and the total expenditure \$11,542.87, leaving a balance for the year of \$2,014.18. In addition to this a reserve fund of \$10,000 is on deposit in the Royal Bank of Canada at Ottawa. The total membership affiliated with the Congress on September 1 was 71,419, a decrease during the year of 8,675. It was stated that enlistment for service in the war was largely responsible for the decrease in membership.

Western Representative.

Mr. W. R. Trotter, who had been delegated to visit the western affiliations in the interests of Congress, reported on the conditions prevailing at the various places visited. The report concludes with the statement that "taking all factors into consideration there can be no manner of doubt as to the value of personal visitations of the various centres, even under such conditions as now prevail. All things considered the general position of trades unionism in Western Canada is cheering." It is stated that

while memberships have decreased, charters are not being surrendered.

Committee on Officers' Reports.

The committee concurred in the reports as a whole and recommended as follows: That the Executive Council again present the demands of Congress to Parliament; that the Executive Council keep in communication with the British Trades Congress and other colonies of the British Empire and act with them toward the formation of a Federation of Nations; that the Council be instructed to co-operate with American and European labour bodies toward the formation of a Federation of Nations on the cessation of hostilities; that Congress reaffirms the stand taken in previous conventions in regard to war; the Manitoba Executive was complimented on the progress labour has made in the election of labour representatives to public bodies; Hamilton Trades and Labour Council was commended for the stand taken on the abolition of property qualification for public office, and the Ontario Government was complimented for having appointed a commission to enquire into unemployment; expressed approval of the work of the Nova Scotia Executive Committee and expressed the hope that it would have a stimulating effect on the efforts of others; it was agreed that the meeting of New Brunswick Federation of Labour at the Capital during the session of the Legislature would be productive of good results; the activities of the British Columbia Federation of Labour was commended, depressed industrial conditions was deplored and the hope was expressed that a practical workmen's compensation act would be the outcome of their efforts; the report of the parliamentary representative was commended and editors of labour papers were requested to give as much publicity to the matters contained as possible, as they are all of such vital importance to the workers of the Dominion.

Committee on Immigration and Unemployment.

In addition to the portions of the officers' reports dealing with these subjects, all resolutions presented to Congress having a bearing on these matters were referred to this committee. The report of Mr. W. R. Trotter was concurred in, and the policy of Congress regarding immigration as set forth at last year's convention was reaffirmed. It was suggested that more complete returns be furnished by the immigration authorities regarding literacy of immigrants by nationalities. The portion of the Executive Council's report dealing with unemployment was endorsed and the Council was urged to demand the appointment of a federal commission to investigate the whole problem of unemployment in Canada, to commence at once, and that a sum of money commensurate with the work to be done be placed at the disposal of the commission. That portion of the report dealing with "interned aliens" was concurred in. The adoption of a six-hour day in all industries was urged as a means of distributing work over a larger number. The creation of labour departments by each of the Provincial Governments was approved. On the question of free municipal bureaus an adherence to the principle adopted at last convention was urged. The convention adopted the following suggestion of the committee as a partial solution of the unemployment problem:

"Your committee has spent much time considering conditions which will immediately follow the declaration of peace and the return to the open market of thousands of soldiers, munition workers and others. We therefore desire to submit a scheme which has for its object the primary one of finding productive employment for discharged soldiers and others; the secondary one of relieving crowded centres to the extent to which it is practicable, and the third, which is eminently desirable, in the shape of the settlement and development of some of our vacant lands.

"Your committee considers that the present system of homesteading is useless as a solution of unemployment difficulties. To avail himself of it the applicant must have sufficient to maintain himself, purchase implements, etc., and is in most cases further and finally handicapped by complete lack of agricul-

tural knowledge or experience. Temporary sustenance, shelter and tuition must be provided.

"Your committee recommends that the Government should select such land as may be necessary for the proper carrying out of a scheme which will meet the abnormal conditions which confront the Dominion, which land should not be privately owned, and that the Federal Government be requested to offer as an option to discharge from the army, further enlistment for a period of five years, of such men as would be willing to undertake agricultural work under the direction of qualified experts from experimental farms and agricultural colleges. That such men should receive the regular army pay and allowances, with rations, on same basis. Suitable accommodation to be provided, with quarters for married men with families.

"After such period of enlistment has expired the men who have thus served should have the option of settlement upon suitably sized allotments of the land so improved, the same to be held on leasehold terms from the Dominion Government."

Report of Committee on Ways and Means.

It was recommended that the president's salary be increased \$200. Other appropriations were made as follows: Secretary-treasurer, \$1,000; assistant secretary, \$50; for immigration work, \$100; Labour Temple employees, \$50; committee on resolutions, \$10 each; fraternal delegate to American Federation of Labour, \$400; fraternal delegate to British Trades Congress, \$500; Vancouver firemen's benevolent fund, \$25; hotel expenses of fraternal delegate. It was further recommended that Congress withdraw from affiliation with the Social Service Congress. Adopted.

Report of Committee on Union Labels.

Recommended that legislation be secured for the better protection of the union label and shop card, and urged for a greater demand for manufactures bearing the union label.

Industrial Disputes Investigation Act.

In view of the fact that a draft bill consolidating and amending the Industrial Disputes Investigation Act, 1907, and the Conciliation and Labour Act was before the convention for consideration, a special committee was appointed to report on this measure, to which was

referred a resolution asking for the repeal of the Act. The committee reported non-concurrence in the resolution and requested Hon. T. W. Crothers, Minister of Labour, who was present and occupied a seat on the platform, to outline the changes made in the Act. After a full explanation had been given and a large number of questions relating to the meaning of certain sections had been asked and answered, a somewhat lengthy debate took place. At the conclusion of the debate a vote was taken on the adoption of the clause in the committee's report recommending non-concurrence in the resolution, thus bringing to a definite issue the question of recommending the repeal of the Act as recommended by the special committee. Non-concurrence in the recommendation was voted by 97 to 55. Another clause in the report of the committee to receive the endorsement of the convention was that recommending "that the matter of the Industrial Disputes Act be referred to the Executive Council with instructions to secure the necessary interpretations from competent counsel, and that when the Bill comes before the House the Executive be authorized to call to Ottawa such officers as it deems necessary to assist in combatting the objectionable and supporting the favourable amendments."

The Minister was tendered the unanimous thanks of the convention for his presence.

Fair Wages on War Supplies.

The following resolution, as amended by the convention, was adopted:

"That the Executive Council of the Trades and Labour Congress of Canada immediately call together representatives of the various organizations whose members are engaged in those industries manufacturing war supplies and approach the Government of the Dominion of Canada with a request that the rights of the workers be protected by the introduction of fair wages schedules in all contracts and demand their enforcement, and that the president of the Trades and Labour Congress of Canada be recognized in an advisory capacity by the Government on all these matters that concern the welfare of the workers; and that the Executive Council be instructed to take such steps as are deemed necessary to bring about the desired results."

Miscellaneous Resolutions.

The following resolutions dealing with a variety of subjects were reported upon favourably by the Resolution Committee and concurred in by the convention:

Declaring in favour of Government ownership of all railways in Canada.

That no railway section shall be more than six miles in length on any main line of railway, with one man to every mile in summer and one man to every two miles in winter, exclusive of foremen.

That on branch lines of railway no section shall be more than seven miles in length, with foreman and one man to the mile in summer and foreman and three men to the mile in winter.

That the Executive Council be instructed to secure complete information as to the standing of employees of railway companies whose lines run through more than one province in relation to compensation for injuries.

That a law be enacted requiring hotel and restaurant employers to grant employees one day off in every seven.

To amend the Dominion Government Fair Wages Regulations to provide for the payment of established union rates of wages and hours of the district; overtime rates to be same as prevails in the district; that the engineer or clerk of works be made responsible for the carrying out of the fair wages clauses and report violations to Minister of Labour; that contractors found guilty of violating fair wages regulations be debarred from securing further Government contracts.

That the Fair Wages Resolution be amended to cover work done by day labour.

Endorsing a draft bill to provide for the licensing of firemen operating steam stationary boilers in the province of Ontario.

To abolish political patronage as a means to public service or Government appointments and urging a system of civil service examinations for all positions.

Urging for a provision in all Workmen's Compensation legislation that medical expenses in connection with injured workmen shall be paid either from the State Insurance Fund or by the individual employer.

That compulsory educational laws should be enacted in every province in Canada, and that where such does not exist that the Provincial Executive Committee be instructed to use every endeavour to have such a measure placed on the statute books.

That the factory laws of the various provinces be amended to provide for a more efficient sanitary system in metal polishing establishments.

That the Postmaster-General be requested to grant an extension of the Saturday half-holiday to all grade men classed as letter carriers whose duties do not call for being on actual street delivery, and to parcel post sorters, porters, collectors and messengers.

That the Executive Council urge the Dominion Government to pass legislation compelling railway companies to provide sheds for the repair of cars in which men can work with comparative comfort; that railway companies be required to carry out their agreements with employees; that tracks used for the purpose of repair and coach yard tracks be laid at

not less than 14 feet centres, and that all railway passenger coaches be thoroughly cleaned and disinfected before leaving a terminal point.

Declaring in favour of a statutory universal weekly half-holiday (preferably Saturday afternoon) throughout the Dominion.

That the Executive Council be instructed to urge the Dominion Government to investigate, by commission, conditions and wages paid in the production of military supplies, and that the investigation cover the amount of profit accruing to manufacturers.

That the Executive Council be instructed to press for legislation that will abolish the practice of making clothing in the homes of the wage-earners.

That the Executive Committee for the province of Quebec be instructed to again demand and urge upon the Provincial Government the necessity for the fusion of all Catholic School Commissions in the District of Montreal.

That the Executive Council be instructed to press for an amendment to existing law that will bring all construction camps within the jurisdiction and scope of the Department of Labour and its officers.

That the Executive Committee for the province of Quebec be instructed to protest to the provincial authorities against the action of the police during the recent strike of papermakers at Doncona.

That the Executive Committee for the province of Quebec be instructed to enter a protest with the proper authorities against tools and machine accessories being manufactured in the Montreal Technical School during the summer vacation and sold in competition with the skilled wage-earners of that city.

That the Executive Committee for the province of Quebec be instructed to again demand that all school books be issued by the Government and sold at cost price.

Protesting against the manufacture of boots and shoes in the Reformatory School at Montreal under contract for the Government.

That the Executive Committees of the different provinces be instructed to urge measures for the better protection of the health of employees against poisonous fumes and gases arising from linotypes and other type-casting machines, melting pots, cauldrons, etc.

Requesting the Ontario Government to appoint on the staff of inspectors under the Stationary Engineers Act one member from the International Union of Steam and Operating Engineers and one from the Canadian Association of Stationary Engineers, and that all boilers carrying a pressure of five pounds or over be placed under the operation of the Act.

Endorsing the Seamen's Law recently enacted in the United States and urging the statesmen and people of the Empire to give the law serious and sympathetic consideration.

That the Minister of Labour be requested to appoint correspondents to the *Labour Gazette* on the nomination of central labour bodies in each district.

Protesting against the importation of musicians into Canada.

Urging upon the Government a better system of providing for the needs and requirements of men and their dependents who have been incapacitated either on the battle field or on the industrial field.

Appealing for more liberal patronage to newspapers owned and controlled by organized labour.

That the Canada Shipping Act be amended to provide for better security to longshoremen in the course of their employment.

That the best interest of the public and persons employed in theatres would be safeguarded by providing that the practice of tying sandbags or other weights on lines used for raising or lowering scenery, curtains, drop curtains, borders or electrical effects be prohibited; that switchboard operators be required to remain within ten feet of such switchboard during a performance; that proper fire escapes from the fly door or gallery on stage be installed; and that proper sanitary appliances be placed in theatres for the use of stage crews.

In favour of the enactment of legislation in each province prohibiting the employment of white women or girls by Chinamen.

In favour of a statutory enactment providing that payment of wages shall be made at intervals of not more than two weeks.

In favour of the enactment of a Mothers' Pension law.

In favour of more sanitary conditions in the salmon canneries of Northern British Columbia.

Protesting against the employment of Asiatics underground in the coal mines on Vancouver Island, and asking the Provincial Government for a more rigid enforcement of the Coal Mines Regulation Act.

That the jurisdictional dispute between Moncton Trades and Labour Council and Local No. 1249 of the United Brotherhood of Carpenters and Joiners of America be referred to the incoming executive council for such action as may seem necessary.

In favour of the licensing of private detectives.

That the Postmaster-General be requested to order the suspension of mail deliveries on all statutory holidays.

In favour of a six-day week for all street and electric railway employees.

In favour of the heating of vestibules of street and electric cars.

In favour of the enactment of legislation requiring employers of labour in factories and workshops to provide a suitable room in which employees eat their lunches.

In favour of legislation to prohibit the use of running boards on street and electric cars.

In favour of making false representation as to labour conditions an offence under the Criminal Code.

Protesting against the importation of aliens to be employed in the Grand Trunk hotel system.

In favour of placing all subsidized steamship companies operating in Canada under the fair wages regulation.

In favour of the extending the weekly half-holiday granted to letter carriers during July and August to all months of the year.

That the Trades and Labour Congress of Canada reaffirm its previous resolution in favour of international trades unionism in Canada.

That Congress advise the Alberta Federation of Labour to give the street railwaymen of Calgary every assistance possible to organize and protect their interests.

In favour of an amendment to the Ontario Colonization Act to permit desirable agricultural settlers with little or no money to take up homesteads in New Ontario, the Government to supply their first year's needs in the way of seed, food, implements, stock and dwellings, the sum advanced to be chargeable against the homestead.

In favour of proportional representation for the election of city councils, in accordance with the method outlined in the English Municipal Representation Bill, 1914.

That the provincial governments be strongly urged to amend any law which limits the amount of the tax which a municipality may collect from land values, and we urge that all other taxes levied by the provinces be repealed and a direct tax on land values be substituted therefor.

That Congress go on record as favouring the establishment by the Dominion Government of a system of agricultural credit.

That the charges for administering intestate estates is too high and should be more commensurate with the work involved.

That the Executive Committee for the province of Ontario take up with the Provincial Government the matter of better ventilation of the Cobalt mines.

That the Ontario Compensation Act be amended to provide for payment for the payment of compensation to dependents regardless of where they may reside.

In favour of a better medical service in mining camps.

In favour of the enfranchisement of women.

Requesting that assistance be given to the pottery workers of Quebec.

Criticizing the Government of British Columbia for certain statements made in a pamphlet on mining, alleging misrepresentations.

Urging that more sanitary methods be adopted in the putting up of cement for shipment.

Officers of the Congress for 1914-15.

The following officers were elected for the ensuing year:

President—J. C. Watters, Ottawa, Ont.

Vice-president — Alex. Watchman, Victoria, B.C.

Secretary-Treasurer—P. M. Draper, Ottawa, Ont.

Provincial Executives:

Saskatchewan — Vice-president, R. Chadwick, Moose Jaw. Committee: G. Judson, Prince Albert; F. Perry, Regina; J. D. Wallace, Saskatoon.

Manitoba—Vice-president, W. J. Bartlett, Winnipeg. Committee: P. McCann, H. Irwin and A. W. Puttee, all of Winnipeg.

Ontario—Vice-president, James Scott, Toronto. Committee: W. J. Halford, Hamilton; A. Thibault, Ottawa; Geo. Murray, Toronto.

Quebec—Vice-president, J. T. Foster, Montreal. Committee: Z. L'Esperence, A. Martel and T. Bertrand, all of Montreal.

The appointment of executives for Nova Scotia and Prince Edward Island was left in the hands of the Executive Council.

British Columbia, Alberta and New Brunswick having Provincial Federations, Labour Congress does not elect provincial executives for these provinces.

Other Representatives.

To represent Congress on the British Columbia Workmen's Compensation Commission, J. H. McVety, Vancouver, B.C.

Fraternal delegate to the American Federation of Labour, Fred. Bancroft, Toronto, Ont.

Fraternal delegate to the British Trades Congress, James Simpson, Toronto, Ont.

Toronto, Ont., was chosen as the next place of meeting.

BRITISH COAL MINING INDUSTRY.

Report of Committee Appointed to Inquire into Conditions due to the War.

THE report of the Departmental Committee appointed in February, 1915, by the British Government, for the purpose of inquiring into coal mining conditions "with a view to promoting such organization of work and such co-operation between employers and workmen as, having regard to the large numbers of miners who are enlisting for naval and military service, will secure the necessary production of coal during the war," has been recently received in the Department.

In the course of the inquiry covered by the report 13 meetings were held in public, at which 27 witnesses were examined. Several weeks also were consumed in collecting accurate figures as to the extent of the shortage of labour and decreases in output. Of the witnesses examined six were inspectors of mines, regarded as independent witnesses, ten were directors of collieries, mining engineers or secretaries of coal owners' associations appointed in a representative capacity to give evidence on behalf of the coal owners' associations of Great Britain; six were miners' agents selected by the Miners' Federation to give evidence on behalf of that body, and witnesses were selected so as

to allow all large coal fields to be properly represented. Other witnesses examined were clerks in charge of mining statistics in Government offices and coal salesmen and merchants.

The report is divided into three parts, Part 1, dealing with the situation to be met; Part 2, with a consideration of the means for meeting the situation, and Part 3, with the restriction of export. Statistical tables in regard to the various matters with which the report deals are also given as appendices to the report.

Subjects of Inquiry.

The committee, the report states, had first to determine what was the extent to which the collieries had been depleted of labour owing to the demands imposed upon the patriotism of the miners, to what extent this shortage had been made good from other sources, what had been and what was likely to be, unless measures were taken to counteract it, the effect of the depletion of labour on the output and the amount of time being lost by the workers. The next thing to be considered was the means which might be devised for maintaining the output at as high a figure as possible,

having regard to the fact that the depletion of labour would be to some extent a continuing process owing to men leaving the mines to join the forces. Later in the inquiry the question of the advisability of curtailing the export of coal in order to meet the wants of the home demand was referred to the committee.

The Situation to be Met.

Dealing with the situation to be met, the report first goes into the conclusions to be deducted from the statistical tables which are printed as an appendix to the report, in regard to the number of persons employed and conditions prevailing in the various coal fields of the United Kingdom, the tables being within 89 per cent of entirety. An analysis of the figures in the tables showed that the number of persons on the books at the end of July, 1914, was 999,424; that the number of persons who had joined His Majesty's forces up to the end of February, 1915, was 184,659, or 18.5 per cent of the persons employed in July, 1914. With the addition of belated returns, however, the total number of coal miners who enlisted was 191,170, or 17.1 of the total number employed at coal mines prior to the outbreak of war. About 50,473 persons had been drafted into the mines up to the end of February, or 5.0 per cent of the persons employed in July, 1914. The actual reduction in mine labour, which was arrived at by deducting the number of persons on the books at the end of February from the number at the end of July, was 134,186, a net deficiency of labour at the end of February of 13½ per cent.

The fall in output for the seven war months showed a decrease to the extent of 13½ per cent over the seven months of the war as compared with the corresponding months of 1913 and 1914, the fall in output being in the same ratio as the loss of labour.

In considering the amount of absenteeism no account was taken of the days on

which the pits were idle either through want of trade or on account of customary "off" days and recognized holidays of the miners. Shifts actually worked were deducted from the number of shifts which could have been worked had the persons on the books worked every day the pits were working. Absenteeism is given, also, in respect of all classes of labour, both above and below ground, and not in respect of one particular class of labour only. Absenteeism, in the pre-war months, ranged from a minimum of 9.8 per cent to a maximum of 11.3 per cent or an average of 10.7 per cent as compared with the war months when the minimum was 9.0 per cent and the maximum was 10.7 or an average of 9.8 per cent, showing a decrease of nearly 1 per cent during the war months.

Reduction of Mine Labour.

In addition to the reduction of mine labour from recruiting, a number of persons in some localities left the mines to work in factories engaged in supplying the army and navy with munitions of war, and the statement is made that probably the exodus of labour from the mines was due in great measure to the fact that for some weeks after the outbreak of war the mines were working very short time, more especially in Northumberland where the mines are very largely dependent on export for their existence. The committee was of the opinion, however, that taking the country as a whole, the depletion in labour from this cause was inconsiderable. The average rate of enlistment over the first seven months of the war was 27,310 persons per month.

Influx of Labour.

While there was a loss of labour in the mines owing to enlistments the committee had to consider against this loss the amount of incoming labour. There is always, it is stated, a certain amount of what may be termed floating mining labour which, in times of depression drifts into other trades or emigrates to

mining districts abroad, and this class had been drawn into home coal mines. Pottery workers in some districts and agricultural labour in others were found to have drifted into the mines. A certain amount of Belgian refugee miners had also been employed at mines, but in small numbers. From the evidence before it the committee was of the opinion that if further labour were withdrawn from the collieries, the output would be so reduced as to seriously affect the industrial position of the country, and the time appeared to have arrived when very full consideration should be given to the question as to whether further recruiting among the miners should be encouraged. The evidence had shown that the recruits had for the most part been drawn from the underground labour and very largely from those at the face in the working of getting and hauling the coal, who it is stated constitute roughly about two-thirds of the underground labour of a colliery.

Reduction of Output and Shortage in Supply of Coal.

The fall in output per month, the report explains, was fairly regular, there being roughly a loss of three million tons as compared with the same months of the period preceding the war. It is pointed out also that in August, 1914, the loss of output was greater than in February, 1915, which at first sight might appear paradoxical especially in view of the fact that comparatively few recruits had been drawn from the mines during the former month and that the effect on production was gradual and cumulative. The falling off in output during the earlier months of the war, however, was not so much due to a shortage of labour as to other causes. Decreased production in some districts was due to lack of orders for coal, the trade having been disorganized, as stated by one witness by "the sudden withdrawal from the market of Germany and Austria, the impossibility of sending ships to the Baltic ports of Russia and neutral countries, the state of affairs in the North Sea, the

partial paralysis of the ordinary international financial relations owing to the sudden outbreak of war." Districts depending on shipping and export, and unable to compete with other districts, for much of the internal trade was particularly affected. Depression in the cotton trade in Lancashire prior to and at the time of the outbreak of war, and falling off in demand for coal also affected conditions in the mines. Briefly summed up, during the earlier months of the war coal was not drawn on so many days as at the time the report was made, at which time coal was being raised practically on as many days as before the war.

The report points out, also, some other factors which have operated to prevent the falling off of output being greater than it has been. The output per person employed below ground is greatest on those days on which absenteeism is greatest, due to the fact that those coal-getters who are at work are more expeditiously served with tubs and their coal is sooner cleared away than when the full complement of coal-getters is at work, and up to a certain point only could the output of a mine be said to be directly proportional to the number of underground workers employed therein—a mine might have been overstaffed with coal-getters. But the report points out, a point is soon reached at which diminished supply of labour is felt, and this point had long since been passed.

The report directs attention to the increased production possible for a given staff of workmen in the reorganization of the working conditions of the mine, *e.g.*, concentrating the coal-getters into those parts of the mine in which coal is most easily got, the curtailment of deal and exploratory work, expediting of underground haulage and the more extensive application of labour-saving appliances, and the committee was of the opinion that in the present emergency this side of the question should be emphasized and steps taken to effect wherever possible improvements in these directions.

While believing it impossible to estimate with any certainty what could have been the output for the year 1915 had the war not occurred, the committee was of the opinion that the decrease of production would be fully 35 million tons unless means could be provided to increase the monthly output or prevent a further diminution.

Attention is also directed to the fact that a loss of output might not mean a shortage to a like extent, for there had been liberated owing to the closing of certain markets fully 18 million tons, which in normal times would have been exported to Russia, Germany, Belgium, Austria-Hungary and Turkey. It should be borne in mind, also, says the report, that the greater number of the mines in the Pas de Calais coalfield are in the possession of the enemy, and that Germany has ceased to be a competitor in many of the coal markets of the world. The committee did not anticipate that the recent rise in the price of coal would have a materially deterrent effect on export, and states that the demands of the Admiralty were far in excess of the normal.

In discussing the extent of the shortage of coal for home supply, the report states that while some indication had been given that the home demand might be somewhat less at the present time than it was some little time before the war, it would not be wise to assume that the home demand would be materially less than it was before the war.

Means for meeting Situation.

In discussing the means for meeting the situation, *i.e.*, possible measures for maintaining or increasing the output of coal, the report refers to the following suggestions made during the course of the inquiry as calculated, if adopted, to counteract the effect of shortage of labour due to recruiting: (1) the reduction of avoidable absenteeism on the days on which the mines are open for work; (2) the curtailment of holidays; the suspension of the Eight Hours Act;

(4) the introduction of labour from outside; (5) the employment of women to perform the lighter work on the surface of the mines; (6) the reduction of the age limit at which boys are permitted to work at the mines; and (7) what might be described as general reorganization.

The report states that the committee examined all these ameliorative measures, and sets out the conclusions reached, it being stated that these depend for their effectiveness on the cordial co-operation of workmen and employers.

Absenteeism.

The reduction of the avoidable absenteeism from work on the days on which the mines are open for work presented, the committee considered, the best means for increasing the output. It is pointed out that while the figures in regard to absenteeism at coal mines show a reduction of nearly 1 per cent, it is a fact that absenteeism is much heavier in respect of some classes than of others, and is far heavier in the case of those engaged in the hewing and putting of the coal than among what are known as "datal" or "on-cost" hands, the hewers earning higher wages, and both they and the putters being engaged in more arduous work than is the case with other classes of mine labour. Coal producing classes (hewers and transit hands) constitute roughly two-thirds of the underground labour employed in mines, and, the report states, it is in promoting greater regularity of work on the part of these classes that most relief is to be obtained. It is shown in statements that the average absenteeism over all classes of labour from August to February was 9.8 per cent and the evidence showed that the absenteeism of face labour or labour employed in the getting and haulage of the coal was much heavier, varying between 12.6 and 15 per cent.

While drink is the cause of some absenteeism, the report states that this is to a much less extent than is commonly supposed, and the evidence of repre-

sentatives of owners and miners was to the effect that absenteeism from this cause was less than it had been, and that there was an increasing tendency in the direction of temperance. The committee was of opinion that were all the avoidable loss of work at the coal mines made good, it would go a long way to neutralizing the effect due to the depletion of labour which had taken place up to the end of February.

In closing that part of its report on absenteeism the committee refers to the way in which the miners of Great Britain have demonstrated that they are animated by a spirit of patriotism, so many of them having left the mines to serve with the colours. The opinion is expressed that were the Miners' Federation of Great Britain to issue an appeal to the miners, supported by personal addresses in the mining districts, it would be fruitful of the best results. In this connection the report quotes the words appearing in a notice issued above the signature of Mr. Thomas Richards, M.P., by the South Wales Miners Federation to all colliery workmen in that field, appealing to them to curtail their Easter and Whitsuntide holidays: "The supply of ammunition to our heroic soldiers on the continent, the efficiency and success of the naval operations in the North Sea and Dardenelles, the home comforts of the poor of this country are all dependent in a very large degree upon the extent and regularity of the supply of coal. The appeal is to every workman . . . to work as regularly as possible with the assurance that his work in a mine is as necessary as the operations in the trenches in this great national crisis."

Stop Days and Holidays.

A paragraph of the report is devoted to the question of stop days and holidays, there being two kinds of holidays observed by the miners, the customary short or idle days in the fortnight and certain recognized periodic holidays in the year. The custom prevailing in the

different coal mining districts in regard to short or idle days is gone into, and the suggestion made that by arrangement between employers and workmen the working time might be extended. In addition to the so-called "stop" or idle days, the holidays most generally recognized by the miners are Christmas day, New Year's day, Easter and Whitsuntide and August Bank holiday. There are, besides, peculiar to particular districts, certain "feasts" and race meetings and annual "demonstration days."

The report refers to a personal appeal by Lord Kitchener, supported by the Miners' Federation, made to the miners throughout England and Wales to limit their Easter and Whitsuntide holidays, and to the gratifying response, which in respect of the Easter holidays, meant an increase in production of nearly one million tons of coal. Holidays in Scotland vary somewhat from those in England and Wales, a portion of the first week in the new year being taken as a holiday throughout Scottish colliery districts as well as special days in various districts. "We think," states the report, "if appealed to by their leaders to curtail somewhat their holidays the miners of Scotland will not be behind their English and Welsh compatriots in their response."

In concluding this portion of its report the committee draws attention to the dangers from a more or less general cessation in times like the present, and states that holidays occupy a somewhat different position in the problem than the question of occasional absenteeism.

Partial suspension of Eight Hours Act.

The report states that the Eight Hours Act having been in existence for several years, and working satisfactorily, neither employers nor miners desire to bring about a return to the pre-Eight Hour Act system, and points out that the more highly organized the system of labour—the greater the division of labour—the more difficult it is to peacefully introduce changes in the system. Under Sec-

tion 4 of the Act, His Majesty may, in the event of war or of imminent national danger or great emergency, by Order-in-Council, suspend the operation of the Act to such extent and for such period as may be named in the Order, either as respecting all coal mines or any class of mines. Most of the representatives of coal owners who appeared before the committee believed that an increase in output would be brought about by the suspension or moderation of the Act, but the representatives of the miners were against any change, and in many collieries it was urged that it would not be practicable to increase the hewers' hours owing to the number of coal-getting shifts in the day and the necessity for repairs. The conclusion of the committee in regard to this point was to suggest that the employers and workmen should, in the first instance, confer together and determine to what extent if at all the Act should be suspended in individual districts, and that an Order-in-Council could follow the lines laid down by such a joint conference. The committee offered its services in assisting in arriving at a working arrangement, and was of the opinion that any extension of hours should meet with special consideration in respect of remuneration. The period of any partial suspension of the Act, it was considered, should be that covered by the duration of the war only.

Introduction of Labour from outside.

To deplete certain industries to benefit the coal mining industry was considered by the committee a very questionable expediency, and most detrimental at the present time to the welfare of the country to draw away labour from agriculture, munition and engineering works. Industries working slack time, however, such as many branches of the quarrying and building trades, it was considered might continue to supply a certain amount of labour for the mines, and a certain number of miners from America and the Colonies would be attracted to the home mines should wages

rise. Belgian refugees, also, who were not married nor of military age could in some instances be employed. In concluding this part of its report the committee states it should be made clear that all those miners who have joined or may join His Majesty's forces during the period of the war will experience no difficulty in being re-employed at the mines at the termination of the war and in the capacity occupied by them when they left, and that persons put on during the war should understand they fill the vacancies during the period of the war only. "This, no doubt," states the report, "has been made clear in many instances, but were it generally realized by the miners that they would not be penalized because of their patriotism, but that employment would be forthcoming at the termination of the war, it would cause much satisfaction."

Employment of Women.

The number of women employed on the surface of mines under the Coal Mines Act of 1911 was, at the end of the year 1913, 6,554; of these 2,933 were employed in Scotland and 2,829 in Lancashire. There had been a considerable increase in the number of women employed at Scottish coal mines since the commencement of the war. While the committee felt there was no doubt that women could be still further employed in the performance of light work, such as the sorting and cleaning of coal on the surface of the mine, thus liberating some old men and boys for work underground, after careful deliberation of the facts and evidence no action was recommended with a view to the more extensive employment of women on the surface of coal mines.

Reduction of Age Limit for Boys.

Under section 91 of the Coal Mines Act, 1911, no boy under the age of 14 years can be employed below ground in the mine, and under section 92 no boy under the age of 13 years may be employed above ground for more than 54

hours in any one week or more than ten hours in any one day. It was suggested to the committee by several inspectors of mines and representatives of employers that were the age at which boys are allowed to work underground reduced to 13 years during the period of the war it would afford some relief in that it would liberate older boys for the performance of more arduous work. One effect of a shortage of labour amongst haulage and transit hands is that hewers or coal-getters have to be taken away from coal-getting to fill the gaps, and at some collieries it was stated the loss of young men and lads by recruiting from haulage and transit hands had been very heavy. The result of any action reducing the age limit for boys was considered by representatives of the miners infinitesimal, and this action they considered should be only taken as a last resort. The committee therefore gathered that the proposal would not be favourably entertained by the workmen or their leaders, and if a Bill to allow of the reduction were introduced into Parliament it would be opposed; it was considered undesirable, therefore, to prosecute the matter further if the result of an enactment were to create opposition or ill feeling. Some relief, however, the committee considered, might be found in allowing some departures from the educational standard which boys must pass before they can leave school if below the age of 14 years. Boys of 13 can be employed on the surface of mines provided they have passed out of a certain standard, but at the age of 14 this restriction disappears. Some elasticity in this regard it was thought might liberate some persons now employed on the surface for underground labour, but the committee was unable to make any recommendation in this respect.

General Reorganization at the Mines.

Dealing with the subject of general reorganization at the mines, in which is included such matters as the conveyance of the men to and from their work by

means of mechanical haulage, the committee points out that concentration of the work of coal getting, postponement of exploratory or "dead" work as far as practicable to a later and post-war period, means of expediting the underground haulage of coal and such like matters of mine engineering might be adopted with advantage. The possibility of closing old and nearly exhausted mines with the object of releasing labour for transference to more modern and highly productive mines was relinquished as impracticable. The advisability also of establishing district joint committees of representatives of the employers and workmen to carry into effect suggestions emanating from the committee was considered, but no recommendation was made.

Restriction of Export.

The committee, after referring to a preliminary report made in regard to the restriction of export of coal in which it was stated that if it could be shown home needs were not being met, the only relief apart from increase of output or improved distribution would be the placing of some restriction on the export of coal out of the United Kingdom, such restriction not to affect, however, coal required for the British Mercantile Marine, coal supplied to British allies or such other countries as the Government might determine and coal sent abroad to the extent essential to secure return cargoes necessary to the country, that the question as to how far export should be curtailed to meet home supplies is a most difficult one to decide, particularly in the absence of recent statistics—as to the extent of home consumption. As to whether there would be a serious shortage in the near future depended on two factors, (1) the extent to which the measures indicated by the committee for maintaining the output were carried into effect, and (2) whether or not there was an expansion in the export trade. It is pointed out in this connection that while the export demand had diminished considerably, this diminution to a

large extent was met by the increased demands of the British navy. In the event of restriction of export it would be necessary to discriminate between districts which are able to compete for a large part of the internal or home trade and those which depend to a very large extent on export for the working of the mines. The committee had also before it the question of the advisability of limitation of the selling prices of coal or the imposition of an *ad valorem* tax on exported coal with a view of meeting the possible inequalities arising from a great restriction of export in respect of some districts as compared with others and retaining as large a quantity of coal for home consumption as necessary, but was not yet in a position to report on the matter.

In concluding its report the commit-

tee states that the basis of all the proposals and suggestions made by the committee is harmonious co-operation between employers and employed through the medium of the organizations on both sides thoroughly representative of the parties. "Unless the organizations possess this power," states the report, "and are able to act with authority for both owners and workmen, friction may arise and stoppages of work take place which ought to be avoided at the present time to the utmost extent possible. In the highest interests of the nation it is especially desirable that during the period of the war the employers should co-operate with the representatives of the workmen on such questions as non-unionism, or other questions likely to lead to any fraction or stoppage during the present unprecedented circumstances."

WAR ORGANIZATION IN DISTRIBUTING TRADES IN SCOTLAND.

THE first report of the committee appointed by the British Government to consider how far and by what means it might be practicable so to readjust the conditions of employment in the distributing trades, both wholesale and retail, in Scotland as to release a larger number of men for enlistment or other national service with the minimum of interference with the necessary operations of those trades, has recently been received in the Department. The committee was appointed on June 4, 1915, and made its first interim report July 1, 1915.

The introduction to the report states that the committee endeavoured to ascertain what could be done in the wholesale and retail distributing trades in Scotland for the release of more men for national service; that a large number of men have already enlisted from these trades, but that in view of the extended demand for labour in such in-

dustries as shipbuilding, engineering and the manufacture of munitions, it might be necessary to make a further call upon trades not directly concerned with the prosecution of the war. Reference is made also to the fact that in England and Wales the same questions were being considered by a similar committee and that special departmental inquiries were also being made with regard to certain trades. At the time of presenting the interim report the committee had had seven whole day sittings. The experience of those members of the committee associated with the distributing trades had been utilized and supplemented by the evidence of witnesses, as well as by information from associations and individuals who had been invited to offer observations and suggestions. Some of the evidence was of a confidential character and had been treated accordingly. The committee had also published appeals to the shopping public and had suggested the calling of conferences and the formation of committees of particular trades.

Appeals to the Shopping Public.

At its first meeting, the committee issued an appeal to the shopping public asking them to co-operate with the patriotic efforts of employers and employees so as to facilitate the release of more men for national service, advising the public to shop as early as possible in the day; not to expect immediate service during the busy hours; to carry home small purchases, or give the option of delivery the following day; and to send orders in writing where practicable and as long as possible in advance. Copies of this appeal were sent to more than 250 Scottish newspapers, and the committee expressed its appreciation of the manner in which the press had given the appeal publicity. By arrangement, also, with the central recruiting committee, placards were issued and displayed in shop windows and otherwise, setting out the committee's suggestions, some 25,000 of these placards having been printed and circulated.

Municipal Conferences.

In order to enlist interest and practical action by the distributing houses in the larger cities and burghs in Scotland, the committee held conferences with the municipal authorities at which information was obtained and the way paved for the formation in each centre of a committee to deal with each particular trade, this course being designed to secure uniformity of action and to obviate difficulties which it was stated sometimes arise where patriotic traders are likely to be placed at a disadvantage with competitors who do not show a similar public spirit. The committee recommended also in this connection that wherever possible steps should be taken to enlist the sympathy and co-operation of employees and employees' organizations.

Statistical Information.

After calling attention to the difficulty of ascertaining with accuracy how many persons were engaged in the distributing trades on account of these

not forming a special category in the Census of Occupations and not ascertaining the number of males of military age engaged in these trades, the report states that a proportional estimate only could be made. Tables are given as an appendix to the report in regard to general statistics of the population of Scotland; also statistics of those trades which are wholly or mainly distributing, with special reference to males, and those trades which are in part distributing, also with special reference to males, and as the result of a general survey of these trades as a whole the committee estimated the total number of males employed in what might fairly be regarded as distribution to be between 100,000 and 120,000, and of these about half were males of military age, that is, between 19 and 40 years old. The report states in this connection that as there were no statistics materially bearing on occupations, later than those of the 1911 Census, the committee was obliged to assume for the purpose of its report that the 1911 statistics indicated approximately the state of things immediately before the outbreak of the war. The committee endeavoured to ascertain information showing how many men had already enlisted from the distributing trades in Scotland, but information it appeared was not available. It was being sought, however, by means of question-papers to employers, and the committee hoped a large number of answers would be received. The report points out in this connection that there was no attempt to ascertain the names or particulars of any of the individual men employed, the object being simply to obtain general statistics as to how many men could still be released, and that the arrangements for this inquiry were made prior to the introduction into the House of Commons of the National Registration Bill and that the questions were addressed to employers.

War Office and Recruiting.

The report points out that the withdrawal of an assistant, practically with-

out notice, often constitutes a serious dislocation of business and militates against recruiting, and expressed the opinion that the war office could do much to facilitate the enlistment of employees, and the consequent reorganization of business, were they to devise a scheme whereby notice of a few days, or perhaps of a week, might be given for the making of the necessary arrangements. It is further pointed out in this connection that the releasing of more men could best be done in a gradual way, the beginning being made by the releasing of many who could be spared for the time being, and then as substitutes were gradually found and trained it would be easier to release others.

Importance of Reinstatement.

The committee regarded it as of vital importance that the releasing of men from distributing trades for national service should be accompanied by a guarantee of reinstatement after the war, should they desire to return to the work and were suitable for it, and expressed its appreciation of the manner in which many employers had already adopted this course and had in some instances supplemented the army pay. Such action, the committee considered, was essential to successful results for various reasons and particularly because the question of whether a man if he had others dependent on him would be willing to take up national service, might be determined by his financial position and his prospects at the close of the war. It is pointed out that it is probably those who had enlisted from any individual business house would probably come back more or less gradually, and that many might desire to remain in His Majesty's service, or follow an outdoor life in the Colonies or elsewhere, but the committee considered a promise of reinstatement was of fundamental importance in recruiting. Attention is directed, also, to the desirability of substitutes being informed that their engagement was in the nature of substitution and

might terminate on the reinstatement of the employee who had enlisted. The committee expressed the hope that in each particular trade some arrangement for apprentices which would follow the time taken up in the service of the country to count towards the period of apprenticeship would be made as far as practicable. Some of the difficulties caused by the enlistment of employees, the committee found, had to some extent been met by reorganization as distinguished from the finding of substitutes, and this process was still continuing.

Substituted Labour.

The committee was of the opinion that the places of men of military age on national service might, to a certain extent, be taken by men either above military age or unfit for military service, though it was believed that most of the efficient male labour of these classes had already been absorbed. The report makes a special appeal for generosity in offers of employment to soldiers and sailors of good character who have had to leave the service on account of disablement or otherwise. It is stated there did not appear to be any prospect of a material increase of substituted labour by employing boys who had just left school, it being recognized that the demand for this class of labour was substantially in excess of its supply and that in a considerable number of cases boys who had left school were occupying places usually filled by their seniors. Suggestions had been made to the committee for reducing by some months the age for compulsory attendance at school, but this the committee could not recommend nor could it regard attendance at continuation classes as making up for the final months of school attendance. While observing that in many country districts school children assist in agricultural work during the holidays, the committee did not find there was room in the distributing trades to any considerable extent for the employment of school children, though they might perhaps be

used as messengers. The committee strongly urged, however, that every effort should be made to avoid conditions which might be detrimental to the welfare of the children. It was evident, therefore, that the principal substitution should be that of women for men. This process had already taken place to a considerable extent, and evidently with satisfactory results. There were, of course, certain occupations unsuitable for women, but there were many possibilities for the future substitution of women in clerkships, counter work, the handling of light goods and other forms of employment. In some cases it had been found possible to obtain substitutes by inviting the return in the present emergency of persons previously employed who had married or retired. In connection with the employment of women the committee quotes with approval the recommendation of a report of a Royal Commission on the Civil Service, namely, "in so far as the character and conditions of the work performed by women approximate to those of the work performed by men, the pay of women should approximate to that of men, and in so far as the efficiency of men is higher the salaries of men should remain higher."

Hours of Labour.

Evidence was given before the committee that in the case of many women and girls the fear of long hours operated as a deterrent against entering the retail distributing trades, but the committee was satisfied that this fear was not justified as regarded the shops in the wealthier neighbourhoods in which the hours of all assistants, irrespective of age, were considerably less than the statutory maximum for persons under the age of 18, and might fairly be described as reasonable. There were, however, many establishments of which this could not be said, and it was doubtless in view of these, the report states, that the legislature fixed 74 hours per week, inclusive of meal times, as the statutory

maximum for the shop employment of young persons. "Excessive hours," states the report, "are a grave evil, and your committee are strongly of opinion that even persons above 18 years of age should in no case be employed in or about a shop for a greater number of hours per week than the statutory maximum just referred to. We suggest that in the committee of each particular trade this question might with advantage be considered, and that so far as possible a uniform system of shorter hours should be adopted. Those houses which come to an arrangement of that character might well inform the public of what they have done and appeal for co-operation and support on that ground, and it is not unlikely that indirect pressure might thus be brought to bear on other houses to fall into line. In the opinion of your committee such a result would not only make occupations of this character more attractive, but would in fact promote the health and well-being of the employees, and also that physical smartness and mental alacrity which are important factors in the efficiency of the staff."

Technical Training.

Commenting on the fact that in the substitution of newcomers for those who have enlisted, the new labour is frequently unskilled and requires a certain amount of training to make it effective, the committee believed the further development of a system for the technical training of shop assistants, which it was understood had already made some beginnings, would be very useful and this, it was considered, was a matter which might well receive the attention of trade committees of each particular trade.

Early Closing.

The committee was much impressed by considerations brought to its notice in favour of the early closing of shops. This it was considered would make the entering of shop life more attractive to many persons who might otherwise be

deterred from it. It was considered that the practice of early closing could be extended by voluntary effort, and that this subject might also receive special attention by the traders of various classes in each district. The existing machinery under statutory powers in regard to compulsory closing was considered complex in construction and slow in operation, and the committee suggested that if the matter should be dealt with by emergency legislation the present machinery should be abandoned in favour of some direct statutory provision for early closing on a certain number of days per week, or as an alternative course that the traders of each particular trade in each district could take steps for obtaining closing orders under the powers of the Shops Act, 1912. The question of the complete closing of shops during the dinner hour instead of keeping open and having employees take their dinner in shifts was also given consideration, and it was the committee's opinion that it would be of considerable advantage if in those districts where shopping conditions rendered it practicable an arrangement for dinner hour closing could be agreed upon by the various houses engaged in the same trade.

Other National Services.

While the enlistment which the committee had more particularly in view was enlistment for the army and navy, it also considered other national services and pointed out in this connection that while it recognized that whole-time work on munitions was the most efficient,

many of those engaged in other trades had offered to undertake part-time work, and the committee believed that a certain amount of that work would be forthcoming if it could be utilized. Evidence was also given before the committee that skill had been acquired by the comparatively unskilled in a much shorter time than had been generally anticipated.

Wholesale and Retail Trades.

Except for recommendations which apply only to shops the committee's observations apply to wholesale as well as to retail distributing houses. In the wholesale distributing houses, it is stated, there is more handling of heavy goods so that there were not the same opportunities of substituting women for men. A large amount of clerical work, however, is already done by women, and the committee suggests that this is probably one of the spheres in which further substitution seems most practicable. The committee considered also that in many of the productive trades where there is a large distributive element a substantial number of men could still be released and the places taken by women, particularly with marking and labelling, checking and bookkeeping.

Machinery to Facilitate Substitution.

The committee calls attention to the ordinary and special facilities which exist at labour exchanges for the purpose of placing employers and prospective employees in communication with one another, and to the useful work which these exchanges have accomplished.

NEW BRUNSWICK LEGISLATION AFFECTING LABOUR.

AT the third session of the sixth Legislative Assembly of the Province of New Brunswick, which was begun at Fredericton, March 11, 1915, and prorogued May 5, 1915, there were passed in all 111 measures, of which 60 were public Acts. There were only two of these measures (an Act to amend the New Brunswick Factories Act, and an Act respecting Mechanic's Liens) which could be said to be directly in the interests of labour, but a number of measures were passed relating indirectly to matters affecting industry and labour.

New Brunswick Factories Act.

That part of the New Brunswick Factories Act which relates to the inspection of boilers is amended¹ by providing that an inspector of boilers may be an inspector usually employed by a boiler inspection company, or a marine engineer holding a first or second class certificate, or a competent boiler maker whose qualifications shall be certified by the factory inspector. The law as it formerly stood provided for the inspection by a marine engineer without mentioning the class of certificate he should hold, by a boilermaker without specifying any of his qualifications, or by a man who held a certificate as a stationary engineer granted under the Act.

That part of the old Act which has to do with examination of stationary engineers is changed in a number of respects. The old Act provided for the constitution of a Board for the examination of stationary engineers by the appointment of two engineers of not less than ten years' experience in the management of steam engines and plants. The new Act provides that the Board shall consist of "not more than three competent persons," and provides that "written examinations may be held

in the presence of the secretary or of the Board as the Board shall direct." Instead of granting certificates of competency or of service, as provided for in the old measure, the Board is empowered to grant licenses for the management and operation of boilers and other plants in connection with the generation of steam for stationary engines. All persons, however, who at the time of the passing of the Act held certificates of competency or service in accordance with the provisions of the old measure, are entitled to receive such licenses without examination. Licenses may be granted by the Board to other persons where the Board is satisfied upon examination that the person possesses sufficient practical knowledge to qualify him to operate and superintend the operation of a stationary or portable engine and boiler, with safety to the persons and property in its vicinity. This is the same provisions as contained in the old Act, except for the substitution of the word "license" for a "certificate of competency," and that the applicant is only required to have a practical knowledge, whereas, in the old measure, theoretical knowledge was also provided for. The old measure provided that a certificate of service could be granted to any person who should within two years from the passing of the Act satisfy the Board that during the five years immediately preceding the Act he had actually served not less than two years in charge of a stationary or portable engine and boiler. The amending Act provides that before any person shall be examined for a license he shall satisfy the examiners that he has been employed as an assistant engineer or fireman under the supervision of a licensed engineer or of an engineer holding a certificate for at least one year, or that he has served at least one year at the trade of boilermaker in stationary, ma-

¹N. B. Statutes, 1915, Chap. 57.

rine or locomotive engine and boiler works. The old measure provided that certificates of competency or service should be valid for two years from their date; the new measure provided that all licenses shall continue in force until suspended or cancelled. A candidate for examination under the amended Act must be of the full age of eighteen years and shall make application to the secretary of the Board upon a form to be supplied, and shall furnish information as to his practical experience as a fireman or assistant engineer, or as to his services in the manufacturing or repairing of steam boilers and engines. No age was specified in the former law. In the new measure it is provided that the fees payable by an applicant for a license shall be \$1 in case he possesses a certificate of competency or service, or \$4 in the case of obtaining such license by examination; under the old measure applicants were required to pay \$1 upon application for a certificate and upon each certificate granted the sum of \$3.

No change was made in the various plants exempted from the operation of the provisions of the Act, except to add to these boilers and engines used for ammonia process plants. In the case also of boilers and engines in charge of persons holding a certificate as a marine engineer, a change is made requiring marine engineers to make application to the Board for a license which is granted without examination on payment of the prescribed fees. Section 50 of the old Act, which prohibited the owner or user of a steam boiler or engine to operate the same for a period of more than 15 days unless the person in charge of the same held a certificate under the Act, is amended by leaving out the words "for a period of more than 15 days." The provisions of this section also are held not to apply to a fireman or assistants working under the supervision of a licensed engineer. In cases, however, where the secretary of the Board is satisfied that the owner or user of a steam boiler or engine is unable

to procure a duly licensed engineer capable of operating his plant, he may issue to such owner or user a temporary permit for a period not exceeding 30 days, for operation by a person who he is satisfied has sufficient practical knowledge and experience to operate the same with safety to the plant and to the persons and property in its vicinity.

Provision is also made in the new Act for the issuing of a duplicate license without examination on presentation of affidavit or other satisfactory proof that license has been lost, stolen or destroyed, and on the payment of \$1. In the event of a candidate failing to pass an examination 60 days shall elapse before he shall become eligible for re-examination, but a candidate shall be entitled to be examined within 14 days from the filing of his application. A provision is also inserted in the new measure providing for the mutual interchange of licenses between provinces.

Mechanics' Lien Act.

The Mechanics' Lien Act is amended² by adding a sub-section to the interpretation, providing that the word "building" shall extend to and include any insurance carried upon a building and any monies payable in any insurance policy in respect of such building.

Measures Affecting Agriculture.

A number of measures affecting the agricultural industry were passed. A change³ is made in the Act relating to cold storage for agricultural and other products by providing that the Lieutenant-Governor-in-Council may from time to time accept the guarantee of the Canadian Pacific Railway Company in lieu of insurance on buildings and plant of the New Brunswick Cold Storage Company, Limited.

"The Apiary Inspection Act"⁴ is a measure designed for the purpose of suppressing infectious and contagious

²N. B. Statutes, 1915, Chap. 60.

³N. B. Statutes, 1915, Chap. 17.

⁴N. B. Statutes, 1915, Chap. 19.

diseases among bees and for the protection of bees. Inspectors are provided for, and persons keeping bees are required to notify inspectors of any contagious or infectious disease amongst bees. The spraying of fruit trees while in full bloom with any mixture containing any compound of arsenic or any other poison hurtful to bees is prohibited.

An Act⁵ to provide for assistance to wheat mills authorizes the granting of assistance by way of bonus to persons or companies erecting mills for the grinding of wheat by the Hungarian or other roller process in localities where no such mills are at present established, or for the conversion of any existing mills to mills equipped with such roller processes, the location, style and capacity of mills to be aided to be approved by the Lieutenant-Governor-in-Council who shall prescribe the amount of the bonus in any case and the conditions upon which the same may be granted. Five thousand dollars is the limit of any sum to be expended per year under the provisions of the Act.

The Agricultural Act is amended⁶ by the addition of a section providing that any agricultural society incorporated under the provisions of the Act may borrow money to meet any current indebtedness and give its promissory note signed by the president and the secretary to any corporation or individual for such amount as the directors may by resolution authorize.

Railway Acts.

A number of measures⁷ respecting railways were passed, most of them to incorporate new companies. An Act relating to the International Railway of New Brunswick empowers the railway to lease or sell its property to the Dominion of Canada, and an Act respecting the St. John and Quebec Railway gives power to the Provincial Govern-

ment to take certain measures to complete lines of railway which the company had failed to finish. The Lieutenant-Governor-in-Council is empowered to appoint a commission consisting of not more than three persons to take charge of the construction of the uncompleted portion of the railway which was to be constructed from a point on the line of the Transcontinental Railway at or near Grand Falls to the City of St. John, and to make such other arrangements necessary to secure the proper completion of the road.

Moratorium Provided For.

An Act⁸ to provide for a moratorium authorizes the Lieutenant-Governor-in-Council in case of war, invasion, riot or insurrection, real or apprehended, and in case of any real or apprehended financial crisis, to authorize by proclamation published in the Royal Gazette in so far as the same may be within the legislative authority of the province, the postponement of the payment of all or any debts, liabilities, and obligations, however arising, to such extent and for such time and upon and subject to such terms, conditions, limitations and provisions as may be specified in the proclamation.

Other Measures.

An Act⁹ respecting motor vehicles provides certain regulations for the prevention of accidents and the safety of the public in connection with the operation of motor vehicles. Motor vehicles are required to display in a conspicuous manner the number assigned to them under the provisions of the Act and to observe certain regulations in regard to rate of speed, giving warning of approach and other matters designed to protect the public. Chauffeurs are required to file in the office of the secretary of the Department of Public Works

⁵N. B. Statutes, 1915, Chap. 20.

⁶N. B. Statutes, 1915, Chap. 21.

⁷N. B. Statutes, 1915, Chap. 9.

⁸N. B. Statutes, 1915, Chap. 11.

⁹N. B. Statutes, 1915, Chap. 43.

on a blank form to be supplied by such secretary, a statement which shall include the name and address of the applicant, nationality, age, height, weight, colour of eyes and hair, and to give the trade name and motor power of the motor vehicle or vehicles to be operated, and to pay a registration fee of \$2. Before a license is granted the applicant must furnish testimonials as to his character and sobriety; no chauffeur's license to be issued to any person under eighteen years of age. Chauffeurs are then to be registered and assigned a number. They are to be supplied with a badge of aluminum or other suitable metal with their registration number and the words "Registered Chauffeur License, N.B.," thereon. This badge must be worn by the chauffeur upon his clothing in a conspicuous place at all times while operating a motor vehicle upon the public highways. Chauffeurs are not allowed to transfer their badges, and no person shall operate a motor vehicle as a chauffeur upon the public highways unless he has complied with the requirements of the Act. Non-residents of the province who have complied with the registration laws of the state or province of their residence may operate in the province for a period not exceeding 21 days in any one year; after that period has expired they must take out registration and pay a tax the same as required of residents under the Act, which is fixed at \$5, except in the case of motor cycles where the fee is \$2. Chauffeurs are also required to pay in addition to the registration fee an annual fee of \$2. The Act also gives power to the Lieutenant-Governor-in-Council to make regulations respecting the use of motor vehicles known as "jitney busses" and providing for the qualifications of drivers and the giving of bonds or other security by the proprietors or operators of such vehicles for the payment of dama-

ges to persons or property which may be caused by their operation. Cities, towns and municipalities within which such vehicles are operated are also given power to make regulations as to routes, rates of fare and details of service.

An Act¹⁰ respecting the manufacture of spruce and other pulpwood cut on crown lands is amended by the addition of a number of regulations affecting procedure. An important change is made; also, in regard to the export of spruce or other soft wood suitable for manufacturing pulp or paper. Formerly all wood of this nature cut on crown lands was required to be manufactured in Canada, but notwithstanding previous provisions in this respect, spruce or other soft wood suitable for manufacturing pulp or paper may now be shipped to the United Kingdom in its unmanufactured state until the expiration of two months after peace has been declared in the present war.

Some changes are made in legislation for the prevention of accidents by fire in hotels. A clause is added¹¹ to the Act of 1911 which provides that the number of permanent outside stairways or ladders to be erected under the Act, as well as the sufficiency and location thereof, shall be subject to the direction and approval of the factory inspector, and gives power to the inspector to give such directions as he may deem necessary to insure at all times unobstructed and free access to such stairways and ladders from the inside. Lessees or proprietors of hotels exceeding two storeys in height are required to place and maintain during the night a red light at the exit to each such stairway or ladder and to keep the word "exit" there conspicuously displayed, and also to keep near each such exit one fire axe.

¹⁰N. B. Statutes, 1915, Chap. 49.

¹¹N. B. Statutes, 1915, Chap. 54.

QUEBEC LEGISLATION AFFECTING LABOUR, 1915.

AT the last session of the Quebec Legislature, which was begun on January 7, 1915, and prorogued March 5, 1915, there were in all 176 measures passed. Of these some refer to matters of direct interest to labour and others have an indirect bearing on questions affecting labour and industry. In an Act to amend the charter of the city of Montreal, the bill as introduced contained a section to the effect that no person residing outside of the limits of the city of Montreal and paying no tax therein should be employed within the limits of the said city as labourer, operative, workman or longshoreman without having previously obtained from the city a permit to that effect and without having paid for said permit a sum not exceeding twenty-five dollars. This section, however, was dropped from the bill later and not included when the measure became law. Representations were made to the Premier by a delegation of labour men in regard to certain desired legislation, the delegation asking amongst other requests that a moratorium measure be passed, in order, as it was stated, to safeguard the interests of small holders. No moratorium legislation, however, was introduced in the Quebec Legislature, the Premier stating, in reply to a question in the Legislature, that the Government did not intend to introduce such a bill, because it considered that it would not be in the interest of the province and of its population under the circumstances then existing.

Measures directly affecting Labour.

Five measures may be said to be directly in the interests of labour, one of these measures dealing with labourers' wages and insurance, another with workmen's dwellings, the third having to do with benefits and pensions to civic foremen, and the fourth and fifth with the

protection of workmen in mines and in lumber and construction camps.

Wages and Insurance.

"An Act relating to the retention of a portion of labourers' wages for purposes of insurance,"¹ recites that certain employers retain out of the wages of their workmen amounts intended to pay premiums on insurance policies issued against accidents or sickness happening by reason of or in the course of their work and that serious inconvenience results therefrom. The law therefore enacts that it is forbidden for any employer to make any retention of any part of the salary or wages of his workmen or employees for purposes of insurance against accidents or sickness happening by reason of or in the course of their work, even with the consent of such workmen or employees, and any agreement under which such a retention is made or authorized is declared to be null and of no effect. In any case where such retention is made, the workman or employee, in the three months following the end of his contract of work, may recover, before any court of competent jurisdiction, the amount so irregularly withheld from his salary or wages, though the Act is held not to apply to any retentions which may have been legally made before its coming into force. The Act does not apply to railway employees who individually and in good faith, take out policies of insurance and give written orders to their employees to pay the premiums out of their wages or salaries.

Workmen's Dwellings.

An Act to incorporate "La Société des logements ouvriers,"² recites that cer-

¹Chap. 71, Quebec Statutes, 1915.

²Chap. 128, Quebec Statutes, 1915.

tain persons have represented that for several years the question of sanitary, modern and cheap dwellings has been before the public in large communities, that a great many builders' workmen are often unemployed, and that the formation of an association for the purpose of enabling workmen to make use of the time they might be without employment by enabling them to devote their labour to the erection of buildings whereof they might become owners on easy conditions would be a matter of public interest, and in view of this certain persons of the city of Montreal and other persons who may become shareholders are by the Act incorporated under the name of "La Société des logements ouvriers."

Membership of Association.

The head office of the association is to be in the city of Montreal and the association is to consist of shareholder members, who are to be subscribers to the capital stock of the association, and registered members, comprising all labourers, carters, carpenters, joiners, bricklayers, plasterers, roofers, plumbers, stonecutters, masons, cement-finishers, painters, electricians, and all other workmen who, by a written application express their intention of joining the association. There are to be as well, beneficiary members, the name given to registered members when they have had placed to their credit, in the association's records, a number of hours' labour, representing an amount of at least twenty-five dollars. The association is to be managed by a board of directors, consisting of five elected yearly, by the shareholder members and beneficiary members. Each shareholder member is given one vote for every share he holds, and each beneficiary member is to have a vote for every hundred dollars of accumulated work.

Objects of Association.

The object of the association is to acquire land within the district of Montreal, where the registered and benefi-

ciary members shall devote the time during which they are unemployed, in building dwelling-houses on such land, of reasonable dimensions, provided with suitable and separate conveniences, and to allow them to become owners thereof at moderate prices. The Act provides for the preparation of house plans, which must be approved by the municipality where the association will carry on its operations, or must be in conformity with the provisions of the by-laws of such municipality as the case may be, and the plumbing work must be done according to the health by-laws of the city of Montreal. Every person qualified to be a registered member of the association may form part thereof by signing a written application to that effect, and his name is then entered in the association's books. He may then choose from among the exhibited and approved plans provided for, the house he intends to acquire. After registration all members may work on the land belonging to the association at building houses pointed out to them and under the direction of persons chosen by the association.

Union wages to prevail.

The association is to keep an account of the number of hours' labour contributed by each registered member and at the same time of the price represented by such labour and is to give each registered member a numbered pass-book in which his hours' labour and the price is entered. The value allotted by the association to the labour of each registered member shall be equal to the price fixed by labour associations affiliated to the Dominion Trades and Labour Congress or eligible for such affiliation, for the same kind of labour and the association shall fix the working hours in accordance with the by-laws of such associations. The value of the labour which shall be required from every beneficiary member to allow of his becoming the owner of a house like that whose plan he has chosen, shall be strictly limited to the cost of the land, materials, labour

and management. While an estimate is to be made in advance for every house, the beneficiary member shall only pay the actual cost of the house as established when the house is completed. Extra work, however, is provided for. The amount of work placed to the credit of registered or beneficiary members, and their interest in the association shall not be liable to seizure. The board of directors alone see to the acquisition of the land and materials required, as well as the advancing of the necessary money for building houses, and the board has the right to keep for the benefit of the association the twelfth of every dozen houses built under the act. The beneficiary members may take possession of the houses as owners when they are completed. When a house is finished the right to take possession thereof as owner shall be sold by public auction to the highest bidder among the beneficiary members, and the premium realized shall be credited as receipts for the benefit of the association. No member can acquire more than one house from the association. Members have the right to transfer their interest in shares.

Ownership of Homes.

As soon as a beneficiary member takes possession of a house, the association shall give him a title deed of ownership, stating the purchase price, and acknowledging the payment of a sum equal to the amount of labour appearing to his credit in the association's books and in his pass-book, the association retaining an hypothecary right on the house for the balance remaining due, without interest. Members are given the advantage of continuing to have hours of labour put to their credit until the purchase price mentioned in the title deed is paid, and the association will give every year an acquittance equivalent to the labour put to the credit of members during that period. The value of work may be repaid in money in certain cases, and qualified heirs or representatives may replace a member. Workmen are bound to continue work after possession

of the house to the extent of one hundred dollars each year, and in default of supplying such work must pay in money the equivalent of such sum or the amount necessary to complete it, the amount to be credited on the balance remaining due. Members wishing to discontinue rights in the association may claim in cash half the value of the work done. Part of wages may be paid in money, but labour so remunerated is not to be entered in such members' account or pass-books. The council of a municipality may guarantee loans to be effected by the association. Contracts for the purchase of houses must be approved by a board of censors, which shall consist of three members, one of whom shall be elected by the board of directors and the two others from among the workmen belonging to the labour unions above mentioned, with the approval of the majority of the beneficiary members.

Capital Stock and Profits.

The capital stock of the association is to be one hundred thousand dollars, divided into one thousand shares of one hundred dollars each, fifty per cent to be paid in cash before beginning operations. Profits are to be divided among the shareholder members and the beneficiary members according to their respective interests. A penalty of one hundred dollars fine and in default of payment of fine imprisonment not exceeding three months is provided in the case of any directors of the association who may sell either land or materials to the association. A yearly statement must be sent the Provincial Treasurer each year.

Firemen's Benefit Association.

An Act to consolidate the charter of the Montreal Firemen's Benefit Association³ consolidates and replaces previous acts connected with the association, the object of which is to help its members in case of sickness, injury, infirmity or

³Chap. 142, Quebec Statutes, 1915.

other disabilities, and to grant them benefits and pensions for services rendered, also to provide relief, pensions and other advantages to the dependents of deceased members. The pension of any member of the association who has served in the Montreal Fire Brigade for twenty or more years, or who has sustained permanent injuries shall be fifty per cent of the annual salary earned by the member at the time he is put on his pension, but the member who is earning at the time he is put on his pension, an annual salary of less than one thousand dollars, shall receive a pension of not less than four hundred and fifty dollars annually. Pensions are based on the salary given by rank.

Quebec Mining Law.

The Quebec Mining Law is amended⁴ by the addition of a section which changes the definition of mines and minerals, so as to exclude from the definition general quarries of stone, clay, fire-brick, etc., when found separate from other substances in the lands of private persons. A change is also made, however, so as to make applicable to such quarries or of minerals belonging to the surface owner, the provisions of that part of the Quebec Mining Law contained in the Revised Statutes of Quebec, 1909, relating to the protection of workmen in mines. That part of the old Act also, which provides that no male child under twenty years shall be employed in working machinery in or near a mine, is amended by including with a mine, "a mill, or works where ores are treated." The new Act also sets out the conditions on which certain oil or gas lands may be staked.

Public Health Act.

The Public Health Act is amended⁵ by the addition of a section which provides that the Board of Health may by by-law, require the employment of duly qualified practising physicians by the

proprietors or contractors in charge of shanties, mining camps, railroad construction camps, or others, such by-laws to apply, however, only to such industries, proprietors or contractors of shanties, mining camps and railroad construction and other works as employ at least twenty-five men at the same place. By-laws are to come into force fifteen days after publication in the Quebec Official Gazette.

Agricultural Measures.

Several measures were passed which affected the agricultural industry in some features, but not having any special bearing on matters of concern to labour. A measure dealing with the dairy industry⁶ provides amongst other things for the inspection of butter and cheese and condensed milk factories; "An Act to amend the Revised Statutes 1909 respecting co-operative agricultural societies"⁷ makes some changes in the procedure in regard to election of officers, and "An Act relating to the aid that may be granted by certain municipalities for the purchase of seed grain and seeds during the year 1915"⁸ sets out the procedure that may be followed by county councils in advancing seed grain or seeds to ratepayers and how repayments may be made.

Other Measures.

Other legislation which may be said to have some bearing on labour is contained in measures relating to the licensing of public laundries and to private detectives. The latter subject has frequently received the attention of labour organizations in Canada and the United States owing to the employment at times by employers of private detectives in connection with strikes, and was one of the subjects upon which the labour delegation mentioned in the introduction to this article, desired legislation.

⁴Chap. 31, Quebec Statutes, 1915.

⁷Chap. 32, Quebec Statutes, 1915.

⁸Chap. 34, Quebec Statutes, 1915.

⁵Chap. 35, Quebec Statutes, 1915.

⁶Chap. 59, Quebec Statutes, 1915.

Public Laundries.

"An Act to amend the Quebec License Law relating to public laundries"⁹ includes a public laundry as one of the institutions named by the Act which must take out a license before doing business, the cost of the license being fixed at fifty dollars for the city of Montreal, forty dollars for the city of Quebec; any other city, twenty-five dollars; in any town, twenty dollars; and elsewhere, fifteen dollars. An additional fee of five dollars is also required to be paid to the collector of provincial revenue.

Private Detectives.

"An Act respecting private detectives"¹⁰ provides that no person or corporation may act as a private detective nor advertise himself as such, nor assume such title or a title to the same effect in a document, or on a letter or card, nor employ, in the name of any company or firm, the word "detective," whether combined with other words or not, without first obtaining a permit to that effect from the Provincial Treasurer. Any person or corporation applying for such a permit must do so in writing in a form provided and give security in the sum of two thousand dollars to guarantee the honest and legal accomplishment of the person or corporation and agents of the duties to be performed as a private detective. The Provincial Treasurer, after such investigation as he deems proper as to the character, ability and suitability of the person or corporation applying for the permit and upon approval of the security and upon receipt of a fee of \$200, may issue, upon a favourable report by the Attorney-General, a permit authorizing the applicant to keep or carry on a private detective office for a term of one year. Persons who act as employees or agents of a person or corporation holding a permit are not required to secure a similar permit, but

they must, on the recommendation of their employer, secure a special annual permit on payment of a fee of two dollars. The employers recommending such persons or agents are made responsible for their conduct as private detectives. Permits are renewable from year to year and may be revoked at any time during the year. Provision is also made for the issuing of temporary permits. Persons holding a permit are not entitled to advertise or act as a collector of accounts, or to collect accounts for any person with or without remuneration.

The words "private detectives" are defined to mean "persons or corporations who, for a profit, make a regular business of searching for offenders against the laws, or of supplying information as to the moral character of the conduct of certain persons, or as to the manner in which certain business is transacted, by corporations or persons; but do not include corporations or persons who make a business, whether for profit or otherwise, of supplying information as to the commercial or financial standing of other corporations or persons."

The Act does not apply to constables or detectives appointed by the Government or municipalities for their own service, nor to special constables who may be appointed by certain judges or magistrates to carry out their orders within the limits of their respective jurisdiction.

Contravention of the Act in any of its provisions is punishable by a fine of not less than two hundred dollars and not more than five hundred dollars for each contravention, with imprisonment for not more than three months, in default of payment of fine.

Co-operative Syndicates.

The Act relating to Co-Operative Syndicates is amended¹¹ in certain particulars. That part of the original Act

⁹Chap. 22, Quebec Statutes, 1915.

¹⁰Chap. 57, Quebec Statutes, 1915.

¹¹Chap. 68, Quebec Statutes, 1915.

which provides that co-operative syndicates for consumption, production and credit may be formed at any place in the province is changed by the addition of the words after credit, "and for other economical and provident purposes."

That part of the Act dealing with the creation of a reserve fund is amended by the addition of a new section which states that "credit societies only are authorized to give credit and make loans to their members."

ALBERTA LEGISLATION AFFECTING LABOUR.

THE third session of the Third Legislative Assembly of the Province of Alberta, which was begun February 25, 1915, and closed April 17, 1915, passed in all 39 measures, of which 22 were public Acts. While no legislation specifically in the interests of labour was introduced, a number of measures affecting the agricultural industry were passed, as well as a number of miscellaneous measures having an indirect bearing on industry and labour.

Measures affecting Agriculture.

An Act to provide for the Inspection of Stock¹ provides for special inspection of live stock at places where the slaughter or shipment of stock is of such magnitude as to require special inspection, special inspectors being required, in addition to the ordinary duties of an inspector of stock, to inspect the stock on the premises of any slaughter house or abattoir or in any place where live stock is being held for feed, rest or sale. All shippers of stock are required to furnish the special inspector with a memoranda of sale, which memoranda is to be forwarded by the special inspector of stock to the Minister of Agriculture the first day of each month. In cases where a special inspector finds that any animal has been unlawfully shipped or is being unlawfully held, he is empowered by the Act to detain such animal and offer the same for sale by auction or otherwise at a reserve price of the average amount paid for such stock,

and the amount obtained for such stock so sold is to be forwarded to the Department of Agriculture, which Department is to forward the money to the owner. Special inspectors are empowered to appoint deputy inspectors. Special inspectors and special deputy inspectors are given the powers of constables and brand readers, which latter term is defined to mean anyone appointed by the Minister of Agriculture to give an accurate description of an astray.

Regular inspectors of stock are also provided for by the Act, and no person is permitted to place any stock consigned to a point outside of the province in a railway car, unless such stock has first been inspected by an inspector and such inspector has issued a certificate. Re-billing from a point inside the province to an outside point is also prohibited without a certificate by an inspector of stock. The inspector of stock is entitled to a fee of 5 cents per head, with a minimum fee of 25 cents for certificates. These provisions, however, do not apply to the shipment of stock registered in the records maintained or approved of by the National Records at Ottawa, and presentation of the pedigree certificate to the station agent is deemed sufficient authority to ship such stock. Inspectors must not issue certificates unless the shipper of the stock produces a memorandum of sale signed by the person who, from the brands on the stock appears to be the owner thereof, or unless such person or agent verbally consents to the granting of the certificate by the inspector. This provision, however, does

¹Chap. 11, Statutes Alberta, 1915.

not apply to any shipper of stock branded with the recorded brand of such shipper, but the shipper is required, before receiving a certificate, to deliver to the inspector a memorandum signed by him or his agent setting forth the age, sex and brands of each animal. In the case of unbranded stock the shipper is required to sign and deliver to the inspector a memorandum setting forth the age, sex and description of each animal and stating from whom each animal was originally acquired by him or his agent.

Inspection of animals sold at public auction or private sale:

No vendor, owner or lessee of any premises where a sale takes place, or an auctioneer conducting a sale, either in any sale yard, sale exchange or other stable where stock is kept for sale or exchange, can accept settlement for, deliver possession or allow such stock to be removed from the premises where the sale takes place until an inspector of stock or brand reader gives to the purchaser a duly signed certificate of such stock, the vendor paying for such certificate the sum of 10 cents per head for each animal sold. No inspector is allowed to issue such certificate without first securing a memorandum in regard to ownership and without first personally inspecting the stock. Failure to do so and for gross carelessness or fraud in preparing the description in any certificate is punishable with a penalty not exceeding \$100 and costs. An auctioneer is required to post up a list of animals to be sold at least three hours before a sale commences, and to give to each purchaser of stock a memorandum of sale signed by himself and the owner. Inspectors may demand the return of any certificates improperly issued.

Butchers and Hide Dealers.

Butchers and hide dealers are required to take out a license, to cost \$1, and no person is allowed to engage in business as a butcher or dealer in hides without such license. A butcher is re-

quired to keep a record of all cattle slaughtered by or for him, a copy of the record to be sent the Minister of Agriculture the first of each month. Butchers and hide dealers are also required to keep a record of the hides of all cattle purchased, such record to be also sent to the Minister. Railway station agents are prohibited from accepting for shipment any hides of cattle excepting those offered for shipment by a licensed butcher or dealer in hides, unless same is accompanied by a certificate of inspection by an inspector of stock or brand reader. Persons slaughtering cattle must not sell the hides to anyone but a licensed buyer, and no person other than the owner of an animal or his agent is permitted to remove the hide from the carcass of any cattle found dead.

Driving or Trailing of Sheep.

An Act to Govern and Regulate the Driving or Trailing of Sheep² provides that whenever the owner of 500 or more sheep desires to move the same on foot from one point of the province to another distant twenty-five miles or more, he shall send a notice of such intention to the live stock commissioner of the province at least ten days before starting on the proposed move, such notice to set out the full name and address of the owner of the sheep, the starting point, the objective point, the proposed route, the number of sheep, the probable date of starting and the name of a responsible person who will be in charge of the sheep. This notice is not required, however, where sheep are being driven directly to market.

Sheep that are being driven or trailed over public roads, trails or road allowances of Alberta must be in charge of the owner or his agent, and sheep must be kept moving and under control of the herders, and must travel a minimum total distance of five miles a day. The owner or agent of such sheep is held

²Chap. 12, Statutes Alberta, 1915.

liable for any damage which sheep may do by entry on lands along the route, whether such lands are fenced or not, and sheep thus entering or damaging may be seized until damages are paid, and in case of disagreement in this regard provision is made for reporting the matter to the nearest justice of the peace, who shall appoint three disinterested persons to survey and assess the damage done, and on receipt of their report shall order payment of the amount with costs by the owner of the sheep or his agent to the party suffering the same, and upon such payment shall order the release of the sheep. In the case of refusal on the part of the owner or his agent to pay such damages the sheep may be ordered sold and damages and costs paid out of the money thus secured. Persons suffering damage may also recover compensation in any court of competent jurisdiction. Any owner or agent attempting to rescue sheep that have been seized is liable to a penalty not exceeding \$100 and costs. Any herder who permits sheep under his charge to wander on privately owned land or lands under lease or permit and to commit damage to crops or meadows thereon is liable to a fine not exceeding \$10 for each offence. The penalty for contravening any of the provisions of the Act not otherwise provided for is a sum not exceeding \$100 and costs.

Irrigation.

An Act respecting Irrigation Districts³ provides for the organization of irrigation districts by petition and the vote of owners in the district, the election of trustees to carry out the work if the vote is in favour of the establishment of such irrigation districts, the establishment of water user's districts, the alteration of boundaries, etc.

Seed Grain and Fodder Relief.

An Act respecting Seed Grain, Fodder and other Relief⁴ provides for the ratification of agreements made between the

province and the Dominion regarding the granting of relief to settlers in districts where crops have failed, and sets out the manner in which relief is to be granted. The amount covered by such relief is made a charge upon the land and crops of the person receiving relief, and takes priority over all other encumbrances on the property or crops. Interest is payable at the rate of five per cent per annum. Any person to whom seed grain, fodder or other goods by way of relief have been advanced, who sells or disposes of the same or any part thereof, or who neglects or fails to sow in a husband-like manner such seed grain without the consent of the Minister of Agriculture or such person as the Minister may appoint is deemed guilty of an offence and liable upon conviction to a fine not exceeding \$500 and to imprisonment for any term not exceeding two years or to both.

Hail Insurance

An Act respecting Municipal Co-operative Hail Insurance⁵ provides for the organization of hail insurance districts to be under the direction of a Hail Insurance Board, which is empowered to pay for damage to crops by hail. Funds for the payment of hail insurance may be borrowed by the Board, such loans to be a debt owing by the hail insurance district, repayable in accordance with the terms of the resolution authorizing the same, and to be a first charge upon the taxes levied by any municipality in the hail insurance district for hail insurance purposes.

Persons suffering losses to growing crops by hail between June 16 and September 15 in any year may put in a claim for indemnity, the maximum indemnity paid for total loss being set at \$6 per acre.

Railway Acts.

An Act to amend Chapter 19, Statutes of Alberta, 1914,⁶ provides for certain

³Chap. 13, Statutes Alberta, 1915.

⁴Chap. 14, Statutes Alberta, 1915.

⁵Chap. 18, Statutes Alberta, 1915.

⁶Chap. 19, Statutes Alberta, 1915.

procedure in the advancing by the Government to the Central Canada Railway Company of a portion of the cost of the line, and provides also for the guarantee by the Edmonton, Dunvegan and British Columbia Railway Company of the bonds of the Central Canada Railway Company to be given for the amount advanced. An Act respecting the Guarantee of Certain Securities of the Canadian Northern Western Railway Company authorizes the guarantee by the province of additional securities. It is also required that the line of railway to which the securities relate shall be completed and ready for traffic on or before December 31, 1915. An Act to authorize the Guarantee of Certain Securities of the Edmonton, Dunvegan and British Columbia Railway Company provides for the guarantee by the province of additional securities of the company in respect of an additional line of railway, construction of part of which is to be commenced on or before August 1, 1915, and be ready for traffic December 31, 1916.

Other Measures.

The Public Utilities Act⁷ is a measure which provides for the creation of a Public Utilities Commission and defines its powers and duties. The expression "public utility" is defined to mean every corporation other than municipal corporations (unless such municipal corporation voluntarily comes under the Act in a manner provided) and every firm, person or association of persons, the business and operations whereof are subject to the legislative authority of the province that own, operate or control any system, plant or equipment for the conveyance of telegraph or telephone messages or for the conveyance of travellers or goods over a railway, street railway or tramway, or for the production, transmission, delivery, or furnishing of a water, gas, heat or light power, either

directly or indirectly, to or for the public, also, the Alberta Government telephones.

A Board to be known as the Board of Public Utility Commissioners is to be established, composed of three members to be appointed by the Lieutenant-Governor-in-Council, one of whom is to be appointed as chairman and hold that office as long as he continues a member of the Board. Each of the commissioners is to hold office for ten years from the date of appointment, but to cease holding office upon reaching the age of 70 years.

The Board is given wide powers in regard to questions of transportation, questions of dispute between public utilities and municipalities, and a general supervision over all public utilities, subject to the legislative authority of the province, and may make such orders regarding equipment, appliances, safety devices, extensions of works or systems as are necessary for the safety or convenience of the public, or for the proper carrying out of any contract, charter or franchise involving the use of public property or rights. Of special interest to labour is the power given the commission to impose and enforce regulations for the safety and protection of employees of any public utility and to impose and enforce regulations in case of accidents and for the remedying of the cause thereof and preventing of recurrence. The Board is required to make a report in January of each year for the year ending November 30 previous.

The Married Woman's Home Protection Act⁸ is a measure designed to protect the interests of married women in homesteads, and provides for the filing of a caveat with the registrar which prevents the transfer by a husband of property in which his wife has an interest until the matter has come before a judge and has been decided by him.

⁷Chap. 6, Statutes Alberta, 1915.

⁸Chap. 4, Statutes Alberta, 1915.

MINING ACCIDENT AT COAL CREEK, B. C.

Findings of Commissioner Appointed to Inquire into Conduct of Mine Officials.

THE August, 1915, issue of the *Labour Gazette* contained the text of the findings of Mr. John Stewart, who was appointed a Commissioner under the Public Inquiries' Act of the province of British Columbia, to enquire into the causes that led to an explosion in what is known as the "B. North Mine" at Coal Creek, B.C., in January last. In his findings Mr. Stewart censured the conduct of certain mine officials in not properly examining the mine.

Subsequent to the handing out of Mr. Stewart's report, the Acting Minister of Mines instructed His Honour Judge Forin to hold an inquiry under the Coal Mines Regulation Act into the conduct of the mine officials mentioned in Mr. Stewart's report. This inquiry was held at Fernie on July 19, 20 and 21, and on August 31 Judge Forin made a report to the Acting Minister of Mines giving his opinion and findings in the matter. The full text of this report is here printed:

Judge Forin's Report.

"To the Honourable W. J. Bowser,

"Acting Minister of Mines.

"In the pursuance of your request contained in your communication of the second July last to hold an inquiry under the "Coal Mines Regulation Act," at Fernie, into the conduct of Mr. Bernard Caufield, manager of B. North Mine, Coal Creek, B.C., and holder of a first-class certificate of competency and second-class certificate of competency B.30; and Mr. William McFegan, over-

man of B. North Mine, and holder of a second-class certificate of competency B.06 and third-class certificate of competency C.319, and into the matters set forth in the said communication I have the honour to report as follows:

"Statement of Case.

"An explosion of gas took place at B. North Mine, Coal Creek, B.C., about 7 o'clock in the morning of January 2, 1915.

"It is not known how the gas was ignited, although there are a number of circumstances known which led to a well-founded theory, but, as the explosion was admitted, Mr. Graham, the chief inspector of mines, did not consider it necessary to go into this feature of the case, with which I agreed.

"Before opening the inquiry on the nineteenth of July, I visited the mine in question on the eighteenth and inspected the ventilating fan and the approaches to the mine; the fan is driven by an electric motor which also furnishes power to operate the haulage and to supply lights. The electric motor is controlled by a contact switch which automatically cuts out when the load is too heavy and must be thrown in again before the fan can start up.

"The attention given to the fan seems to have become quite secondary owing to the dismissal of one of the fan men and the lack of system and discipline from the manager downwards. It seemed to be a sort of overman's duty to look after the fan as appears in my findings.

"Through the failure to operate the ventilating apparatus the said B. North

Mine filled with explosive gas. The explosion caused serious injury to Thomas France and John Gydossie, underground employees at the said mine, and Evan Evans, late inspector of mines, lost his life by suffocation while endeavouring to ascertain by examination the condition of the mine subsequent to the explosion.

"I held the inquiry on the nineteenth, twentieth and twenty-first days of July. Mr. Graham, chief inspector of mines, represented the Provincial Government, and Mr. Caufield and Mr. William McFegan were each represented by counsel.

"Opinion and Findings of the Court.

"(1) I find that it was well known that B. North Mine was a gaseous mine and the utmost vigilance and attention should have been given to the system of ventilating the mine.

"(2) That the mine when being worked for three shifts had three fan men in attendance as good mining practice would require.

"(3) That after October there was a cessation of regular operation by three shifts, and during the balance of the year 1914 until Christmas week the mine was worked intermittently, and the services of one fan man was dispensed with, the two remaining fan men working 12 hours each, or irregularly as their services were required.

"(4) That for the purpose of giving extra employment during Christmas and New Year's week the work in the mine was resumed for three shifts or for the full 24 hours.

"(5) That during Christmas week one of the two remaining fan men were laid

off through sickness and a make-shift system of having the bogie man or haulage man attend to the fan was introduced.

"(6) That at the time of the explosion there was but one fan man regularly employed to attend to the ventilating fan; this being very bad mining practice, and while the circumstances were peculiar and arose from unusual conditions owing to the intervening of a holiday, New Year's Day, on which day the miners take a holiday, still the primary cause of the irregularity in working the ventilating system was the neglect to have regular fan men on duty when the mine was operating. If this had been done no explosion would have taken place. Of course there would have been no explosion if the fire bosses had during New Year's Day and the following day kept the fan going and examined the mine, but the crux of the position of the fire bosses as one of them considered it is explained in Questions and Answers, 1447-1450.

"Alex. McFegan, witness:

"Mr. Macneil—1447.

"Q. The point is the Act makes these rules compulsory?

"A. Yes, if they left the fire bosses alone—or if they had left the overman alone—without interference, there would have been a fan man there.

"1448.

"Q. Explain?

"A. There would have been a fan man simply because I don't think the fire bosses or the overman would have stopped the fan men; at least they never were known to stop them.

“The Court—1449.

“Q. It was against the wishes of the overman and the fire bosses that the fan men were removed?

“A. That is it.

“Mr. Macneil.

“Q. Is that what you mean?

“A. That is what I mean. Your Honour, it is all right for the Coal Company to put up rules and stick them in your face when anything happens, but when they will not let you carry them out fully, that is the position we are in.

“(7) I do not exonerate the two fire bosses, who seem to have been lax in not keeping a careful supervision of the mine during New Year's Day, on which work ceased, but it appears from Exhibit ‘C’ and the questions and answers brought out by the examination of A. McFegan by Mr. Graham, that the management knew that on idle days and Sundays that the afternoon and night shift fire bosses were not at work (see questions and answers, 1469-1485). However the actions of the fire bosses are not being inquired into, and I gather as a result of their being remiss they have been dismissed from the Coal Company's service. The responsibility of having the ventilating machinery properly operated was upon the official whose prerog-

ative it is to appoint competent fan men. And this official is the manager, Mr. Bernard Caufield.

“(8) The dangerous policy of cheap economy pursued by the manager in not keeping regular fan men on B. North Mine cannot be excused by shifting the blame on under officials, either overman or fire bosses, who were also negligent.

“(9) In view of the very great importance of proper ventilation the carelessness of the manager, Mr. Bernard Caufield, in not providing competent fan men, was in my opinion a measure of gross negligence, and I suspend his certificate of competency, being a first-class certificate of competency and a second-class certificate of competency B.30, for one month.

“(10) Mr. William McFegan, the overman, must also share in the responsibility for permitting the slack discipline in such an admittedly gaseous mine, he should have been on the alert to see that the ventilation of the mine was attended to in a workmanlike manner. I also suspend his certificate, a second-class certificate of competency B. 106 and a third-class certificate of competency C.319, for one month.

“(Sgd.) J. A. FORIN,

“*Court of Inquiry.*”

“Nelson, August 31, 1915.”

PUBLIC EMPLOYMENT BUREAUS.

IN view of the increasing importance of the work performed by public employment agencies in Canada the Department is endeavouring to secure regular returns on the subject. The information thus obtained will be, it is thought, an important indication of industrial conditions, and a summary statement based upon the reports received will be printed in the *Labour*

Gazette. There is some inevitable delay in the preparation and forwarding of the returns by the various bureaus; this, however, may disappear later. Also, the co-operation of the bureau officers, it is hoped, will bring about a greater uniformity in the returns than is found at present. Information on the work done during August is available for the present issue. The statement for September will appear in the November issue.

*Positions filled.

PRICES, RETAIL AND WHOLESALE, CANADA, SEPTEMBER, 1915.

THE feature of the prices movement during September was the lower level for wheat, flour and bread, oats and rolled oats. Eggs, however, advanced materially. The wholesale markets for cattle, sheep, beef and mutton were somewhat lower. Hog markets, however, were upward. Declines occurred in many metals, notably spelter and zinc which receded from the abnormal levels of the last three months but were still comparatively high.

In retail prices the cost of a list of certain staple foods in terms of the average prices in Canada stood at \$7.736 for September, as compared with \$7.781 for August and \$7.826 for September, 1914. Fuel and rent showed little change for the month, but the latter averaged \$4.06 per week as compared with \$4.588 in September, 1914. Meats, eggs, flour, evaporated apples, and potatoes averaged somewhat lower than a year before, with bread, beans, cheese and sugar higher.

In wholesale prices the Department's index number covering 272 commodities, including raw materials and manufactured goods as well as farm products and foods, stood at 147.2 for September, as compared with 147.6 for August, and 141.3 for September, 1914. Including spelter and zinc in the calculation for August at the high levels reached by an abnormal advance since June, from which prices have again fallen to a great extent, the index number for August was 149.9. The chief decreases for the month occurred in Grains and Fodder, Animals and Meats, Breadstuffs, and Metals, with the chief increases in Dairy Products, Fish, Fruits and Vegetables, Hides and Fuel.

As compared with September, 1914, the chief increases appear in Dairy Pro-

ducts, Sugar, Woollens, Jute, Flax Products, Hides, Leathers, Boots and Shoes, Metals and Implements, Miscellaneous Building Materials, Paints, Oils and Glass, Crockery, Drugs and Chemicals. The chief decreases appear in Grains and Fodder, Animals and Meats, Fish, Fruits and Vegetables, Silks, Lumber, Raw Furs and Sundries.

More detailed information as to the price movement appears in the accompanying tables and the following notes.

Retail Prices.

Beef.—The price of sirloin steak rose at New Westminster, B.C., and fell at Truro, N.S., at Montreal, Que., at Toronto and Cobalt, Ont., at Edmonton, Alberta, and at Victoria, B.C. Round steak rose at Halifax, N.S., and at New Westminster, B.C., and fell at Toronto, Ont., at Edmonton, Alberta, and at Victoria, B.C. Rib roast was higher at New Westminster, B.C., and lower at Truro, N.S., at St. John, N.B., at Toronto, Ont., at Regina, Sask., at Edmonton, Alberta, and at Vancouver and Victoria, B.C., while medium shoulder roast declined at Truro, N.S., and at St. Thomas, Ont. At Halifax, N.S., beef was reported to be a little scarce, and this was responsible for the higher price of round steak, but at Truro, N.S., and at Toronto, Ont., good supplies were reported owing to the grass-fed cattle coming on the market.

Veal.—The price advanced at Lethbridge, Alberta, and at New Westminster and Vancouver, B.C., but declined at Edmonton, Alberta. At Lethbridge, Alberta, a scarcity of veal was reported.

Mutton.—The price of mutton was reported higher at Lethbridge, Alberta, owing to scarcity. Declines, however, were reported at Halifax, N.S., at Nia-

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the month preceding the present issue of the *Labour Gazette*, of the more important staple commodities entering into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a statement is given of the rental of a representative workingman's dwelling of the better class in the quarter of each locality usually occupied by workingmen.

DEPARTMENT OF LABOUR, CANADA.

OF CONSUMPTION, CANADA, DURING SEPTEMBER, 1915.

The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison. Such comparisons, however, will reflect conditions better if averages over some time are taken and if the several articles are grouped together as in a family budget.

The quotations contained in the table have been furnished by the correspondents of the *Labour Gazette* in the respective localities, under detailed instruction as to sources of information, quality of goods to be quoted, etc., from the Department.

COMMODITIES, CANADA, SEPTEMBER, 1915.

Rice, good medium, per lb.	Beans, hand picked, per lb.	Apples, evaporated, per lb.	Prunes, medium quality, per lb.	Sugar		Tea		Coffee, medium, per lb.	Potatoes, per bag of $\frac{1}{2}$ bushels. gara Falls and London, Ont., at Regina, Sask., and at Edmonton, Alberta.

Pork.—Fresh roasting pork rose at Niagara Falls, Ont., and at Vancouver, B.C., but fell at St. Hyacinthe, Que., and at Edmonton, Alberta. Pork chops were also higher at Niagara Falls, Ont., and at Lethbridge, Alberta, but were down at Sherbrooke and St. Hyacinthe, Que., while salt pork, Canadian mess, was higher at Sherbrooke, Que., and lower at Edmonton, Alberta.

Bacon.—Breakfast bacon rose in price at Belleville, Toronto and St. Catharines, Ont., and at Edmonton, Alberta, but fell at Cobalt, Ont. At Toronto, Ont., the high price of hogs was reported responsible for advances in bacon.

Fish.—Fresh fish were reported somewhat higher at Chatham, Ont., and at Vancouver, B.C., but lower at Woodstock and London, Ont. Salt herrings were lower at New Westminster, B.C., and canned salmon was higher at Truro, N.S.

Lard.—The price was up at Truro, N.S., but was reported lower at Sorel and St. Hyacinthe, Que., and at Vancouver and Victoria, B.C.

Eggs.—Fresh eggs were up in thirty-two of the cities. Similarly packed eggs were higher in ten cities. As the season advanced eggs became scarce.

Milk.—The price declined at St. John's, Que., and at Victoria, B.C., and advanced at Sherbrooke, Que. At Victoria, B.C., it was stated that of late demand had fallen off considerably, increasing the competition among dealers and causing a reduction in the price.

Butter.—Dairy butter rose in thirteen of the cities, and declined in four. Creamery butter similarly advanced in thirteen cities and declined in seven. Some scarcity of butter was reported in a number of localities, but in others ample supplies were said to be available.

Cheese.—New Canadian cheese was lower in ten cities and higher in one, while old cheese was lower in five and higher in one. At Peterborough, Ont., it was reported that prices on the local cheese board were higher than during the previous month, owing to the improvement in the export trade.

Bread declined in fifteen of the cities. Of these, ten were reported in Ontario. The reductions averaged two-thirds of a cent a pound, and ran from one-third cent to one and one-quarter cents. In practically every case the declines were said to be the result of the recent declines in the price of flour, wholesale and retail.

Flour prices were reported higher in one city, but were lower in forty-four cities. Reductions in the wholesale price and an easier wheat market were the causes generally reported.

Rolled oats advanced at St. Thomas, Ont., but declined at St. Catharines, Ont., at Saskatoon, Sask., at Edmonton, Alberta, and at New Westminster, Vancouver and Nanaimo, B.C., following declines on the oat market.

Rice.—Good medium rice was higher in price at London and Fort William, Ont., and at Lethbridge, Alberta. Patna rice was also higher at London, Ont., but was lower at Niagara Falls, Ont., and at New Westminster and Vancouver, B.C.

Tapioca, medium pearl, was reported down at St. John, N.B., and at New Westminster and Vancouver, B.C.

Canned tomatoes, peas and corn.—Canned tomatoes were reported higher at Chatham and Sault Ste. Marie, Ont., and lower at Amherst, N.S., and at New Westminster, B.C. Prices of canned peas and corn were higher at Moncton, N.B., but lower at Prince Albert, Sask., and at New Westminster, B.C.

Beans.—Common dry beans were reported up at Truro, N.S., at Three

Rivers, Que., and at St. Thomas, Ont., and down at Niagara Falls, Ont., and at New Westminster and Prince Rupert, B.C. At Niagara Falls, Ont., a good crop of beans was reported.

Evaporated apples advanced at Truro, N.S., at Three Rivers, Que., at Saskatoon, Sask., and at Calgary, Alberta, and declined at Moncton, N.B., and at Vancouver and Victoria, B.C. At Moncton, N.B., it was stated that the fresh apples coming on the market had lessened the demand for evaporated fruit.

Prunes were higher at Niagara Falls, Ont., and lower at Truro, N.S. In the former city some scarcity was reported.

Sugar.—Granulated sugar was quoted higher at Regina, Sask., but lower at St. John, N.B., at Three Rivers, Que., at Brockville, Peterborough and Toronto, Ont., and at New Westminster, Vancouver and Prince Rupert, B.C. Yellow sugar was also lower at St. John, N.B., at Peterborough and Toronto, Ont., and at Vancouver and Prince Rupert, B.C. The recent reductions in the wholesale price were the causes reported in most localities.

Tea.—Prices for black tea were lower at Truro, N.S., and at St. John, N.B., but were higher at Westville and Halifax, N.S., at St. Catharines, Ont., at Lethbridge, Alberta, and at Vancouver, B.C. Green tea was lower at St. John, N.B., and at Prince Rupert, B.C., and higher at Westville, N.S., at St. Catharines, Ont., and at Vancouver, B.C. In some localities the higher freight rates, insurance, etc., and shortage of transportation was reported, to have raised the wholesale price, with a corresponding increase in the retail price.

Coffee advanced at Woodstock, Ont., and at Vancouver, B.C., and declined at Fredericton, N.B., and at New Westminster, B.C.

Potatoes.—Potatoes were reported higher in price at Kingston, Hamilton, Brantford, London, St. Thomas, Chatham and Windsor, Ont., and at Regina, Sask. The price, however, declined in thirty-eight of the cities, as potatoes were reported to be plentiful in most localities. In several Ontario cities where increases were noted it was reported that the crop has been seriously shortened owing to the prevalence of rot following upon the heavy rains.

Vinegar, white wine, declined at Victoria, B.C.

Starch.—Laundry starch was higher at Victoria, B.C., and lower at Edmonton, Alberta, and at Vancouver, B.C.

Coal.—Anthracite coal was reported lower at Hull, Que., but higher at St. John, N.B., at Three Rivers and St. Hyacinthe, Que., at Peterborough, Toronto, Niagara Falls, St. Catharines, Galt, Woodstock, Chatham and Cobalt, Ont. It was stated that increases in hard coal at this season were customary. Bituminous coal declined at Hull, Que., at Peterborough and Orillia, Ont., and at Regina, Sask.

Wood.—Hard wood was somewhat lower at St. John's and Hull, Que., and at Woodstock, Ont., and soft wood was lower at Hull, Que., and Victoria, B.C.

Coal oil prices were down at St. Catharines and Sault Ste. Marie, Ont., and at New Westminster, B.C.

Rent.—Rates for houses both with and without sanitary conveniences were somewhat lower at Edmonton, Alberta, and for houses with conveniences only, at Lethbridge, Alberta, and at Vancouver, B.C. Many vacant houses were reported.

Wholesale Prices.

Grains and fodder. — Wheat prices continued on the lower level to which they had fallen by the end of August and showed slight further declines with fluctuations according to foreign demand and crop reports. Manitoba Northern, No. 1, declined to 92 $\frac{2}{3}$ c, advanced to

96 $\frac{1}{4}$ and then fell back to 94c. Ontario winter wheat had declined to 92-95c, and fell to 90-92c, for No. 2. Other grains were also downward in sympathy with the market. Western barley had declined to 47 $\frac{1}{2}$ c, and Ontario barley to 52-54c. Western oats had declined to 49c for the old crop at the end of August and to 39 $\frac{1}{2}$ c for the new crop. After

declining further to 36c, the price of new oats rose to 42c. Ontario oats declined to 38-39c for the new crop. American corn fell to 81c at lake ports. Flaxseed had declined to \$1.40 $\frac{3}{4}$ but rose to \$1.54 $\frac{1}{2}$. Ontario peas were quoted down at \$1.25 per bushel. Rye declined to 75c, but afterwards rose to 85c. Hay declined to \$18.00-18.50 at Montreal and at Toronto to \$15.00-17.00. Baled straw rose to \$7.50. Bran declined \$1.00 to \$26.00 per ton, and shorts was steady at \$29.00.

Animals and meats.—Western prime cattle had declined to \$7.00 per cwt., and eased off further to \$6.35-6.50. The arrivals on the market were heavy. At Toronto best steers declined from \$8.40 to \$8.15. Arrivals on the market were larger as farmers had finished harvesting operations. The demand for cattle was fairly easily filled. Beef declined 50c per cwt. Veal also fell off 50c per cwt. Hogs had risen to \$8.90 and advanced further to \$9.15, as some scarcity had appeared. Breakfast bacon rose 1c per pound. Hams and barrel pork were slightly easier. Lard firmed slightly to 12 $\frac{1}{4}$ -12 $\frac{1}{2}$ c, but afterwards declined $\frac{1}{4}$ c. Sheep rose to \$6.00-6.75 in the first week, but declined and by the last week the price was down to \$5.25-6.00. Mutton declined \$1.00 per cwt., to \$11.00-13.00. Dressed lamb fell to \$13.50-14.50. Prices of poultry were steady but turkeys were slightly firmer.

Dairy products.—Finest creamery butter rose at Montreal from 28 $\frac{1}{2}$ -28 $\frac{3}{4}$ c to 31 $\frac{1}{2}$ -31 $\frac{3}{4}$ c. Prices were also up at Toronto. A good demand from Great Britain was reported, but some difficulty was experienced in getting space in steamships. Cheese rose from 13-13 $\frac{1}{4}$ c to 15-15 $\frac{1}{4}$ c, but then eased off $\frac{1}{8}$ c. Demand was reported good and exports were much larger than a year ago. Fresh eggs rose from 28c to 34c at Montreal. The demand was good for export and also for domestic consumption. At Toronto the price advanced from 25-27c to 30-32c.

Fish.—Salt mackerel rose from 5c to 6c per pound at the Atlantic Coast.

Fresh halibut rose from 9c to 10c per lb. Lake trout was up to 12-13c at Toronto and whitefish up to 13-14c.

Fruits and vegetables.—Early fall apples were quoted at \$2.50-3.50 at Toronto as compared with \$1.50-2.00 a year ago. The crop was reported much smaller than last year. Grapes were down to 20-30c per basket. Peaches were lower at 25-50c as compared with \$1.00 last year and pears were down to 25-45c as compared with 50-75c a year before. Plums were quoted as low as 18 $\frac{1}{2}$ c, as compared with 30c last year. Bananas fell to \$1.25-1.75 per bunch and Messina lemons were down to \$3.00-3.50. California Valencia oranges rose from \$4.50-5.00 to \$5.00-6.00. Currants advanced to 10 $\frac{1}{2}$ -11 $\frac{1}{2}$ c on reports of probable shortage in shipment of new crop owing to the effect of the war on Mediterranean markets. Valencia raisins were steady at the higher prices reached in August. Potatoes were down to 60c in large lots at Montreal. At Toronto potatoes advanced to 80-90c. Crops were reported heavy but blight prevailed considerably and caused much loss through rot. Onions were down to \$1.50 at Montreal. Tomatoes declined to 15-20c but afterwards rose to 25-40c per basket. Canned corn, peas and tomatoes advanced 2 $\frac{1}{2}$ c per dozen, as wet weather reduced the expected production and improved the market for the surplus stocks from last year's pack.

Miscellaneous groceries.—Flour declined again, spring wheat patents being down to \$5.85 at Montreal, as compared with \$6.70 in September, last year, and \$5.60 in July, 1914. Bread declined at Toronto from 3 $\frac{1}{2}$ c to 3 $\frac{1}{8}$ c per lb., wholesale. At Victoria, B.C., the price fell from 5c per pound to 4c. The tea market showed some weakness in the cheaper grades, as stocks of Indian and Ceylon tea had accumulated. Sugar declined slightly later in the month, the raw market being somewhat weaker. Barbadoes molasses rose 2c per gallon owing to advances on the primary markets. Maple sugar rose to 12 $\frac{1}{2}$ -13c per lb., the demand being good as compared with the

supply. Cream of tartar advanced 5c per lb., again.

Textiles.—Ontario wool was steady at the advance in August. Demand for wool in England was maintained. Raw cotton rose slightly, demand keeping up and some damage to the new crop being reported. Grey cottons and prints averaged higher. Japan raw silk rose to \$3.42½ per lb. Jute advanced slightly owing to a larger demand. Hessian was slightly lower, trade being light.

Hides, leather, boots and shoes.—No. 1 beef hides rose to 18c per lb., under a good demand. The leather market continued firm, the export and home demand both being large.

Metals and implements.—Iron and steel markets were firm. N. S. pig iron, foundry, No. 1, rose to \$20.00 per ton at Montreal, and steel billets rose to \$30.00-32.00. Spelter and zinc declined considerably, almost to the levels in June. Aluminum rose to 35-37c. Many other metals, however, declined. Brass was down to 32c per lb., copper to 19½c, lead to 6¼c, nickel to 40-50c per lb., and quicksilver to \$89.00 per flask. Tin fell to 39-40c per pound and solder fell to 19-20c.

Fuel and lighting.—Gasoline rose 2c per gallon. Connellsville coke, furnace, rose to \$1.60-1.65 per ton at the ovens owing to the better iron and steel market. Foundry coke was also higher.

Building materials.—Some improvement was expected in the lumber market in Ontario, as the demand by farmers was better after harvest. Lumbermen were expected to cut less than last winter. The market was quiet at Montreal. Some demand was reported for use in the manufacture of ammunition boxes. Prices of deals were easier at St. John, N.B., owing to a decline in England, but most of the output had been sold ahead. Freight was high and ships were scarce. Copper wire was slightly lower, but iron wire advanced. Hinges were down 10c a dozen. Linseed oil declined nearly 10c per gallon. Turpentine was firmer. Benzine rose 2c per gallon.

House furnishings.—Prices were steady and little change in demand was reported. Brooms were upward on account of the higher price expected for broom corn.

Drugs and chemicals.—Caustic soda advanced to 4c per lb. Alum, quinine and borax were also upward.

Miscellaneous.—Furs, raw, muskrat, advanced to 18-20c per skin. Canadian hops rose to 16c per lb. Best English hops advanced to 38-40c per lb. Pulp, ground wood and sulphite were slightly firmer. Raw rubber was easier at 50c per lb.

Prices in Other Countries.

The accompanying table, including the latest findings of the most authoritative index number of wholesale prices in Great Britain, the United States and France, will enable a review to be made as to recent movements and tendencies in prices in these countries as compared with Canada.

The index number of the *Economist*, London, rose slightly during August, barley, beef, mutton, sugar, jute, English wool, cotton, and petroleum being higher, but wheat, oats, tea, coffee, steam coal, lead and tin were lower.

Bradstreet's, New York, Saturday, September 11, 1915, reports as follows:

For the second time within as many months commodity prices have worked downward . . . Incidentally, the current price index is the highest ever set forth at this time of the year. . . . Indeed, the undercurrents are subject to sudden changes, with the signs suggesting an upward rather than a downward movement, foreign demands added to domestic improvement in industrial and business circles being likely to bolster prices. This indication is the more noteworthy because it is visible at a time when the country is enjoying abundance in the supply of nature's products. In fact, the market place reflects lower prices for breadstuffs and certain provisions, a circumstance which, in view of the general situation, is cause for congratulation. . . . This development is directly traceable to lower quotations for breadstuffs, live stock, provisions, metals, oils, naval stores, building materials and miscellaneous articles. It is to be noted, however, that as regards metals, pig iron as well as steel manifested marked strength, but this was more than offset by lower quotations for tin, copper and lead. Fruits, hides and leather, and textiles, with chemicals and drugs, ascended, the

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included.

(h.) Index Number for August 15th, \$9.8495.

*Revised figures.

second and last named groups having continued the movements with which students of price changes are fully familiar.

Dun's index number was lower for September first as a result of decline in wheat and all other grains except corn. Metals were upward, except copper, while eggs and meats advanced. Clothing materials, drugs and chemicals, paint and oils, and many building materials were upward.

Gibson's index number including 22 foods in general consumption in the United States stood at 58.3 on September 18, as compared with 63.1 for the month of August and 68.6 for September, 1914.

The index number of the *Annalist*, New York, including 25 foods, stood at 136.17 for September 18, as compared with 142.12 on August 1, and 160.69 on September 19, 1914.

Retail prices of food in the United Kingdom on September 1 were reported on in the Board of Trade Labour Gazette for September as follows in part:

Retail prices of food advanced about 1 per cent during the month of August. The articles showing marked increases in price between July 31 and September 1 were bacon and butter, which rose about 5 per cent on the average; fish about 4 per cent, and eggs, which were about 11 per cent dearer. On the other hand, the average price of potatoes was about 20 per cent lower on September 1 than a month earlier. With both eggs and potatoes the movement was seasonal. Changes in the prices of other articles were comparatively unimportant.

As compared with September 1, 1914, the general level of prices showed an increase of about 23 per cent. British beef was dearer at the later date by about 35 per cent, and British mutton by about 30 per cent, the increase in the average prices of imported beef and mutton being about 4 per cent greater in each case. Fish increased in price during the year by over 40 per cent; bread, flour, tea and eggs by 25 to 30 per cent. Butter and cheese were about 20 per cent dearer on September 1, 1915, than a year earlier. The average prices of bacon, milk, potatoes and granulated sugar increased by 13, 11, 8 and 3 per cent respectively during the twelve months, and margarine alone among the articles included showed a net decrease in price during the year.

Taking all the articles together and making allowance for their relative importance in working-class household expenditure, the average increase in the retail prices of food since the beginning of the war may be put at about 35 per cent.

This figure relates to food only; and in estimating the increased cost of living generally, this increase

must not be applied to the total family expenditure, but only to that proportion which is expended on food. On the whole the increase in other items of working-class expenditure has been considerably less, especially as regards rent.

Retail prices of food in Berlin are summarized in the United Kingdom Board of Trade Labour Gazette from official Prussian publications. In July, 1915, the level appeared nearly 70 per cent. higher than a year before. During the month of July, 1915, prices of potatoes, eggs, sugar, butter, beef, mutton, bacon, lentils, rice and lard advanced, the average rise being estimated at 2.6 per cent.

Retail prices of food in Vienna were also summarized from official Austrian reports. The price level in July, 1915, appeared over 78 per cent higher than a year before. At the middle of July, 1915, prices appeared higher than a month before in wheat, flour, rice, eggs, lentils, split peas, haricot beans and sugar, but were lower in beef, potatoes, onions and cabbage.

In New Zealand the Dominion index number of retail prices and house rent, reported in the Journal of the Department of Labour, for the quarter ending June, 1915, stood at 1,105 as compared with 1,042 a year before, due to increases in Groceries and Dairy Produce, there being also less marked increases in Meat, but a decrease in Rent. As compared with the first quarter of 1915, there was a seasonal decline in potatoes, but sugar, bread, butter and eggs were upward, while meat was lower. The index number was therefore slightly lower than for the March quarter, when it stood at 1,105. A calculation as to the advance in prices since the beginning of the war showed the advance from July 31, 1914, to July 31, 1915, to be 18.01 per cent in Groceries, 16.27 per cent in Dairy Produce, 2.84 per cent in Meat, averaging 12.15 per cent in Foods. In the calculation allowance was made for the comparative importance of each commodity in consumption and for the population of each locality.

FAIR WAGES SCHEDULES AND CLAUSES IN GOVERNMENT
CONTRACTS AWARDED DURING THE MONTH
OF SEPTEMBER, 1915.

DURING the month of September the Department of Labour received for insertion in the *Labour Gazette* information relating to 15 contracts, nine of which were awarded by the Department of Railways and Canals and six by the Department of Public Works. Two of the contracts awarded by the Department of Railways and Canals contained fair wage schedules. There was no fair wage schedule in the other 13 contracts, but the general fair wage clauses providing for the rates generally accepted as current in the locality where the work is being carried on were inserted. A statement is added for supplies given by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System.

Fair Wages Schedules.

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wages schedule, but contained the following clauses providing for the payment of wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the foregoing clauses were the following:

DEPARTMENT OF RAILWAYS AND CANALS.

Construction of concrete arch culverts, reinforced concrete culverts, bridge substructures, and the filling of certain bridges on the main line of the Inter-

colonial Railway, as follows: Bridge No. 11.34, Dowling's Gulch, 14 ft. concrete arch and filling; Bridge No. 12.9, McDonald's Gulch, substructure for steel viaduct; Bridge No. 27.3, Mill Brook Trestle, 14 ft. reinforced concrete culvert and filling; Bridge No. 37.3, Ottawa Brook, substructure for steel viaduct; Bridge No. 38.6, Walker's Gulch, substructure for steel viaduct; Bridge No. 40.9, Jamesville No. 1, 6 ft. concrete arch and filling; Bridge No. 41.4, Jamesville No. 2, 6 ft. concrete arch and filling; Bridge No. 60.0, Beaver Cove, double 14 feet reinforced concrete culvert. Name of contractors, Jorres, Girouard & Company, Limited, Ottawa, Ont. Date of contract, September 13, 1915. Amount, schedule rates.

Construction of a pier and the renewal of abutments, St. Henri Bridge, mile 111.1, Riviere-du-Loup Subdivision, on the line of the Intercolonial Railway. Name of contractor, R. C. Sutherland, Ottawa, Ont. Date of contract, September 15, 1915. Amount, schedule rates.

Manufacture, erection and completion of the steel superstructures of 10 bridges on the line of the Intercolonial Railway, including the removal of the present superstructure, in each case, as follows: 1, Main Road Crossing Bridge (13.6 m.w. Derby Junction); 2, Connor's Crossing Bridge; 3, Keough Culvert Bridge; 4, Boiestown Road Bridge; 5, Clearwater Brook Bridge; 6, McBean's Bridge; 7, Estey's Brook Bridge; 8, Manzer's Brook Bridge; 9, Manzer's Brook No. 2 Bridge; 10, Leper Brook Bridge. Name of contractors, Rhodes, Curry Company, Ltd., Amherst, N.S. Date of contract, September 17, 1915. Amount, schedule prices.

Construction of the foundations for a coaling plant, the supply of certain material and the building in of the machinery and plant at Levis, Que., on the line of the Intercolonial Railway. Name of contractors, P. J. Lynch, Cape Tormentine, N.B.; F. C. Peckham, North Timiskaming, Que., and T. C. Gorman, Ottawa, Ont., doing business under the firm name of Lynch, Peckham & Gorman. Date of contract, September 21, 1915. Amount, schedule prices.

Manufacture, erection and completion of the steel superstructures of four railway bridges on the line of the Intercolonial Railway, including the removal of the present superstructure, in each case, as follows: 1, River Inhabitants Bridge; 2, Indiantown Brook Bridge; 3, Bartholomew River Bridge; 4, Cross Creek Bridge. Name of contractors, The Hamilton Bridge Works Company, Ltd., Hamilton, Ont. Date of contract, September 25, 1915. Amount, schedule prices.

Manufacture, erection and completion of the steel superstructure of six bridges on the line of the Intercolonial Railway, including the removal of the present superstructure, in each case, as follows: 1, River Deny's Bridge; 2, Jamesville Road Bridge; 3, Leitches' Creek Bridge; 4, Ball's Creek Bridge; 5, Campbell's Brook Bridge; 6, Sydney River Bridge. Name of contractors, The Canadian Bridge Company, Ltd., Walkerville, Ont. Date of contract, September 28, 1915. Amount, schedule prices.

Manufacture, erection and completion of the steel superstructures of Ottawa Brook Bridge, Walker's Gulch Bridge and St. Henri Bridge, on the line of the Intercolonial Railway, including the removal of the present superstructures in

the cases of Ottawa Brook Bridge and Walker's Gulch Bridge. Name of contractors, Dominion Bridge Company, Ltd., Montreal, Que. Date of contract, September 28, 1915. Amount, schedule prices.

DEPARTMENT OF PUBLIC WORKS.

Fittings in Post Office, Burford, Ont. Name of contractor, The Canadian Office & School Furniture Company, Ltd., Preston, Ont. Date of contract, Sept. 4, 1915. Amount, \$940.

Dredging entrance to Kaministiquia River, Fort William, Ont. Name of contractor, Great Lakes Dredging Company, Ltd., Port Arthur, Ont. Date of contract, September 13, 1915. Contract price, Class "B", 25 cents per cu. yd. (place measure).

Partial removal of tower, Victoria Museum, Ottawa, Ont. Name of contractor, Carlton Construction Company, Ltd., Ottawa, Ont. Date of contract, September 13, 1915. Amount, \$13,990.

Post Office fittings in public building, Ste. Agathe des Monts, Que. Name of contractor, The Berlin Interior Hardwood Company, Ltd., Berlin, Ont. Date of contract, September 15, 1915. Amount, \$1,585.

Post Office, Customs and Inland Revenue fittings in public building, Joliette, Que. Name of contractor, The J. T. Schell Company, Alexandria, Ont. Date of contract, September 21, 1915. Amount, \$4,289.

Post Office fittings in public building, Walkerville, Ont. Name of contractor, The Berlin Interior Hardwood Company, Limited, Berlin, Ont. Date of

contract, September 24, 1915. Amount, \$2,974.

POST OFFICE DEPARTMENT.

During the month of August, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages, and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.....	\$1,043.66
Making and repairing rubber dating stamps and type also other stamps.....	123.41
Supplying stamping material and repairing stamping pads.....	635.17
Supplying new mail bags.....	11,116.51
Repairing mail bags.....	2,987.66
Supplying mail bags fittings.....	10,092.15
Making and repairing miscellaneous articles of postal stores.....	36.15
Making and supplying railway mail Clerks' tin travelling boxes and repairing steel portable letter boxes.....	277.30
Supplying cloth for official uniforms.....	12,223.27

TRADE DISPUTES DURING SEPTEMBER, 1915.

THREE new disputes were reported to the Department of Labour during September, one less than during the preceding month, and also one less than during September, 1914.

Analysis of Trade Disputes during September.

Number and magnitude.—Eight strikes were reported in existence in September, three less than during the previous month, and the same number as in the corresponding month of 1914. Twenty-four firms and 584 employees were involved in these eight disputes, including 14 firms and 470 employees concerned in the new disputes of the month. During September, 1914, 9 firms and 325 employees were involved in disputes, including 5 firms and 116 employees in the new disputes of the month.

Time losses.—The loss of time to employees through trade disputes during September, 1915, was approximately

5,718 working days, as compared with 13,401 working days lost in the preceding month, and 5,888 days lost in September, 1914. The new disputes of the month accounted for a loss of 2,960 days as compared with 663 days in September, 1914.

Trades affected.—The following table shows the trades affected by new disputes of the month and the number of employees in each group:

TRADES.	No. of dis- putes.	No. of em- ployees
General transport.....	2	400
Miscellaneous.....	1	70
Total.....	3	470

Localities affected.—One of the new disputes occurred in Nova Scotia; one in Ontario, and one in Manitoba.

Causes.—The three new disputes were for the following causes:

Demand for an increase in wages, 2.
Demand for a six-day week, 1.

Results.—Four of the eight disputes in existence during September were settled during the month in the following manner:

Men secured work elsewhere and strikers' places filled, 2.

Part increase granted, 1.

Men returned to work under the same conditions as prevailed prior to the strike, 1.

Disputes beginning before September.

Trades disputes existing September 30, and continued from earlier months, were as follows:

- (1) Plumbers and steamfitters, Victoria, B.C.
- (2) Boilermakers, iron workers and helpers, Halifax, N.S.
- (3) Brewery workers, Montreal, Que.
- (4) Cigarmakers, Edmonton, Alta.

Conditions remained practically the same as in the previous month in regard to the strikes mentioned above.

Cap makers, Toronto.—This strike, which took place June 20, among 12 employees of J. Samuels & Company, as the result of the company attempting to reduce the wages of its employees, terminated September 25. The men had also demanded that the shop should be a strictly union one, and to this the employers also objected. The company filled the strikers' places and the men secured work elsewhere.

Disputes beginning during September.

Three new disputes occurred during September: coal handlers at Halifax, N.S., freight handlers, Sarnia, Ont., and cooks, waiters and waitresses at Winnipeg, Man.

Coal handlers, Halifax.—On September 1, a strike of coal handlers in the employ of the Dominion Coal Company at Halifax took place, about 200 employees demanding an increase of 5 cents per hour. The rate existing prior to the strike was 30 cents per hour on day work and 35 cents per hour for night work. The company granted an increase of 3 cents per hour and the strikers returned to work September 12.

Freight handlers, Point Edward and Sarnia.—A strike of 200 employees of the Northern Navigation Company at Point Edward occurred on September 15. The men demanded an increase of 5 cents per hour, which if granted would have brought their rate up to 30 cents per hour instead of 25 cents. The company, however, refused the increase demanded and the men returned to work at the same rate as prior to the strike after being out only three days.

Cooks and waiters, Winnipeg.—Seventy-five employees (including five women) of eight hotels and restaurants at Winnipeg, struck on September 9, to enforce their demand for a six-day week. On September 18, the strikers had secured work elsewhere and the employers had filled their places with non-union members.

TABLE OF TRADE DISPUTES DURING SEPTEMBER, 1915.

Occupation.	Locality.	Alleged Cause or Object.	No. of Firms or Establishments affected.	Approximate No. of Employees affected.		Date of Commencement.	Date of termination.	Result.
				Male.	Female.			
DISPUTES BEGINNING BEFORE SEPTEMBER.								
<i>Building:—</i> Plumbers & Steam-fitters.....	Victoria, B.C.....	Against reduction in wages.....	5	30	Feb. 16, 1915.....	Unsettled at end of the month.
<i>Metal:—</i> Boilermakers, iron-workers & helpers.	Halifax, N.S.....	Demand for a minimum wage scale	2	44	Aug. 2, 1915.....	Unsettled at end of the month.
<i>Clothing:—</i> Cap makers.....	Toronto, Ont.....	Against reduction in wages and for a union shop.....	1	12	June 20, 1915.....	Sept. 25, 1915..	Men secured work elsewhere and strikers' places filled.

Cigar makers.....	Edmonton, Alta.....	Against reduction in wages.....	1	20	Aug. 6, 1915.....	" " "

DISPUTES BEGINNING DURING SEPTEMBER.

<i>General Transport—</i> Coal handlers.....	Halifax, N.S.....	For increased wages.....	5	200	Sept. 1, 1915....	Sept. 12, 1915...	Part increase granted.
	Freight handlers.....	" "	1	200	Sept. 15, 1915..	Sept. 18, 1915..	Men returned to work under same conditions.
<i>Miscellaneous—</i> Cooks, waiters and waitresses.....	Winnipeg, Man....	Employees demanded a six-day week instead of seven.....	8	70	Sept. 1, 1915....	Sept. 18, 1915..	Strikers secured other work and their places were filled by non-unionists.

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for the other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF SEPTEMBER, 1915.

Under this heading, account is taken of such accidents only as were sustained by workmen in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the country or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Bureau of Mines of Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

ACCORDING to the industrial accident record of the Department of Labour 66 workpeople were killed and 231 injured during the month of September, 1915. The record for the month of August was 77 killed and 243 injured and that for the month of September, 1914, was 63 killed and 366 injured. Comparing the record of September with that for August it will be seen that there were 11 less killed and 12 less injured and a comparison of the September record with that for September, 1914, shows there to have been 3 more killed and 135 less injured.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF SEPTEMBER, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.
Agriculture.....	9	18	27

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING SEPTEMBER, 1915.

Trade or Industry.	Locality.	Date	Number.	Cause of Fatality.
<i>Agriculture:—</i>				
Farmer.....	Ponoka, Alta.....	Sept. 11	1	Runover by a binder.
".....	Montague, Ont.....	" 15	1	Struck by a falling piece of lumber.
".....	Ste. Rose, Que.....	" 17	1	Fell from and runover by wagon.
".....	Palmerston, Ont.....	" 30	1	Mangled by threshing machine.
Farm Laborers.....	Puslinch, Ont.....	" 9	1	Crushed by falling cutting-box.
".....	Sedgewick, Alta.....	" 10	1	Runover by a wagon.
".....	Stoke, Que.....	" 16	1	Mangled by threshing machine.
".....	Claremont, Ont.....	" 20	1	Fell through a trap door.
".....	Boissevain, Man.....	" 22	1	Kicked by a horse.
<i>Lumbering:—</i>				
Lumber yard employee.....	Pembroke, Ont.....	" 4	1	Runover by a wagon.
Logger.....	Village Bay, B. C.....	" 8	1	Struck by a cable of logging machine.
Logger.....	Courtenay, B. C.....	" 9	1	Crushed by a falling log.
Logger.....	Campbell River, B. C.....	" 16	1	Crushed by a falling tree.
Logger.....	Port Hardy, B. C.....	" 16	1	Crushed by a falling tree.

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING SEPTEMBER, 1915.—Continued.

Trade or Industry.	Locality.	Date.	Number.	Cause of Fatality.
<i>Mining:—</i>				
Miner.....	Minto, N. B.....	Sept. 6	1	Cave-in of material.
".....	Springhill, N.S. (No. 3 Col.)...	" 28	1	Fall of rock.
".....	Garson Mine, Sudbury, Ont....	" 8	1	By a fall.
".....	South Porcupine.....	" 25	1	Crushed by a loaded mine car.
Cement works employee.....	St. Vital, Man.....	" 15	1	Buried under falling mass of clay.
Miner.....	Morinville, Alta.....	" 20	1	Crushed between mine cars.
".....	South Wellington, B.C.....	" 22	1	Crushed by mine cars.
<i>Railway and Canal Construction:—</i>				
Laborer, (Welland Canal).....	Merritton, Ont.....	" 11	1	Electrocuted.
Laborer, (railway construction)...	Cambie, B. C.....	" 20	1	Crushed by falling rock.
Shift boss, " " ".....	Field, B. C.....	" 12	1	" " " "
<i>Building Trades:—</i>				
Roofer.....	Barrie Military Camp.....	" 9	1	Fell from a ladder.
Carpenter.....	Quebec, Que.....	" 11	1	Crushed by an elevator.
Painter.....	Three Rivers, Que.....	" 17	1	Fell from bridge he was painting.
Concrete worker.....	Halifax, N. S.....	" 27	1	Mangled by a concrete mixing machine.
<i>Metal Trades:—</i>				
Engineer.....	Vancouver, B.C.....	" 4	1	Crushed by descending elevator weight.
Brass worker.....	Toronto, Ont.....	" 8	1	Struck by falling piece of metal.
Lineman.....	Cornwall, Ont.....	" 24	1	Fell from transmission tower.
Tender (Blast furnace).....	Steelton, Ont.....	" 14	1	Burned by molten metal.
<i>Woodworking trades:—</i>				
Sash & door factory employees..	Montreal, Que.....	" 25	3	Fatally burned in a fire which destroyed factory.
<i>Steam Railway Service:—</i>				
Engineer.....	Newtonville, Ont.....	" 26	1	Derailment of train.
".....	Compeer, Sask.....	" 20	1	" " "
Brakeman.....	Moncton, N.B.....	" 21	1	Fell from moving train.
".....	Montrose, Ont.....	" 25	1	" " "
Yard foreman.....	Red Deer, Alta.....	" 26	1	Fell under moving car.
Waiter (dining car).....	Montreal, Que.....	" 27	1	Crushed between cars.
Shop hand.....	St. Malo, Que.....	" 28	1	Falling pipes.
Section foreman.....	Burford, Ont.....	" 2	1	Explosion of a torpedo.
Sectionman.....	Kaslo, B. C.....	" 14	1	Hand car struck by a train.
".....	Bellevue, Ont.....	" 17	1	Fell from an runaway by cars.
Flagman.....	Brandon, Man.....	" 15	1	Struck by a locomotive.
Employee (Minnewashta bridge)	Winnipeg, Man.....	" 18	1	Fell from a bridge.
<i>Navigation:—</i>				
Captain and sailors.....	Halifax, N. S.....	" 10	3	Fatally burned.—Schooner loaded with oil and gasoline caught fire.
" ".....	Amherst Island, (Lake Ontario)	" 26	4	Schooner foundered during a gale.
Engineer, (tug).....	Chatham, N.B.....	" 22	1	Drowned—fell over board.
Deckhand.....	Brockville, Ont.....	" 12	1	Fell over board.
".....	Montreal, Que.....	" 17	1	Fell into hold of vessel.
".....	Ladner, B. C.....	" 16	1	Fell over board.
Cook (on tug boat).....	Newcastle, N. B.....	" 19	1	Fell from wharf.
Longshoreman.....	Sarnia, Ont.....	" 28	1	Fell into hold of vessel.
<i>Miscellaneous Transport:—</i>				
Teamster.....	Novar, Ont.....	" 24	1	Fatally injured internally, endeavoring to prevent overturning of load of steel girders.
Grain elevator employee.....	Port Arthur, Ont.....	" 23	1	Crushed between cars.
<i>Public and Civic Employees:—</i>				
Cement inspector.....	Quebec, Que.....	" 11	1	Struck by descending elevator weights.
<i>Miscellaneous Skilled Trades:—</i>				
Waitress.....	Winnipeg, Man.....	" 23	1	Crushed by a dumb-waiter elevator.
<i>Unskilled Labour:—</i>				
Laborer.....	Mosse Jaw, Sask.....	" 1	1	Crushed by heavy pipes.
".....	Orillia, Ont.....	" 11	1	Crushed by an elevator.

IMMIGRATION AND COLONIZATION.

THE official statements given below except where otherwise indicated, by with regard to British emigration, courtesy of the Department of the Interior. the number of homestead entries made, land patents issued, etc., are published,

BRITISH EMIGRATION.

During the month of August, 1915, the number of passengers leaving the United Kingdom for British North America, according to official returns of the British Board of Trade, was as follows:

NOTES ON OFFICIAL REPORTS.

Unemployment in Massachusetts.

Massachusetts.—Commonwealth of Massachusetts. Bureau of Statistics. Thirtieth Quarterly Report on Unemployment in Massachusetts, quarter ending June 30, 1915.

THIS report on unemployment gives the returns from 1,092 labour organizations in Massachusetts representing 162,315 wage earners. For all occupations 10.6 per cent were unemployed at the end of June as compared with 16.6 at the end of March and 9.9 at the end of June 1914. The principal cause of unemployment was lack of work, 7.6 per cent being out of work on account of this factor, as compared with 12.8 at the end of March and 6.9 at the end of June, 1914. Strikes and lockouts contributed but a small percentage.

In the building trades the per cent unemployed was 13.2 as compared with 26.3 at the close of March. In the boot and shoe industry the percentage was 10.9 as compared with 22.4 at the end of March and 12.9 at the end of June 1914, and in the textile industry 6.9 as compared with 6.4 at the end of June 1914. In steel and iron manufacturing there was little activity, except in localities where war munitions were being made. Machinists, moulders and core-makers showed improvement owing to this cause. In printing and allied trades unemployment increased 2 points. In miscellaneous trades the quarry workers unemployed were 40.3 per cent as compared with 21.6 in June 1914, and paper and pulp makers 34.2 per cent as compared with 9.2 in June 1914.

Mines and Quarries.

United Kingdom.—General Report, with Statistics, for 1914. By the Chief Inspector of Mines. Part I.—Divisional Statistics.

It is interesting to note in this report the heavy depletion of mine labour due to recruiting in the last five months of the year 1914. Returns from owners of mines under the Coal Mines Act show that the number of persons ordinarily employed from the period January to July was 1,133,746, while on the last pay day of December the number employed had fallen to 981,624. The number of persons employed under the Metalliferous Mines Act shows a decrease of 3,703 persons as compared with 1913. At the quarries under the Quarries Act there was a decrease of 2,001 in the number of persons employed as compared with 1913. The output of coal also fell off, the total output being 265,644,393 tons, a decrease of 21,766,080 tons on the output of the previous year. The number of fatal accidents in coal and metalliferous mines showed a decrease as compared with 1913 while fatal accidents in quarries showed an increase. The number of non-fatal accidents for 1914 showed a decrease in all three branches of the industry.

New York State Department of Labour.

New York State.—Annual Report of Commissioner of Labour, 1914. Albany, State Department of Labour, 1915. Pages, 359.

Special interest attaches to the report for 1914 as during this year the re-organization of the Department noted in

the *Labour Gazette* for September was completed. The reorganization entailed an increase of 56 per cent in expenditure and 68 per cent in the number of persons employed, the expenditures for 1914 aggregating \$614,070.65.

In addition to the report of the commissioner and the financial report of the Department there is a brief report covering the work of the Industrial Board to date. The report of the Bureau of Inspection has tables summarizing the orders issued and prosecutions instituted and a special report on canneries in view of the desire of employers in this indus-

try to secure certain exemptions from the legislation applying to factories in general. The Bureau recommends that the present law should not be changed. The Bureau of Mediation reports half as many disputes in 1914 as in 1913. The Bureau of Industries and Immigration has an interesting report dealing mainly with the exploitation of the immigrant at the port of New York.

A compilation of the labour laws of the state and a statement of the opinions of the Attorney-General concerning labour laws conclude the volume.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

A WORKMAN in the employ of a light and power company at Montreal lost both hands and an eye in an accident which occurred whilst he was at work. He sued the employer for \$25,000. The employer denied responsibility, submitting that the accident was due to the sole fault of the victim himself; and, in any event, that the suit should have been taken under the Workman's Compensation Act, since plaintiff was a workman earning less than \$1,000 per year. The judge in the Lower Court assessed the damages at \$12,000, but reduced the sum by \$6,000 on account of contributory negligence on the part of the plaintiff. The case, by consent of both par-

ties, was submitted to the Court of Review for a decision as to whether the proceedings taken by the plaintiff should have been taken under the Workman's Compensation Act or were rightly taken under the common law.

The facts of the case, as reviewed by Mr. Justice Greenshields, who also handed down judgment for the majority of the court, showed that the plaintiff entered the employ of the defendant in the month of July, 1911, at a salary or wage of 17½ cents an hour. His wage was increased to 35 cents an hour up to the end of December, 1911. On January 1, 1912, a new engagement was entered into with him; the employment was changed, and his wage was increased to 40 cents an hour, and he worked at that rate up to the date of the accident.

On February 15, plaintiff was "laid off," but was recalled to work May 1, 1912. During the time he actually work-

ed, from January 1, 1912, to January 1, 1913, or to the date of the accident, he received from the defendants the sum of \$939.50. If the amount he would have received had he worked from February 15 to May 1 had been added, then his wages would have amounted to more than \$1,000 per annum, and he would be removed from the operation of the Workman's Compensation Act and was entitled to his recourse under the common law. It was the opinion of the judge that when he was engaged on January 1, no idle time was anticipated; it was no part of his engagement that he should remain idle for any space of time. In arriving at a basis to estimate the yearly wage of the man, the period from February 15 to May 1, in which he did not work, should be counted, and what he should have earned at his regular salary during that period should be added to what he actually received during the time he had actually worked, between the first of January, 1915, and the date of the accident.

It was held that the idle days were due to accidental causes and were beyond the control of the plaintiff, and that the plaintiff was entitled to add to the amount he did receive the amount he would have received had he worked continuously. The Court of Review confirmed the former judgment. (*Reynolds v. Canadian Light and Power Company.*)

In a recent decision in the Court of King's Bench at Montreal an employee of a foundry, charged with manslaughter by causing the death of a fellow workman through criminal negligence, was acquitted.

The deceased was crushed between the top of a travelling crane operated

mechanically by the accused, when his body was caught between the crane and the wall. He received such injuries that he died a day or two later. He was on the top of the crane making repairs at the time, and was supposed to be warned by the ringing of a bell operated by the accused when the crane was to be moved.

A model of the crane was reproduced in court to illustrate the workings of the machinery, and the chief electrician of the plant explained its principles and gave other evidence. He explained that the crane was worked from a cage in which the accused worked. The cranesman had four levers, one at his right side, and three in front of him. Two operated the hoist, and one for another purpose, while the side crane had also another function. The cranesman had also two foot levers, one of which he operated with his right foot to ring the warning bell, while the left foot took care of the brake. The chief electrician admitted that the operator must be alert at all times, especially when the crane was in motion, for it moved at a very rapid rate, reaching out 200 to 250 feet in its swings. There were always men working beneath the crane, as well, making its operation a task of great care. The place was also very noisy, the works going 24 hours per day. The jury found the accused not guilty and he was acquitted accordingly. (*The Crown v. Pitro.*)

ALBERTA CASE.

Damages.—Pecuniary Loss—Pain and suffering.

A locomotive engineer, who had been engaged in that capacity since 1906, previous to which time he had for three

years been a foreman, was injured while running his train, being struck on the forehead by the lock of a mail bag suspended from a mail crane, and brought action to recover damages. The wound was a compound fracture extending into the hair three or four inches. He was promptly taken to a hospital and placed under the care of the defendant company's divisional surgeon. The plaintiff remained in an unconscious condition for a long time; it was about two months before he became at all natural.

The doctor had known the plaintiff for two years or more. He claimed the plaintiff was, before the accident, a very strong man, above the average, and very bright mentally. Since the accident his memory was not good; he remembered nothing of the accident, his mental pro-

cesses were slow and there was a certain amount of confusion. The plaintiff's condition generally had improved, but the improvement was more noticeable during the first six months. In the doctor's opinion he would never be able to do work that would require quick thinking or automatic action, and would not be able to resume his work as an engineer. Another medical practitioner, called on the plaintiff's behalf, did not expect he would ever be able to do anything, and thought it was likely the plaintiff's condition would become worse.

In view of all of the evidence gathered at the trial, the jury assessed the damages at \$27,000. The defendants appealed from this decision but the appeal was dismissed. (*Jackson v. Canadian Pacific Railway.*)

THE LABOUR GAZETTE

NOVEMBER, 1915.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

MANY statements have appeared in the public press of late regarding industrial problems which are thought likely to arise in Canada at the close of the war by the return to civil life of many thousands of men who have been on war service, as also in the case of soldiers invalided and partly disabled and who are already returning in considerable numbers. The matter became during October the subject of a conference between the members and officials of the Dominion and Provincial Governments with a view to the formulation of a plan in which the Dominion, Provinces and municipalities may co-operate and which will aim at providing employment and a new start in life for the returning soldiers. The Dominion Government had already established a body known as the Military Hospitals and Convalescent Homes Commission which had in hand matters relating especially to the care of invalided and disabled men, and by an extension of the powers of this body the Commission was authorized also to "deal with the question of employment for members of the Canadian Expeditionary Force on their return to Canada, to co-operate with Provincial Governments and others, for the purpose of providing employment as may be deemed necessary."

The membership of what is commonly known as the Military Hospitals Commission is as follows: President, Hon. J. A. Lougheed, K.C.; members, Hon. Thomas W. Crothers, K.C., Minister of Labour; Mr. F. W. Avery, Ottawa; Mr.

W. M. Dobell, Esq., Quebec; Sir Rodolphe Forget, M.P., Montreal; Mr. W. K. George, Toronto; Mr. Lloyd Harris, Brantford; Mr. J. H. S. Matson, Victoria, B.C.; Mr. D. Lorne McGibbon, Montreal; Mr. John S. McLennan, Sydney, N.S.; Colonel Sir H. M. Pellatt, C.V.O., Toronto; Mr. C. W. Rowley, Winnipeg; Mr. Clarence Smith, Montreal; Mr. Thomas Walker, M.D., St. John, N.B.; Mr. Smeaton White, Montreal; the Director-General of Medical Services, Canadian Militia; Secretary, Mr. E. H. Scammell, F.C.I.S., Ottawa.

No official statement has yet been issued as to the outcome of the conference mentioned above, but it is understood that the gathering cordially endorsed the plan submitted on behalf of the Commission whereby it was thought an effective co-operation of the various governmental authorities would be secured.

* * *

DURING the past month two further parties of Canadian workmen left the country for what may be termed emergency work arising out of the war, one consisting of men to be employed in the construction of a munitions railway in Northern Russia, the other being composed of coal miners from Western Canada who volunteered for work in British mines. The arrangements were made in each case by agents of the British Government, the agents dealing directly with the workmen engaged.

The Russian railway is one which has been under construction during the past

year and is now nearing completion. Sections of the lines are said to be ready for operation. The workmen who went from Canada were of the various classes suited to the requirements of a new railway. This party, consisting of about six hundred men, was gathered from the various cities of the Dominion, individual contracts being signed with responsible representatives of the authorities concerned.

The party of coal miners went under the auspices of two commissioners acting on behalf of the British Board of Trade, Mr. Thos. Richardson, M.P., a well known Member of Parliament, and a member of the Executive of the Durham Mines Union, and Mr. R. Baird, understood to be a representative, in a measure, of the point of view of the mine owners. This mission appears to have arisen from correspondence started by miners at Nanaimo who had emigrated from Great Britain a year or two ago, and, not finding coal mining conditions on Vancouver Island prosperous, particularly since the outbreak of war, had asked if arrangements could be made by the British mining unions for their return to England, where newspapers reported that recruiting among the miners had caused a shortage of labour. The British agents visited the leading points on the Island, also those in the Crow's Nest Pass district. The exact number of men with whom engagements were made has not been reported, but is reported to be about 350, and in about 40 cases arrangements were made for the return of the families of the miners engaged.

* * *

MUCH interest has been shown in the press and otherwise in the welfare of the considerable number of Canadian workmen who engaged some months ago to go to England to work in munitions factories. The arrangements in the matter were made, it will be remembered, by special agents of the British Board of Trade, Messrs. G. N. Barnes, M.P., and

Mr. W. Windham, who came to Canada for the purpose, the exact number of men engaged by them being 1,710, chiefly machinists, shipwrights, blacksmiths and other iron workers. No official statement as to the conditions under which the men are working appears to have been made, nor is any expected. Word has been, however, received that in a number of cases the men received wages lower than they understood would be paid; also a few cases have been reported where the workmen were not found suited to the work required. Authorities of the British Board of Trade, looking into the matter, decided that in the case of Canadian workmen who had proceeded to England by arrangements made by Messrs. Barnes and Windham and who had dependents in Canada, a separation allowance was desirable. The allowance fixed in the case of each such workman having dependents was 17s. 6d., and the Department of Labour of Canada was invited to co-operate in the distribution of the allowances to those persons in Canada declared to be entitled to receive the same. At the close of the month the Department was expecting to receive details of the arrangements made by the British authorities.

* * *

THE record in Canada with regard to industrial disputes was not quite so good during October as in recent months, though fortunately nothing had occurred at the close of the month which threatened any serious public inconvenience. The most important dispute of October was among workers in the Asbestos Mines at Thetford, Que., where about twenty-five hundred men were affected. The employees here suffered a wage reduction at the outbreak of war and now sought a restoration of the former wages. The situation was complicated by the fact that the employees were of mixed nationalities, including a good many enemy aliens, chiefly Austrians, and there was at one time danger of serious friction between

them and Russian workers. Mr. Victor DuBreuil, one of the Fair Wages Officers of the Department, visited the scene of the dispute and took an active part in its settlement. The interruption of work lasted about four days.

A brief strike occurred also in the Auburn Woollen Mills at Peterborough, Ont., in the settlement of which Mr. E. N. Compton, one of the officers of the Department, rendered effective assistance. The trouble here related to the question of rates for night piece work. The strikers numbered only about fifty, but the work of about 150 hands was suspended for a few days.

Two minor strikes in the coal mining industry are also to be noted, one at Lovettville, Alberta, affecting 100 men, where a working arrangement was made with the help of the Department after a brief interruption; the other coal mining disturbance was in South Welling-ton, Vancouver Island, involving about 150 men, and is understood to have lasted but a day or two.

* * *

DURING the month the report of the Board of Conciliation and Investigation in the case of the Canadian Northern firemen, where a demand had been made to have the western schedule applied substantially to eastern lines, was received. The chairman of the Board was Judge Coatsworth, Toronto, and the Board's findings were unanimous. The employees promptly accepted the findings, but word reaching the Department at the end of the month showed that the company was inclined to demur. There seemed however good ground for hoping that arrangements would be reached without interruption of work. The findings of the Board in this case are printed in the present issue of the *Labour Gazette*.

The case of the dispute between the Hydro-Electric System of Toronto and its electrical workers received much attention during the month. Here the

findings were received by the Minister during the month of August and the employees promptly notified the Minister of their acceptance. The chairman of the Board was Judge Coatsworth, Toronto, and the findings were accompanied by a minority report from the nominee of the employer. The commissioners of the Hydro-Electric System, in reply to enquiries from the Department as to their attitude to the findings, deferred a statement on this point, but intimated that negotiations with the employees would take place. Some evidence of friction reached the Department and the Minister urged on the commissioners the view that the Board's report in such matters should be promptly accepted by both parties. Negotiations between the commissioners and the employees took place shortly before the close of the month and did not proceed favourably, the commissioners finally refusing to accept the Board's award and offering instead an agreement representing a material departure from the Board's recommendations. The employees had notified the commissioners that a strike would occur on Tuesday, November 2, if the Board's report were not accepted, and work ceased accordingly on the afternoon of the day mentioned. At the time of going to press a strike was in progress.

* * *

THE Industrial Commission recently established by the State of New York, replacing the former Department of Labour and the Board administering the Workmen's Compensation Act, has begun the publication of a monthly journal devoted to the doing and interests of the Commission. The new periodical is entitled "The Bulletin," the first issue being published for the month of October; the office of publication is at Albany, N.Y. The initial issue gives much interesting information as to the organization of the new Industrial Commission and the division and subdivision

of the numerous and important duties placed upon it. As has been explained in recent issues of the *Labour Gazette*, besides the Board of Commissioners, five in number, with Mr. John Mitchell as chairman, there is an Industrial Council of ten members, membership in the Council being, however, of an honorary character. Important branches of the Industrial Commission have been established in the leading cities of the State, including New York, Utica, Syracuse, Rochester and Buffalo. Under the system of organization outlined in The Bulletin the work of the Commission is divided on the following lines: (1) Chairman John Mitchell takes charge of the Bureau of Workmen's Compensation, Mr. W. C. Archer being deputy commissioner; (2) Commissioner E. P. Lyon administers the state fund connected with the Workmen's Compensation Act, Mr. F. S. Baldwin being manager; (3) Commissioner James M. Lynch controls the Bureau of Factory Inspection, with James L. Gernon as first deputy commissioner; (4) Commissioner L. Wiard has charge of three bureaus—(a) a Bureau of Statistics and Information, with Mr. Leonard W. Hatch as chief statistician; (b) a Bureau of Mediation and Arbitration, with Mr. W. C. Rogers as chief mediator; (c) a Bureau of Industrial Code, with Messrs. Richard J. Cullen and Thos. C. Eipper as deputy commissioners; (5) Commissioner W. H. Rogers supervises two bureaus—(a) a Bureau of Employment, with Chas. B. Barnes as state director; (b) a Bureau of Industries and Immigration, with Marian K. Clark as chief investigator. The Bureau of Industrial Code, it should be said, takes the place in the organization of the Commission of the Industrial Board established by the Legislature of the State in 1913 for the purpose of "interpreting the labour laws, framing rules and regulations for factory construction, and also to modify in special and specific cases the laws enacted by the Legislature relating to industrial matters," the rules and regu-

lations of the Industrial Board having the force and effect of law when the Legislature is not in session. There are, of course, in addition, numerous highly important divisions of the work of the Industrial Commission which have been duly apportioned among the different commissioners.

* * *

REFERENCE was made in the October number of the *Labour Gazette* of the intention of the British Columbia Government to appoint a commission to investigate the subject of Workmen's Compensation, with a view to legislation at an early date. The Government has now named the members of the commission as follows: Mr. Avar V. Pineo, of Victoria, representing the Administration; Mr. David Robertson, of Vancouver, a member of the firm of Robertson & Hackett, representing the employers of British Columbia, and Mr. James H. McVety, of Vancouver, representing the trades and labour interests of the province. It is understood the commission will visit those provinces which have enacted Workmen's Compensation legislation and will also investigate the subject in some of the United States.

* * *

EMPLOYMENT in October on the whole was at a high level. There was no abatement of the abnormal activity in some lines of the metal trades, and the textile industry was unusually busy on war orders. Some slackening in employment was reported by leather workers and moulders but increased employment in the building trades in the Maritime Provinces, better conditions in coal mining, threshing operations and the movement of the grain in the West all contributed to the general improvement. Enlistment for overseas service continued an important factor in reducing the reserve labour supply.

PRICES during October showed declines in a number of staple commodities, but increases in a number of other commodities which usually advance with the season had the effect of increasing the cost of the average family budget so far as foods were concerned. Rents, however, averaged lower in several provinces than in the previous month, and in all provinces except Prince Edward Island were lower than in October, 1914. The Departmental index number of wholesale prices was about three points higher than in the preceding month.

* * *

THE report of the United States Commission on Industrial Relations to which reference was made in the last number of the *Labour Gazette* contains three separate reports. The first, prepared by Basil M. Manly, Director of Research and Investigation for the Commission, is signed by Chairman Walsh and the labour members—Commissioners Lennon, O'Connell and Garretson. It finds deplorable living and working conditions in the United States and gives as the main causes of industrial unrest: unjust distribution of wealth, unemployment and denial of opportunity to earn a living, denial of justice, and denial of the right of organization. It is therefore proposed that Congress should enact an inheritance tax that would limit to one million dollars the amount that may be passed on to the heirs. For the settlement of labour disputes a Proposed Plan of a National System of Mediation, Investigation and Arbitration is submitted. A National Mediation Commission should be appointed by the President with power to intervene in all industrial disputes in interstate commerce except public service corporations, thus supplanting the mediation powers of the Department of Labour. The Commission should also have power through

Boards of Mediation and Investigation to investigate disputes and give publicity to the recommendations of such Boards.

The second report, prepared by Professor John R. Commons, is signed by Commissioners Commons and Florence J. Harriman and, subject to certain dissenting opinions expressed in the third report, by the employer members—Commissioners Aishton, Ballard and Weinstock. It dissents from the Manly report because the recommendations have not the criticism of the employers, because they have few practicable suggestions for legislation and are directed to making a few individual scapegoats, when the principal cause of industrial unrest is the breakdown in the administration of the labour laws and the consequent distrust of government on the part of a large portion of the population. The commissioners recommend State and Federal Commissions for the administration of all labour laws, the Department of Labour, however, to be retained for educational purposes and to enable the Government to decide upon a labour policy. It is believed that compulsory methods of mediation and arbitration are unsuited to conditions in the United States and it is therefore proposed that the Commission should follow strictly voluntary methods of mediation and arbitration while exercising the ordinary coercive powers of government in the other branches of its work. An inheritance tax is proposed in order to provide funds for the Commission.

The third report, signed by the employer members, dissents from the recommendations of the Commons report that the secondary boycott should be legalized and that public inquiry in labour disputes should be limited to cases where both sides invite such inquiry. They argue that, while some employers have been guilty of wrongdoing, the causes of industrial unrest are not entirely at their doors as the Manly report would indicate. In addition to the three main reports there are various

supplemental statements expressive of agreement with or dissent from specific points in the different reports. All three reports favour the promotion of collec-

tive bargaining through further organization of employers and employees. A summary of the report will be found elsewhere in this issue.

INDUSTRIAL CONDITIONS DURING OCTOBER, 1915.

GENERAL SUMMARY.

ON the whole, employment in October was at a high level, public employment agencies throughout the country reporting a heavy demand for both skilled and unskilled help. There was no abatement of the abnormal activity in some lines of the metal trades, and the influence of war orders was also reflected in the textile industry, woollen mills generally reporting great activity and in some instances working night and day. There was, however, some relaxation among the leather workers, and moulders were slack at different points. Improvement in the building trades continued in the Maritime Provinces and at points in Quebec, while in Ontario a marked improvement in the carpentering trade was reported from some localities. In the Prairie Provinces threshing operations left no reserve of unskilled labour and the movement of grain was an important factor in improvement at such places as Brandon, Winnipeg, Fort William and Port Arthur. Alberta cities reported a demand for miners and some clerical help unemployed. Conditions in British Columbia cities as compared with a year ago showed a decided improvement, but there was still some unemployment. Enlistment for overseas service continued an important factor in reducing the reserve labour supply.

Threshing still continued in the West,

and in some localities was expected to last until midwinter. Good wages prevailed, and in some localities a shortage of labour was reported. There was a falling off of nearly 50 per cent in the potato crop in practically all parts of Eastern Canada. Fishing was fairly quiet on the Atlantic coast, but somewhat improved in British Columbia. Lumbering continued fairly active in Eastern Canada, though a number of mills shut down, and there was a falling off as compared with the previous year in many sections in the number of men being engaged for the woods. Coal mining was active in practically all the coal producing fields in the Dominion, and metal mining also continued to show improvement. Manufacturing conditions were up to the level of the preceding month, and in a number of instances additional employees were taken on. Railway construction on the whole continued quiet. Heavy shipments of grain continued to keep up activity in rail and water transport. Trade and commercial conditions were improved in many districts with the freer movement of money consequent upon the marketing of the harvest and improved conditions in the various industries.

The Departmental index number of wholesale prices stood at 149.9 for October, as compared with 147.2 for the previous month and 139.7 for October, 1914. Advances in grains, dairy products, fruits and vegetables, cotton, caus-

tie soda and gunpowder occurred but fodder, flour, oatmeal and sugar were lower. In retail prices the cost of a budget of certain staple foods was \$7.815, as compared with \$7.736 in September and \$7.993 in October, 1914. Rents averaged lower in British Columbia and in Ontario for October and in all provinces except Prince Edward Island were lower than in October, 1914.

Changes in Wages and Hours of Labour.

As in the previous month, few changes in rates of wages and hours of labour were recorded during October. Employees in the Intercolonial Railway shops at Moncton were back on the winter schedule of 54 hours per week, instead of 50 hours as in the summer months, but this was the usual seasonal change. Some 2,500 asbestos miners at Shefford Mines, Que., secured an increase of 25 cents per day in wages as the result of a strike. At Edmonton it was reported that the salaries of civic employees would be cut in two, half salaries to be paid and the balance of salaries due to remain in escrow with the city and be returned at the end of the year. It was reported that employees of the Canadian Copper Company's smelter and machine shops were notified that commencing November 1 an eight-hour shift would go into effect. Particulars of this change, however, had not been received at the Department at the end of the month.

Agriculture.

The gathering of root crops, fruit picking and fall plowing comprised the bulk of activity in agricultural operations in Eastern Canada, while the active continuation of threshing in the Prairie Provinces provided plenty of employment to farm labourers at high wages. In many localities a shortage of labour and machines was reported, and in some districts it was expected threshing would last till midwinter. Grain crops in the West were expected to be up to if not

in excess of previous estimates. In Eastern Canada crops on the whole were fair, except in the case of some root crops. Potatoes were reported half a crop in districts where a full crop had been the rule in other years, and were an almost total failure in other localities. In Alberta and British Columbia, however, potatoes were a very good crop and were selling at low prices.

In Nova Scotia and New Brunswick favourable weather prevailed for the taking in of crops and considerable fall plowing was done. Low yields of potatoes were reported throughout New Brunswick, which annually produces a heavy crop of potatoes, and at some points potatoes were reported to be selling at double the prices obtained last year.

In Quebec farmers were busy fall plowing under favourable weather conditions. Root crops were reported good in many localities. In Ontario from a great many points, potatoes were either reported a complete failure or a very poor crop—to such an extent in a few localities that farmers were not digging them. In a number of Ontario districts a scarcity of farm help was reported owing to many men leaving farms to take the places of men enlisting in the cities. In the Niagara and Hamilton fruit districts peaches and pears were good, though grapes were below the average. The peach crop in the Essex and Kent districts was reported a good one. At Berlin there was continued activity in the hauling of beets to the sugar factory, a large number of men being employed in this work. As high as 300 to 400 wagon loads were hauled into the factories each day and in addition to the local supply, some 800 carloads were brought in from points in Western Ontario. Beets were reported testing well and farmers were receiving satisfactory prices. At Wallaceburg, near Chatham, there was also considerable activity in the sugar beet fields and large numbers of men were engaged in harvesting and hauling the crop.

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

Threshing continued under favourable weather conditions in the West, and in Saskatchewan it was estimated at the end of the month that about 70 per cent of the total wheat crop had been safely garnered. There was a strong demand for threshers in nearly all districts and wages were high. The general wage was reported as \$3 per day, and in some places where snow had fallen wages went up to \$3.50 and \$4 per day, and for teams \$7 per day. At Kerrobert and some other localities prairie fires occurred which resulted in considerable damage. Some of these fires arose as the result of carelessness and in one instance a farmer who had caused a prairie fire by throwing away a lighted match was heavily fined.

At Winnipeg the month was reported a record one for grain shipments, the highest in 20 years for the examination and despatch of grain due to the exceptionally large acreage and to some extent to the interruption of threshing and shipments owing to unfavourable weather during September. The amount of grain passing through Winnipeg during the month was 48,913,200 bushels of wheat; 6,656,800 bushels of oats; 1,304,450 bushels of barley and 155,800 bushels of flax. At Brandon an exceptionally heavy demand for harvesters and threshers was reported with higher wage rates than for last year. About 75 per cent of the threshing was reported completed with a good yield and a fair grade. From Moose Jaw it was reported that 80 per cent of the threshing was completed and 40 per cent of the grain marketed. All persons willing to engage in threshing operations were able to find employment. At Regina, cold and wet weather during the early part of the month left quite a number of men idle for a short time, but at the end of the month all were engaged. Farmers were hauling grain to the elevators and doing fall ploughing. At Prince Albert, good crop conditions were reported with favourable weather; some activity in the sale of farm lands at fair prices was also reported. Grain crops with the ex-

ception of oats were expected to be well up to the average. In Albert, also, active conditions prevailed. At Medicine Hat, the demand for farm labour was greater than the supply, and the Board of Trade made arrangements to bring 100 men from Vancouver to meet the local demand. The wage for farm labourers was \$3 a day with board. At Lethbridge, a great demand for farm help was also reported. One agency had openings for over 200 men, and no applications for positions on hand. Wages here also were \$3 a day with board—somewhat better than last year. In the Edmonton district there was an exceptionally good crop of potatoes, and a good potato crop was reported to be general in Alberta. Prices in some localities were as low as 25 cents a bushel. At Calgary, no lack of labour was reported. The Civic Labour Bureau sent out about 250 men to various points during the month.

In British Columbia favourable crop conditions prevailed and an exceptionally heavy yield of potatoes was reported. The grain and fruit crops were also good. One thousand tons of potatoes and 20,000 boxes of apples of the best quality were shipped from Victoria to Australia and were expected to find a ready sale at good prices.

Fishing.

Fishing on the Atlantic coast was fairly quiet. At Digby, the outstanding feature was a scarcity of haddock, the fish most wanted by producers on account of the growing demand for Finnan Haddies at this season of the year. The cause of the scarcity was ascribed to the unfavourable weather. Shore fishermen were taking a few haddock but these were small. Fairly good catches were reported at the mouth of the Bay of Fundy and it was expected that the fish would strike in permanently in a short time. At Yarmouth there was considerable activity in preparation for the winter lobster season which opens on December 15. No scarcity of bait was

expected as the weirs were taking large quantities of herring. Mackerel continued to come forward in good numbers and sword-fish and albacore kept up until quite late in the month. Sydney reported fishing quiet.

From St. John, N.B., it was reported that sardines in the Bay of Fundy were scarce, and that owing to the fact that few weirs remained standing after the severe gale late in September the catch was small. At Newcastle fishermen were disposing of their season's catch of cod-fish prices for which were about 20 per cent less than last year.

On the lakes fair conditions prevailed. In the Bay of Quinte a fair amount of whitefish were taken. Under a change in Ontario fishing regulations the closed season for whitefish on the Great Lakes will be done away with except in the Bay of Quinte, where the present regulations will remain in force and the Bay close for fishing from November 1 until November 30. At Port Arthur herring fishing was active and was expected to be busy until the third week in December. Continued shipments of whitefish were reported from the Lesser Slave Lake by way of the Edmonton, Dunvegan and British Columbia Railway and Grand Trunk Pacific to Chicago.

In British Columbia salmon fishing on the Fraser River was fair although it was reported that the large number of men and boats engaged, owing to unemployment in other lines, reduced the average per boat. The entry of American canners into the market tended to bring better prices to the fishermen and opened a market for all the humpback and dog salmon that could be procured. The catch of cohoes during the latter part of the month was fairly good. At Prince Rupert, conditions were reported active, with employment being given to additional numbers of men. September shipments from the Port showed an improvement over those of the previous month. Whaling vessels operated by the Victoria Whaling Company returned to port for the winter and considering

the short time they were operating had a fairly successful season.

Lumbering.

Lumbering operations were slightly quieter than in the previous month owing to the closing down of a number of sawmills which had finished the season's cut. A number of large mills, however, continued sawing and were expected to be in operation until the freeze-up.

In the Maritime Provinces the uncertainty of the lumber market, the stocks on hand, the scarcity of tonnage and high freight and insurance rates as well as the exchange market were all expected to materially affect the cut of logs this season. From some places, however, a favourable outlook was reported. At Newcastle, N.B., there was not such a demand for labour owing to some of the sawmills having completed their cut. Other mills, however, were working day and night. Logging operations in the woods in this district were reported active and additional numbers of men were being sent in. The number of men to be employed this year was expected to equal the number employed last year, wages being about the same. At Moncton, however, it was reported there would be a restricted lumber output, one indication of which was the lack of demand for horses. Most of the mills in districts near Quebec City had not finished their season's cut and were expected to continue until stopped by adverse weather. At Three Rivers, mills were still running with enough logs to keep them busy for several weeks. Over 10,000,000 logs were reported to have come down the St. Maurice river this season. About two-thirds of these logs were made into pulp to be shipped to the United States.

In Ontario, fairly active conditions were reported. In the Cobalt district there was a big demand for shantymen, and employers claimed they could not secure the number of men required in this work. At Midland, also, sawmills continued to provide employment for a

considerable number of men, and it was expected that a fair amount of employment would be given in the lumber camps. Fire at this place towards the end of the month caused a loss estimated at \$325,000. At Thessalon, in the Sault Ste. Marie district, a large sawmill shut down on account of low water, but it was expected there would be a fair amount of activity in logging operations. At Port Arthur, sawmills were shut down, and at the end of the month little was being done in the way of logging operations.

In the lumbering districts of Saskatchewan, Alberta and British Columbia, there was a noticeable increase in activity; orders from the Prairie Provinces for lumber to be used in the construction of granaries and other buildings depleted local stocks of lumber, and lumber companies in many instances were active in re-stocking local yards and in making preparations for the winter's cut of logs. It was expected that a great many of the men engaged in harvesting operations would find ready employment in the woods. At Prince Albert, many men were returning from the harvest fields to meet this demand, and it was expected some difficulty would be experienced in securing the men required. At Lethbridge, also, a demand for men for the lumber camps was reported. At Edmonton, sawmills which were more or less damaged by the spring floods were not repaired, but a large sawmill built some distance from the river which started operations during the summer was very active, the supply of logs being brought in by rail. A good demand was reported for the finished product from the country districts.

In British Columbia, greater activity was reported. At Fernie, a local company advertised for 75 men and obtained them promptly. These men were placed at building roads preparatory to the commencement of logging operations which were expected to continue throughout the winter; the wage paid

was \$2.25 for a day of ten hours. In other localities, also, sawmills were commencing operations. At New Westminster, an improvement was noticeable; several camps were opened and the mills were running full time. At Nanaimo, sawmills were working steadily, but not to full capacity. Logging camps also were reported not very active. The export of British Columbia timber was reported seriously inconvenienced by the earth blockade which tied up shipping in the Panama canal.

Mining.

There was a noticeable increase in mining activity both in coal and metaliferous mines. In Nova Scotia, in the Sydney district coal mines were reported very busy, the Dominion Coal Company having a much larger output than in the previous year. At Sydney Mines and Inverness, collieries were active and prospects good for the coming season. The Dominion Coal Company were advertising for miners and mine labourers at Springhill where it was reported some 300 to 500 miners could be placed. At Westville the demand for coal continued and all of the mines worked full time. Mining companies were barely able to fill their contracts and had large orders ahead. A shortage of labour was reported to be curtailing the output.

In Alberta and British Columbia, also, active conditions prevailed. At Lethbridge it was reported that the demand for miners and mine workers was not being met, and in the Drumheller fields, north of Calgary, a demand for men also existed. In the Edmonton district mine operators reported a scarcity of experienced miners, while on the other hand it was alleged that the wages offered were too low to induce miners to remain in the district. At Fernie, the coal mines gave employment to additional numbers during October as well as more steady employment to those engaged. The placing of a large order by the Granby Smelter with the Crow's Nest Pass Coal Company resulted in the

mines being operated continually on the single shift basis, while in some mines two shifts were working. The possibility of larger orders gave promise of steady operation of the mines during the coming winter. Improved conditions were also reported from mines in the district. At Nanaimo, the coal mines of the city and district did a better trade during October than in the preceding month, particularly the mines in the city.

In metal mining activity still continued. In the Province of Quebec asbestos mining at Thetford Mines continued active, broken only by a brief interruption on account of a strike which lasted two or three days. Copper mines at Eustis also were busy. The crusher plant at these mines which had been burned down was being replaced and was expected to be running again in December. Many men continued to find employment in the mining of chrome iron in Black Lake. In the Cobalt district the mines were running steadily. Ore shipments from this district for September were reported about 400 tons higher than for the previous month.

In British Columbia the improvement in mining was reflected in improved conditions in other industries, and in business. At Trail a large number of dwellings were being built to meet the increased requirements and work on the new plant of the company was progressing. There was a noticeable improvement in business in Nelson and district due to increased activity of the mines and smelter. The Slocan Star Mine was busy, employing about from 40 to 50 men. The Noonday Mine near Sandon was active and had nearly completed a 600 foot tunnel. The Lucky Jim mine was resuming operations. The Cork Province mine near Kaslo which had been idle for six years resumed operations with a force of 40 men and was making regular shipments to Trail. The Hewitt mine near Silvertown was producing 150 tons of ore per day and its mill was also busy, from 40 to 50 men being employed. At Sheep Creek, also, activity was reported and at Queen mine,

near Nelson, production was maintained, 35 men being employed in the mine and mill. The Mother Lode mine near Greenwood was also being worked and the cyanide mill was in operation.

The Granby Company at Amyox gave employment to a large number of carpenters and labourers during the month. At Alice Arm and Surf Inlet north of Prince Rupert and at different points on the Skeena River activity was reported in development work.

Manufacturing.

The activity in manufacturing noted last month was continued in October. In Nova Scotia, manufacturing centres were busy. The steel business at Sydney and Sydney Mines was active and good orders were reported ahead. Additional plant was put into operation by the Dominion Steel Company during the month and large quantities of iron ore, limestone and dolomite were being put into stock for winter use. The number of men employed was larger than at any time during the past 18 months. At Amherst, active conditions were reported, with a shortage of men in some instances. At Westville, manufacturing in metal lines continued very active, plants working both day and night. The woolen industry in this district was quiet on account of a large fire which destroyed the plant of the Nova Scotia Underwear Company at Eureka. About 160 persons were thrown out of work temporarily. The estimated loss was \$200,000, covered by \$150,000 insurance. The company was rebuilding on the old site and was expected to resume operations shortly.

New Brunswick manufacturing conditions also were satisfactory. At Fredericton, manufacturing conditions, on the whole, were steady with exceptional activity in some branches due to the continuation of large orders for military equipment. From industrial districts in Quebec continued activity was reported. At Sherbrooke, most of the metal working establishments were busy

on war munitions, and woollen factories also were active. At Montreal, woollen and cotton companies were busy, and establishments engaged in the manufacturing of munitions were very active.

Ontario industrial districts showed a continuation of the previous month's activity. The large steel mill at Sault Ste. Marie was fairly active and was expected to operate all winter full time, but with a reduced staff. At Toronto, metal working factories were active, also jewelry factories—the latter preparing for the Christmas trade. Woodworking and piano factories were quiet. Leather establishments were busy, and clothing factories fairly so. Breweries and cigar factories were quiet. At Berlin, rubber factories were busy, and trunk and bag factories were working overtime. Interior hardwood factories also were busy. Two furniture factories were working overtime and others were beginning to work full time. The Dominion Sugar Factory was running day and night and on Sundays. Button and clothing factories were busy. Foundries also were working full time. Felt factories and shoe factories were busy, the former working overtime. At Galt, machine shops were working day and night and other industries were fairly well engaged. At Guelph, manufacturing generally was more active, and the outlook for the winter better than for the corresponding period of last year. Factories working on munitions continued busy, and there was a steady demand for machinists. A knitting factory was destroyed by fire and about 30 workers, mainly women and girls, were thrown out of employment. At Stratford, all manufacturing establishments were reported busy. Woollen mills at Mitchell were rushed with orders, and hosiery mills were also busy. A number of manufacturing establishments at Goderich and St. Marys were busy on war orders. At Hamilton, manufacturing in most lines was fairly good and considerably better than for the same period a year ago. Some establishments were

working day and night. The International Harester Company had orders ahead for a year owing to the big crops and consequent demand for farm implements in the West. The National Steel Car Company was busy on orders for steel cars for the Intercolonial Railway—the first complete all-steel cars built in the Dominion. The Mercury Mills, a large knitting company, commenced work on a new knitting factory to cost \$250,000 and to give employment to 500 hands when completed. Seven new factories were established in Hamilton during the year. At Niagara Falls, manufacturing continued to show improvement. The American Cyanamid Company commenced the manufacture of a new abrasive material and re-engaged about 30 of its former employees, making in all about 350 employees engaged. Before the war this company employed more than 1,000 hands. Some departments in silverware factories were running overtime. A carriage mountings factory wanted machine hands. Suspender and box factories were all busy. At Brantford, the outlook was better than for the past 12 months and a number of establishments were reported as fearing a scarcity of skilled labour. A large number of outside workers secured employment in the factories. Textile factories were busy and advertising for help.

At St. Thomas, Windsor, Owen Sound, Kingston and Brockville fair conditions generally existed. At Woodstock a scarcity of men for factory work was reported. Furniture workers, moulders, stove mounters and men to work on munitions were in demand. Waggon makers and manufacturers of pianos and organs were working as usual. At London an improvement was noticeable in factories and foundries. Iron industries such as rolling mills, and implement factories were busy and munitions factories were working day and night. At Chatham, manufacturing establishments were busy. Plans were under way for the construction of a large sugar beet

factory, which was expected to furnish employment for upwards of 300 men during the busy season.

Western conditions also were reported as improving. Flour mills were all busy, many of them running twenty-four hours a day. Factories having war orders were exceptionally busy and others were fair.

Railway Construction.

Outside of fairly large operations in Alberta and British Columbia, railroad construction continued somewhat quiet during October. Good progress was made in construction work on the Edmonton, Dunvegan and British Columbia Railway. On the main line the whole of the grading from the Smoky to the Spirit River was about completed. After delays caused by slides on the banks of the Smoky, steel laying was again started and would, it was expected, be continued without interruption. Good progress was made on the Grand Prairie branch. On the Central Canada Branch, steel was within eleven miles of Peace River Crossing. On the Alberta and Great Waterways Railway there were only fifteen miles of grading to be completed. At Prince Albert the completion of the Grand Trunk Pacific line into the town was reported as still hanging fire.

Railway construction in Eastern Canada consisted for the most part in maintenance work. Construction work on the Halifax and Eastern Railway was discontinued. The road was almost completed, only a few miles remaining unfinished. Work on the ocean terminals at Halifax showed good progress and contractors had a large number of men on day and night shifts. The work of laying large concrete blocks on the quay wall was well under way. At Three Rivers employment was given to a considerable number of men in the construction of the city street railway. At Toronto about 200 men were at work on the site of the new Union Station.

The plans for the construction as approved by the Dominion Railway Board provide for increased accommodation to that originally proposed. The viaduct and approaches are estimated to cost approximately \$12,000,000. Work on the construction of No. 2 section of the Trent Canal provided work for several hundred men along the Severn River.

General Transport.

Conditions in general transport continued fairly active, particularly on western railway lines, owing to the continued heavy shipments of grain, which were also responsible for active freight traffic on the lakes. Shipments, however, from Montreal and Atlantic ports were reported slowing down somewhat.

At Halifax conditions along the waterfront were not very brisk and for the greater part of the month longshoremen had little to do. At Westville railroad traffic continued very heavy, due largely to heavy shipments of steel and, also to the general increase in volume of business. At Three Rivers, Que., the harbour was exceptionally active during the month, many vessels being engaged in loading lumber and unloading coal from Sydney, N.S. At Montreal the grain export business was reported slowing down and it was reported that high marine insurance was having the effect of sending tramp steamers to Portland. The season on the whole was not a bad one for longshoremen. Few passenger vessels left Montreal and what passenger accommodation was available was eagerly sought.

In Ontario active railway conditions in most districts was reported. At St. Thomas railway shop men were busy and there was plenty of work ahead. The Pere Marquette shop men were particularly well employed. Traffic employees reported a fair month and spare men were better employed than during the previous month. Railway shops at Stratford also were busy. At Toronto railway workers and others engaged in

transportation had a quiet month owing to some extent to the depletion of rolling stock, much of which had been sent west to move the grain crop. At Port Arthur there was noticeable activity in the railway shops owing to the necessity of repairing and putting into service as much rolling stock as possible for use in moving the grain crop. Repairs to ships at this point also provided considerable work.

At Moose Jaw, all available rolling stock was being used to handle wheat shipments. The number of grain cars passing through Moose Jaw during the month exceeded all previous records; this also was the case at Winnipeg.

During the month the Canadian Northern Railway Company opened its new Sudbury-Port Arthur line for freight traffic. The Grand Trunk Pacific also put into operation during the month an improved service between Toronto and Calgary and Saskatoon, and between Edmonton and Calgary.

The annual meetings of the Canadian Pacific Railway Company and the Grand Trunk Pacific Railway Company were held during the month. At the meeting of the Canadian Pacific Railway the business dealt with consisted of the presentation of the president's annual report, the adoption of the annual financial statement and the election of directors. The shareholders also adopted a resolution empowering the company to absorb the Allan Steamship Company. At the meeting of the Grand Trunk Pacific Railway the president stated that as the railway was nearing completion, construction work during the past year had been confined to necessary ballasting and bridging, principally on the mountain division, and no new extensions had been undertaken. In consequence of the adoption by the company of fuel oil on locomotives between Prince Rupert and McBride, oil fuel plants had been completed at Jasper, McBride, Prince George, Prince Rupert and other

points. The passenger train service between Edmonton and Prince Rupert had been increased in consequence of increase in travel. Reference was also made to the position which Prince Rupert was coming to have as the centre of the largest fisheries in the world. It was also pointed out that while the development in that portion of British Columbia, through which the railway passes, had not been as great as it otherwise would have been owing to the war and the financial situation, nevertheless development was going on through this section, and a number of settlers had taken up land in the Nechako and Bulkley valleys, and the outlook for mineral development was also very good. Reference was also made to the inauguration of the "National" train which formed the first regular connection between the Grand Trunk Railway in the East and the Grand Trunk Pacific in the West, operated via the Grand Trunk, the Temiskaming and Northern Ontario, and the National Transcontinental Railway. There had also just been completed the company's new floating dry-dock at Prince Rupert, which had been under construction during the past several years.

Canadian Trade.

Canada's foreign trade during September showed a decrease in total imports entered for consumption as compared with the corresponding month in 1914, the amounts being \$38,625,098 and \$52,452,793 for 1915 and 1914 respectively. Exports, however, showed an increase of \$14,333,122 as compared with the same month in 1914. During September increases were shown in the products of the mine, the fisheries, the forest, animals and their produce, agriculture, manufactures and miscellaneous merchandise.

The following table gives the latest official summary of Canadian foreign trade:

IMPORTS AND EXPORTS, SEPTEMBER, 1915.

Imports Entered for Consumption.	September		Exports.	September	
	1914	1915		1914	1915
Dutiable Goods.....	22,575,997	22,279,886	The Mines.....	5,120,246	5,600,416
Free Goods.....	13,991,575	15,746,834	The Fisheries.....	1,987,669	2,750,313
			The Forest.....	4,945,471	6,527,625
			Animals and their Produce....	7,063,312	10,188,424
			Agriculture.....	7,478,798	11,139,935
			Manufactures.....	5,188,314	9,244,974
			Miscellaneous.....	12,803	939,595
Total.....	36,567,572	38,026,720	Total Merchandise.....	31,796,613	46,129,735
Coin and Bullion.....	15,885,221	597,378	Coin and Bullion.....	166	75
Grand Total.....	52,452,793	38,624,098	Grand Total Exports.....	31,796,779	46,129,810
Duty Collected.....	6,016,606	7,904,995			

The following are the returns of the Canadian bank clearing houses for September, 1915, with increase or decrease over September, 1914:

	1915	1914	Change.
Halifax.....	\$ 8,375,614	\$ 7,979,600	+ \$ 396,014
St. John.....	7,032,534	6,297,997	+ 734,537
Montreal.....	206,673,288	203,588,919	+ 3,084,369
Quebec.....	14,049,560	16,252,124	— 2,202,564
Brantford.....	1,991,039	1,981,161	+ 9,878
Fort William.....	1,560,744	3,146,682	— 1,585,938
Hamilton.....	12,312,115	11,788,302	+ 523,813
London.....	6,887,872	6,386,175	+ 501,697
Ottawa.....	17,306,374	17,467,683	— 161,309
Peterborough.....	1,548,213	1,804,079	— 255,866
Toronto.....	138,247,404	142,910,702	— 4,663,298
Brandon.....	1,878,252	2,203,254	— 325,002
Winnipeg.....	102,276,346	121,752,096	— 19,475,750
Regina.....	6,664,202	8,287,865	— 1,623,663
Saskatoon.....	3,922,548	4,442,081	— 519,533
Calgary.....	12,013,785	15,311,248	— 3,297,463
Edmonton.....	7,182,158	11,246,864	— 4,064,706
Lethbridge.....	1,381,138	1,723,375	— 342,237
Medicine Hat.....	949,460	1,578,805	— 629,345
New Westminster.....	1,147,837	1,572,190	— 424,353
Vancouver.....	24,369,842	34,234,654	— 9,963,812
Victoria.....	5,216,333	9,214,871	— 3,998,538
Total.....	\$585,839,054	\$634,681,100	— \$48,842,046

Canadian revenue for September, 1915, amounted to \$13,154,318.15 as compared with \$9,953,093.07 in September, 1914. The expenditure on capital account for September, 1915, was \$18,177,210.82, compared with \$5,163,610.28 in September, 1914. The expenditure on capital account for September, 1915, comprised \$3,481,175.35 for public works, including railways and canals, \$155,032 on railway subsidies, and \$14,541,003.47 on the war:

The September, 1915, bank statement showed the paid-up capital of the char-

tered banks of Canada to be \$114,422,566, an increase of \$437,819 compared with the figures for the previous month. Deposits payable on demand amounted to \$359,315,280 in September compared with \$334,022,174 in the previous month, an increase of \$25,293,106. Notes in circulation amounted to \$105,798,618 in September as against \$99,610,962 in August, an increase of \$6,187,656. Loans to cities, town municipalities and school districts, and other current loans amounted to \$815,015,088, as against \$804,368,465 in August, an increase of \$10,646,623.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

The general condition of the labour market has been better for the past month than at any time since the war started. Every branch of employment seemed to be well employed, and, in some cases, there was a shortage of men, due to the large number enlisting throughout the district.

The Dominion Coal Company at Springhill reported a shortage in miners, and could place three to five hundred more miners there.

Halifax.

The general condition of labour during October was very fair. There was sufficient building and construction work carried on to employ the majority of tradesmen, and the demand for unskilled labour was good. Reports from the various trades connected with the Halifax District Trades and Labour Council showed business fair in all branches.

Conditions along the waterfront were not very brisk, in fact for the greater portion of the month longshoremen had very little to do.

Construction work on the Halifax and Eastern Railway has been discontinued. The road was almost completed, only a few miles remaining unfinished.

Work on the Halifax Ocean Terminals showed good progress. The contractors had a large number of men employed in both day and night shifts. The filling in work has been very extensive, and the work of laying the large concrete blocks, weighing 120,000 pounds, of the quay wall, was well under way.

Sydney.

Labour conditions were active and labour generally was well employed throughout the district. The larger industries were all busy, while almost all the small concerns had ample business to keep their men working steadily. This change and activity in the district, compared with the inactivity of October last year, has helped to greatly relieve the tension brought about by the war, and has placed the working classes in a better position to go through the winter. The prospects pointed to a continuation of business prosperity, especially in the coal and steel trades.

The coal trade was very busy, the Dominion Coal Company having much larger outputs than October of last year.

Sydney Mines and Inverness were active. Prospects were good for the winter season.

The building trades had a fair amount of work. The wood factories and foundries, while running below their normal staff, gave steady employment to all at work.

Both rail and water transportation was heavy.

Truro.

All classes of labour were well employed, with bright prospects for the immediate future. There was a slight dullness in lumber circles though a good number went into the woods.

Railway transportation employees were busy.

Many farmers were busy housing grain and potatoes, delay being caused by the almost continuous wet weather the previous month.

All industries in Truro, Bass River and Stewiacke were running full time.

The Truro Steel Company were busy getting machinery and making other improvements in the plant, formerly that of the Truro Engineering Company. When in operation about 60 hands will be employed.

Westville.

In practically every industry in this locality the demand for labour exceeded the supply during October and was much greater than for the corresponding month of last year. This greatly increased demand was due to the continued activity of those plants engaged in the manufacture of war munitions. All of the plants worked day and night through the month.

The vicinity experienced a great loss in the total destruction by fire of the plant of the Nova Scotia Underwear Company, situated at Eureka. This concern had profitable business placed ahead for several months operating and about 160 persons are temporarily thrown out of employment. The estimated loss is

about \$200,000, covered by \$150,000 insurance. The company, however, are rebuilding on the old site and will resume operations as quickly as possible.

Railway traffic continued very heavy and showed an increase over last month and nearly double that of a year ago, accounted for largely by the moving of so many steel ingots to the Steel Works and the general increase in volume of business.

Wholesale and retail trades continued busy and both reported more business than last month, and greatly in excess of the same period last year.

Lumbering showed a decrease, owing to the falling off, both in demand and price, for deals.

The demand for coal continued and all the mines operating worked full time, being barely able to fill their contracts, and still have large orders unfilled. The shortage of labour is a serious detriment to this industry and greatly curtails the output. The September output from the Acadia Coal Company was 30,400 tons, and from the Intercolonial Coal Mining Company, 17,927 tons.

PRINCE EDWARD ISLAND.

Charlottetown.

Labour conditions compared well with the same month in previous years. All trades were well employed and in some instances carpenters and masons were in demand.

Cod and haddock were coming in to the local market in large quantities.

Crops throughout the district were light. Potatoes particularly were expected to show a considerable shortage.

NEW BRUNSWICK.

Fredericton.

Labour conditions compared favourably with September and were fully as good as in October of the previous year. Manufacturing on the whole was regular and there was exceptional activity

noticeable in some branches. The continuation of large orders for military equipment and munitions had the effect of reviving industry in some lines, with a consequent increase in the amount of wages paid out and the stimulation in many quarters of domestic trade. The building trades were generally well employed, although towards the end of the month work showed signs of slackening, as is usual at this season of the year. Unskilled labour was also fairly well employed.

Moncton.

Labour conditions continued active and prosperous, showing no diminution from the preceding month and was very considerably in excess of the corresponding period of last year. The demand for all classes of building mechanics and builders' labourers was good and was expected to continue so until winter set in. Woodworking factories were also very active.

Customs duties collected at the port of Moncton for September amounted to \$9,678, as compared with \$8,130 for September, 1914.

A school census taken by the Board of School Trustees shows the population of the city of Moncton to be 13,814 persons as against 13,322 in 1914. The number of children from six years to 14 inclusive is 2,167.

Commencing October 1 the men in the Government railway shops worked 54 hours per week as against 50 hours during summer months.

Newcastle.

During the latter part of October there was not such a demand for unskilled labour, due to the finishing of the season's sawing by some of the lumber mills. Others, however, were working a day and night shift in order to have their logs sawn before the river freezes over.

Building trades were especially busy and there was such a demand for skilled

building tradesmen that the local supply was exhausted and tradesmen were brought from Moncton and St. John to supply the demand.

Fishermen were disposing of the summer's catch of codfish. The price this year was about 20 per cent less than that paid last year. Oysters were reported plentiful, but also sell for less than in previous years.

Lumbering operations in the woods were in full swing and more men were being sent to the shanties daily. The number of men employed this year will equal, if not exceed the number employed last year, while wages paid are about the same.

St. John.

Conditions remained unchanged in the labour market and retail merchants report business dull.

Deposits in the Savings Bank during the month of September were \$47,651.33, and withdrawals \$81,184.54.

Inland revenue receipts for September were \$21,693.74, and for the corresponding period of last year \$17,608.79, an increase of \$4,084.95.

The customs receipts for the month of September were \$90,979 greater than for the corresponding period of last year. For the six months of 1915, as compared with the same period of 1914, the revenue shows a surplus of \$438,444.06.

The harbour revenue for September amounted to \$5,124.90, compared with \$3,956.69 for September, 1914.

There was a decrease in ferry traffic during September. The decrease in passengers totalled 23,594 and in teams 656.

Exports to the United States for the quarter ending September 30 show a decline of \$74,139.41, as compared with the corresponding period last year.

The usual grant of \$200 has been voted by the Provincial Board of Education to the St. John School Board to assist in the maintenance of an evening technical school during the winter.

The price of bread dropped a cent per loaf on October 4, making the price eight

cents per loaf. Biscuits were also lowered one-half cent per pound.

The annual convention of the Canadian Brotherhood of Railroad Employees opened on October 19, with about 45 delegates present. A committee interviewed Sir Robert Borden during the afternoon. President A. R. Mosher presided on the morning of October 20 and a lot of routine business was transacted, including the reception and adoption of reports of standing committees. The convention was brought to a close on October 21. The next place of meeting will be Charlottetown, P.E.I. It was proposed to have the Workmen's Compensation Acts (if possible) made to apply to Government railway employees. A. R. Mosher, Halifax, was re-elected president.

QUEBEC.

Hull.

In spite of the closing down of the J. R. Booth sawmills, the company has re-engaged most of its employees on important improvements being made so as to run the mills by electricity. The work will last all winter. With this and the demand for men for work in the woods exceeding the supply, everything points to an improvement in the general situation. Business was also better than during October of last year. A large number of men were employed on municipal work such as sewers and sidewalks, which will be pushed until it is completed.

Industry in general is prosperous and lumber will be cut on a large scale this year. Lumbermen's wages have somewhat increased and from \$20 to \$30 per month are now being paid.

Montreal.

That the state of business is not only improving but improving rapidly was the news given during October by financiers and business men generally. Green-shields & Company stated that as most

of the improvement was largely based on agriculture and not munitions manufacture, it was entitled to respect. Mr. J. E. Dalrymple, vice-president of the Grand Trunk and Grand Trunk Pacific, stated here on October 25 that the pessimistic feeling had gone out of the country, and that business had become brisker in consequence of this growing confidence, aided by the great crop and the large war orders. Mr. C. C. Ballantyne, vice-president and general manager of the Sherwin-Williams Company of Canada, said on October 12 that the orders received in the paint business during September were fully one hundred per cent above those of the corresponding month of 1914. For the first time in many months the railroads were in the market for the company's product, and the most cheerful aspect of the situation was the change in western conditions. Paint men also report large orders from car-building companies working on Russian orders.

Lumbermen claim that the principal English ports are over-supplied with lumber, and that the export trade this winter is not any too promising. The cut in the large lumber sections will be very light during the coming season in consequence.

The clothing trade was looking up a little, some manufacturers reporting a fair proportion of spring orders from travellers, and things looked better in the woollen trade. Canadian woollen manufacturers cannot undertake fresh orders for some months to come. The various cotton companies have advanced their prices. Clothing manufacturers find it difficult to get supplies of English goods, and most of their tweeds are being bought in the United States. The boot and shoe factories were not over-busy.

Grain export business from this port has been slowing down with the advancing season, and higher marine insurance is diverting tramp steamers to Portland where a number of vessels were loading for European orders placed with Montreal houses. The harbour at

one time had only four ocean-going steamships in it, but towards the end of the month enough reached port to keep the figure near the fifteen mark. Altogether the season has not been a bad one for 'longshoremen. There has not been much import freight to handle as compared with former years, but there has been far more re-fitting of steamships than in other years, and many of the 'longshoremen have found work at this as they are most of them able to handle efficiently the axe, hammer and saw. This applies to the whole season rather than to last month. There were not many passenger vessels, and two passengers applied for every berth on any steamer that left Montreal with passengers.

More grain was received than usual by the railroads, but through the Lachine canal the season to the end of October had 26,126,052 bushels less than for the same period in 1914. This may be partly explained by the fact that the tonnage operated last month totalled only 573,729 as compared with 704,811 for October, 1914. Freights earned on the lakes and ocean have far exceeded other years.

The Harbour Commission will have the addition to elevator No. 1 so far advanced by winter that work can continue throughout the winter on interior work. It will be ready in the early summer. Victoria pier will not be completed until next year, although it is now above water throughout its whole length. The harbour commissioners have made a new departure in making an engine tender for one of the small locomotives used on the harbour railway system. Three more have been ordered at their locomotive shops. As soon as circumstances warrant it, the commissioners will urge the Dominion Government to construct an elevator east of the present hay sheds and four berths for tramp vessels coming to the port for grain, at a total cost of two million dollars.

At a meeting of representatives of the Civic Improvement League, the Builders' Exchange, the Protestant Board of School Commissioners, the Y.M.C.A., the Municipal Reform Association and the Local Council of Women, a committee composed of Mr. David Trotter, Rev. M. E. Fee, Dr. Atherton and Miss Wileman was appointed to arrange for a public meeting in the interests of the movement for the establishment of a federal chain of labour bureaus.

Thirty residents of Sault au Recollet were thrown out of work by a fire which destroyed the plant of J. R. Walker & Company, paper manufacturers. As many of these residents are family men who have been working for many years at this plant, the fire occasioned considerable hardship among them.

On October 26 it was stated that the Charity Organisation Society had spent during the last 12 months nearly three times as much as in other years. The treasurer's report showed a disbursement of \$53,994.72 as compared with \$18,556 for the previous year. Of this \$40,000 had been spent in relief work proper. The secretary said that there were many cases of husbands leaving for Great Britain to work, and their families not getting anything from them for their support. The relief expenditure of the Baron de Hirsch Institute was \$24,748.77 for the year as against \$14,123.58 for the previous 12 months. Dr. J. L. D. Mason, medical officer of the Institute, said that half of the cases of sickness, which accounts for the dependent condition of most of those come in contact with, were due to preventable causes, bad housing being the main cause aggravated by poor home surroundings and overcrowding.

Quebec.

The month has been a good one. The building trades were busy and with the exception of those employed upon outside work, who had to lose some five days

due to rainy weather, this branch of labour was busy. The usual seasonal activity was evidenced in the coming and going of schooners engaged in the coasting trade.

Farmers were busy with fall ploughing, the conditions being ideal for this work.

In the lumbering industry most of the big mills in the outside district had not finished their season's cut and were expected to continue until stopped by the weather.

Sherbrooke.

Labour conditions showed little change from those of the preceding month. Metal working establishments for the most part were busy manufacturing war munitions.

Woollen factories were also busy.

Lumbering was rather quiet.

The asbestos mines were working full time. The copper mine at Eustis was working full time and was building the crusher plant that was burnt down. The plant it was expected would be running again in December. Many men were employed in mining chrome iron in the Black Lake district.

Sorel.

Industrial conditions were somewhat better than in the previous month. More men have been employed in the various industrial establishments. There were, however, still a few hundred men without steady employment.

St. Hyacinthe.

The general condition of labour was good. There was an improvement in some industries, but little activity in building operations. A large number of men were engaged on city work, such as cement sidewalks, the opening of new streets, etc.

Business, wholesale and retail, was active, and banks reported a fairly active month.

Farmers were busy doing their fall ploughing, and were helped considerably by the rains which fell abundantly during the month. Employment on the farm was good, with enough supply to meet the demand for labour.

St. John's and Iberville.

The condition of the labour market during October was better than during the previous month. Manufacturing improved in several branches. There was very little doing in the building trade, and many workers were idle.

Navigation was fairly active. During the last week of the month a number of boats left for the United States with cargoes of hay.

Business in general was fair and the fall trade promises to be good on account of the prosperity among farmers.

Agricultural conditions were fair. Farmers were busy ploughing and pressing hay.

Fishing on the Richelieu was quiet.

Three Rivers.

Labour conditions were about the same as during last month. The concreting of the streets gave work to quite a number of men the whole month and the Three Rivers Traction Company also kept its men busy every day this month finishing the line.

The harbour was exceptionally active this month loading several ships with lumber and unloading several shipments of coal for Sidney, N.S.

Lumber mills were still running with enough logs to keep them busy for several weeks.

All factories were working full time with good prospects ahead.

ONTARIO.

Belleville.

Labour conditions for October were practically the same as for the previous month. The manufacture of war muni-

tions and of food supplies for the Old Country gave employment to many. The establishments work a day and night shift. Sewer construction in various parts of the city gave employment to many.

Many men were engaged in catching whitefish which were quite plentiful in the Bay of Quinte.

In the northern part of Hastings county some mining operations were being carried on chiefly in the taking out of iron ore.

Berlin.

Labour conditions in Berlin for October were very good, in fact better than the same month last year. Some men were out of work in the building trades but all others were very busy.

Button factories were busy, as well as glove factories. Foundries were also working full time, one working overtime. Interior hardwood factories were busy while two other furniture factories were working overtime. Others were also beginning to work full time. Rubber factories also were busy. Trunk and bag factories were working overtime. Felt factories and shoe factories were busy, the former working overtime. Wholesale sausage factories were busy and the sugar factory was running day and night and Sundays. Bakers and confectioners also were busy. The only trades that reported trade a little dull were the breweries and cigar factories. Even labourers were well employed, a large number having taken advantage of the rush in the factories.

There were still a large number of houses under construction, some just being started. Wholesale and retail trade was fair.

Customs returns for Berlin for September showed an increase of \$24,421.96.

Brantford.

Labour conditions improved during October, and prospects were much better than in the corresponding month of last

year. The manufacture of war munitions was keeping a fair number of men busy, and special orders received by some manufacturers helped conditions considerably.

A large number of outside workers have secured employment in the factories.

The textile factories at Brantford and Paris have been frequently advertising for help, both as learners and experienced workers.

The customs receipts for the past month show a decided improvement over last month, as well as over the same month of last year.

The civic authorities continued to employ a large number of men on sewer construction and other street work.

The outlook for manufacturers was far better than it was twelve months ago, and already some establishments were reported as fearing a scarcity of skilled labour.

Brockville.

Labour conditions generally were much improved over last month and were more favourable than in October 1914.

Exceptional activity still prevailed in the steel and brass trades. Unusual activity was apparent in the moving of freight and grain.

Manufacturing generally was fair. In a number of establishments men were put on and double shifts operated.

Chatham.

October was a fairly busy month for all classes. Building operations were very brisk, both interior and exterior carpenters and joiners being in demand, bricklayers being the only branch that were not fully employed during the month.

Engineers have staked out the foundations for the \$1,000,000 sugar factory to be established at Chatham. Every effort will be made to get the foundation completed this winter and local labour will be employed as far as possible.

Every manufacturing establishment in the city was running full time. Planing mills for a time were working overtime.

The Wm. Gray-Campbell Company have decided to manufacture automobiles, which will add another industry to the city and will require a large number of experienced workmen.

Cobalt.

Labour conditions in Cobalt and throughout all of Northern Ontario were better than at any time since the beginning of the war, from the standpoint of employment. The mines were running steadily and there was harmony between employers and employees. The floating supply of labour was at the end of the month an unknown quantity. There was a big demand for shantymen and employers claimed they could not secure the number of men required in this work.

Tradesmen, principally carpenters and other classes of building tradesmen, reported times very slack but those of them who were not working at their regular calling were doing general work around the mines or elsewhere.

Work on a new pulp mill to be erected at Jacksonborough, on the National Transcontinental Railway, was expected to be commenced soon and it was thought the preliminary work would give employment to a large number of common labourers on the start and later to carpenters and bricklayers, also cement workers.

The outlook at the end of the month was that labour would be in demand this winter instead of the various committees having to face again the problem of assisting the unemployed.

Galt.

There were few changes in the industrial situation in Galt and district. Everybody seemed to have plenty of work and the outlook was bright for the winter. Farmers were complaining of the difficulty of getting farm help. This

year they were compelled to organize bees among themselves and go from farm to farm to help each other out.

The big machine shops were still working day and night shifts, and cotton and woollen mills were very busy, working overtime. Shoe factories were fairly busy.

Guelph.

The general condition of the labour market for October showed an improvement over the previous month. The building trades reported better conditions, with work in sight for the coming month. The weather has been very favourable for all outdoor labour.

Manufacturing generally was more active, with the outlook for the coming winter better than at the corresponding period last year. Factories working on war munitions continued busy and there was a steady demand for machinists. Civic works continued to give employment to many labourers.

The factory of the Colonial Knitting Company was gutted by fire and as a consequence about 30 workers, mostly women and girls, have been thrown out of employment. The firm was working day and night on a \$20,000 Government contract for khaki sweaters. The origin of the fire is a mystery.

Customs returns for the month of September were \$22,136.80, an increase of \$9,311.75 over the corresponding month last year. Wholesale and retail merchants report trade fair.

The evening technical classes were well attended.

Hamilton.

Labour conditions in October, like the month preceding it, were considerably better than during the corresponding period of last year, there being a shortage of help in some trades, while other trades that had been quiet showed some improvement. Cigar makers, boot and shoe workers and broom makers were still working on short time, however.

A quarter of a million dollars' worth of road paving proposed for this year has been indefinitely postponed, the feeling being that at the present time property owners in the districts affected could ill afford to take up the burden of local improvement charges for paving. In the past two years \$800,000 has been spent on paving. The amount spent this year is \$145,000.

The technical committee of the Board of Education has decided to abolish the payment of tuition fees. Instead of the regular fee an enrolment fee of \$2 will be required from each pupil, the same to be returned at the conclusion of the term provided the pupil attends 75 per cent of the classes.

Rather than instal sanitary conveniences in all their houses, as ordered by the Board of Health, the Canadian Northern Railway has begun the wrecking of 27 houses on its right of way in this city. The work of installing sanitary conveniences in the remainder of the company's houses, about 50 in number, was under way.

Hamilton's customs collections for September were 114 per cent greater than those of the same month last year.

Kingston.

Labour conditions showed very little change from the preceding month but while employment was very scarce there was little distress.

While the Canadian Locomotive Company was still very active a number of unskilled workers were laid off in some of their shops. Workmen have been busy in Sydenham during the past couple of weeks installing machinery for the new electric light works.

Total exports from Kingston to the United States during July, August and September were \$223,084.69 as compared with \$319,765.32 for the same period last year, a decrease of \$96,680.63.

London.

A more encouraging tone seems to have set in in business affairs pertaining to factories and foundries and in railroad work. Travellers all report more and larger orders being received. The iron industries, such as rolling mills, agricultural implement factories, etc., were much busier. Munition factories are working day and night.

Outside building work was not brisk. Civic work, including sewers, roadbeds, sidewalks, curbs, etc., continued to employ large forces of unskilled labour and teamsters were also getting a good share in the work.

Niagara Falls.

Labour conditions showed a marked improvement during October. Manufacturing, building trades, railway employment and unskilled labour were all affected. During October much out-of-door work was being rushed to early completion.

The American Cyanamid Company commenced the manufacture of a new abrasive material at its plant here and re-engaged about thirty of its former employees. This company now employs about 350 men. Before the war it had more than a thousand hands.

Fine autumn weather assisted the farmers in harvesting late crops of all sorts and stimulated agricultural employment. The grape crop was not good and the apple yield was small.

Welland.—Contracts were awarded for a new printing house and for a suburban school to cost \$20,000. Metal-working plants were very busy.

Port Colborne.—The iron smelter was shipping at the rate of 700 tons per day and its accumulated stock of pig iron was much reduced. The flour mill was running to full capacity. The steamer "Grant Morden" unloaded 476,315 bushels of wheat at the Government elevator. This was the largest cargo ever carried in one ship on the Great Lakes.

Longshoremen and labourers generally were in demand.

Orillia.

The labour situation continued very satisfactory. There was practically no unemployment even in the building trades.

The Orillia smelter is now running only in the daytime and is making a specialty of the production of molybdenum.

Collingwood. — There has been a marked improvement in the labour situation in Collingwood. The shipyards were working night and day on special orders and also had contracts for a couple of small steamers. The Imperial Steel and Wire Company has resumed operations, after being idle for several months. This company is working night and day.

Midland. — The labour situation in Midland during the past summer has not been encouraging. While the saw mills have provided employment for a considerable number of men, the other industries, such as foundries and machine shops, planing mills, etc., have been running short hours and with reduced staffs. The building trade has been practically at a standstill and general conditions in the labour field have not been encouraging. The lumber firms will doubtless give employment to a number of men in their camps, but on the whole there seemed little prospect of improvement in the immediate future, unless the smelter should re-open.

Ottawa.

A decided improvement in the labour situation developed during October, a scarcity of workers being recorded in several industries, particularly in lumbering. Skilled labour for the most part was in demand while for unskilled labour unemployment was materially decreased. On the whole the month found practically all trades fairly well employed with the exception of the building trades which continued very dull.

Several demands for labour were received from centres outside Ottawa and in some instances could not be met. This demand; the starting of several civic works; steady recruiting; increased lumbering activity and the need of five hundred men for a new munitions plant at Renfrew were responsible for the improvement in conditions.

Relief organizations reported marked improvement in the number of unemployed, the Union Mission, for instance, recording October conditions better than those of the past few months.

Coal or iron miners were in demand during the month to enlist in a tunnelling company which was recruited and quarrymen or others used to the handling of explosives were sought to act as miners' helpers. The usual restrictions as to height, etc., were waived in the case of experienced miners.

The employment of idle ratepayers on civic works as a means of relieving unemployment and the consequent growth of a "patronage evil" has engaged the attention of the City Council and a change, to take place in the matter of employment on civic works wholly under the control of the city engineer is mooted.

The eight o'clock early closing of bars is likely to lead to a reduction in the number of bartenders employed in the city and in some cases to a wage reduction.

The Moving Picture Operators' Local has inaugurated an instruction class for assistants.

"The Canadian Plate Printer," a local labour magazine, has suspended publication.

Owen Sound.

The labour market was very fair during October. Few if any were idle. Unskilled labour was scarce. There was considerable demand by farmers and apple packers for help but the labour bureau was unable to supply the help required.

Factory work in general was quite normal. While some were still running on short hours others were increasing their pay roll.

The fishing season has been good.

There has been a decrease in the call for charities. It was expected that winter conditions would be much better this year than last.

Peterborough.

Labour conditions during October showed little change as compared with the previous month. Manufacturing industries were fairly busy. The building trades continued very quiet.

Unskilled labour has been well employed and while most of the civic work—paving, sewer and sidewalks—was being finished for the season, other work was being planned for the winter months.

There was a good demand for men for the lumber camps. This it was expected would relieve the unemployed some but it was considered there would be a lot of idle men this winter.

Port Arthur and Fort William.

There was very little change in labour conditions from those existing last month. The general situation in some respects was less acute than for the same time last year.

The huge crop in the West has made railroad workers busy. Particularly in the railway shops has this been noticeable among machinists, blacksmiths and car repairers. For the past two years these trades have been on short time with the result that rolling stock has run down to a bad state of repair. Now that all cars and locomotives are needed, the repairs have been very heavy. Repairs in shipping also provided much work for the various machine shops in the two cities. Elevator workers also were busy.

Saw mills have shut down and there was nothing being done yet in the way of logging operations.

Fishing, which has been busy all the summer, will until the third week in December get more active as the herring fishing develops.

Sault Ste. Marie.

There was little change in labour conditions. Outside of the pulp mill, the steel mill and a foundry working on war munitions, industrial conditions were quiet. With present contracts and others expected, it was considered that the steel works would likely operate all winter full time with a reduced staff. The largest saw mill at Thessalon has shut down, but it was expected that lumbering operations in the woods would occasion a little activity later on.

Stratford.

The general condition of the labour market during October was the same as the previous month. Owing to the weather being more favourable it was better for the building trades and all outdoor workers. There was a demand for machinists.

The woollen and knitting factories, furniture and woodworking factories and railroad shops were busy. Some factories were working day and night shifts to keep their orders filled.

The customs returns for the month of September totalled \$14,719.30. This is a slight decrease as compared with same month of 1914. The excise returns for this port for September were \$5,054.90, being a slight increase for the same month of last year.

St. Catharines.

Labour conditions during October were about the same as in the previous month. Conditions in the factories continued fair except those working on war munitions which were very active.

Merritton.—There was very little change in labour conditions.

Thorold.—Labour generally was fairly well employed.

Pt. Dalhousie. — Labour conditions continued fair.

St. Thomas.

The general condition of the labour market during October compared favourably with the previous month and was better than the corresponding month of last year. The demand for unskilled labour was greater than the supply and in some branches of trade there was a decided scarcity of skilled labour, particularly in the metal branches. The building trades continued quiet with a greater falling off in work towards the close of the month. It has been a dull summer for workers in the building trades. The demand for women workers was greater than during the previous month.

Railroad shopmen were busy and there appeared to be plenty of work ahead. Pere Marquette shopmen have been particularly well employed. Traffic employees reported a fair month. Spare men were better employed than during the previous month.

Toronto.

Labour conditions during October showed some improvement with a decrease in the number of unemployed. The building trade, though still quiet, was more active than in September. Many who were formerly engaged in the building trades have found employment in other occupations or have left the city. There is an increase in the demand for unskilled labour in construction work. The order for the early closing of bar-rooms and liquor shops beginning on November 1 will probably result in throwing many out of employment.

Railway men and others engaged in transportation had a quiet month, on account of so much rolling stock having been sent to the West to move the grain crops. The longshoremen, coal drivers and teamsters have been organized as a union affiliated with the Canadian Federation of Labour.

During September the Civic Labour Bureau placed 1,165 men in vacancies, of whom 416 were sent outside the city.

At the new Union Station about 200 men were at work, the preference being given to returned soldiers and residents of Toronto.

Work by the Canadian Stewart Company in connection with the harbour improvement at Ashbridge's Bay has been discontinued.

The plans for the new Union Station, as approved by the Dominion Railway Board, provide for considerably increased accommodation to that originally proposed, increasing the estimated cost to \$3,340,000. The viaduct and approaches are estimated to cost approximately \$12,000,000.

The Toronto Street Railway has been ordered by the Ontario Railway Board to have 25 new cars of a modern type in operation by December 1. The company's receipts continue to show a decrease, the figures for September being \$489,573, as compared with \$525,254 for the corresponding month last year.

Windsor.

Labour conditions were fairly satisfactory. There was considerably more demand for labour over last month. Local building mechanics were all employed, also many coming in from other points.

Manufacturing has been fairly active.

The automobile industry was very active, one company having a large order of delivery cars for foreign shipment. Other industries were also active.

Woodstock.

The point has been reached where the demand is for men, not for work. There was a demand for labour, both skilled and unskilled, and even when some of the factories were slack there were very few men without employment; some of the factories which desired to increase their staffs found difficulty in securing men. There was a demand for men for

the furniture trade, and for moulders and stove-mounters, also for men to work on munitions.

Considerable activity was reported in the stove and furnace trade. There was some improvement in the furniture trade. Wagon-makers and manufacturers of organs and pianos were working as usual.

There is not a great deal of new building, but there was considerable jobbing work, and at the end of the month carpenters were busy with special work. There were few if any idle men in the building trades.

Generally speaking, business was fair. In staple lines it was about normal. There was, however, a lessening demand for luxuries, extras and high-priced goods.

MANITOBA.

Brandon.

During October labour generally has been well employed, a considerable improvement over the condition prevailing last month being noted.

The exceptionally fine weather has assisted the farmers in gathering in the long delayed harvest. So great has been the demand for harvesters and threshers that wages have been at higher rate than that of last year. About 75 per cent of the threshing was completed, with good yields and a fair grade.

Civic work has progressed somewhat slowly owing to the difficulty of obtaining men.

Building trades have been slack though it has been difficult to obtain carpenters for work already under way.

Freight shipments have been heavy. With the grain rush every available man has been working at high pressure.

Winnipeg.

No improvement was noticed during the month in the condition of skilled trades. The building trades remained very quiet. Engineering trades were

not noticeably very active; machinists continued to work at reduced hours. Printing trades were dull. Clothing trades were fairly well employed, as were those engaged in transportation work. Clerks, stenographers and others in the miscellaneous class were moderately well employed.

Unemployment among the unskilled heavy labour was scarcely noticed. The very fine weather that prevailed during a goodly portion of the month made it necessary for farmers to promptly engage extra help to continue threshing operations which had been interrupted by rainfalls in September.

In Manitoba, toward the end of the month, there remained forty per cent of the exceptionally heavy crop to be threshed and shipped, when snow and rain fell heavily, again impeding operations.

It would seem that unemployment in Winnipeg and district during the approaching winter will be considerably less than was the situation last winter.

SASKATCHEWAN.

Moose Jaw.

Threshing operations have been very active and all persons willing to take on this class of work have been able to find employment. This year persons accustomed to all kinds of employment have taken up farm work and the work has extended over a considerable period of time.

Tradesmen, however, were not steadily employed, with the exception of machinists who were in good demand as were also tradesmen who have knowledge of the work necessary in connection with the handling of rolling stock.

Retail trade in the city was improving and at small country points in the district business was very good. A great number of farmers were paying up their debts and money was easier.

Eighty per cent of the threshing has been completed in the district and 40 per cent of the grain marketed. No

serious congestion has occurred at any point. Three weeks of good weather will see everything in readiness for the winter. The crop as harvested is one of the best this district has ever seen, and will do much to help retail and wholesale business in the province.

All available rolling stock is being used by the railroads to handle wheat shipments and records for cars handled through this divisional point have been made and broken several times this fall.

Prince Albert.

The general labour situation has changed but little. Few men were out of work owing to the large number who have enlisted and the demand for men to assist in threshing operations. Towards the end of the month many men were returning ready to meet the heavy demand for labour by the lumber companies, which this year will have many camps in full operation.

Railway employees have been busier this month owing to the transportation of the crop, which has exceeded all expectations, and to the increased demand for lumber.

Several enquiries for whitefish have been received from outside points and there is evidently a great demand for the produce of the northern lakes.

Lumbering will provide work for hundreds this winter, and some difficulty in securing the necessary men is experienced.

The completion of the Grand Trunk Pacific line into Prince Albert was still hanging fire.

The district round about Prince Albert is experiencing a season of prosperity. Good threshing weather enabled farmers to complete a bountiful harvest, and the smaller towns and villages were enjoying a trade boom. Farm lands were beginning to sell, although there was no tendency towards exorbitant prices. Every indication pointed to a further increase in the cultivated area for next year.

Regina.

Labour conditions were very good. Wet and cold weather during the early part of the month stopped harvesting operations and kept quite a large number of men idle for a short time, but at the end of the month all were fully engaged again. The building trades were busy, especially carpenters and bricklayers, and some bricklayers were brought in from Moose Jaw, Saskatoon and other nearby places.

Threshing was progressing favourably. The yield was very good, and the grade was high.

Saskatoon.

Business conditions generally showed some improvement with the harvesting of the crop, although not quite as much money was circulating as is usual in the fall owing to the fact that many farmers were holding grain for higher prices.

Some slight shortage of unskilled labour was reported, but the situation later seemed well in hand.

Building trades were still very quiet in cities, with a fair demand for carpenters for country work.

There was an unusually large crop and a scarcity of labourers in certain localities.

About 70 per cent of threshing in old settled districts was done, but in more backward parts where machines were scarce and the crop heavy, work was expected to last for several weeks.

ALBERTA.

Calgary.

There has been a general improvement in the industrial situation over the preceding month. Very few were unemployed. Although there was no building activity in the city, farmers were erecting buildings in the district, houses in some cases, but mostly buildings for the farm. Several small elevators were also being built, which has employed

quite a number of men. Men generally employed in the building trades were gradually being absorbed in other work at greatly reduced wages.

The Canadian Pacific Railway at the Ogden shops has greatly increased its labouring staff, wages being 20½ cents per hour and married men only being required for the work.

An active campaign by the vacant garden club early in the year now shows splendid results; more vegetables have been grown this year than in any other year in the city's history. The saddlery firms in the city who have finished their war contracts were engaged in manufacturing their usual line of goods.

The weather continued favourable for threshing operations. There has been no great lack of labour, and reports from several districts show the crops in good condition.

The Canadian Northern Railway reported the coal mines in the Drumheller district busy and stated there was a demand for miners.

The Civic Labour Bureau has sent out about 250 men to jobs in the country. The Associated Charities have given relief to 70 families this month, showing a further decrease from the number relieved last month.

In place of the evening technical classes being held, \$200 has been allotted to hold a series of lectures during the winter, arrangements for which are being made by the executive of the Board and representatives of other associations in the city.

Edmonton.

There was no demand for labour in the city, but the demand for threshers from the country districts continued throughout the month, and the surplus of unemployed was made up of men who were not capable of doing the heavy work called for on the farm. Any building mechanics who found employment were engaged on repair work; no new work of any importance was started.

Mine operators reported a scarcity of experienced miners, while on the other hand it was said that the wages offered were too low to induce miners to remain in the district. A few miners were preparing to go to England about November 1. It was also reported that railroad contractors in the north country were forced to increase the wages of their labourers who were attracted by the higher wages paid in the harvest fields.

While wholesale and retail trade in the city remained quiet, wholesalers reported an active country business.

Farmers were very busy threshing what is said to be the best crop for many years. The heavy growth increased the amount of work, and there was still a demand for threshers at the end of the month. A year ago the price of potatoes was 60 cents per bushel, and this year many farmers planted a much larger acreage than usual. As a result wholesalers were buying potatoes for 20 cents per bushel.

The saw mills along the river which were more or less damaged by the spring floods have not been repaired. But a large new mill built some distance from the river, which started operations during the summer, has been very active. The supply of logs is brought in by rail. The demand for the finished product was from country districts.

Lethbridge.

The opportunities for employment were very good at the end of the month. One labour agency reported it had openings for over 200 men and not an applicant on hand. This was owing to the great demand for harvest help. There was also a demand for men to go into the lumber camps.

Coal mining also was active and the demand for miners and other workers for the mines was not being met. In the building trades, however, there was no work in the city and little in the district.

Transport conditions were active owing to the movement of the crop.

Wages for harvest help run about \$3 per day with board, somewhat better than last year.

Medicine Hat.

Labour conditions improved. The demand for farm help was greater than the supply, and the Board of Trade made arrangements to bring 100 men from Vancouver to meet the demands of the farmers.

Flour mills were all busy working 24 hours a day. Each mill was handling about nine carloads of wheat daily. Other manufacturing establishments were fairly busy.

Farmers were all busy with their crops, which are without doubt one of the greatest in the history of this district. Wheat has run no lower than 40 bushels to the acre, and in some cases as high as 70 bushels. Farm help was very scarce. The average wages paid for harvesters was \$3 a day and board.

BRITISH COLUMBIA.

Fernie.

The extent to which labour generally has been employed in this district during the current month has been a noticeable improvement over the previous month. The demand has been greater than during any month in the past year, and it has been more or less of a general demand, as both the coal mining and lumbering industries, which are the principal industries of this locality, have increased their working forces. This improvement, however, has not affected the particular trades to any extent, as the demand has been confined to unskilled labour and the particular classes required in the industries mentioned.

Wholesale and retail merchants reported an increased volume of business during October.

Greater activity has been evidenced in the lumbering industry throughout the entire district during the current month in view of the increasing demand for the

manufactured forest products in the Prairie Provinces. The Elk Lumber Company of this city advertised for 75 men on October 15 and obtained this number promptly. These men were placed at work building logging roads and other works on the timber limits of this company, preparatory to the commencement of logging operations, which it is understood will commence shortly, and be carried on throughout the winter months, in order that a suitable supply of logs may be obtained to operate the large saw mill here next spring. The rate of wages paid by this company for the men only recently put to work is \$2.25 per day of 10 hours.

The coal mining industry gave employment to additional numbers during October, as well as more steady employment to those already employed. The placing of a large order for coke by the Granby smelter at Grand Forks with the Crow's Nest Pass Coal Company about the middle of October has resulted in the mines operating continuously on the single shift basis, while in some of the mines here two shifts were being worked. The outlook in this connection was considerably more favourable than for some time as the local coal company has been requested to submit tenders for a still larger supply of coal, which will result in the event of their securing this order in the steady operation of the local mines during the coming winter.

The improved conditions in the coal mining and lumbering industries, which became effective here during the present month, are also reported from various centres in this district. The mines in nearly all the surrounding camps are operating more extensively and in other localities saw mills have commenced to operate, all of which has a desirable effect on the community generally.

Nanaimo.

The condition of labour in this district has shown a slight improvement over last month, owing chiefly to a large number of unemployed going back to the

old country to work, and also to the mines working more steadily than last month, but there were still a large number of unemployed men in the city and district.

Merchants, wholesale and retail, reported business very quiet, especially in lines outside of actual necessities.

The saw mills of the district were working steadily, but not to their full capacity. Logging camps were not very active.

The coal mines of the city and district did better during October than in the preceding month, particularly the mines in the city.

Nelson.

There was a very noticeable improvement in labour conditions during October, and the situation was better than at any time during the last 12 months. The activity around and in the mines and smelters has given to a large number of men steady employment, and as there is a large amount of building going on at Trail, B.C., carpenters, bricklayers and labourers were well employed, leaving very few idle men. The city has also given employment to quite a number of men making and grading streets.

The demand for houses at Trail still continued, and more were needed to meet the requirements. During the year 75 new houses have been erected, and several others were being arranged for. Work on the new plant was steadily progressing, the steel having been delivered on the site and the brick work was commenced.

From 40 to 50 men were employed on the property of the Slocan Star mine, near Sandon, which was producing about 120 tons daily.

The 600 foot tunnel at the Noonday mine, near Sandon, on which work has been in progress for some time, was nearing completion. The tunnel has already been driven about 400 feet, and new buildings have been erected on the property. The Lucky Jim mine, at San-

don, is to resume operations and the shipping of ore immediately. Since the destruction of the Ivanhoe mill by fire some weeks ago the firm has leased the Rosebery mill and will resume work with a full crew.

The Cork-Province mine, near Kaslo, was employing a force of 40 men, and regular shipments of ore were being made to the smelter at Trail. This property has been idle for six years.

The Hewitt mine, on Four Mile creek, two miles east of Silverton, was producing 150 tons of ore per day, and its mill also was busy. From 40 to 50 men were employed.

The Florence mine, at Ainsworth, was expected to ship shortly. The road to the Highland concentrator was completed, and 100 tons will be treated daily. There were about 25 men working, but this number will be greatly increased.

There was much activity at Sheep creek. Development work and operations about Salmo were said to be greater than for many years.

At the Queen mine, which has been producing gold steadily for fifteen years, the production was being maintained at a normal rate. About 35 men were employed in the mine and mill.

The Mother Lode mine was being worked and the mill and cyanide plant were in operation.

New Westminster.

Labour conditions during October showed very little change from those prevailing during the previous month, and no special activity was noticeable in any branch of industry.

The number of unemployed was less than during September.

The allotment to New Westminster of a portion of an order for war material will be of material assistance to a considerable number of unemployed in the iron industry.

Fishing during the month was fair, although the large number of men and boats engaged owing to unemployment in other lines has reduced the average

per boat. The advent of American canners into the market this year has tended to bring better prices to the fishermen and has opened a market for all the dog salmon and humpbacks that could be secured. The catch of cohoes during the latter part of the month also was fairly good.

Lumbering has shown a little improvement, several camps having been opened and the mills all running full time.

Prince Rupert.

Labour conditions were improving slightly around the city, but not to any great extent. Very little work was being done at the dry dock owing to its construction being just completed and the final inspection underway.

The Granby Company has been giving employment to a large number of idle carpenters and labourers from this city during the past month. A number of men have left for Alice Arm for work in connection with the mining development that has just started there and at different points on the Skeena river.

An increased number of employees was also being employed in the fishing industry.

Vancouver.

Employment showed the same general slackness which has prevailed for the past 12 months. No improvement can be reported over last month. There were very many unemployed in the city, and all offers of work were eagerly taken up.

Relief was still being given by the city to necessitous cases. The latest report, issued by the civic relief office October 22, shows that 442 families were in receipt of relief. Of that number 77 were Canadian families, 214 Old Country families, 20 American families, and the rest were of various European nationalities. None were Orientals. Single men to the number of 102, all suffering from some form of physical disability, were also being relieved.

Civic expenses for the first nine months of the year have been reduced \$450,000 below those of last year for the corresponding period.

A proposal to establish a system of municipal government by a Board of Control and aldermen elected at large has been vetoed by the City Council. The present system is election of aldermen by wards.

A movement is on foot to close all barber shops at seven o'clock each evening except Saturday. Before this can be done the assent of 75 per cent of the total number of barber shop proprietors must be obtained. The chief of police has taken a census of the number of barber shops. There are 179 in all. Of these, 120 are conducted by white men, 19 by Chinese, 36 Japanese, and 4 negroes.

The Board of Trade has gone on record as favouring the building of steam and sailing ships by private concerns, assisted by Government subsidy; the home ports of such ships to be in British Columbia. This is due to difficulty which has been experienced in getting cargo ships for freights consigned through British Columbia ports. The help of the Provincial Government and other Boards of Trade is to be sought.

The Canadian Northern Pacific Railway Company had announced that it was about to commence operating a through service from Vancouver to Edmonton. Contracts were about to be let for the construction of temporary terminals and freight sheds, but owing to a disagreement between the company mentioned and the Great Northern Railway Company, as to the former having running rights over the line of the latter where it enters Vancouver, operations have, for the time being, been suspended. It is stated in official quarters that this will be only temporary, and until such time as an agreement is reached.

The milk wagon drivers of the city have formed a union, with an initial membership of 70, and have affiliated with the Trades and Labour Council.

Machinists report practically all of their number employed. With this one exception, all trades report acute slackness; and from the standpoint of employment in general the prospect for the coming winter is very unsatisfactory.

Victoria.

There has been no change for the better in labour conditions during October, the number of unemployed being practically the same as during the past few months. Work among the building trades was dull, even for this season of the year. All city employers on outside work were working alternate shifts of two weeks on and two weeks off, in order that as many men as possible might receive some benefit from the work being done. Machinists were exceptionally busy. Two of the foundries were operating night and day seven days a week on special orders, which, in view of larger orders in sight, were likely to continue for some months.

At the instigation of the Board of Trade a general committee of Victoria citizens has been formed, composed of representatives from the most influential public organizations in the city, for the purpose of finding employment for soldiers returning from the front.

One thousand tons of potatoes and 33

carloads (20,000 boxes) of apples were recently shipped from British Columbian ports to Australia. The potatoes and apples were of the best quality and were expected to find a ready sale at a remunerative price.

The Canada Potash and Alzin Company has been formed for the purpose of preparing dried kelp for market in commercial quantities. The plant, which is located at Sidney, about 15 miles from Victoria, will have a capacity of 30 tons daily.

During the year ended March 31, 1915, the immigration to British Columbia was 10,197 against 37,608 a year ago. Japanese immigration amounted to 592 and Chinese 1,155. The Chinese immigration was only 20 per cent of the previous year, the falling off in head tax being over two million dollars.

The whaling vessels operated by the Victoria Whaling Company have returned to port for the winter, and taking into consideration the short time (about three months) they have been operating this year, have had a fairly successful season. One of the vessels operating on the west coast of Vancouver Island captured what is said to be the largest whale ever caught on the Pacific coast, it being 98 feet in length with a girth of 63 feet. It was mothering a baby whale 18 feet long.

REPORTS OF WOMEN CORRESPONDENTS.

Montreal.

Women have not been affected in any particular way during the past month; conditions have been about the same as in September and compared favourably with those existing in October, 1914.

Employment bureaus reported that the demand for domestic servants was good. The number of factory hands who have sought employment in domestic service for the past year has been reduced of late owing to the demand

for female workers in the munitions works.

Milliners, tailoresses, dressmakers and seamstresses have had regular employment. The autumn trade has brought more activity in retail stores. Nurses have had a busy month. The Victorian Order of Nurses has offered the services of its members for the care of wounded soldiers who will be kept in Montreal during their convalescence.

Health and hygiene.—The latest statistics published by the City Health De-

partment show that in Montreal the death rate in 1914 was 1.73 per cent less than in 1913. The improvement shown for the first eight months of 1915 is still greater as there was a reduction of 643 in the number of deaths during the same period of 1914. From January 1 to September 20 of the current year the death rate among children - under 5 years shows a reduction of 946 over the same period of last year. These encouraging figures are attributed to the good work done by the milk stations in procuring good milk for the infants and imparting to the mothers much useful instruction in the care of children and the rules of health generally.

Activity of women's organizations. — During the last week of October several women's organizations of the city co-operated with one another in encouraging what was styled "The Ideal Home Show." Different exhibits showed the uses to be made of modern inventions in improving the home and giving the housewife every opportunity of lessening the drudgery of work and thus allowing her more time to devote to the intellectual training of her family.

Fédération Nationale Saint-Jean-Baptiste.—The Provincial School of Domestic Science affiliated to la Fédération, re-opened its classes October 1. The usual complete programme is announced for the year: Practical Cookery Classes, Special Course for Nurses in Invalid Cooking, Dressmaking and Sewing Classes, Millinery, Embroidery, Hygiene, The Care of Young Children, etc.

The committee of "l'Assistance par le Travail" called a general meeting at which the report of the work accomplished was given and the needs of the present season discussed. From November, 1914, to June 30, 732 applicants were received: 157 married women, 24 women who had been deserted, 66 widows and 501 girls. For 210 of these permanent positions were procured, and 172 were employed in the workroom where they were given 5,476 days' work at 50 cents

a day. The articles of clothing made were distributed among the different parochial federated guilds for school children who were not sufficiently clad; work was also done for the Ste-Justine hospital, the Red Cross and the "Aide au Drapeau." In this way the committee took care that their workroom would not in any way fill orders that might come in competition with women earning their living by needlework. On the evening of October 31 la Fédération held the third general meeting of the year.

At the last meeting of the Committee of Social Works it was decided that a Study Guild would be formed for the members of the different working girls' associations. The object is to give those interested in social and economic questions an opportunity of training their minds and becoming well informed leaders and advisers of their respective groups.

Social service.—The Catholic Social Service Guild has continued its work since its establishment was spoken of in these columns (see *Labour Gazette*, August, 1915, page 171). Up to the end of October it had received 357 applications for work, and 295 positions were filled permanently. Houses were found for nine of the applicants.

The annual meeting of the Charity Organization Society was held October 26. The secretary gave a statement of the expenditures of the year. These amounted to nearly \$54,000; \$18,000 was the sum usually expended in a normal year. The report of the bureau for the employment of women and girls showed that work or relief had been provided for 1,373 women. This society and others will profit by the grant of firewood (50,000 old railway ties) offered by the railway companies to the Corporation, and for which the latter has just voted \$1,500 to meet the cost of transporting, cutting, etc. Several large lumber merchants have also offered to allow the city to take waste wood from their yards.

The municipal regulation passed in favour of the levying of a tax on theatres and places of amusement, to be devoted to the city hospitals, was enforced on August 2. The report given of the first nine weeks of its collection showed that \$26,070.40 had been gathered in.

The work of the women's directory having grown so much during the last year, new offices have been opened at 348 St. Denis street. A new home has also been offered by one of the members of the executive committee, where the young women will be trained for domestic service, which training will be seen to by a competent matron.

At a recent meeting of the managing committee of the Patriotic Fund it was stated that 3,721 families have been helped up to date by the fund in Montreal, meaning an outlay of \$659,134. The salaries paid to clerks and other expenses amount only to 2.05 per cent of this sum.

Teachers.—During the month of October the fifty-first annual convention of the Provincial Association of Protestant Teachers of Quebec took place. Between 600 and 700 attended, coming from all parts of the province, the great majority being women teachers. Lectures on different branches of education took up most of the time at each session. "How to Teach Chemistry," by Dr. N. Evans, M.Sc., of the McGill University, and "Agriculture and Nature Study," by Dr. Hamilton, of Macdonald College, were among the subjects treated. The latter subject was brought before the teachers as being a most important factor in education. That nature study should be given a place on all school curriculums was the opinion of the lecturer.

Toronto.

Among factory employees there has been no lack of work in the past month. In this regard conditions were even better than in the preceding month, and greatly improved as compared with the same month last year.

Candy and box factories were busy three nights a week on their final Christmas rush, and firms manufacturing whitewear and ladies' wear have been unusually busy. Carpet, overall and bag factories were working overtime. The knitting mills were still working every night. Out of town munition factories have sent requests for workers, but as girls were able to get the work they wished in the city these applications have not been filled.

Night work has interfered with educational classes, but, when possible, girls have been more anxious to learn anything useful, such as dressmaking, millinery, cooking, etc.

Domestics.—There was no improvement noticed in the domestic situation, as there is no possibility of being able to supply the demand for houseworkers, as the following figures from returns of employment bureaus will show: new registrations for the month, 130; new registrations for day work only, 43; applications for domestic help, 443; applications for domestic help filled, 84; applications for domestic help out of town, 73; applications for domestic help out of town filled, 26.

Sewing women and charwomen were busier during October, and a number of women reported that their husbands had gone to work in munition factories, which relieved the stress at home.

The number of positions for stenographers filled in the month as compared with the same month last year shows an increase of 100 per cent, which indicates an improvement in business conditions. Approximately 100 of those registered were unemployed.

The Bell Telephone Company has a waiting list of 2,000 as compared with 3,000 last year. About 60 per cent. of these are known to be employed at other work meanwhile, and an average of 20 a month were being employed by the company.

No improvement was reported among tailoresses. Those employed were working for reduced wages, and a great many

were out of work. What is called first class trade is reported as five per cent better than last month.

Winnipeg.

Conditions continued to be very much the same as last month, though better than a year ago. Preparation for Christmas trade has given a little increase in employment in the stores, while office positions were reported not so good.

There is an apparently increasing shortage of domestics to take the positions opening. Both the Young Women's Christian Association and the Winnipeg Free Employment Agency reported positions open for domestics being far in excess of the number of competent domestics to take them. Many very good openings have remained unfilled at these agencies. A large number of inexperienced girls and foreign girls without training in any line were seeking employment, but they are either not willing to go into domestic work or were not wanted by the employers.

In the factories the numbers were maintained fairly well. There was some slight demand for factory help, while garment making factories were working with a full staff, full time, and in some cases overtime.

There were very few experienced stenographers out of work, but there were large numbers of stenographers without experience or with only a few weeks' or months' experience looking for work. Milliners, dressmakers and telephone girls were well employed. Bookkeepers were somewhat better employed, while clerks in stores were increasing in numbers. Nurses were not at all well employed, the waiting list during October numbered 60. Generally speaking, cases were not of long duration.

The relief work by the Associated Charities reported below does not include relief given on account of unem-

ployment, which is now handled by the unemployment department at the city offices. This department covers such cases as are caused by men being out of work, and, properly speaking, does not belong in this report. The Associated Charities figures are as follows: total number of cases relieved, 288; new cases included therein, 36. Of these the causes were: widows, 75; general sickness, 48; tuberculosis, 28; man away, 41; desertion, 41; others, 33.

The report from the Winnipeg Free Employment Office shows 824 positions offered for women, and of these 623 were filled. Of these, 442 offered and 432 filled were day workers, and domestics were 267 offered and 118 filled.

Vancouver.

With the exception of a slightly increased demand for domestic help, labour conditions for women during October remained very much the same as during the previous month.

A comparison of labour conditions for women during the year 1914-1915 with 1913 shows that in nearly every trade or occupation only about 50 per cent of the women employed therein during the year 1913 were needed during the year commencing September, 1914, to October, 1915, making a fall of 50 per cent in the demand for woman labour in less than three years.

The Women's Employment League, an organization that last winter organized a toy making industry in the city, whereby several hundred girls were provided with temporary employment, has again taken into consideration the need for assisting the unemployed women during the coming winter, and for the present decided, "that although the demand for female help has fallen nearly 50 per cent within the last three years, so many women have left the city in the last year that at the present it is not necessary to organize special work for those out of employment." It was decided, how-

ever, to use the funds in the treasury to assist individual cases until such time as employment could be found for them.

At the last regular meeting of the Local Council of Women, acting on the report of the delegate to the Social Service Council, a committee of three was appointed to investigate and bring in a report on the relation (in Vancouver) between unemployment and low wages and prostitution.

The British Columbia Graduate Nurses' Association held its annual meeting recently. The principal object of this organization is to secure registration of graduate nurses. A bill has been drafted and submitted to the Executive Council of the Provincial Legislature, but the association does not propose to press for the passage of it during the continuance of the war.

The bill also aims to secure the registration as attendants of nurses who are not graduates, a "graduate" nurse meaning one who has studied for three years and has graduated from an approved school, with credentials from the hospital from which she qualified.

The last report of the city relief officer shows that 440 families were being supported by the city. Of this number 77 were Canadian families, 214 Old Country families, and 20 American, the remainder being made up of almost every European nationality. Eighty-four of the heads of these families were women who were unable to obtain employment to keep themselves and children, 60 being widows and 24 deserted wives.

In particular employment, practically the only demand during the past month was for domestic help, the average wage offered being from \$10 to \$15 per month.

Reports from employment bureaus show that 30 per cent of the domestic positions offered are filled by women who have hitherto worked at some other trade, or followed some other occupation, such as waitress, dressmaker, stenographer, sales clerk or canvasser, forced through unemployment and low wages prevailing to take up another means of earning a living.

In factory employment trade was very dull, with the exception of a boot and shoe factory where an order for military boots has been placed, and where five more women have been taken on than were employed there last year.

An order from the Government for sweaters for soldiers has resulted in one firm, the Vancouver Knitting Company, taking on ten more hands. The company expects to keep busy until the end of December.

Garment workers, tailoresses, dressmakers and milliners were not fully employed during the past month, although the "fall" season for such trades had begun.

Laundry workers also were not working full time; workers in candy factories were fully occupied, but a cut of about 20 per cent in the piece-work rates has in one factory caused considerable dissatisfaction.

The demand for stenographers was lower than during the last few months, due no doubt to the cessation of the need for substitute help during vacation periods.

Sales clerks and telephone employees were still taking time off turn and turn about, the sales clerks one week in four and the telephone employees three days each per month.

THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907. — REPORT
OF BOARD IN DISPUTE BETWEEN THE CANADIAN NORTHERN
RAILWAY COMPANY AND LOCOMOTIVE ENGINEERS AND
FIREMEN EMPLOYED ON ITS EASTERN LINES
AND MERGED LINES.

ON October 22 the Minister received the unanimous report of the Board of Conciliation and Investigation which was established on June 2 last to deal with a dispute between the Canadian Northern Railway Company and employees on its eastern lines and merged lines, being members of the Brotherhood of Locomotive Engineers and members of the Brotherhood of Locomotive Firemen and Enginemen. The number of employees directly concerned in this dispute was given in the application as 407, and indirectly 1,120. The application grew out of a demand on the employees' part for the same wages and general working conditions east of the Great Lakes as are at present paid and enforced in the service of the Canadian Northern Railway in Western Canada.

The Board was composed of His Honour Judge Emerson Coatsworth, of Toronto, Ont., chairman, who was so appointed by the Minister of Labour in the absence of any joint recommendation from the other members of the Board; Mr. F. H. McGuigan, of Toronto, Ont., appointed on the recommendation of the Canadian Northern Railway Company; and Mr. D. Campbell, of Winnipeg, Man., appointed on the recommendation of the employees.

The report of the Board was signed by all three members, and was accompanied by a schedule to be effective from November 1, 1915, recommended by the Board members to govern the rates of pay and rules of employment

of the locomotive engineers and firemen on the following roads: Canadian Northern Ontario Railway, Canadian Northern Quebec Railway, Quebec & Lake St. John Railway, Halifax & South Western Railway, Central Ontario Railway, Bay of Quinte Railway, Brockville, Westport & North Western Railway, and Irondale, Bancroft & Ottawa Railway. In submitting this schedule the Board in its report observed: "This schedule may not seem materially different from the present schedule under which the men have accumulated so many grievances, but it endeavours to correct the evils of which they complain, and uses, wherever there is any likelihood of dispute, very largely the language of the western schedule."

In the conclusion of its report the Board offered the following observations: "Under existing circumstances and conditions and after the fullest consideration, the Board is unable to see its way clear to recommend any increase in wages and rates at the present time except so far as the rules in the schedule hereto attached will affect the rates. Business at present is not of such a character as to justify any considerable increase, and probably it will be better on the whole to wait until in the near future the road becomes unquestionably a transcontinental road, when Mr. Hanna has promised to take up the matter of an increase with the men."

Text of Board Report.

The text of the report of the Board in this matter is as follows:

TORONTO, October 22nd, A.D. 1915.

To the Hon. T. W. Crothers, K.C., M.P.,
Minister of Labour, Ottawa.

SIR,—

Re Industrial Disputes Investigation Act, 1907, and *re* differences between Canadian Northern Railway Company and employees on its Eastern Lines, being members of the Brotherhood of Locomotive Engineers and members of the Brotherhood of Locomotive Firemen and Enginemen.

The Board of Conciliation herein beg to report as follows:

Immediately after the appointment of the Board in June, 1915, several preliminary meetings were held in Toronto, at which were present the chairman and Mr. McGuigan, Mr. David Campbell, the other member of the Board, not having arrived from Winnipeg.

The regular meetings of the Board with all the members present began on Wednesday, July 28, at 9 o'clock a.m., in No. 1 Court Room in the City Hall, Toronto, and several meetings were thereafter held going through the matters in dispute with a view to arranging for conciliation and ascertaining what the possibilities were in regard to a settlement between the parties.

On Tuesday, the 3rd day of August, 1915, at 10 a.m., in the same place, the Board met for the purpose of proceeding with the consideration of the matters referred to them, in the presence of all parties.

The representatives for the company before the Board were: Messrs. D. B. Hanna, L. C. Fritch, A. J. Hills, W. A. Kingsland and J. Bain. The representatives of the men were: for the engineers, W. B. Best and Ash Kennedy; for the firemen, T. M. Spooner and E. Ball.

Before proceeding to take evidence the Board called upon the parties to endeavour to adjust their differences without any further meetings and every effort

was made on the part of the Board to bring the parties together with a view to a settlement but it was found impossible to do so.

The Board thereupon proceeded to take statements from the parties on each side. It was decided to hold the meetings in private and that there would be no sworn statements but that the statements of all parties would be accepted as if sworn. A number of persons besides the representatives were present on each side to give evidence.

It was found that the matters in question between the parties were very important and complicated. It appears that the men and the company worked together under what are known as schedules, that is, printed rules and regulations and rates agreed on which are considered to be binding upon each side. One of these was filed as Exhibit "4," known as the "Engineers' Schedule" on the eastern lines.

The complaints made by the men were that while these schedules had been reasonably and fairly interpreted at the outset in 1912 and 1913 when they were first agreed upon respectively, yet in the course of the past year or more changes have been made in the interpretations, and rules which had been interpreted satisfactorily for a time were changed and in practically every case to the disadvantage of the men. Numerous instances were related by the men where some of the engineers and firemen on these lines had been at a very considerable loss in consequence of the restricted interpretations recently placed on the schedule with its rates.

After the men had given a large number of these cases, the representatives of the C. N. R. alleged that it would be impossible for them to meet the cases without having each particular instance put in writing and an opportunity given them to investigate the same. The Board, after consideration, believed this to be a reasonable request and consequently on August 11 ordered that the men should put their whole cases in writing with all the complaints which

they made so that the company might have an opportunity of investigating and answering the same, such statement to be put in at once and to be replied to by the company and as soon as the reply was in the Board would resume its meetings and proceed with the matter.

The men's case and the company's reply were put in and an effort was made to proceed on September 13 but, owing to the absence of one of the members of the Board, it was found after some meetings, impossible to go on then and an adjournment was made until October 7, when the Board resumed its sittings with the representatives and has sat almost continuously since that date hearing and considering the above statements and the evidence of the parties in relation thereto.

The final result of the investigation by the Board was that it was found that many of the complaints of the men were well founded and that change had been made in the interpretation of the schedule to their disadvantage, and that they had very many grievances in regard to the changes. The company's statement in reply to that of the men did not deny that changes had been made, but endeavoured to justify the company in re-interpreting the rules and rates, urging that their conclusions were justified by a reasonable reading of the schedule and should be confirmed by the Board.

The Board under all the circumstances, without judging between the parties as to whether or not the company's later interpretation of the schedule was correct, concluded that after interpretations (of these rules and rates) satisfactory to the men had been made and mutually understood for as long a period of time it was, to say the least, very inadvisable to make the changes which have produced so much friction and dissatisfaction among the men, as has occurred in this case.

The result, so far as the Board is concerned, is that they believe it would be unwise and unfair for them to expect the men to continue to work under schedules so unsatisfactory to them, and

that while under other circumstances, modifications or alterations might have been made which would have met the views of all parties, in view of the disputes which have occurred there seems little possibility of continuing the old schedule. Therefore the Board has decided to prepare a new schedule.

One of the many points which has provoked considerable discussion under the old schedule, was that of dealing with men who were disciplined. While the Board is of the opinion that there was no deliberate intention on the part of the company to discipline its men unfairly, yet the men have been exceedingly discontented with the manner in which investigations of complaints against them have been had and claim that they have been disciplined without proper investigation. The Board, without desiring to lay down any hard and fast rules for future investigations, would recommend that hereafter the greatest possible consideration be shown to any man who has been charged with a fault and that he shall have every opportunity of putting in his side of the case at the investigation which shall be fair and impartial and of such a character that the man against whom complaint is made will not be in any way taken unawares. The company contended that in many of these cases the men failed to follow up their schedule rights of appeal to higher officers.

Another matter which occasioned a good deal of discussion was as to whether or not what are known as the branch lines should be separately considered and special schedule provisions made in regard to them.
